NEW ENGLAND FARVER

PUBLISHED BY J. B. RUSSELL, AT NO 52 NORTH MARKET STREET, (AT THE AGRICULTIEN, WYRTHOUSE.)-T. G. FESSENDEN, EDITOR

VOL 1X.

BOSTON, FRIDAY, JULY 23, 1830.

NO. 1.

CHOLE TOTARMOO

FOR THE NEW ENGLAND PARMER.

To the Honorable Board of Visiters of the Professorship of Natural History

Gentlemen-In compliance with your request, I beg leave to offer the following statement corcerning my late tour through parts of the Southern States which I had not heretofore visited.

On arriving at Charleston, S. C., I comme seed my pedestrian journey, and proceeded to Augusn, in Georgia, thence to Macon, afterwards to Colunbus, at the Falls of the Chatahootshee, on the line of the State; I then continued through the Cresk reservation to the town of Montgomery, in Alalama, and at length arrived at Tuskaloosa, the canital of that State; I now proceeded to Cahaba aid Greenville, and entering Florida not far from Persacola, continued to Tallahassee the capital, from whence I returned through the lower part of Georgia, crossing the Apalachicola, Altamaha, auc Ogechee, to Savannah. The whole of this inland pedestrian journey was upwards of 1200 miles, occupying me from the middle of January to the close of March. Being the winter season I made all the collections I possibly could of new and rare plants, both roots and seeds-but have to regret the delay of the largest collection of seeds which I had made. This collection likewise contained ing the gardens. The practice generally among an herbarium in which were a considerable mant frances in managing their fowls is to feed them ber of new species of plants. I still, however, during the winter, and at the return of spring, have the satisfaction to state that all the collections they are allowed to rove over the farm in quest I made in South Carolina, Georgia, and Alate. as far as Cahaba, have safely arrived at the Botanic they apply those instruments which nature has Garden, and many of the plants are growing, among which are included several that are orna, which lie concealed in the earth, waiting to prey mental and rare as well as new.

large flowers, believed to be hardy; a new $C_{0\pi}$ -them: but with all my precepts and examples, I scattered. volvulus, with large tuberous roots; an undescribed have not as yet been able to convince one of my parrow leaved Yucca, Y. *ligulata; the splendid neighbors.

Tetragonotheca Helianthoides, Verbesina virginica; a new species of Apocynum and Collinsonia, Pinguicula lutea; Stellaria longipedunculata, Viola *reticulata, a new species; Petalostemon carneum. Sanguinaria cauadensis, \$. *rosea, Hypoxis sclacea, Minutus alatus, a species of Pancratium, Adiantum trapeziforme, similar to the West India plant; Trilliam *tricolor, a new species with three colored leaves; a new species of Calopogon, Rhexia glabra, &c; also a large quantity of seeds in a mixed collection, many of which are now vegetating; as well as a number of other species of plants collected out of flower and fruit, and not yet grown up sufficiently to be recognizable.

A considerable number of the plants which I collected in Alabama and Florida, from the distance they had to be conveyed, have perished. My collections were always rather select than nu. merous, and many of the objects could only be obtained by my own unaided conveyance. If any of these collections prove interesting or useful to the institution, my intention will be fully answered.

Your obedient servant,

THOMAS NUTTALL.

FOWLS IN GARDENS.

MR FESSENDEN-Ever since I was a boy there has been a strange prejudice against fowls visitof food, and if, driven by the calls of hunger, upon all the fruits of the garden as soon as they Among them are several fine species and varie- make their appearance above ground, sentence new species of Horse-chesnut, with scarlet flowers; is the severity of the law that they very seldom several perenaial large species of Helianthus or escape. This punishment has been various, ac-Sun-flower; several new species of Silphium, cording to the humanity of the judges; some-Rudbeckia, and eight or ten kinds of Liatris; sev-times by cutting the middle toe off, sometimes by

labor that mankind have, and will not work unless driven to it by hunger.

Another great cause of our suffering so much by insects, is that the birds are almost ail destroyed by sportsmen and wanton boys. All insects are made by our all-wise Creator for some wise and good purpose, and if the feathered tribe are all destroyed, the insects which were made for their food, will increase, and prey upon the fruits of the earth. Yours, with respect,

BENJ. WHEELER

Framirgham, July 16, 1830.

INSECTS.

To the Publishing Committee of the Mass. Hort. Society GENTLEMEN-I beg leave to lay before you a few observations respecting insects.

The rose-bug, Meloloztha subspinosa, P It commences its ravages in this place (7 miles south of Boston) at the time the damask rose puts forth its blossoms. The following is a memorandum of the first appearance of this destructive insect for several years past.

1822, June 10. 1823, " 20. 1824, 15. 1825, ٤. 10, 1826. " 6, 1827, 10. 1828, 10. 1829. 12, 1830,

Eacl: halividual lives about three weeks before the eggs are deposited, soon after which Loth supplied them with, to search for those insects males and females die. As all the rose-bags do not make their appearance at once, but continue to increase in number for sever; ' days in succession, the whole duration of the species, or the time ties of Phlox, not yet cultivated; a very showy is immediately pronounced against them, and such in which we are afflicient with this scourge, is extended to 30 or even 40 days; the work of destruction, however, is finished, and the greater number disappear in the space of 4 weeks. This year, and in this vicinity, we shall probably find eral species of Solidago, Aster, and Vernonia, pecu-booting, and even death itself. As I was brought that the rose-bugs have nearly left us by the 22d liar to the South; also Amsonia angustifolia, Poda- up with all those prejudices, it was a long time of July. Immense numbers of these insects were lyria perfoliata, P. uniflora, &c. Coreopsis senifolia, pefore I could overcome them after my reason observed here in the years 1825, 1826, and 1827; and a new species allied to it, C. *stellata; Cantua was convinced; but happily for the benefit of my since which time they have been gradually decoronopifolia; a new suffinitione Cactus, with props in the garden, I have entirely overcome creasing, and are now still less numerous and more

On the contrary, the caterpillars of the apple tree, (Lasiocampa castrensis, L.) which had been Silene regia; the Sensitive Briar, (Schrankia horri- If my fowls, after clearing all the bugs and few in numbers for several years, have returned dula); a remarkable new species of Sarracenia; vermin from my garden, resurt to my neighbors, upon us in hosts. The canker worm (Geometra an undescribed shrul by hardy Croton, Zornia tet in quest of insects, the dogs are set on to them, or vernata, Pack) has not yet arrived here, nor has it raphylla; a new perennial Lapin, L. *strigosus; stones, or clubs are sent to drive them home, been necessary to use any precantions against it the splendid Asimina grandiflora, or large flowered My practice is in the spring to call the fowls into for 13 years past. I usually feed my fowls every day, and very sel-first appearance of the evil; and resert, without iscus scaber, with a large yellow flower and deep dom have any thing scratched up in the garden, hesitation, to the only known and effectual remedy, surple centre. Several Lobelius, Polygala latea; for I find that fowls have the same aversion to which consists in the careful and repeated applicawinter; and, when the insects are numerous, it may be necessary to tar both in the afternoon and late in the evening.

Much has been said respecting an insect which attacks Barley, and several communications on the subject have been published in the New England Farmer. Through the politeness of Cheever Newhall, Esq. I obtained a few pieces of diseased Barley straw, containing several worms or larvæ which were new to me. Each larva was imbedded in the substance of the stem, in a little longitudinal cavity which it had formed for itself, and its presence is known by an oblong swelling upon the surface. In some pieces the swellings were so numerous as greatly to disfigure the stem, the circulation in which must have been very much impeded if not destroyed. These larva were carefully watched, and early in the spring were found to have entered the pupa state. On the 15th of June the perfect insects began to make their escape through minute perforations which they gnawed for that purpose. Seven of these little heles were counted in a piece of straw only half an inch in length. The perfect insects continued to release themselves from their confinement till the 5th of July, since which no more have been seen. Much to my surprise these insects proved to belong to those called by Linnaus Ichneunous minute, minute ichneumons, which are parasitic, or prey, in the larva state, upon the bodies of other insects. I had hoped to have obtained the true culprits, which probably are allied to the Hessian flies, but the ichneumon had attacked them, depositing an egg in every one, the larvæ from which had destroyed those of the fly, and, having completed their metamorphoses, have, as before said, made their escape from the straw in the perfect state.

These little relucamons were exacined and carefully compared with descriptions of other similar insects, whence it appears that they are a species, which have not yet been described. They are very much like the parasitic insect which attacks the grabs of the Hessian fly, belong to the same genus, but are rather larger insects, of a jet black color, except the legs, which are blackish, with pale yellow joints. The female is thirteen lumdredths of an inch in length, the male is rather smaller. These minute insects, then, are among our friends; they are those which an all-wise and provident Creator has appointed to check the increase of the fly that attacks our Barley; and, though disappointed in obtaining the latter in its perfect state, I hail with pleasure the appearance of its mortal enemy.

Although the Borky fly has not been obtained in the perfect state, there does not exist the smallest doubt in my mind that it is a two-winged insect like the Hessian fly of America and the Wheat fly or Tipula of Europe. Any one who will compare the history of the two latter with what is known of the Barley insect, will arrive at the same conclusion. Both the Hessian fly and Barley insect make their attack upon the culms or hanlms of our cereal productions, which they disfigure and injure to a great extent; and both have a similar four-winged parasnic ichneumon appropriated to them. In addition to this statement the following conjectures, in default of facts, may be offered. It is probable that the Barley insect is a distinct species of the same genns (Cecidomyia,) to which belong the Hessian fly, (Ceci-) without any enlargement of the posterior thighs.

ing a similar parasite. The Hessian fly deposits semblance to the male of that insect, and is still eggs, and the grubs proceeding therefrom are more like the currant bush Egerio, but is much smated between the sheathing bases of the lower smaller than either of them. It may be named leaves and the haulms of the wheat. Whereas the and defined. Barley insects are found to pentrate the haulms themselves, and lie concealed beneath the epidermis. From this slight difference in the mode of attack thighs and feet, (except at tip.) and three narrow it would appear that the insects are not identical; bards across the abdomen pale golden yellow. and this conjecture is still further strengthened by the fact that the parasite of the Barley insect is not the same species as that of the Hessian fly,

Agrecably to established usage à spécific name* discovered parasitic insect.

and thorax granulated, abdomen smooth, polished; teahs of an inch. thighs at tip, legs and feet at base pale schreous yellow. Length about twelve hundredths of an inch.

We have reason to believe that the grubs of the Barley fly remain in the straw during winter, and that they assume their perfect forms in the spring, in season to deposit their eggs on the young Barley. It is therefore essential to prevent their assuming the perfect state, and this may be done by burning the stubble, which contains many of them, in the autumn, by descroying, in the same way, all the straw and refuse which is unfit for fodder, and by keeping the grain in close vessels over one year. In this way the insects, which are disclosed from the small heavy pieces of straw remaining unwinnowed from the grain, will perish without an opportunity of escape.

There is an insect which has lately been discovered in the trunks of the pear tree, feeding beneath the bark. It is said that considerable injury has resulted from its attacks. An infested tree may be recognized by the castings thrust our of the minute perforations made by the larvæ; if the tree be whitewashed the perforations (about the size of awl-holes) and castings are still more readily discovered. Mr Downer furnished me with some of these insects which had changed to the pupa state under the bark, enveloped in little cylindrical brownish cocoons, consisting of fibres of the bark interwoven with a silky substance. This was during the summer of 1829, and in the autumn the perfect insect extricated its head and pupa-skin sticking half way out of the hole in the conclude, that the Dutch embassy in 1656 bark, where it was retained by the transverse se-

TEMARKS ON VEGETABLES. [Continued.]

Mills informs us in his History of India, that the Higlish East India Company sent their first order for tea in the year 1667-8, when they ordered their igents to send home by their ships one bundred nounds weight of the best ley that you can get; and in the year 1676-7, tea to the value of one hundred dollars was ordered on the Company's

Worlidge informs us in his Vinctum Britannicum, which was published in 1675, that Mr Thomas Garway, in Exchange-alley, near the By al Exchange, was the principal, if not the first promoter and disperser of this feaf and liquor in London. He had,' says Worlidge, 'a paper printed, declaring the virtues of this beverage against ill affections of the head, and obstructions in the stomach, the spicen, and the reins. It drieth up ill vapors that offend the head, and annoy the light, it digester's anything that both heavy on the stomach, and restoreth lost appetite, &c, &c. One of the printed bills is in the British Museu in f.om which we find that tea had only been known by presents sent to princes and grandees before the year 1657, when it sold from 30 to 50 dollars the bark, and finally made its exit, leaving the old the pound weight. From these dates we may

In the printed circular alluded to, Thomas Garway offers his tea for sale, from sixteen to fifty

Sir Kenelm Digby, in his Book of Receipts 8 vo. London 1669,) has the following notice of a new mode of making tea. The Jesuite that came from China, anno 1664, told Mr Waller, (the marter. To near a pint of the infusion take two yolks of new-laid eggs, and beat them very well with as much fine, sugar as is sufficient for this quantity of liquor; when they are very well incorporated, pour the tea upon the eggs and sugar, and sir them well together, and so drink it hot; this is good in a morning, or when one returns hone fatigued and faint; in which case a pleasanter beverage does not exist."

To make tea, and to serve it in a genteel and grareful manner, is an accomplishment in which

* Objections are sometimes made against seientific names, but in this age of inquiry and know-shillings per pound. ledge no one can reasonably object to giving its proper name to any natural object, as this designates it much more correctly and unequivocally than any popular or vulgar appellations. The propriety of this proceeding will be evident to those who reflect | Port.) that there they use tea sometimes in this how vague, and indefinite, and multiplied are many of the popular names given to insects.

This insect is not an Ichneumon as the genus now stands; but, as there are some doubts relative to its true place in the modern arrangement of these insects, I prefer retaining it in the old genus to which Linnseus would have referred it. Mr Say would probably call it a Ceraphron, while I am rather disposed to arrange it, and the parasite of the Hessian fly, in the genus Eurytoma, as defined by Laticille and Dalmann. It may be mentioned that this little i sect possesses the power of leaping, but

excepting that they seldom add either sugar er tea to a fine powder, by grinding the leaves in a farly by persons of consequence. In their parties, the rea table furniture, with the powdered tex inclosed in a box, is set before the company, and the cups are then filled with hot water, and as much of the powder as would fall a common tea- poor is taken out of the box, and put into each cup, and then stirred and mixed together with a curious denticulated instrument, till the liquor foams, in which state it is presented to the company, and sipped while warm. The common people, who can only abrain a coars r tea, boil it for some time in water. Early in the morning they put a large kettle of water over the fire, with the tea inclosed impediment in drawing off the liquor; and this forms their drink for the day, The water in Chiwithout this corrective, to be mufit for the purposes of life. Thus, we see, Providence has in every instance provided a remedy for evil.

The celebrated traveller Kalm observes, that in such long journeys as his, through the deserts in hot countries, where the water is unfit for use and full of insects, tea is almost as necessary as ples to the ordinary and even trivial occurrences food, as it relieves a weary traveller more than of life, that science diffuses her benefits, and percan be imagined. Dr Clarke, in his travels vol. feets her claim to the gratitude of mankind; thereii. p. 533,) says, the exhausted traveller, reduced fore, if one principle of making tea is preferable by continual fever, and worn by incessant toil, to another, it should be ettended to, however without a hope of any comfortable repose, experiences in this infusion the most cooling and balstrength is renovated.

in wood or metal, silver excepted,

a tray, with the cups and sugar, for when made out of the room, all its reviving spirit has evaporated before it reaches the guest. It is not the bitterness, but the fragrance of tea that is cheer-

It has been observed that the infusion made in silver is stronger than that which is produced in black earthenware. Polished surfaces retain heat leaves, better than dark rough surfaces, consequently the caloric being confined in the former case, must sandy or fat soil, although the Japanese plant it act more powerfully than in the latter. It is far as a border to their fields without regard to the ther remarked, that the silver when filled a sec-soil. and time, produces worse tea than the eartheaware; and that it is advisable to use the crockery ware, unless a silver vessel can be procured sufficiently large to contain at once all that may be required. These fac's are readily explained, by conside ing that the action of heat, retained in the silver vessel, so far exhausts the herb, as to leave little flavor for a second dilution; whereas the reduced tenmerature of the water in the earthenware, by extracting only a small portion at first leaves some for the action of subsequent dilutions.

masters, in the same manner as Europeans in form; and this must be the case, since it is dedancing, and other branches of polite education. monstrated that a sphere contains a given measure The Chinese pour hot water upon the tea, and under less surface than any other solid; from draw off the intusion in the manner now practised, which it follows, that where there are two vessels of equal capacity, one globular, and the other milk. Their neighbors the Japanese, reduce their square, oblong, elliptic, or cylindric, the spherical vessel, having less surface than the other, musi handmill; it is then mixed with hot water into a throw off less heat; and that, consequently, the thin pulp, in which form it is sipped, particulative will be greater in the former case than in the latter

The reason for pouring boiling water into the vessel before the injusion of the tea, is, that being previously warm, it may abstract less heat from the mixture, and thus admit a more powerful acnon. It is, with equal facility, explained why the infusion is stronger, if only a small quantity of boiling water be first used, and more be added some time afterwards. If we consider that only the water immediately in contact with the herb can act upon it, and that it cools very rapidly, especially in black earthenware, it is clear that the effect will be greater where the heat is kept up by either in a bag or a kind of basket, to prevent an additions of boiling water, than where the vessel is filled up at once, and the fluid suffered gradually to cool. When the infusion has once been comna is said to be mauscous and unwholesome, and, pleted, it is found that any farther addition of the herb only affords a very small increase of strength, the water having cooled much below the boiling point, and consequently acting very slightly: therefore it is better to make fresh tea in a second vessel, than to add it to the exhausted and cool leaves.

It is by the application of philosophic princitriffing it may be considered.

The cultivation of the tea, we may naturally samic virtues; the heat of his blood abutes, his conclude, forms an important part of the husbandspirits revive, his parched skin relaxes, and his ry of the Chinese, since it is a vegetable in such demand by the natives, for their home consump-We have experienced that tea will retain its tion, and also in so great request for exportation, flavor when kept in glass or china jars, better than It is therefore cultivated with much attention, al-(though it is often found in its natural state, par-As tea contains volatile parts that should be ticularly on the rugged banks of steep mountains, pre cryed, and in which its better qualities exist, where it cannot be gathered without the greatest the tea pot should be handed to each person on difficulty and danger. In order to obtain this tea where acress is impracticable, the inhabitants have resource to a singular expedient. A great number of monkeys generally resort to these steep places, and being irritated and provoked. tear off the branches and shower them down upon those who have teased them; the aggressors

The tea shrub does not thrive well in either a

Near the end of the first month of the Japmese year, that is, about the beginning of March, the mothers of families with their children and servants, go with their baskets into the tea plantations, when the weather is hot and dry, and rather the small tender leaves, that are not above three or four days old, and previous to their being unfolded; these are picked off one by one, taking great precaution not to break them or injure the shrub. However tedions this may appear. yet they will gather from four to ten, or fifteen It is supposed that the infusion is stronger in a pounds in a day. This first gathering is called

people of both sexes, in Japan are instructed by globular vessel, than in any one of a different fichi tsian, or tea powder, because it is used polverised. Towards the evening, they carry these leaves to the house or building erected for the purpose, containing a number of small stoves, where they are put on a hot polished from plate namediately, before they have time to ferment, m which case they would turn black; they contime to turn them about until they are witheres; when they are removed on to mats, or paper, and left to cool, after which the leaves are folded or eurled in the palm of the hand; they are then placed on a second hot plate, and turned as before with the hand till they are tolerably firm. They are then cooled suddenly a second time, by agitating the air. This operation is repeated three or four times in order to extract all the moisture from the leaves. The principal object of cooling the leaves quickly is to preserve the curl, which must also preserve much of the flavor. The more curious are put into glass bottles well corked, others into square boxes varnished and lined with lead and then neatly papered. In about six days, this tea is again spread on the table and all the leaves that have been over dried or scorehed, are taken out and put with common tea. It is often dried a fifth time, to make it more secure for keeping.

The Dutch, with all their boasted cleanliness, have a disgusting practice in drinking tea; for instead of adding sugar to their cups, they generally suck a piece of sugar candy, which they take out of their mouths when they drink. We hear of instances in that country, where one piece is said to answer the purpose of the whole family.

[Tobe continued.]

HORTICULTURAL ANOMALY.

The Editor of the Providence Free Press, in copying Mr Prince's communication from the New England Pari or of the 25th of June, respecting many of his apple trees having produced double blossoms this season, has added the following remarks;

The confirmation of the truth of the above anomaly in the vegetable kingdom. I can certify as coming under my observation. Above twenty years ago, while a minor and living with my father, in the town of Mansfield, Mass, he inoculated an apple tree, in the month of July, which had surung up in the garden from the seed, was very thrifty and the second year of its growth. It was inoculated about nine inches from the ground and the next spring the ton was taken off. In the month of May it blossomed. From one bud there sprang two distinct blossoms, one of them was the most extraordinary blossom that I ever beheld on an apple tree. It was a double blossom and collect these branches and strip them of their resembled in appearance a white rose, with petals almost as large and equally as numerous. The stem was of an uncommon length, I think about 5 inches long. There was no appearance of any apple attached to it.

> Another fact equally as singular was, that there was another blossom from the same bud of usual form and appearance, from which grew and came to nesturity an apple, remarkably fair and of larger size than common for the kind, which was the sour red streak. The apple stayed on until plucked off after the frests in autumn had commenced. Many came to see the curiosity, who declared they never saw or heard of the like before. The inoculation grew to the length of three feet that season, in two branches.

DISEASES OF HORSES. [Continued]

FARCY is intimately connected with glanders; they will run iaio each other, or their symptoms will usingle together, and before either arrives at its fatal termination its associate will almost invariably appear. An animal inoculated with the matter of farcy will often be afflicted with glanders, while the matter of glanders will frequently produce farcy. They are different types or stages of the same disease. There is, however, a very material difference in their symptoms and progress, and this most important of all, that while glanders are generally incurable, farey, in its early stage and mild form, may be successfully treated.

Veterinary writers tell us that it is a disease of the absorbents in the skin. The small arteries are employed in building up and nourishing the various parts of the body; and another set of vessels are busied in taking up and carrying away that which is worn out and useless. There is no part of the body on which thousands of these little tubes do not open. Those of the skin are not only employed in removing useless materials, but in taking up various substances, and principally fluids which may be in contact with the skin. The little vessels which are thus occupied, collect together and form larger branches, which run in company with the superficial veins, and therefore farcy was once supposed to be a disease of the veins, and the tumors by which it is characterized accompany the course of the veins. The poison which they take up produces inflammation in them, which gradually spreads along the absorbent, and causes it to swell,

These vessels, small as they are, contain valves like those in the common pump, which permit the fluid to pass one way, but prevent its return. The inflammation, which pursues the natural course of the thuid through these tubes, that is, towards the reservoir into which it is thrown before it enters the heart, seems to be arrested by these valves, and they inflame and swell; and therefore the first indication of this disease, even before any drooping, or loss of condition, or of appetite, is generally the appearance of little tumors-farcy buts-close to some of the veins, following the course of the veins, and connected by increased to a scruple, with two drachus of together by a kind of cord, which farriers call corded veins. When they are few and small they may possibly exist for several weeks without being observed; but at length they increase in number and in size, and become painful and hot, and some of them begin to ulcerate. They appear culargement of the limb, and lameness.

In some cases, however, the horse will droop for many a day before the appearance of the buttons or farcy buds ;-his appetite will be impaired; -his coat will stare ;-he will lose flesh. The poison is evidently at work, but has not gained sufficient power to cause the absorbents to swell. In a few instances these buds do not ulcerate, but become hard and difficult to disperse. The pro- useful, and the leg should be frequently fomentgress of the disease is then suspended, and possi- ed with warm water. In both cases, although bly for many months the horse will appear to be the air should be fresh and cool, the florse should at which be is now worn out and destroyed. Mr restor d to health; but he bears the seeds of the be warmly clothed. inalady about him, and, all at once, the farey assames a virulent form, and hurries him off. These

little tumors or lomps of surfeit. They are ge- is a dropsical affection of the skin, either of the nerally higher than these tumors; - not so broad; -have a more knot; y feel, and are principally found on the inside of the limbs, instead of out-

The increase of these buds marks the progress of the disease, and that progress is retarded by the resistance of these valves. The ulcers spread around, and are cured with considerable difficulty. Larger tumors appear in the groin and between the fore-leg, and olccrate and spread, and the hollows and burrowings run deep in every tirection, and the horse becomes a miserable and loathsome object. Glanders speedily appear, and death ensues.

Few things are more unlike, or more perplexing, than the different forms which farcy assumes at different times. One of the legs, and particuburly one of the hinder-legs, will suddenly swell to an enormous size. At night the horse will appear to be perfectly well, and in the morning one leg will be three times the size of the other, with considerable fever, and scarcely the power of moving the limb.

The treatment of farey varies with the form it assumes. In the button or bad farcy, a mild dose of physic should be first administered. The buds should be then carefully examined, and if any of them have broken, the budding iron, of a dull red heat, should be applied to them; or if matter should be left in them, showing that they are disposed to break, they should be penetrated with the iron. These wounds should be daily inspected, and if, when the slough of the cantery comes off, they look pale, and foul, and spongy, and discharge a thin matter, they should be frequently washed with a lotion, composed of a drachm of corrosive sublimate dissolved in an ounce of rectified spirit; the other buds should likewise be examined, and opened with the iron as soon as they evidently contain matter. When the wounds begin to look red, and the bottom of them is even and firm, and they discharge a thick white or yellow matter, the friar's balsam will speedil, heal them. As, however, the constitution is now tainted, local applications will not be sufficient, and the disease must be attacked by internal medicines, age, or dollness and sluggisiness. as soon as the physic has ceased to operate. The corrosive sublimate will be the best alternative. and may be given in doses of ten grains, gradual gentian and one of ginger, and repeated morning and night until the ulcers disappear, unless the horse is violently purged, or the month becomes sore, when a drarhm of blue vitriol may be substituted for the corrosive sublimate. During this, the animal should be placed in a large box, with a usually about the face or neck, or inside of the free circulation of air; and greek grass, or carrots, thigh, and in the latter case there is some general the latter more particularly, should be given him, with a fair allowance of corn. If he could be turned out during the day, it would be advantageous; but at all events he should be daily exer

In the species of farcy attended with enormous swelling, it will be prudent to bleed moderately as well as to physic. The iron will not be necessary, but the same alterative medicine will be

THE LIPS.

The lips of the horse are far more important organs than many suppose. They are, in a manner, the hands of the horse; and if any one will take the trouble to observe the manner in which he gathers up his corn with them, and collects together his grass before he divides it with his nippers, he will be satisfied that the horse would be no more able to convey the food to his mouth without them, than the human being could without his hands. This has even been put to the test of experiment. The nerves which supply the lips were civided in a poor ass, to illustrate some point of physiology. The sensibility of the lips was lost, and he knew not when he touched his food with them; the motion of the lips was lost, and he could not get the oats between his teeth, although the manger was full of them; at length, driven by hunger, he contrived to lick up a few of them with his tongue, but when they were on his tongue, the greater part of them were rubbed off before he could get them into his mouth. It is on account of this use of the lips, that the faces of all quadrupeds are so lengthened that the lips may be brought into contact with his food, without inconvenience or injury to other parts of the

The lips of the horse should be thin, if the beauty of the head be regarded, for if they are loaded with far they connot be so sensible as they ought to be: yet, although thin, they should evidently possess power, and be strongly and regularly closed. A firm, compressed mouth gives a favorable and no deceptive idea of the muscular power of the animal. Lips apart from each other, and hanging down, indicate weakness or old

The depth of the month, or the distance from the fore part to the angle of the lips, should be considerable, first, for the sake of beauty. A short protuberant mouth would be a bad finish to the tapering face of the blood horse ;-more room is likewise given for the opening of the nostril, which we have seen to be an important consideration. The bridle will not be carried well, and the horse will hang heavy on hand, if there be not considerable depth of mouth,

INDICATIONS OF OLD AGE IN A HORSE.

The general indications of old age, independent of the teeth, are deepening of the hollows over the eyes,-gray bairs, and particularly over the eyes, and about the muzzle; thickness and hanging down of the lips; sharpness of the withers; sinking of the back; lengthening of the quarters; and the disappearance of windgalls, spavins, and tumors of every kind.

Of the natural age of the horse we should form a very erroneous estimate, from the early period Blaine tells us of a gentleman, who had three The Water Farcy, confounded by name with horses, which died at the ages of thirtyfive, thirtythe common farcy, and by which much confusion seven and thirtynine. Mr Cully mentions one

Preston, in 1715, and which was extracted at his death, in 1758; and Mr Percival gives an account. of a barge horse that died in his sixtysecond

Lightning .- It is curious to find that the conductor or lightning rod, which so many men of genius, learning, and ingennity, have been at the pains to complete, which in fact has always been regarded as one of the prondest trophics of science-was known and employed by a people of no more refined cultivation than the wild peasantry of Lombardy. The Abbe Berthollet, in his work on the electricity of Meteors, describes a practice used in some of the bastions of the Castle of Duino, on the shores of the Adriatic, which show rather than use. has existed from time immemori I, and which is literally neither more nor less than the process that sentinel was made sure that a storm impended, ing it a fair trial .- Norristown Free Press. and he tolled a bell which sent forth the tidings of danger to the surrounding country. Nothing can be more delightfully anniable than the parent about 50,000 silk worms are now at work. Mr al care of its subjects which this interesting pro- Abbott has been active in introducing them. vision of the local government exemplified. The admonishing sound of the bell was obeyed like a preternatural signal from the depth of the firmament; shepherds were seen hurrying over valleys arging their flocks from the exposed fields to places of shelter. The fishing boats, with which the coast of the Adriatic was generally studded. forthwith began to crowd sail and make for the nearest port, while many a supplication was put up from many a gentle and devout heart on shore, before some hallowed shrine, for the safety of the li.tle fleet. - Monthly Review.

MECHANICS.

If we look round within the circle of our acquaintance, we shall find that many of our most respectable citizens are mechanics. Several of the first merchants in this city were once mechanics, many of our professional men were in conth mechanics. Several of our most distinguished legislators, philosophers and statesmen, were also once mechanics. How did they rise to their present eminence? It was by the cultivation of their minds in useful knowledge, by feeling a proper respect for themselves which led them to form regular, industrious and frugal habits, and thus have they secured the respect and confidence of their employers, and risen to the affluence and respectability which they now enjoy. The same ness is of the worst sort. It spoils health, dispath of honor and usefulness is opened to every mounts the mind, and unmans men. It reveals person in our happy republic; and we hope that secrets, is quarrelsome, la civious, impudent, danamong us to imitate these examples, that they may and usefulness .- N. Y. Even. Jour.

A CURE FOR THE BITE OF A SNAKE.

Mr James Johnson, of Pikeville, Md. states that last summer, a black man was bitten mon the finger in the dark, by a snake supposed to be a copperhead. His arm swelled to twice its ordinary size. A physician had a strong decoction patience and impartiality. - Wm. Penn.

of the bark of the yellow poplar, or American tulip tree, made, with which the swelled part was washed often, a half pint given him to drink every half hour, and the bruised bank put on as a poultice. - The pain soon ceased, the swelling subsided, and the man got well.

VALUE OF TIME.

An Italian philosopher expressed in his motto, that 'time was his estate;' an estate which will indeed produce nothing without cultivation; but which will always abundantly repay the labors of industry, and satisfy the most extensive desires, if by their being girdled by a small bug which cats no part of it be suffered to lie waste by negligence. to be overrun with noxious plants, or laid out for

To destroy insects that infest Peach Trees .enabled Franklin to bring down lightning from Take 2 lbs. soft soap, 2 lbs. of flour of sulphur, the clouds. HOSTON, FRIDAY, JULY 23, 1830.

From the National Ægis

PEAR TREES.

Some three or four years since a disease appeared on pear trees, which from the appearance assumed after the attack, was called the fire blight.

Some insisted that the rapid decay of the branches of apparently healthy trees, was occasioned its way in the sap wood nearly or quite round tho limb, that this bug was not more than one tenth of an inch in length, and various other particulars.

Others urged that it was a new disease among fruit trees and probably arose from a change of the sap, effected by the powerful rays of the summer sun operating upon an unusually luxuriant growth of new wood, that the sap became sour or its qualities materially changed,

Communications supporting these two opposite theories appeared, and the writers on both sides after much discussion remained satisfied of the correctness of their different theories.

The writer of this, in order to satisfy himself, examined a number of limbs affected with the fire blight, some of which were more than three feet in length; he separated the limbs from the parent tree, so close to the body as to take a piece of the bark from the trunk, then carefully split the Embs from end to end, keeping the split as near the centre of the limb as possible, and for most of the length in the pith. He then minutely and thoroughly examined the halves of the limb thus prepared with a good compound microscope, (its magnifying power about ten degrees,) and was not able to discover the slightest trace of a perforation made hy any big or juscet in either of the pieces.

In order to be more sure of the fact, he again divided the halves of the limb into two equal longitudinal sections, and subjected the fresh sides thus exposed to the test of the microscope, still no appearence of the work of an insect could be discovered. It was evident that the cause of this decay of the limbs was somewhere in themselves, for the limbs examined were in that part next to the trank of the trees in a still flourishing condition, the extremes for near half the length; were dead. and the limbs were taken off close to the wood of the trunk. If it was the work of bugs or insects that caused this premature decay, the part eat noist have extended nearly or quite round the limbs before they would perish for want of the necessary supply of sap. By the result of the investigation it appears that if any bugs or insects were in the limbs at all, their path could not have extended round one quarter part of the circumference of the limb, and of course could not have out off so much of the supply of sap as to injure the limb,

The back of the limbs was all taken off, and the alburnum and bark both carefully examined by the eye, and with the microscope; here seemed to be the seat of the disease, the albumum was at the small ends of the limbs black and discolored for half their length towards the trunk of the tree; this discoloration did not extend equally round the trunk, but would on one side perhaps, be an inch in advance of its opposite,

The writer does not undertake to assign a cause for the fire blight, but merely says, that from a offinite and careful examination, he is well ratisfied that in the limbs he examined it never was

caused by the work of an insect. - That bugs or ness, do not require the growth to be so open as insects may and do sometimes work in the limbs of the pear trees he does not doubt, but he is equally firm in the behef, that there is a disease often affecting the pear tree, external indications chards and open plantations, against which we of which are similar to those exhibited on limbs know not a remedy. This is called a fire blast, of that tree girdled by bugs or insects, which originates from an entirely different cause.

Remarks by the Elitor of the N. E. Farmer .- It has been said to be umphilosophical to suppose more than one cause to an effect; and as blight in pear trees is an effect sometimes produced by an insect called Scolylus pyri, therefore we should be satisfied with that cause for blight, and autribute every blight which ever affects pear trees to that insect. But we might as well say that a defective tooth was cause sufficient to account for the effect in the human body yeleped pain, and whenever the latter existed we might take it for granted that a tooth extractor was the proper application,

Blight is a withering or blasting of substances belonging to the vegetable kingdom while in a state of growth. Whatever causes such withering or blasting is the cause of blight. The blight mentioned above by "Agricola," is probably what is called by writers fire blight. The blight in the limb of a pear tree, sent us by Dr Fiske was, no doubt, caused by scolytus pyri, and it as different from fire hlight as gont from yellow fever.

Dr Coxe says, That species of blight which is sometimes called the fire blight, frequently destrays trees in the fullest apparent health, in a few hours, turning the leaves suddenly brown, as if they had passed through a hot flame, and causing a morbid matter to exude from the pores of the back, of a black, foreignous appearance; this happens through the whole course of the warm season, more frequently in weather both hot and moist, affording reason to believe that it arises from rays of the sun operating on the vapor, or clouds floating in the atmosphere, either by concentration or reflection. It generally, though not always, is perceived most in confined places: certain kinds, and particularly that most exquisite of our winter pears, the St Germain, seems peculiary liable to this species of blight. I have in twenty years lost upwards of fifty trees in the fullness of vigor, sometimes in the most open airy situations, and in every kind of soil. From repeated observation of the kinds most liable to this malady, I have been led to believe, that it is somewhat connected with a principle which appears to be considered as a sound one by the most judicious European writers, when treating of apple trees, that is, the long duration of the variety. It is certain, that natoral trees, continually springing up from seed, are seldem attacked by this discase; and the Seckle pear, generally supposed to be a new variety, is but little affected by it-of fifty bearing trees of this kind, of various ages, I have not lost one entire tree from this cause-this year, for the first time, I have perceived the limbs of some of them partially affected, and in some instances several large branches have been destroved. From the great vigor and rapidity of vegetation in America, pear trees, if much pruned, are apt to grow too fast; this appears to render them more liable to the effect of the fire blight than otherwise they would be-I have therefore changed my mode of trimming them under this impression, confining it very much to suckering, and merely forming the tree-our heat and dry-

in Europe,

Miller's Gardener's Dictionary says, 'There is a sort of blight, which is often destructive to orwhich in a few hours has not only destroyed the fruit and leaves, but many times parts of trees, and sometimes entire trees have been killed by it,

'This is supposed to have been effected by voltimes of transparent flying vapors, which among the many forms they revolve into, may sometimes approach so near to a hemisphere or hemias thereby to make the beams of the sun converge present season, being the upper story of a Hive enough to search plants or trees they fall upon, in proportion to the greater or less convergency of the sun's rays.

'Against this enemy to our fruits there is no guard to our trees, nor any remedy to cure it: but as this more frequently happens in close plantations (where the stagnating vapors from the earth, and the pleutiful perspirations from the trees are pent in for want of a free air to dissipate and expel them; which are often observed in still weather to ascend in so plentiful a manner, as to be seen by the naked eye, but especially by reflecting telescopes, so as to make a clear and distinct object become dim and tremulous) than in those which are planted at a greater distance, or are not surrounded with hills or woods; this directs us, in the first planting of kitchen gardens and orchards, &c, that we should allow a greater distance between the trees, and to make choice of clear healthy situations, that the air may freely pass between the trees to dissipate those vaporbefore they are formed into volumes, whereby the circumandient air will be clear, and less subject to injuries; as also that finits produced in this clearer air will be much better than those that are surrounded with a thick rancid air; for as fruits are often in a respiring state, they conscquently, by imbibing a part of these vapors, are rendered crude and ill tasted."

Elinburgh Review .- Wells & Lilly have this day published. No. 101 of the Edinburgh Review, which contains elaborate articles on the following subjects.

Naval Tactics, Breaking of the Enemy's Line-Sir James Turner's Life and Times; Scottish Covenanters - Public Schools of England; Eton-Astronomical society of London: Recent History of Astronomical Science—Scottish Judicial Reforms; Law of Scotland and England-Public Registry in England-Duty on Coal; Coal Trade-Mr Robert Montgomery's Poems; and the modern Practice of Puffing - Finance: The Budget-Delavigne's Marino Faliero; Anglo-French Drama-Life and Correspondence of Sir Thomas Muuro. Quarterly List of New Publications. - Price \$5.00 per annum.

MASSACHUSETTS HORTICULTURAL SOCIETY

Cherries .- From Mr Robert Manning of Salem, fruit of the Plam Stone Morella. This cherry is of a large and fine appearance and of good flavor of the kind. Mr Manning states that they are good bearers; they are well described in RUFUS Howe, from garden of S. Downer, Dorgood appearance but rather acid flavor.

Gooseberries, ... From Mr SAMUEL WALKER, C Roxbury, finit of five varieties, (names not given consisting of small, medium, and very large sized The medium was preferred for eating. From M N. Seaver, of Roxbury, five varieties, viz: Roar ing Lion, Bang-up, Jolly Angler, and two, name unknown; all which were of a large and fine appearance. The first named had the preference eight of them weighed 4 oz, 4 drs., and one 12 dwts. Mr Seaver states his bushes are all young and small, being the first year of bearing and have averaged one quart each.

Honey .- From Rugus Howe, from S. Downer's cylinder, either in their upper or lower surfaces, Garden, one box filled with Honey, made the It presented a most beautiful and delicate appeararea; weight, 15 lbs. Mr Howe Tates he comnenced this spring with ten hives, many of which were in a weak state, from which he now has thaty; he has taken from the laves about one fauldred and fifty pounds of new honey, and will probably have as much more before the season is past; and that the Boe Miller or Moth, which has been so destructive to Bees in this vicinity appears to have in a great measure ceased its ravages.

The Committee on Vegetables have awarded the premium for Early Potatoes to Mr SAMUEL POND, of Cambridge, and for Early Beets and Early Canliflowers to Mr NATHANIEL SEAVER, of Rosbury.

Boston, July 21, 1830.

It is now the season when children, and others who ought to know better, eat maripe fruit, and cholera morbus and dysentery commence their rayages. In the week ending 10th inst., 30 persons died in Philadelphia of these disorders,-Boiled milk, thickened with a little floor, is an almost certain care for dysentery, in common cases.—Boston Patriot.

From a valuable little work entitled ' Seventy five

SEASONABLE RECIPES. GOOSEBERRY PUDDING.

A pint of stewed gooseberries, with all their inice.

A quarter of a pound of powdered sugar.

Two onnees of fresh butter.

Two ounces grated bread,

Three eggs.

Stew the geoseberries till quite soft .- When they are cold, mash them fine with the back of a spoon, and stir into them one half of the sugar. Take the remainder of the sugar, and stir it to a cream with two ounces of butter.

Beat the three eggs, and stir them into the butter and sugar, in turn with the gooscherries, and the grated bread.

Lay puff-paste in a soop-plate. Put in the mixture, and bake it half an hour.

Do not grate sugar over it,

Boston Pudding.-Make a good common paste with a nound and a half of flour, and three quarters of a nound of butter .- When you roll it out the last time, cut off the edges, till you get the sheet of paste of an even square shape.

Have ready some fruit sweetened to your taste, If eranberries, gooseberries, dried peacires, or damsons, they should be stewed in very little water. Prince's Treatise on Horticulture, p 29. From drained, and seasoned with nutmeg, rese water, and lemon. If currants, caspherries, or black herchester, fruit of a French Cherry, (name lost) of ries, they should be mashed with sugar, and put into the pudding raw.

Spread the finit very thick, all over the sheet of paste, (which must not be rolled out too thin,) when it is covered all over with the finit, roll it up, and close the dough at both ends, and down the last side. The the pudding in a cloth, and boil

Eat it with sugar. It must not be taken out of the pot till just before brought to the table.

Red Current Jelly .- Wash your currents, drain them, and mek them from the staiks. Mash them with the back of a spoon. Put them in a jellybag, and squeeze it till all the juice is pressed but. To every pint of juice allow a pound of the best loaf sugar. Put the juice and the sugar into cour kettle, and boil it fifteen minutes, skimming tall the while. Pour it warm into your glasses, set it several hours in the sun; and when cold, ie it up with brandy paper.

Jellies should never be allowed to get cold in he kettle. If boiled too long they will lose their lavor, and become of a dark color.

Strawberry, raspberry, blackberry, and grape elly may be made in the same manner, and with he same propertion of loaf-sugar,

Raspberry Jum .- Allow a pound of sugar to a found of fruit. Mash the rasoberries and out hem with the sugar into your preserving kettle. Boil it slowly for an hour, skimming it well. The : up with brandy paper,

All iams are made in the same manner.

Black Cake. - Three pounds of butter and three ounds of sugar beat to a cream, three glasses of randy and two of rose water, twentyeight eggs nd three pounds of flour added by degrees toether, six pounds of currants, six pounds of seed-I raisins, one ounce of cinnamon, one ounce of utmeg, three quarters of an ounce of cloves, half rounce of mare, one bound of lemon. Two rge loaves, baked five hours.

Cockroaches .- the sapient Sancho Panza de ares that there is a remedy for everything but ath; and it is truly happy for mankind that the ultiplication of this postilent race can be repressby aid of their own voracity. If to a quantity Indian corn meal about one third of white or d lead is added, and the mixture moistened with olasses, so as to make it moderately adhesive. e cockroaches will gladly devour it. The repition of this poisoned food for a few nights is nerally sufficient to reduce their numbers to a ry few, even in the most infected houses, and ill eventually cause the destruction of the whole, Soda. - A few onness of soda will soften a hogsad of the hardest water. It is greatly superior wasting to either pot of pearlash, giving a delite winteness to the linen, without the slightest inry, and it never, unless excess is used, in the ast affects the hands.

A Profitable Gooseberry Bush .- Dr S A. Shurtleff sed the present season in his garden, near Pemberton's ill, in Boston, on a single Gooseberry bush, one bushel Goo-eberries of superior quality. The fruit sold at 20 n's per quart, amounting in all to \$6,40.

Our printer desires us to state that the present exssive warm weather has had so unfavorable an effect on the composition rollers used at the Steam Power ess, as to render it impossible to get out this wee; 's per in so workmanlike a manner as is desirable; on this count we have deferred printing the title-page and tex to the eighth volume; it will probably be issued th our next paper.

To Correspondence, — We are obliged this week to fer eight communications; among which are one on mestic Wines, by J. M. G .- Remarks on the Hestian and of a parasitir In ect that fee Is cpon it - &c, &c, all of which will soon appear.

B 1 Subscubers to the New England Farmer are informed that they can have their volumes neatly half-bound and lettered by sending them to this office.

Roman.

This elegant, full blooded borse, a bright bay, with black legs, mane, and tail, of high spirit and good temper, will stand at the farm of Mr Stephen Williams, in Northborough, Ms. at 20 dollars the season, to be paid before June 25 the mares are taken away.

Turnip Seed, &r.

For sale at the Seed Store connected with the New England Farmer Office, 52, North Market-street,

An extensive a soutment of Turnip Seeds, of the most duable sorts for family use or stock. The most approxvaluable sorts for family use or stock ed kinds for the farmer, are the White Dutch, Stone, Yellow Stone and Yellow Malta. The two latter are of uncommon excellence, and keep well London describes the Yellow Malta as 'an excellent and beautiful root,' and of delicious flavor. Of the sorts for field culture, the White Norfolk, Yellow Aberdeen, White Flat, and Ruta Baga, are the best. The Yellow Aber deen is most approved among the Farmers of England and Scotland, as it glows to a large size is very sweet and muri ious, and keeps till June. The above seeds were saved in Europe expressly for this Establishment. and the utmost dependence may be placed on their genuine quality.

200 lbs. of the finest English White Flat Turnip Seed. raised this season, expressly for this Establishment, by Mi AARON D. WILLIAMS, of Roxbury, and warranted of the first quality, for sale, wholesale and retail.

Also, a variety of Long and Turn'p rooted Radishes, suit able for sowing the ensuing months, Long Prickly, and many other varieties of Cucumbers for pickling.

Chloride of Soda.

For sale at the Seed Store connected with the N. E. Farmer, 52 North Market-street-A few dozen bottles of Chloride of Soda, for preserving meat, removing offensive mells, neutralizing pestilential exhalations, and destroying contagion; prepared by the New England chemical company for Lowe and Reed. This valuable article is particularly described, page 390 of this week's New England Farmer .- Price \$1,00 per bottle, with directions.

Bolivar Calves, Saxony Bucks, and Bremen Geese.

For sale, t Bull Calves, sited by the celebrated imwhich stock have produced 36 quarts of oalk a day. No. I, dam Grey Brown, half Colebs and half Galloway. No. 2, dam Juno, three fourths Fill Pail. No. 3, dam Ceres, her sire Cœlebs, her dam Mr Gray's imported Cow. No 4, dam Beauty, half Cœlebs and half Galloway. The alves are beautiful, and their dams all great milkers.

Two imported Saxony Bucks, 2 Yearlings, and 2 Lambs. 3 pairs of Bremen Geese. Inquire of Benjamin Shurtleff, Jr, Chelsea, or at 52 Hanover Street, Boston.

Medical School in Boston.

The Courses of Lectures begin annually on the third Wednesday in October, and are continued daily for three months, on the following subjects :-

Anatomy and Surgery, by John C. Warren, M. D. Chemistry, by John W. Webster, M. D.

Materia Medica, by Jacob Pigelow, M. D.

Midwifery, and Medical Jurispendence, by Walter

Channing, M. D.

Theory and Practice of Physic, by James Jackson, M D. The apparatus and collections of specimens used in illustrating the demonstrative courses, are very extensive. The fees for all the courses amount to \$70. Board is

obtained for about \$3 per week.

This institution now offers greater advantages for the equirement of a thorough Medical education, than it has done at any former period of its history. During the last two years the means of obtaining practical knowledge of the anatomical structure of the human body have been amply supplied to pupils, probably at a less expense than in any other of the schools in the United States. The opportunity of witnessing numerous important and capital operations in surgery, and of attending the clinical practice of one of the best regulated hospitals in this country, are gratuitously afforded to all who attend the lectures of the professors. 5t

Chloride of Lime.

For sale by Ehenezer Wight, Druggist, Milk Street, opposite Federal Street, Chloride of Lime, well known for posite recertai cites, constitutions effluvia, and for its there be any change, that it will be a farther advance.

Mucduff

For sale-price \$300 He is a full bred Durham Short Horn Bull, bred by Mr Power, of Philadelphia - red and white; calved in June, 1827. Dam-Annabella, sold at the auction of Mr Power's cattle, June 16, to Mr Freeman of Baltimore, for \$310. Size-Mr Powel's celebrated Bull, Malcolm.

The stock from Macduff has proved good. The Bull may be seen on the farm of the subscriber, near Newark, New Jersey. Letters directed to him, 27, Nassau-street, New York, will be attended to.

New York, June 22, 1830.

BRIGHTON MARKET-Monday, July 19. [Reported for the Chronicle and Patriot.]

At Market this day, 279 Beef Catile, including about 50 unsold last week-unsold at the close of the market between 90 and 100-10 Cows and Calves, and 2209

Prices—Beef Cattle—Sales dull, from \$3.50 to 4.50.
Cows and Calves—We noticed the sale of three only

at \$17 and 25. Sheep-Sales brisk, fair lots at \$125 a 2-some probably brought more than \$2, and we noticed a few taken

for less than \$1-quality poor. Swine-none at market.

The Wool Trade - in elligent dealers in wool express the opinion that wool will hold its present price, and if

MISCELLANIES.

COFFEE.

There are probably many house-keepers who for the preparation of an important item of domestic luxury. It is somewhat remarkable that an infusion which may be made with great case, and in a very short space of time, is, in many families, the cause of more vexation and complaint than all the other petty annoyances of the household put together. The suggestions below, which we copy from the Virginia Literary Museum, may be the means of soothing the diurnal irritation of many an unquiet spirit,-Bos. Doi. Adv.

1. The raw coffee should be round and small grained, free from dirt and of a light color. It should have no appearance of mouldiness, and be quite free from any strong smell. It should not be long kept in sacks with other provisions, as there is no substance more apt to obtain strong and disagreeable odors from the presence of its neighbors. Rum injures it; and Miller even goes so far as to state, that a few bags of pepper, on board a ship from India, upon one occasion, spoiled the whole cargo.

2. When the grains are large, flat, and of a green color, they should be kept on hand, in a dry situation, a long time before use. Every West Indian planter knows this fact, although his interest too often induces him to send the artiele to market before it is old and dry enough.

3. Roasting coffee is by far the most difficult operation of the housekeeper; when earried far enough, an aromatic oil is formed by the heat and forces itself out upon the surface of the grains, giving them a glossy appearance, and an odor which is considered their perfection; yet too little reasting prevents the aroma from appearing, and too much completely volatilizes it, leaving nothing but a flat bitter taste. The heat should be strong and the operation shortened as much as possible, without burning the grains. The roaster should be close or well covered all the time, and, in order to improve the looks and flavor, a small piece of butter may be added to the coffee, while parch-

4. When thus prepared, coffee may be preserved for use in large quantities, without losing much of its freshness, provided the vessels containing it, be kept well covered.

5. An infusion of coffee is better than a decortion, simply because the heat, in the last case, being stronger and more lasting, drives off more of the aromatic oil. It is better, therefore, to grind the coffee very fine, and then expose it by means of a bag or strainer, to the action of hoiling water, than to boil it any length of time, Heat, although unavoidable, injures the flavor, and the best coffee I remember to have tasted, was made by exposing the powder to a pressure of cold water; a tea-spoonful of this extract, thrown into a cup of hot water is sufficient. It is not a bad method to allow the ground coffee to lie in cold water between meals, and then to prepare it by adding hot water.-Just in proportion to the continnance of heat in this and the last operation, the through. At some seasons of the year, when the fragrance disappears, and is replaced by a strong bitter taste which, according to the experiments of Chenevix, depends upon the presence of tannin

THE WEAZEL.

The following story is told in Selkirk-shire .- A group of haymakers while at work saw an eagle rising above the steep mountains that enclosed a narrow valley. The eagle himself was no unusual sight, of white or red lead is added, and the inixture i will be interested in the following simple roles but there is something so imposing and majestic in this noble bird, while he soars upwards in spiral circles that it fascinates the attention of most people. The spectators were soon aware that there was something peculiar in the flight of the bird they were observing. He used his wings violently and the strokes were often repeated as if he had been alarmed and hurried by unusual agitation, and they noticed at the same time that he wheeled in circles constantly decreasing, while his ascent was proportionally rapid. The now idle haymakers drew together in close consultation on the singular case, and continued to keep their eyes on the scemingly distressed eagle until he was nearly out of sight, rising higher and higher in the air. - In a short time. however, they were convinced that he was again rapidly seeking the earth, evidently not as he ascended, in spiral circles, but as something falling with great rapidity. But as he approached the ground they clearly saw he was tumbling in his fall like a shot bird, the convulsive fluttering of his powerful wings, stopping the descent but very little, until he fell at a small distance from the party .- A large They had baths in almost every house, and some c buck tailed weazel or stoat, ran from the body as they came near, turned with the usual nonchalance and impuderce of the tribe, stood upon its hind legs, crossed its fore paws over its nose, and surveyed its enemies a moment or two (as it often does when no dog is near) and bounded into a bush. The of every house, and there are many baths at tavern king of the air was dead, covered with his own blood, and upon further examination they found his throat cut, and the stoat has been suspected as the regicide unto this day.

> A friend mentioned the following fact that came under his own observation .- A light snow covered the ground, and he, while walking out to an adjoining hill, fell in with the track of one of these weazels. which is easily to be distinguished from that of the smaller species by the larger foot print and length of the spring among the snow. He followed the track for some time for his amusement, along the sides of the hill until he came to the marks where a pair of grouse had been sitting, when he lost all trace of the weazel and could follow it no further. As there was no appearance of a hole he was much surprised, and paying close attention to the track of the animal, he became convinced that it had made a spring upon one of the birds which had flown away with it. The conclusion is that the stoat knew quite well what it was about, and would keep its hold until it came to the ground again under similar circumstances with the eagle .- Mag. of Natural History.

> > COCKROACHES.

These insects are among the most disagreeable of the annoyances to which the dwellings of man are subject, and, where their multiplication is permitted the ravages they commit are extensive and vexatious. They are all nocturnal, and exceedingly agile; their flattened bodies allow them to hide, with ease, in every crevice, whence they sally forth in hordes during the night, to devour every sort of provision which is not secured from their voracity. Like all other depredators, they are thrown into confusion and put to flight by the presence of light, whence they were, in ancient times, appropriately called lucifugw or light-shunners. Their destructiveness is not confined to articles of provision for the table; silk, woollen, and even cotton cloths are devoured, or rendered useless by being gnawed male cockroaches fly about, they are very troublesome, especially about twilight, when they dash into rooms, and often strike against the faces of those precreambling that in tan bark.) Roasting, hesides forming this bitter substance, deprives the coffee of nutritious qualities.

COURLEVER TO THE CO.

FOR THE NEW ENGLAND FARMER.

Extracts from a paper entitled 'Some account of the Insect known by the name of the Hessian fly, and of a parasitic insect that feeds on it. By Thomas San [Journal Acad. Nat. Sciences, I. p. 45, &c, accoupanied by a plate.]

'The well known destroyer of the wheat, his received the name of Hessian fly, in consequence of an erroneous supposition that it was imported in some straw with the Hessian troops during ne revolutionary war. But the truth is, it is absolutly unknown in Europe, and is a species entirey new to the systems. The insect described by Mr Kirpy, in the Trans. Lin. Soc. of London, vol. ix p. 232, and named by him Tipula Tritici, is without doubt of the same genus with this, but specifically distinct. The Hessian fly belongs to the order Diptera, (containing the two-wingel flies,) and genus Cecidomyia, which includes insecs resembling little long legged gnats. The Hessian fly is thus named and described.

' Cecidomyia destructor. Head and thorax black wings black, tawny at base; feet pale, covered with black hair. Length rather more than three twentieths of an inch.' The eggs are elongated. somewhat cylindrical and of a yellowish color. The grub or larva is whitish, without feet, and when taken from the culm is almost inert, exhibiting very little motion to the eye. It is the twentieths of an inch in length, and one twentieth in thickness. The pupa resembles the mature larva, but is of a dark reddish brown color; and appears perfectly inert.

The history of the changes of this insect is briefly this. The eggs are deposited by the female in different numbers from one to eight, and perso doing the parent exhibits another instance of that provident care for her offspring, which is so strongly evinced by many of the insect race. The egg is not placed at the axilla of either of the culm, from which alone its nourishment is deriv- taste, and flavor. ed. If the wine the body of the larva, at length kills it, but not in has been made carefully, and the fermentation duly general until after its change into the pupa state, Protected by this indurated covering the parasite undergoes its change, and appears in the perfect state about the latter part of June, It seems probable that this insect prevents the total loss of our to press out the juice; even with the assistance of wheat-crops, by restraining the increase of the a press, the labor of it is considerable. This I Cecidomyia within certain bound. The Ichneumon Tipulæ of Mr Kirby is congeneric with this, the fruit is put up into large red earthenware but is doubtless specifically distinct.'

FOR THE NEW ENGLAND FARMER.

DOMESTIC WINES.

MR FESSENDEN-The great difficulty of prohaps more, upon a single plant of wheat, and in curing foreign wines free from adulteration, should encourage families to make at home such wines as can be obtained from our own fruits. They would have the great advantage of being pure. and if properly manufactured will cost but a trifle. leaves indifferently, but displaying some portion Any fruit of an agreeable flavor may be used for of botanical knowledge, the fly carefully insinu- wine; it is conceived that the proportion of the ates her elongated oviduct between the vagina of quantity of fruit, may be raised according to cirthe inner leaf and the culm nearest the root of cumstances, the sugar being the article which will the plant, where the larva, when excluded from give body and strength to the liquor; and the the egg, will be in immediate contact with the fruit being used principally to impart to it color,

Currants make a favorite wine; and the proporcurrent wine, provided it is clean, and from sugar The parisite of the Hessian fly belongs to the of a good grain; it makes the most substantiel gar were put together into a half hogshead tub, days, and took down most of my peaches, they Ceraphron destructor. Black, granulated; feet in a cool cellar, and well stirred two or three times

rous, polished, ovate-acute,-Length one tenth of quor was carefully skimmed of all impurities which gathered and swam on the top. When the sugar 'This is often mistaken for the Hessian fly, in was dissolved, after letting it settle for a few hours, consequence of being found in wheat-fields in it was decanted into three small casks, putting vast numbers during the devastation committed first in each two quarts of the best French brandy, The bungs were put in immediately, but not driven tight, and the vent holes left opened. The bungs and the pins of the vent holes should be stopped tight, as soon as it can be done without running the risk of having the casks burst; opening the vent once or twice a day as long as it appears to be needful. The weather in common seasons is so hot at the time of the currant vintchecked, it will decant in March perfectly clear, but if it should happen not to be the case, isinglass is the best Ingredient to clear it with.

The greatest trouble in making current wine is have avoided of late years by baking them slightly, pots, commonly called pail pots, covered over with a paper, and put into the oven of a temperature full as hot, as it is after taking out the bread. The pot may remain there till the heat of the oven is spent, and the currants will be found to have vielded their juice, and a small pressure over a sieve will separate it from the grounds. The time and labor saved are not the only advantage resulting from this method, but the juice so obtained, being in a great measure claborated by the heat of the oven, has less tendency to ferment than in its natural raw state. The fruit should be perfectly ripe when gathered, which is, when the stalks have turned yellow, when the berries and leaves begin to fall, that is in general about the fifth of August,

There are other fruits besides Currants which would make pleasant wines; the small wild cherry could answer well for that purpose. The rolor, richness, and flavor of its juice would certainly be very favorable, and by baking, the juice could be easily obtained; the latest Black, Mazzard and

Peaches will make an excellent wine, and the atmosphere is well calculated for the vinous fermentation. The flavor and color of that juice would be well adapted for wine. On the 19th, were bruised and broken, and unfit for any use; and base of the antennæ whitish; abdomen glab- a day until the sugar was entirely dissolved, the li- this gave me the idea to try to convert them into

most fit for the purpose, I lead them thrown into water, and well mashed with the hands; this mash was then placed into a large copper boiler, and boiled for some time, cooled, and strained. While yet warm, I had sixty pounds of sugar dissolved in it, and when cold put into a cask without any brandy, and bunged close. There were twentynine gallons; it remained so until the spring of 1828, and proved to be a very delicious wine : its only fault appeared to be a great propensity to ferment, which made it needful to keep it in a cool cellar; the cost of the sugar was \$6,90.

In England they make a very excellent wine paint. with an infusion of Walnut leaves, sugar, and a small quantity of brandy; it is of excellent flavor, and esteemed to be a great stomachic.

They make another sort of wine with cowslip blossoms; and in fact any fruit or blossom capable of imparting a pleasant flavor, with sufficiency of sugar will make wine. Taking it for granted, as I believe there is no doubt, that sugar, dissolved in water and conducted through a proper fermentation, with a small addition of pure brandy, will procure a liquor possessed of all the cordial virtues of the wine made of grapes. The occasional rigor of our winters precludes a hope for our present generations, to cultivate the foreign grape for the purpose of wine making. The necessity of covering over the vines for winter, the multiplicity of labor required for the due management of a vineyard, would render the cost far more than the price of imported wines. But our various fruits offer ample resources for making very pleasant and cheap wines, which would have the advantage of being pure and wholesome, and would save to the country immense sums, which now, in our days, are yearly exported to foreign nations,

With best wishes, I am your friend, &c. Weston, July 20.

APPARATUS TO PREVENT THE ASCENT OF THE CANKER-WORM.

To GEN. H. A. S. DEARBORN-

Since your publication on the canker-worm in the N. E. Farmer of the 18th of June, I have thought much upon the subject, and after thinking of many plans to prevent the ascent of the grub upon the trunk of the tree, I have succeeded in perfecting a cheap, and I hope, certain remedy.

I take the liberty of forwarding to you one or two models, or rather the apparatus itself; the small one is complete.-The mode of applying and fitting to the tree I will attempt to describe,

The first step will be to procure two strips of sheet lead; say an inch wide, and of sufficient length to reach half round the body of the tree; these are to get the circumference and any inequalities in the body of the tree at the spet where you wish to fix the board; then put them edgewise upon the board and with a lead pencil trace the size and shape of the trunk of the tree; the next step will be to make the circle with the gage for the insertion of the inner or tin rim; the circle is easily and deeply made by the sweep of the gage it should be made larger by at least an inch than the one made by the pencil,-then split the circular board by sawing, or lay on a strait stick and draw a knife on each side of the board, cutting at least one third through, and then split it.-With a compass saw follow round the pencil mark, or perhaps cut a quarter of an inch larger to allow for the growth of the tree; the space between the board

wine, and after selecting those which appeared the wooden hoop, thin edge up, or let the thin edge | some of which I hope will be found to be new; come just to the lower edge of the hoard; mark the Papaw and Tulip trees thrive here, and I trust how far it laps-then lower the hoop and nail it will ere long adorn your city and vicinity. Some with small nails, and clinch them; lift up the hoop to the lower edge of the board, and hold an iron ladies are tasteful in their flower gardens, and I wedge, or some other solid substance on the upper surface of the board, and drive up the hoop tack with small nails; then insert the tin hoop by driving it down well into the groove; let it lap by an inch, put in a piece of flag and confine the lap by a tin loop, and you then have a circular canal, which, if not water tight, may easily be made so by giving it one or two linings of hot tar, or thick

> The canal may now be filled with tar and oil, oil, spirits of turpentine, lime water, or I should think fish brinc-or a brine made strong with common salt and nitre; this would not belikely to freeze in cool nights, and a little winter strained oil on the top would perhaps prevent the evaporation of the brine, and make it more difficult for the grubs. If the brine should become weakened by rain or snow water, it might easily be strengthened by throwing in a little salt. The tin should be an inch higher than the wooden hoop-if they should swim across they would find it difficult climbing up,

> I have never seen a canker-worm nor the grub, or female, but am under the impression that the grub is a clumsy insect; if that be the case, I think they would not be able to pass the boundaries of another more simple and cheaper defence than the one above described.

> It is the circular board with only one rim, and that of the thinest tin-to be put upon the outer edge instead of the wooden one, and reversed, or instead of rising above the upper surface of the board it should hang down an inch or two; this would present an obstacle which I think they never would be able to pass, for whenever they should attempt to turn the lower edge of the tin they would find themselves on terra firma instead of being on the top of the tree.

If upon examination you should be of the opinion that either of the plans would answer any purpose, no one could object to them on the score of expense, for I would engage any required number to be delivered in Boston, the circular board and hoop, (of this largest size) for 121 cents each or the board best for its application? for the tin rim for half the sum.

There is one other consideration,-if this will stop the grub, it would also stop the ascent of spiders, caterpillars, ants, slugs, and possibly the curculio, if, as Dr Tilton says, they crawl up the body of the tree, instead of flying.

Be pleased to accept the assurances of my regard, in the spring. LEVI BARTLETT:

Warner, N. H., July 2, 1830.

SEASON AT CINCINNATI.

[Extract from a letter from a gentleman in Cincinnati, Ohio, to the publisher of the New England Farmer.]

- 'Wheat promises fair-also Oats and Barley, there will be excellent crops of rye-Hay will be light, though clover promises well-peaches are abundant-plums are not much cultivated, and apples are rather scarce-Corn is backward (so far as I can judge from a twentyfive miles' journey after a good milch cow, the same being scarce and dear) and markets are low for most kinds of agricultural produce.
- 'I hope to be able to forward to you this winand tree may be filled with oakum; then apply the collecting. I have seen several beautiful species, the stalk is almost dead, in most cases, from the

grounds here are very prettily ornamented; the think they are more inclined to work in them than they are in Boston.'

LIST OF FRUITS.

Ma Fessenden-Will you or some other compeent gentleman publish in the New England Farmer a small Catalogue of the most approved pears, such as have fruited in our country and are good bearers; and show as near as practicable the precise time of ripening of each; commencing with the earliest. Let the day of the month beput down to show the comparative difference of the ripening of each variety. I find the catalogies of our nurserymen disagree; and are rather vague-Oct., Nov. and Dec. is not sufficiently explicit. There is a time when each variety isgenerally in the greatest perfection. That time isimportant to be known, whether it be usually or the 1st, 15th or the 30th, of the month. It is espected that pears will vary a short time in coming to maturity from year to year; yet the time wthin 10 or 15 days of ripening might be made known, which would be very useful to the horticaltural community, particularly to those who are jist beginning to cultivate this valuable fruit. It yould also aid your readers in selecting those arieties which will ripen in succession.

The above information would be thankfully reseived and be very gratifying to at least one of SUBSCRIBERS.

(F A valuable article on Fruit Trees, the nost esteemed sorts, and their times of ripening, &c, written by the Hon. JOHN LOWELL, will be found in Fessenden's New American Gardener, page 128.

FRUIT TREES.

MR FESSENDEN-I have presumed to address to you the following questions, and shall feel particularly obliged by an early answer if consistent with your engagements.

1. What is the best wash to apply to apple and other fruit trees, and what time in the year is

2. Has there ever been any method ascertained to prevent the ravages of the Canker Worm?

Do you know what will prevent the small worm from attacking fruit trees in the month of June and July; this worm is much smaller than the Caterpillar which appears and forms branches

Our fruit trees in this vicinity seem to call for great attention to prevent their utter destruction, and it is an object of some importance to ascertain if possible any remedy for the depredations of insects.

Yours Respectfully, JOSEPH ELLSWORTH.

Kitch Mills, Con., July 22, 1830.

INSECTS ON INDIAN CORN.

Ma Fessenden In the Farmer of the 2d, inst, I noticed your remarks on the wire worm, which has been making ravages among the corn in some parts of the state. I have noticed many fields of corn in this vicinity, which were of a rusty yellow color at the bottom-and in searching for the cause, the roots were found ter a package of ornamental seeds which I am now to be covered with green lice. The bottom of communication.

not, have you on hand any information to give respecting them.

H. FERRY. Yours,

Northampton, July 14, 1830. Remarks by the Editor .- We have no recollection of having seen, heard, or read of the above mentioned insect, before the receipt of Mr Ferry's

REMARKABLE GROWTH OF CHERRY GRAFTS.

In the mouth of March, 1828, I set, on a natural Cherry Stock, which is now seven inches in circumference, probably not much less then, a scion of the English Blackheart, which is now in the smallest place eleven inches in circumference and has completely covered the stock. There are three leading branches from this, one six and a half feet, one six feet, the other five and a half feet; there are seventeen smaller lmbs, branching from these in all directions. It bore fruit this present season in abundance and to perfection only two years old. I have several others which have grown very rapidly and I believe they do quite as well if not better than budding, especially large stocks. L. COBB.

Sharon, Mass. July 19, 1830.

REMARKS ON VEGETABLES. [Concluded.] THYME.

' No more, my goats, shall I behold you climb The steepy cliffs, or crop the flow'ry thyme.' Dayous.

In ancient times, flocks of goats and sheep were sent from many remote parts, to feed on the thyme which grew so abundantly on the rocky parts of Languedoc and Narbonne, and this pasturage yielded a great revenue to the inhabitants of that country, during the height of Roman luxury, on account of the high flavor it gave to the thousands of cattle which were sent to that province.

> Where the wild thyme perfumes the purple heath, Long loitering there your fleecy tribes extend.

Phillips in his History of Vegetables, says, a long residence on and near the South Downs of Sussex, gave the author of this work an opportunity of ascertaining, that those flocks which fed on hills most abounding with thyme, produced so long as their lands were fresh and fertile. mutton of a very superior relish; and it cannot have escaped the notice of the epicures in haunches, that the highest flavored venison is always from arid hilly parks, where this penetrating 'punprovoking' herb abounds,

This plant was thought excellent in suffumigations to revive the spirits; and by its extraordinary fragrancy it was deemed comfortable to the brain and highly exhilarating to the heart. A little thyme mixed with wine, gives it a most grateful savor, and both the smell and taste of it are very penetrating; whence it becomes sudorific, inciding, penetrating, healing, and opening; is of service in the flatulent colic, and restores a decayed appetite.

TOBACCO.

Tobacco was brought to England by Sir Francis Drake, in 1570, who that year made his first that purpose. By the way of making known that expedition against the Spaniards in South America. Lobel informs us, that it had been cultivated in England previously to that date. Sir Walter ductions, I have to state that this tree was introabout the year 1586, and it is related that he was

appears he did not intend that it should be copied. pipe in his mouth, he inadvertently called to his man to bring him a tankard of small ale: the fellow coming into the room, threw all the liquor in his master's face, and running down stairs, bawled out 'Fire! help! Sir Walter has studied till his head's on fire, and the smoke bursts out of bis month and nose.' After this, Sir Walter made it no secret, and took two pipes just before he went to be beheaded.

A French Natural Historian (Valmont Bomarc) relates, that in 1750 Maryland and Virginia produced to England more than 100,000 tons of tohacco; of which, he says, the English kept one half for their own consumption, and exported the remainder to France; for which the latter country paid annually the sum of 9,200,000 livres, or about \$1,701,998 52.

This vegetable still continues to form so considerable a branch of commerce in England, that a store-room has lately been erected in the London Docks, for the exclusive purpose of housing tobacco, which covers with one roof a space of nearly six acres of ground, and which is perhaps the largest room ever built. This immense storeroom is, when empty, an object of wonder; but on sceing it full of tohacco our amazement must be increased, by reflecting on the extent of the trade of England, and on the singular destination of such an enormous heap of half-putrefied nauseous leaves.

Wynne says, in his History of Virginia, published in 1770, that the Virginians export annually above forty thousand hogsheads of this leaf, each hogshead containing eight hundred weight. This author says, 'wherever they have planted this article, their lands are so exhausted by it, that they will hardly produce the bare necessaries of life, and much less such an exhausting weed. It is for this reason, that most of our tobacco plantations are broken up and the people have been obliged to quit them, and retire to the mountains, where they find fresh lands fit to produce this plant, which is the support of their trade, and has been of more importance to them than all the other productions of North America put together,

WATER CRESS.

The ancients are cress with their lettuce to counteract the cold nature of that salad. The name of Nasturtium alludes to its warm stimulating qualities, which were thought to put life into dull and stupid persons, and to brighten the understanding of those who ate of Nasturtium, and which gave rise to the Greek proverb, 'eat cress, and learn more wit.'

CHINESE MULBERRY TREE.

Ma Fessenden-I perceive in your paper of 16th inst, a communication on the subject of the Chinese Mulberry Tree, (Morus multicaulis) which, it is stated, was introduced to France from the Philippine Islands, in July last, and the acquisition of which promises to be of vital importance to the silk culture on account of its great superiority for those who escaped unstung?-U. S. Gazette. in our country we sometimes even anticipate others in the introduction of useful horticultural proand has consequently existed among us for above extraordinary dimensions of the flowers.

loss of sap-extracted by the insect. Have you the first who brought tobacco into repute; but, three years. A number of plants were propagated ever published any account of this insect? If by the caution he took in smoking it privately, it from it the first season, several of which were sent abroad, and one of which I presented to that in-But sitting one day in a deep meditation, with a telligent and enterprising friend of the silk culture, Gideon B. Smith, Esq. of Baltimore, who, in a recent letter, speaks of its flourishing condition.

P. S. I notice a small error in my communication inserted in your paper of 25th ult. The date should be May instead of June.

Very respectfully, WM. ROBERT PRINCE,

Linnean Botanic Garden, New York, July 27, 1830.

CATTLE OVERCOME BY HEAT.

MR FESSENDEN-As the hot season has now arrived, when oxen are frequently overcome by heat, and many are lost, will you, or some of your correspondents, through the medium of your useful paper, inform the public of the best manner of treating an animal overcome by the heat, and you will oblige a constant reader.

Very respectfully yours, THOMAS HUBBARD.

Concord, July 18, 1830.

We can find nothing on this subject in any veterinary writer, and our own observation and experience have not led us to any remedy for this evil of ordinary occurrence. We should be very much obliged to any correspondent who may suggest any cure or palliation for the complaint above mentioned.

To Remove a tight stopple from a decanter .-It frequently happens that the stopper of a glass bottle or decanter becomes fixed in its place so firmly, that the exertion of force sufficient to withdraw it would endanger the vessel. In this case, if a cloth wetted with hot water be applied to the neck of the bottle, the glass will expand, and the neck will be enlarged, so as to allow the stopper to be easily withdraw .- Dr Lardner's Cabinet Cyclopædia.

The non conducting power of Sand is so great, that in eastern countries, when the surface of a bed of sand at midday is too hot to allow the hand to remain in contact with it, the temperature, at the depth of a few inches, is gratefully cool. During the celebrated siege of Gibralter, the garrison turned their knowledge of this fact to good account. The red bot shot employed to destroy the Spanish floating batteries was placed in wooden barrows on layers of sand, and thus carried from the furnaces to the batteries without the wood once catching fire.

The Hive Bee, - 'Lesser tells us, that in 1525, during the confusion occasioned by a time of war, a mob of peasants, assembling in Hoherstein, attempted to pillage the hnuse of the minister of Elende, who having in vain employed all his eloquence to dissuade them from their design, ordered his dometics to fetch his bee-hives, and throw them into the middle of the infuriated multitude.

'The event answered his expectations: they were immediately put to flight, and happy were

It is stated, that if a bed of carnations be watered at different times in the season, with a solution of nitre, the good effects of the application will Raleigh carried the Virginian tobacco to England duced into our collection in the winter of 26-27, be visible by the luxuriance of the leaves, and the

DISEASES OF HORSES. [Continued.]

DISEASES OF THE TEETH.

Of the diseases of the teeth in the horse, we know little. Carious or hollow teeth have occasionally, but not often, been seen; but the edges of the grinders from the wearing off of the enamel, or the irregular growth of the teeth, become rough, and wound the inside of the cheek; it is then necessary to adopt a summary but effectual method of cure, namely, to rasp them smooth. Many bad ulcers have been produced in the mouth, by the neglect of this,

The teeth sometimes grow irregularly in length, and this is particularly the case with the grinders, from not being in exact opposition to each other, when the mouth is shut. The growth of the teeth still going on, and there being no mechanical opposition to it, one of the back teeth, or a portion of one of them, shoots up half an inch or more above the others. Sometimes it penetrates the bars above, and causes soreness and ulceration; at other times, it interferes partially, or altogether, with the grinding motion of the jaws, and the animal pines away without the cause being suspected. Here the saw should be used, and the projecting portion reduced to a level with the other teeth. The horse which has once been subjected to this operation should afterwards be frequently examined, and especially if he lose condition; and, indeed, every horse that gets thin or out of condition, without fever, or any other apparent cause, should have his teeth and mouth carefully examined, and especially if he quid (partly chewing and then dropping) his food, without any indication of sore throat, or if he hold his head somewhat on one side, while he eats, in order to get the food between the outer edges of the teeth. A horse that has once had very irregular teeth is materially lessened in value, for, although they may be sawn down as carefully as possible, they will project again at no great distance of time.

DISEASES OF THE TONGUE.

The tongue is sometimes exposed to injury, from carelessness or violence in the act of drenching, or administering a ball, being pressed against, and cut by the edges of the grinders. A little diluted tineture of myrrh, or alum, dissolved in water, or even nature unassisted, will speedily heal the wound. The herse will bite his tongue,-most frequently in his sleep. If the injury be trifling, it requires little care; but in some instances, a portion of the tongue will be torn or nearly bitten off, and the assistance of a veterinary practitioner will be needed.

Bladders will sometimes appear along the under side of the tongue, which will increase to a considerable size, and the tongue itself will be much enlarged, and the animal will be unable to swallow, and a great quantity of ropy saliva will drivel from the mouth. This disease often exists without the nature of it being suspected. It resembles what is called the blain in the cow, which is a very serious complaint in that animal, frequently connected with much fever, and terminating in sufcation. If the mouth of the horse be opened, one large blodder, or a succession of bladders of a purple hue, will be seen to extend along the whole of the under side of the tongue. If they be lanced freely and deeply, from end to end, the

medicine. The cause of this disease is not clearly known. It usually proceeds, perhaps, from indigestion, connected with a general tendency to inflanimation.

THE STRANGLES.

This is a disease principally incident to young horses-usually appearing between the fourth and fifth year, and oftener in the spring than in any other part of the year. It is preceded by cough, and can at first be scarcely distinguished from common cough, except that there is more discharge from the nostril, of a yellowish color, mixed with matter, but generally without smell; and likewise a considerable discharge of ropy fluid from the mouth, and greater swelling than usual under the throat. This swelling increases with uncertain rapidity, accompanied by some fever, and disinclination to eat, partly arising from the fever, but more from the pain the animal feels in the act of chewing. There is considerable thirst; but after a gulp or two, the horse ceases to drink, vet is evidently desirous of more. In the attempt to swallow, and sometimes when not drinking, a convulsive cough comes on, which almost threatens to suffocate the animal, and thence probably the name of the disease. The tumor is about the centre of the channel under the jaw, it soon fills the whole of the space, and is evidently one uniform body, and may thus be distinguished from glanders, or the enlarged glands of catarrh. At length the centre of it becomes more prominent and softer, and it evidently contains a fluid. This rapidly increases, the tumor bursts and a great quantity of pus is discharged. As soon as the tumor has broken, the cough subsides, and the horse speedily mends although some degree of weakness may hang about him for a considerable time.

The treatment of strangles is very simple. As the essence of the disease consists in the formation and suppuration of the tumor under the jaw, the principal, or almost the sole attention of the practitioner should be directed to the hastening of these processes: therefore, as soon as the tumor of strangles evidently appears, the part should be actively blistered. Old practitioners used to recommend poultices; which, from the thickness of the horse's skin, must have very little effect, even if they could be confined on the part; and from the difficulty and almost impossibility of this, and their getting cold and hard, they must weaken the energies of nature, and delay the ripening of the tumor. Fomentations are little more effectual. A blister will not only secure the completion of the process, but hasten it by many days, and save the patient much pain and exhaustion; and it will produce another good effect-it will, previous to the opening of the tumor, abate the internal inflammation and soreness of the throat, and thus lesson the cough and wheezing.

As soon as the swelling is soft on the top, and evidently contains matter, it should be deeply and of your paper, the following statement: freely lanced. It is a bad, although frequent practice, to suffer the tumor to burst naturally, by which a ragged ulcer is formed, very slow to heal and difficult of treatment. If the incision is deep and large enough, no second collection of matter will be formed: and that which is already pressure with the fingers being avoided. The sam daily injected into the wound.

swelling will very rapidly abate, and any little on the symptoms. If there is much fever, and coat of hog manure. The first summer of course

fever that remains may be subdued by cooling evident affection of the chest, and which should carefully be distinguished from the oppression and choking occasioned by the pressure of the tumor, it will be proper to bleed. In the majority of cases, however, bleeding will not only be unnecessary, but injurious. It will delay the suppuration of the tumor, and increase the subscquent debility. A few cooling medicines, as nitre, emetic tartar, and perhaps digitalis, may be given, as the case requires. The appetite, or rather the ability to eat, will return with the opening of the abscess. Bran-mashes, or fresh cut grass or tares, should be liberally supplied, which will not only afford sufficient nourishment to recruit the strength of the animal, but keep the bowels gently open. If the weakness be not great, no further medicine will be wanted, except a dose of mild physic, to prevent the swellings or eruptions which sometimes succeed to strangles. In cases of debility, a small quantity of tonic medicine, as camomile, and gentian with ginger, in doses of a couple of drachms, may be administered

As strangles seem to be a disease from which few horses escape, and which, although attended with little danger, is sometimes tedious in its progress, and accompanied by much debility, some foregn veterinary surgeons have endeavored to produce a milder disorder by inoculating, either with the matter from the tumor, or the discharge from the nose; and it is said that a disease, with all the characters of strangles, but shorter and miller in its course, has supervened. English practitioners have not, we believe, tried the ex-

CANKER AND WOUNDS IN THE MOUTH.

The mouth is injured much oftener than the careless owner suspects, by the pressure of a sharp bit. Not only are the bars wounded and deeply ulcerated, but the lower jaw between the tush and the grinders is sometimes torn even to the bone, and the bone itself affected, and portions of it come away. It may be necessary to have a sharp bit for the headstrong and obstinate beast, yet if that be severely and unjustifiably called into exercise, the animal may rear, and endanger himself and his rider; but there can be no occasion for a thousandth part of the torment which the trappings of the mouth often inflict on a willing and docile servant, and which either render the mouth hard, and destroy all the pleasure of riding, or cause the horse to become fretful or vicious.

From the Westfield Register.

AGRICULTURAL.

MR HUNTINGTON-As it seems to be the fashion of the day to communicate the result of experiment, as well in husbandry as in the arts and sciences, I beg leave to offer through the medium

In the spring of 1828, having a piece of wet land near my house, which would probably be most aptly called Bog Meadow, through which runs a brook about six rods from the bank or upland. I hired three men with canal wheelbarrows. and carried on loam from the adjoining upland, formed may be suffered to run out slowly, all | (which when I commenced, was a steep elevation of 6 or 8 feet ebove the meadow,) covering the part should be kept clean, and a little friar's bal- land to the depth of about six inches. I then sowed Herds Grass seed plentifully upon the earth The remainder of the treatment will depend and raked it in; and covered the whole with a

hav, but found the weeds so abundat that I thought it expedient to cut them and ast them into my harn yard for manure. The st summer I found my crop of hay excellent, bth in quality and quantity, and mowed two good e land, and have now gathered the first crop; e result is as follows.

From one hundred and eight rods of land, by curate measurement. I found, when we had ked it into beans prepared for carting, they nounted to seventy; and as the hay was of an cellent quality and in fine order, I determined ascertain, as near as could be done without too uch expense, the quantity of it. For this purse, therefore, I selected two of the heaps, such were thought by myself and my men to prent a fair average of the whole tract then mow-, and found the average weight of them to be e hundred and four pounds-which, conquently would give me 7280 lbs. for the tract 180 rods-and which at the same rate, will e five tous and 785 pounds to the acre.

The expense of carrying the loam on to the adow, as near as I could ascertain, was about enty dollars per acre ;-and before this improvent, the land probably yielded not more than a to the acre, and that a very coarse and infer quality. It ought perhaps to be stated that above calculations are all made in net weight, I I believe the result fairly stated.

Yours, &c. JAMES FOWLER. Westfield, July, 3, 1830.

SLEEP OF CHILDREN. Infants, from the time of their birth, should be ouraged to sleep in the night in preference to day; therefore, mothers and nurses ought to nove everything which may tend to disturb their t, and not to attend to every call for taking m up and giving food at improper periods. ants cannot sleep too long; when they enjoy a n, long-continued rest, it is a favorable symp-. Until the third year, children generally rere a little sleep in the middle of the day; for that age, half their time may safely be allotted leep. Every succeeding year, the time ought e shortened one hour; so that a child seven rs old may sleep about ten hours. Children ht to rise at six o'clock in the summer, and seven in the winter. It is extremely inicious to awaken children with a noise, or ry them immediately from a dark room into glaring light, or against a dazzling wall: the den impression of light may debilitate the organs vision, and lay the foundation of weak eyes. t clothes or linen should never be allowed to nung to dry in the bed-room, as an impure atsphere is attended with various and often fatal sequences .- Banish (says Professor Hufeland) her beds, as they are unnatural and debilitating trivances. - The bedstead should not be placed low on the floor; and it it highly improper to er childron to sleep on a couch which is made hout a sufficient elevation from the ground.-

A SISTER'S LOVE.

ok of Health.

There is no purer feeling kindled upon the altar numan affection, than a sister's pure, uncontamted love for her brother. It is unlike all other ction; so disconnected with selfish sensuality;

ter it, nothing can suppress it. The world may revolve, and its revolution effect changes in the fortunes, in the character, and in the disposition of her brother; yet if he wants, whose hand will so readily stretch out to supply him, as that of his ons from it .- The last spring, I again manured sister? and if his character is maligned, whose voice will so readily swell in his advocacy? Next to a mother's unquenchable love, a sister's is preeminent. It rests so exclusively on the tie of consanguinity for its sustenance; it is so wholly divested of passion, and springs from such a deep recess in the human bosom, that when a sister once fondly and deeply regards her brother, that affection is blended with her existence, and the lamp that nourishes it expires only with that existence. In all the annals of crime, it is considered anomalous to find the hand of a sister raised in anger against her brother, or her heart nurturing the seeds of hatred, envy or revenge in regard to that brother.

> To clean the Teeth-Pulverized chalk is said to to be the best application to remove the tartar on the teeth, and powdered charcoal will prevent its formation. Vinegar or any other acid will injure the enamel. If the teeth and gums are brushed every morning before breakfast with fine powdered chareoal or soot, and a stiff brush, they will be perfectly clean, and you will seldom if ever be pained with the tooth ache.

> Fashionable Singing .- The Editor of the Augusta Conrier, in remarking upon Mrs Plumer's singing, says that he would as soon listen to a steam boat letting off her steam, as to a fashionable singer who stands and cries ba-a-a for a quarter of an hour at a stretch. We agree with him.—Camden Journal.

TO PARENTS.

The following is an extract from the 'Frugal House-

'In early childhood, you lay the foundation of poverty or riches, in the habits you give your children. Teach them to save every thing, -not for their own use, for that would make them selfish,but for some use. Teach them to share feverything with their play mates; but never allow them to destroy any thing.

'I once visited a family where the most exact economy was observed; yet nothing was mean, or uncomfortable. It is the character of true economy to be as comfortable and genteel with a little, as others can be with much. In this family when the father brought home a package, the older children would, of their own accord, put away the paper and twine neatly, instead of throwing them in the fire, or tearing them to pieces. If the little one wanted a piece of twine to play scratch-eradle, or spin a top, there it was in readiness; and when they threw it on the floor, the again in its place.

'Economy is generally despised as a low virtue, tending to make people ungenerous and selfish. This is true of avarice; but it is not so of economy. The man who is economical, is laying up for himself the permament power of being useful and generous. He who thoughtlessly gives away ten dollars, when he owes a hundred more withal, so fond, so devoted. Nothing can al-1 the injury he does his family and creditors is cer-1 prizes are also announced for 1834.

tain. True economy is a careful treasure in the service of benevolence; and where they are united, respectability, prosperity, and peace will follow.

[The following was addressed to a farmer, of Penn. who brought a bottle of the oil to Maryland-at a large dinner party on Elkridge of gentlemen from town and country, of whom we had the pleasure to be one, the salad was dressed with this sun flower oil. It was eaten, and pronounced to be excellently well dressed, no body suspecting it not to be olive oil. When the British treaty was made, cotton was deemed to be an exotic product, unworthy of regard.] - American Far-

THE SUN FLOWER-its culture-product-properties, uses and value.

The sun flower is cultivated like Indian corn. planted in rows-the rows three feet apart and stalks eighteen inches.

Any land which produces corn will yield from 50 to 70 bushels per acre, and it is worth 75 cents

The single headed kind is preferable, and as soon as ripe, which is known by its shatteringthe heads are taken off, carted to the barn floor, and immediately threshed out with the flail, it should be cleaned with the wind mill, f or fan we suppose,] and then spread out, and occasionally turned or stirred to become dry, if left upon a large heap it may mould.

By an improved mode of extracting the oil, a bushel of seed yields a gallon of oil-three quarts cold pressed, and one quart by heating. The cake when ground is very nutritive as cattle feed, and will pay the expense of the miller.

The oil used as a purgative appears to have the same effect as easter oil, without the nausea.

Of the bottles sent, one marked with a vellow ribbon, was expressed about two months ago-the three other bottles were expressed four weeks since. The first is clearer, owing to the difference of the four weeks; it clarifies without any preparation. The three bottles are finer in their taste than that marked, which is owing to an improvement in the machinery for making it.

A bushel of seed will plant about 10 acres. I can furnish any gentlemen disposed to cultivate it with the best seed. I expect to raise about 500 bushels this season, and have engaged others in raising probably as much more.

CHAS. A BARNITZ.

The Paris Central Society of Agriculture, at its last sitting, awarded the following prizes: -2000 francs to Messrs Flackat and Mulot, for their process of boring for Artesian wells. Another, for the same object, to Messrs. Fraisse and Poituvin; and also a gold medal to M. Favel. 1000 francs to M. Payen for a memoir on the use which may older children had no need to be told to put it be made of the carcases of domestic animals when dead; and other prizes, of small amounts, on different subjects, making altogether 7000 francs. Several gold and silver medals were also presented. The prizes of next year are to be, first, 1500 francs for the best treatise on the use which may be made of the dead bodies of domestic animals: 1500 francs for the best treatise on the blindness of horses; 3500 francs for the best than he can pay, deserves no praise, he obeys a model of a threshing and winnowing machine: sudden impulse, more like instinct than reason; it 3000 francs for the best treatise on the mode of would be real charity to check this feeling; be- boring for water: 1000 francs for the best treatfeminine in its developement; so dignified, and cause the good he does may be doubtful, while ise on the culture of the pink poppy. ENGLAND FARMER.

BOSTON, FRIDAY, JULY 30, 1830.

MR FESSENDEN-I beg leave to offer the following remarks for the benefit of that portion of your readers, who have faith in most things which they find in print, especially if found printed in the New England Farmer.

Respect is certainly due to the opinion of your correspondents-greater respect is due to the discernment of the most enlightened portion of your subscribers, but I submit the question to your candid decision, if the greatest respect on the score of usefulness is not due to those who feel and acknowledge their want of light, and seek it through the medium of your valuable paper. Would it not therefore be well to let every unsound opinion, which is offered for publication, be accompanied by some corrective editorial remark?

The cultivation of the wild cherry tree has been recommended for the purpose of attracting the caterpillar from apple trees. Let us reflect on this a moment, and see if the preservation of seed caterpillars amounts to anything more or less than the encouragement of emigration from their favorite cherry trees to the remotest part of the surrounding orchards as is their practice at the time of depositing their eggs.1

The raising of orchards from cuttings has its as in gardens and orchards. advocates, by placing the end of each slip in a potato, then plant it out, and the whole business properly understood, may be of service. The is done. Who from their own reasoning could cherry trees, as we comprehend the matter, are have believed that there was such affinity between intended merely as decoys, or traps to catch catvarious kinds of trees and plants and the juice of a raw potato? Surely no one; but having faith in what is printed, many have witnessed the hopeful prospect of a blessed hereafter, that is about to be realized by a bost of roses, myrtles, gerani- may be perfectly correct to destroy all the wild ums, and other slips at this present time, which are gone, or going to their long homes.9

The great body of our farmers are not horticulturists. An erroneous opinion prevails among tree is valuable, and the bark useful in medicine. them that orchards, young or old, should not be ploughed. The article, which appeared in your paper of the eleventh of June, which recommended hand hoeing, and top dressing with manure, instead of ploughing and planting for a crop, has been misunderstood by some who consider grass as no crop at all, particularly in pastures, and believe that to have been the impression of the author of the piece referred to-but his plan is to permit nothing to grow under fruit trees, or vines, which is correct, and should be adopted by men of wealth, or by every one in the cultivation of nice and valuable fruits, near a good market. But orchards of cider apples, and even choice table fruit, whore land is cheap, and no demand for it, should always be set out in a rich moist pasture.3

As there are but few farmers who can be induced to keep their orchards free of grass and weeds, and be contented only with a crop of fruit. would it not be well to recommend to them the next best conrsc, which is to plough shallow, so as not to cut off any small roots, manure as much as can be effectual, cultivate annually a crop of some fruit for the supply of the city of Paris, a prokind among their trees. But be sure that neither corn nor potatoes be planted within four feet of be to set pig weeds in a cornfield, and grass is as proportion of manure is every year worked into destructive to an orchard as weeds are to a garden. the soil' &c. [see p. 374, col. 1.]

But grass is least injurious when closely fed off on the ground.

I am your obedient servent. Providence, July, 1830. AN ORCHARDIST.

NOTES BY THE EDITOR.

1 We have heretefore endeavored to anticipate objections, and prevent errors on this subject. In the fifth volume of the New England Farmer, page 358, column second, the following article may be found recorded:

CATERPILLARS AND THE BIRD CUERRY.

In the current volume of the New England Farmer, page 314, an article was republished recommending to plant the Bird Cherry (Prunus Padus) in orchards, as a place of resort for caterpillars; as those insects have such a partiality for the leaves of that tree, that they will congregate on them and leave all other trees within one or two hundred yards distance untouched. A friendly horticulturist has suggested to the editor that the article alluded to might be the means of mischief, by inducing cultivators to raise those cherry trees and thus favor the multiplication of the insects by furnishing them with the food to which they are most partial;-those gentlemen in the neighborhood of Boston, who are friendly to the pursuits of horticulture, have taken great pains to extirpate the bird cherry, endeavoring to procure its entire destruction in fields and forests, as well

It appears to us, however, that the article, erpillars .- But you must be careful to destroy the caterpillars on the trees, when they are taken. If you catch, and feed and let them go at large, you become instrumental in their propagation. It cherry trees, except those which can be used to allure caternillars to destruction. But if we are not misinformed, the timber of the wild cherry

2 We have not seen any recommendation, from any cultivator, whose authority can be relied on for setting slips or cuttings in a potato, and planting them out in that position. But we are not prepared to say that a process of that kind would not succeed with some plants, in some cases, though we doubt whether that mode of propagation will often be found expedient.

3 There are several articles in our paper of the eleventh of June last, relating to the culture of fruit trees, which concur in recommending to orchardists, when fruit is the principal object of eulture on any particular piece of ground, not to cumber the premises with other crops. In one of those articles, a quotation is given from Vernon's translation of a French treatise on the cultivation yellowish green, with red stripes on one of the Mulberry tree, in which the translator condemns the general usage of the farmers of our country, in taking a crop of grain, of roots or of grass from their orchards. And states that 'At Montreuil, a village of nearly twenty thousand ton, fruit of the Moor Park Apricot, of fine inhabitants, all maintained by the cultivation of pearance, measuring six inches in circumferer prietor will not allow even a plant of lettuce to be grown near fruit trees. Every particle of the surany tree. To plant potatoes round the root of a face of the ground is there kept in a friable state tree when it is transplanted, is as wise as it would to the full extent of the roots of the tree; a due

It is true that Nicol, a Scotch gardener, reco mends a somewhat different mode of cultivati fruit trees, and allows an orchard to be laid do to grass after the eighth year, [same page abo referred to. Deane's New England Farmer, lil wise, art. orchard, observes, that 'orchards whi are laid down to grass last longest; but it is a cessary to keep the ground clear of weeds a grass for some little distance from the roo When trees in an orchard are so large as shade most of the ground, little besides grass v grow under them. And the leaves which I from the trees, together with their shade, will p vent the sward from becoming too tough and m ted for roots of the trees to penetrate it. We l lieve, however, that the ground should always stirred about young trees, but not so deeply as injure the roots.

MASSACHUSETTS HORTICULTURAL SOCIET FRUITS.

Cherries .- From Gen. Deanborn, fruit of Belle et Magnifique. The tree was received fr Vilmorin's Nursery in 1823 or '25, and truly is magnificent appearance; color red, with wl spots, or mottled, a valuable fruit from its latene The tree is very vigorous and a good bear From Mr Robert Manning, a French Cherry fair appearance, but rather acid flavor.

Apples .- From Col. George Gibbs, of Sa wich, L. I. near New York, fruit of a fine Ap that ripens with him about the 1st of July. tree imported from Europe thirty years since, na unknown. From E. BARTLETT, Esq. of Roxbi fruit of the early Nonsuch, (ripe July 10,) to Juneating; both in pleasant eating and good fill Also fruit of the Winter Pearmain and Rock ple, of the last season, in good preservation; latter has been kept four and five months into second year. From S. Downer, of Dorches an apple well known in the market for some ye past, under the name Queen, Ladies, &c. original tree of this variety, we learn from C Benjamin Williams, of Roxbury, was a Wile which grew on his farm, which was blown de some years since. This fruit is deservedly a verite as a summer apple. The color is a r beautiful Red, varies from light to very darl the sunny side. Shape oblong and very peril medium size, sprightly, and very pleasant, riper in succession, commencing about the 1st of Aug The tree grows upright and thrifty, and is a stant and good bearer. It is getting much ci vated in this vicinity. The committee recomm that it be called the Williams Apple. Fron Howe, from the garden of S. Downer, fruit of Early River Apple. This fruit is said to h originated near the Connecticut River, and good summer fruit, over medium size; colc pleasant flavor, and saleable in the market, rip in succession, also the Early Harvest Apple, ag flavored, yellowish white, saleable fruit.

Apricots.-From E. Phinney, Esq. of Lexi

Pears .- From Mr E. D. RICHARDS, of Dedh fruit of the Madeleime (of Cox, No. 3,) Citror Camnes, Green Chissel, or Early Chaumonte one of our best summer Pears, and a good bea Plums .- From R. Howe, from S. Down

Garden, fruit of the Jaune Hative, Early Yel or White Primordian, called in our market Bil lum. A Yellow Plum of fair size and of good avor. The tree blossoms full but the fruit is neertain in setting.

Honey .- From Mr ARTEMAS ROGERS, of Waertown, four boxes and one tumbler of Honey. he boxes were taken from the top of one hive, nd contained about 4 lbs. each, of a pure white oney and comb. Mr R, commenced in the spring ith one hive from which he has had two swarms. S. DOWNER.

Remedy for drinking cold water when heated .- A iend in Roxbury informs us that a person who had aterially injured himself by drinking freely of cold ater, when very warm, in consequence of exertions making hay, was restored to health by the appliation of bruised horse-radish leaves and onions to e stomach and bowels.

Sugar from Beet roots. - The French appear dermined to carry on this manufacture: the quanty made in France is about 4,000 tons a year. 'he cost is as yet considerably greater than that f West India sugar; but the process is very reent, and the parties expect to make improveents which will materally reduce its expense.

Emigrants from France .- In the ship France, tely arrived at New York from Havre, came 113 rmers from Wirtemberg and Alsace, in France.

TALL TIMOTHY .- A stalk has been cut at Norriswn, Pa. 7 feet and 51 inches in height.

The Salem N. Y. Post states that the Wheat Crop hich has looked remarkably promising, is now tely to be greatly injured, and in some instances most entirely cut off, by an insect, which is found, great numbers, in the head of the grain. It is of rellawish color, and about the tenth of an iach in ngth. It is within the hull, where it fastens upon e kernel, and saps the juices and destroys the life

It is stated, that if a bed of carnations be watered different times in the season, with a solution of tre, the good effects of the application will be visie by the luxuriance of the leaves, and the extra ornary dimensions of the flowers.

The expenses for the support of the poor of the ty of New York, during the past year, (1829) nounted to one hundred and twentyfour thousid dollars.

Ruta Baga Seed.

Just received at the Seedstore connected with the New agland Farmer, 52 North Market-street,

A few pounds of the new Red Top Ruta Baga Turnip ed, from Scotland, where it is considered much superior the common sort.

Also, 100 lbs. of the common Yellow Top Ruta Baga, warranted of the first quality.

olivar Calves, Saxony Bucks, and Bremen Gcese. For sale, 4 Bull Calves, sired by the celebrated im-orted improved Durham short horned bull BOLIVAR, hich stock have produced 36 quarts of milk a day. No. dam Grey Brown, half Cœlebs and half Galloway. No. dam Juno, three fourths Fill Pail. No. 3, dam Ceres, er sire Cœlebs, her dam Mr Gray's imported Cow. No.

dam Beauty, half Cœlebs and half Galloway. The alves are beautiful, and their dams all great milkers. Two imported Saxony Bucks, 2 Yearlings, and 2 Lambs. pairs of Bremen Geese. Inquire of Benjamin Shurt-ff, Jr, Chelsea, or at 52 Hanover Street, Boston.

IF Subscribers to the New England Farmer are inrmed that they can have their volumes neatly halfound and lettered by sending them to this office.

Chloride of Soda.

For sale at the Seed Store connected with the N. E. Farmer, 52 North Market-street-A few dozen bottles of Chloride of Soda, for preserving meat, removing offensive smells, neutralizing pestilential exhalations, and destroyin aronning pesurential exhaustins, and destroy-ing contagion; prepared by the New England chemical company for Lowe and Reed. This valuable article is particularly described, page 390 of this week's New Eng-land Farmer.—Price \$1,00 per bottle, with directions.

Turnip Seed, &c.

For sale at the Seed Store connected with the New England Farmer Office, 52, North Market-street,

An extensive assortment of Turnip Seeds, of the most valuable sorts for family use or stock. The most approved kinds for the farmer, are the White Dutch, White Stone, Yellow Stone and Yellow Malta. The two latter are of uncommon excellence, and keep well. Loudon describes the Yellow Malta as 'an excellent and beautiful root,' and of delicious flavor. Of the sorts for field culture, the White Norfolk, Yellow Aberdeen. White Flat, and Ruta Baga, are the best. The Yellow Aberdeen is most approved among the Farmers of England and Scotland, as it grows to a large size, is very sweet and nutritious, and keeps till June. The above seeds were saved in Europe expressly for this Establishment, and the utmost dependence may be placed on their genuine quality.

200 lbs. of the finest English White Flat Turnip Seed, raised this season, expressly for this Establishment, by Mr AARON D. WILLIAMS, of Roxbury, and warranted of the first quality, for sale, wholesale and retail.

Also, a variety of Long and Turnip rooted Radishes, suitable for sowing the ensuing mounts, some many other varieties of Cucumbers for pickling.

July 9. able for sowing the ensuing months, Long Prickly, and

Roman.

This elegant, full blooded horse, a bright bay, with black legs, mane, and tail, of high spirit and good temper, will stand at the farm of Mr Stephen Williams, in Northborough, Ms. at 20 dollars the season, to be paid before the mares are taken away.

For Sale,

The well known FARM in Dover, occupied for the last for teen years by the subscriber, containing about 200 acres, well located in a square, bounded on the south by Cochecho river, and on the east by Fresh creek, on which is a tide mill, with an apparatus for pounding and grinding plaster. The Buildings consist of a large two story Brick House, of 46 feet by 38, with a wing of 20 by 16, all well finished, adjoined to which is a shed 34 feet by 14, connecting the cider house 27 by 37, two stories, with one plastered room, where all the spinning and wcaving is done for the family; two Baros, one of which is 100 feet by 42, with two wings of about 40 feet each, one employed as a stable, the other for a sheepfold, with a good yard well walled in; the other is a Store Barn of 45 feet square, of 16 feet post, and will contain 60 tons of hay; a piggery of 50 feet by 30, with a cellar of 18 feet square under it, with boilers set to make soap, brew, and cook for swine. The fields are divided by permanent stone walls, and consist of one of 40 acres in front of the house, one of 17 on the East, one of 10 acres on the North, (principally orchard,) one of 15 Northeast, and one of 30 acres West of the house, with three pastures of 20 to 25 acres

The Farm has been gradually improving for the last ten years, and the two last has cut each year one hundred tons of hay, and 20 to 25 tons of thatch. It is one and a half miles from the village of Dover, which affords a good market. There has been planted some hundreds of Fruit Trees, principally Apple, many of which are grafted-with Pears, Cherry, Plum, Peach and Quince trees, and many in bearing, with a small nursery.

The terms of sale may be known by applying to Major. Annrew Pierce, of Dover, Mr Samuel Lord, of Portsmouth, or the subscriber on the premises.

June 11. WILLIAM FLAGG.

Am-u-nishun ov awl Kines, for sail as u-shu-al at Kouplan's Pouder Store, 65, Braud-street.

Carnation Pink Roots.

For sale at the Seed Store connected with the New England Farmer, No. 52 North Market Street, A collection of the finest Carnation Pink Roots, potted,

now in bud and bloom, and in good order. They are raised from some choice plants received from Europe last season, and are sold at 50 cents per pot. July 9.

New Work on Farriery.

Just received and for sale at the Seed Store connected with the New England Farmer Office, No. 52 North Market Street,

The Veterinary Surgeon; or, Farriery taught on a new and easy plan: being a treatise on all the diseases and accidents to which the Horse is hable; the causes and symptoms of each, and the most improved remedies employed for the cure in every case; with instructions to the Shoeing Smith, Farrier, and Groom, how to acquire knowledge in the art of Farriery; and the prevention of Diseases. Preceded by a popular description of the animal functions in health, and showing the principles on which these are to be restored when disordered. By John Hinds, Veterinary Surgeon. With considerable additions and improvements, patieularly adapted to this country, by Thomas M. Smith, Veterinary Surgeon, and Member of the London Veterinary Medical Society. Price \$1,25.

At Market this day, 199 Beef Cattle, including 58 unsold last week-all sold; a circumstance which has not happened for six or eight weeks past, 2660 Sheep, and 8 Cows and Calves.

Prices-Beef Caltle-A little better than last week :-

particular good Cattle, \$3.75 to 4.75.

Sheep and Lambs—Sales brisk—lots were taken at \$1.37\frac{1}{2} a 2.00—some wethers were at market and sold, price not noticed.

Cows and Calves-Few sales only at 20 a 25.

Swine-none at market.

MISCELLANIES.

PEARLS.

Pearls are not as poets have feigned-

- rain from the sky,

Which turns into peads as it falls in the sea;

but they are the morbid secretions of an oyster, a native of the sea and of various coasts. It is singular as remarked by Humboldt, that though several species of this genus of oyster abound in the rivers of South America no pearls are found in them. The saw; several thousand people of different colors, pearls are situated either in the body of the oyster or they lie loose between it and the shell, or lastly, they are fixed to the latter by a kind of neck, and it is said they do not appear till the animal has reached bazaar or market-place before each; the multitude its fourth year. They are of a beautiful lustre, but of hoats returning in the afternoon from the pearl there is nothing peculiar in their chemical composition, consisting merely of carbonate of lime.

The Romans were extravagantly fond of these ornaments which claimed the first rank after the diamond, and they gave almost incredible prices for them. Julius Casar presented Servilia, the mother of M. Brutus with a pearl worth 48,4171, 10s. and separating and assorting them, others weighing and Cleopatra, at a feast with Anthony of which Pliny ascertaining their number and value, while others has given a long and interesting account, swallowed are hawking them about, or drilling or boring them one, dissolved in vinegar of the value of 80,7291. 3s. 4d. They were worn in great profusion, not only in the ears, and on the fingers, head and neck, but strung over the whole body. The principal fisheries of this people were in the Rod Sea, the Gulf of Persia, and the Indian Ocean; and it is a matter of history that Cæsar was induced to invade Britain from some exaggerated accounts he had heard of the pearls of the coast, and rivers. Ceylon continues to be as it was in the time of the Romans, the most productive of those ornaments. The ancient fisheries of the Red Sea, however, are either exhausted or neglected, and cities of the greatest celebrity have in consequence sunk into insignificance or total ruin. In the time of the Ptolemies the merchants of the islands were princes, but they are now succeeded by a race of miserable fishermen.

In his tour to Scotland, Mr Pennant mentions a considerable pearl fishery in the vicinity of l'erth from which 10,000 l. worth was sent to London from 1761, to 1799, but by the indiscriminate destruction of the muscles the fishery was soon exhausted.

After the discovery of America the traffic in pearls passed in a great measure from the East, to the shores of the Western world. The first Spaniards who landed in Terra Firma found the savages decked with pearl necklaces and bracelets, and among the civilized people of Mexico and Peru, they saw pearls of a beautiful form, as eagerly sought after as in Europe. The stations of the oysters were sought out, and cities rose into splendor and affluence in their vicinity, all supported by the profits on these sea-born gems. The first city which owed its rise to this cause was New Cadiz, and the writers of that period discourse eloquently of the riches of the first planters, and the luxury they displayed -but now not a vestige of the city remains, and downs of shifting sand cover the desolate island. The same fate overtook the other cities, and towards the end of the sixteenth century this traffic in pearls had dwindled into insignificance. At present, Spanish America deadly wound. So exceedingly poisonous is its bite, furnishes no other pearls for trade than those of the Gulf of Panama and the mouth of the Rio de la Hacha.

The bulk of them are procured from the Bay of Condeatchy, in Ceylon, the Taprobane of the Ro-

On all other stations the cysters have disappeared while here they continue in undiminished numbers, though fished for centuries. The fishery has been conducted with an eye to the future. The banks which extend fur several miles along the coast are divided into three or four portions and fished in succession, a repose of three or four years being thus given to the animals to grow and propagate. The other) venomous creature, the first thing to be done

and nations the fishing days do not in reality much exceed thirty.

The fishing season commences in February and continues till about the beginning of April. During its continuance there is no spectacle which Ceylon affords, more striking to an European than the Bay of Condeatchy. 'This desert and barren spot' says an eye witness 'is converted into a scene which exceeds in variety and novelty almost everything I ever countries, easts, and occupations continually passing and repassing in a busy crowd: the vast number of huts and small tents erected on the shore, with the hanks, some laden with riches, the anxious and expecting countenances of the boat owners while the beats approach the shore and the eagerness with which they run to them when arrived; the vast number of jewellers, brokers, merchants of all colors and descriptions, who are occupied with the pearls, some for future use-all these circumstances tend to impress the mind with the value and importance of that object 'which can of itself create this seene.'

The inference is just, and yet when we remember in what manner and by whose means these vain ornaments are procured, the impression which such a gay scene conveys comes not unalloyed. Poor negroes sold to slavery were compelled to dive for them; and we cannot read of the cruel treatment they received from the American Spaniards without feelings of indignation and horror. Nor is it methodistical, but it is wholesome to view the desolation which overtook their cities, and the departure of their pomp and their strength' as the just punishment of their wickedness. The divers I believe are not slaves nor I hope are they maltreated; but they still drive a laborious trade and one not void of danger. for the ground shark prowls among the banks and is ever on the watch to devour them.

Pearls are the toys of civilized nations; while shells themselves become the pride and ornament of savage tribes; for it is in poetry only that we find damsels who think themselves 'when unadorned, adorned the most;' a negro Venus with a large cowry for an ear pendant, another for a nose jewel, and a string of volutes for a necklace, may in the opinion of your fair lady have a ridiculous and childish taste, but the one values her shells as highly as the other does her pearls. Sir J. Banks could not by any presents induce an Otaheitan girl to part with her native orna-

ments. - Edin. Jour. of Nat. Science.

COBRA DA CAPELLO.

The Cobra da Capello is a reptile of the most venomous nature, found in various degrees of abundance in different hot countries of the old continent, and in the islands adjacent. When disturbed by the approach of an individual, or any noise, the cobra raises the anterior part of his body, so as to appear to stand erect, expands its hood, and is prepared to inflict a that, in numerous instances which are well authenticated, death has followed within a few minutes; under ordinary circumstances, a few hours is the longest term that intervenes from the infliction of the bite till the death of the sufferer, where prompt measures for his relief have not been resorted to. So numerous are these dreadful vipers in some parts of India and Africa, that they are frequently found in dwelling-honses, and, in some instances, have taken up their quarters in the beds. Death of necessity must follow, under such circumstances, should the animal be alarmed or irritated by any sudden motion. In case a bite is received from this (or indeed any given to the animals to grow and propagate. The beds are carefully surveyed before they are let or farmed, and the merchant is permitted to fish for them the wound, on the side nearest the heart. The excel-

only six or eight weeks; but from the number of lent experiments of doctor Pennock, which have be holidays observed by the divers of different sects already referred to, prove that a sufficient degree pressure thus kept up will prevent the poison fro affecting the system; and this is rendered evident the good effects derived from ligatures appli around bitten limbs above the wound, by the nativ of India, though such ligatures generally act 1 imperfectly. The good effects of pressure, combin with the advantage of withdrawing the poison, w he obtained by applying a well exhausted cuppin glass over the wound; a substitute for which may most always be made of a drinking glass, small bott &c., if proper cups be not at hand. To heighten t curiosity of the multitude, the jugglers of India sele these venomous reptiles for their exhibitions, ar having extracted their fangs, keep them in cages baskets, to exhibit as dancing snakes. When t cage is opened, the juggler begins playing upor pipe or other instrument; whereupon the viper: sumes the erect attitude, distends its hood, and 1 mains balancing itself in this position until the mus is suspended. It is, however, most probable, that tl viper, in common with lizards and other animals, peculiarly affected by musical sounds. A friend, w passed a considerable time in the kingdom of At informed us, that a cobra entered a room while gentleman was playing on the flute, and advanc gently towards him so long as the music continue whenever it was suspended, the animal halted, a when it was entirely stopped, it gradually withdre This circumstance induced them to spare the vipe which uniformly made its appearance on several su cessive days when the flute was played.

The Galena Advertiser states that a roof of 12. equare feet may be covered with 765 pounds of she lead, which at the present prices, would cost 53, or about 20 dollars, less than the price of the nece sary shingles at Baltimore. The lead covering it supposed would last as long as the walls of the Lous and when no longer wanted as a covering wou not be lost. A shingle roof needs repairs or ren vation in twenty years.

A short time since, in a churchyard in Herefor shire, England, were written on a grave rail the fe lowing lines :-

Remember me as you pass by, As you are now, so once was I; As I am now so you must be, Therefore prepare to follow ine.

Underneath these lines some one wrote in bh paint-

To follow you I'm not content, Unless I know which way you went.

NEW ENGLAND FARMER.

PUBLISHED BY J. B. RUSSELL, AT NO. 52 NORTH MARKET STREET, (AT THE AGRICULTURAL WAREHOUSE.)-T. G. FESSENDEN, EDITOR.

VOL IX.

BOSTON, FRIDAY, AUGUST 6, 1830.

No. 3.

COMMUNICA PIONS.

FOR THE NEW ENGLAND FARMER.

The following letter from T. A. KNIGHT, Esq. will, I think, be interesting to all those who have seen the illiberal and disingenuous remarks in Loudon's Gardener's Magazine, upon the London Horticultural Society, and that eminent and liberal horticulturist, its learned President. J. LOWELL.

LONDON, MAY 28, 1830.

JOHN LOWELL, Esq., Rozbury, near Boston.

My DEAR Sta-I intended to have forwarded to you a box with plants or grafts of some Belgick varieties of Pears, of which the merits have been ascertained in the garden of the Horticultural Society; but the affairs of that Society became embarrassed the past winter, and the members have been disagreeing among themselves, and all has been in confusion owing to a heavy debt having been contracted.

All parties have alike been friendly to me; and reclected me without a dissenting voice. I had declared, when it was first proposed to make me President, that I, living at so great a distance (170 miles) would take no part in the management of the finances. Everything is now perfectly and amicably arranged, and all is going on well; and I hope next spring to forward a box to you. I have two or three excellent new pears in my own nursery, and one very admirable apple. Thave also a new plum which remains sound und excellent all winter, and which is the best dessert fruit which I possess in the spring. I shall be happy to bud trees of any kind which I think worth sending you.

Respecting my dispute with Loudon, I thought the discovery I had made as to the culture of the potato, of much value to a country circumstanced as ours is, and having the power to silence him with little trouble, I thought it best to do so.

I never engage in controversy till I am very sure I am right; and knowing that the public will sooner or later judge correctly I never lose my temper, or am in the least degree discomposed.

I think, that, last year, I discovered a mode of mproving cider, which renders it more wholesome, and enables me to obtain from apples which are without acid, a liquor as free from acid is any kind of wine.

During the fermentation of cider sherry, though t be called vinous, a good deal of acetous acid, is, believe, always generated, making those liquors nore or less harsh, that is, really acctous. I mix n each hogsbead of 110 gallons, from seven to ight pounds of newly burnt charcoal finely powlered. This mitigates fermentation, rendering the quor as black as ink so long as it ferments, but as oon as fermentation ceases, the charcoal is deosited, carrying with it all impurities, and leavng the cider excessively bright. No taste or mell is given to the liquor by the charcual, that eing wholly insoluble.

I sent you a small tree of the Siberian crab,

a useful variety-none was ever seen so productive in our climate.

Very sincerely yours,

T. A. KNIGHT.

N. B. Roxbury, July 30 .- Any person may have buds or scions of the Siberian bitter sweet, J. L.

LOCUST.

MR FESSENDEN-On the whole, I am extremely well pleased with the New England Farmer: but should I find a word or two of fault, it will all be intended for the benefit of the paper, as well as its numerous readers. What I particularly allude to in this case is the neglect of giving the botanical or scientific name to all vegetables that are brought into notice, either that of Linnæus, or some other well known and approved author, There is no one of your correspondents, I presume, but might find the botanic name of any vegetable he might wish to bring into notice through the medium of your paper,

reading the observations of Ma WM. BUCKMINS- Locust tree, (Robinia pseudo acacia.) Michaux, in TEA, in the last No. of your journal, where he re- his North American Sylva, in describing this tree commends the culture of the Yellow Locust Tree. I have no doubt but his remarks are worthy of in winter, while the circulation of the sap is susattention-but what species of Locust is this? pended, and posts [for fences, split from them] are Eaton describes four, viz: False acaeia, (Robi- allowed to become perfectly dry, before they are nia pscudo acacia-Clammy Locust (R. viscosa)-Rose Locust, (R. Hispida) - and Siberian Locust, rience has st Avn that their duration varies accord-(R. Caragana.) NUTTALL mentions the same, but ing to certain differences in the trees from which no Yellow Locust. My first impression, however, they are formed; thus about Lancaster and at was, that it was the common Locust we often see Harrisburgh, a small town on the Susquehannah, in our door yards, here in the country, Robinia where a considerable trade is carried on in wood pseudo acacia; but perceiving Mr B's account of that is brought down the river, those trees are the rapid growth of its sprouts, a circumstance I accounted best whose heart is red; the next in never happened to notice, I began to be suspicious that it must be some other species.

It is well known that common names are often local as well in their application as in their origin; thus a plant may receive a vulgar name in one section of a country where it may be familiarly known by almost every one, yet unheard of in a different section; but the scientific or Linnæan appellation conveys an idea of the same plant ble tree I believe there are two kinds, or species, throughout the world wherever the name can be

CROPS IN NEW HAMPSHIRE.

may not be altogether uninteresting. Our mowing fields, but a small part of which is yet cut, durability to any kind of timber.' * * * * will not afford an average crop; old fields of red grain is thought to be more promising than it has been for a number of years previous; but Indian corn must inevitably fall short of an average. Most of the fields of corn in this vicinity met with a serious disaster in the very outset, esthe hill, which I believe was a general practicethe farmer, after waiting an unusual length of time alled the Bitter sweet, the fruit of which is wholly for the blade to make its appearence, examined ree from acid and makes a cider which resembles for the cause, and on removing the covering, light French wine; it agrees with many who found to his astonishment and vexation, from five pondent appears to entertain a favorable opinion

cannot bear common eider. I hope it will prove or six to ten or twelve wire worms, all standing ready, like the dragon in the Apocalypse, to deyour the first embryo that the feeble efforts of nature were able to protrude; and this I found was the case in a few instances, even where the seed had been steeped in a solution of copperas, or saltpetre-the latter I have never known, before, to fail. This want of success in the solutions, may, think, be accounted for from the frequent rains and great abundance of moisture in the ground, which extracted or otherwise neutralized the saits, and thereby destroyed their efficacy.

> It may be worthy of remark, that those fields generally which suffered the most from the worm, were where the seed had been thrown upon the naked dung; but in some few instances where a hoe full of earth intervened, it almost entirely escaped. Yours, &c.

TRUMAN ABELL,

Lempster, N. H., July 19, 1830.

Remarks by the Editor .- Scientific men have I was induced to make these remarks from not agreed relative to the varieties of the common and its properties, says, ' When the trees are felled set, they are estimated to last forty years. Expeesteem are those with a greenish vellow heart: and the least valuable are those with a white heart. From this variety in the color of the wood, which probably arises from a difference in the soil, are derived the names of Red, Green, and White Locust. In the western states there is a variety, which is sometimes called Black Locust.'

Mr Briggs, of Bristol, R. I., says, 'of this valuagrowing pretty generally throughout New England, at least as far as my information extends, viz. the yellow and the white locust. The latter is very By the way, a few remarks on the state of the inferior in value to the former. While the white crops in this northern section of New England, decays as soon as the chesnut, or any common forest wood, the yellow is superior in point of

Again, he observes that 'The two kinds may top and speargrass are extremely light. English be easily distinguished by peeling the bark, or cutting a chip from the wood. The bark of the white is more smooth, and peals off more readily, and the wood is more sappy than the yellow. The white is worth but little, except for fire wood.' &c. See N. E. Farmer, vol. v. p. 177. and vol. vii. pecially where raw, coarse manure was used in p. 81. We have no doubt but Mr Buckminster's observations apply to the Pseudo acacia, the only in addition to the effects of a cold wet season, kind which is common in New England, but cannot say whether he has reference to the white or yellow kind.

We are glad to find that our intelligent corres-

copperas and saltpetre; and that he is able to assign so probable a cause of their failure in some instances, the present season.

MR FESSENDEN-I was somewhat surprised on reading the statements of L. S. in the Farmer of July 9th, on the application of brine to peartrees. My own experience had led me to believe, that salt, or strong brine, in any considerable quantities, would kill any tree or shrub to which it might be applied.

A few years since, having cut several butternut and walnut trees from the cultivated part of my meadow, I was troubled with an annual growth of sprouts and suckers, from the stumps and roots; and although I cut them off closely, each year, yet they seemed not at all to diminish. And as it was difficult to extract the green roots, I had recourse to brine, such as your correspondent applied to his Pear trees-and though I put less than a pailful to a stump, yet one course was sufficient to kill them, entirely, in a few weeks. I have tried salt brine, with the same effect, on other trees, which I wished to remove .- I have also found it useful in destroying beds of Canada thistles. I should like to know more of the beneficial effects of salt in given quantities, in improving an exhausted soil, or as a mixture in composts—and whether other farmers or horticulturists have found it useful to fruit trees, as stated by L. S. Yours, &c.

Grafton Co., N. H., July 19, 1830.

Remarks by the Editor .- That strong solutions of salt in water are fatal to vegetation of all kinds is a fact which has been known for ages. But it is stated by agricultural writers that in small quantities, mixed with other substances, and judiciously applied, it is useful as a manure. Its application is recommended for destroying insects, and it is probable that its good effects when applied to pear trees, mentioned by L. S. pages 401, 402, vol. viii. New England Farmer, might originate in the destruction of some worm in the root, which the brine might destroy, without being point. The leaf therefore is to the bud what the strong enough to injure the tree. We have heretofore expressed our doubts relative to the utility of salt, applied as mentioned above, but are not prepared to say that cases may not exist, in which it may be of service as an anti-lote to premature decay in fruit trees. The most efficient and useful medicines, as well for vegetables as animals, are poisonous and destructive, when exhibited in too large doses.

FOWLS IN GARDENS.

Mr Fessenden-I have read in a late New England Farmer, the communication of Benja-MIN WHEELER, headed ' Fowls in Gardens.' I am one of the 'neighbors' of Major WHEELER; and except his hens and my dog, our families are all good friends,-Under these circumstances I feel called on to give my reasons for not having been 'convinced' by the 'precepts and example' of my friend.

From my youth up I have had occasion to observe that a hen is naturally disposed to all manner of mischief; being altogether selfish in her feelings, regardless of of all interests except her own and those of her chickens; and because no laws have been made for her better regulation, and no fences required to restrain her wanderings, she deems herself to be lawless, and sets all

worm and a cornfield, I leave to the metaphysicians; but it is quite certain that she does not, nor does she seem to be at all concerned to comprehend the difference between her master's enclosures direction. This is the only substance which is and those of his neighbors.

If Major Wheeler's hens could be persuaded to follow his 'precepts and example,' his neighbors would have no cause of complaint; but although he never invades my cornfield himself, and has forbidden his hens to leave his garden, vet they disregard it, and no longer ago than last summer, put into their crops not less than half a dozen bashels of corn from the ears in my field.

In this state of things, I have bought me a dog, and a very good dog too, Mr Editor, and hope I shall be able to persuade my neighbors to do the JOHN BALLARD, 2d.

Framingham, July 29.

VEGETABLE PHYSIOLOGY.

MR FESSENDEN-The following outlines of the Theory of Vegetable Physiology, were drawn up by Prof. Lindley of the London University, from the writings of M. du Petit Thouars, and with some modifications, may be regarded as exhibiting a general view of the science in its present state. Every proposition abounds with matter for attentive consideration, and might serve as the theme for an interesting disquisition. As the result of the researches of one of the most accute observers and ingenious reasoners ever engaged in the investigation of this subject, it is worthy of a careful study; and as the season is approaching in which the operation of budding is usually performed, it may prove acceptable to many of your readers.

Respectfully yours, Salem, August 2, 1830.

1. The bud is the first visible moveable point of vegetation; one exists at the axilla of every leaf. It is manifest in the greater number of dicotyledonous plants and grasses. It is latent in monocotyledonous plants, in which it exists only as a vital flower is to the fruit and seed.

2. The bud is at first supported by the juices contained in the utricles of the interior vegetable substance or parenchyma. This is the operation by which the parenchyma is reduced to a state of pith. That part is therefore analogous to the cotyledon of the seed, or seminal embryo.

3. As soon as the bud is formed it is subject to two general movements. The one is a motion upwards, or an aërial motion. The other is a motion downwards, or a terrestrial motion. From the first proceeds the embryos of leaves, analogous to which is the plumuli; from the second proceeds the formation of the wood or bark, analogous to which is the radicle.

4. Each of these fibres is formed at the expense of the cambium or of the sap produced by the first fibres and deposited between the wood and bark. The fibres carry downwards the matter necessary for their own elongations, which matter is the descending sap.

5. The development of the bud consists in the aërial or leafy clongation of these fibres; each of fine-Moor Park by E. PHINNEY. which, attracted by the leafy extremity, carries upward with it the matter necessary for its own by Rufus Howe. Cherry Plums, by Gen. Dear. elongation, which matter is the ascending sap.

stances, the woody and the parenchymatous, (which too acid for table fruit, from the garden of M the lawyers and field drivers at defiance. Wheth- were long ago recognized by Grew;) the woody M'Lane, of Boston.

of the utility of soaking seed corn in solution of er a hen cannot or will not distinguish between a is disposed in fibres which undergo no change The parenchymatous appears formed, in the outset, of detached particles which unite and form utricles; so that it assists in the process of increase in every susceptible of a green color,

7. The sap is the food of plants. It is pumped up in the form of moisture by the roots, and it becom s exposed to the atmosphere in the leaves. In the first instance it has a common use; but finally it receives a particular destination according to the kinds of plants and their parts. It is only carried to the points when it is wanted, so that there is no universal circulation. Being composed principally of the two general substances, of which mention has been made, the woody and the parenchymatous, as soon as one of these is employed in the process of vegetation, it is necessary that the other should be disengaged and deposited in the vicinity; so that the application of one substance is the separation of the other.

YELLOW LOCUST

Mr Fessenden-Early in May, 1828, I removed two Yellow Locust trees from a dry, sandy soil, where they were suffering much from the depredations of the worm, to a wet, mucky soil, highly favorable to the growth and operations of worms. These trees were not originated from seed, but spronts from roots, where trees had been eaten down. Soon after they were transplanted, I observed that the worms, which had previously eaten so as almost to destroy the trees, continued their rayages, and their chips lay in piles around the trees, as ample witnesses of their unabated industry, I gave up my beautiful young Locusts for lost.

Early in June, of the same year, being engaged in whitewashing some fruit trees, I thought proper

to try its effects upon the Locusts,

My first operation was, to fill up the cavities. occasioned by the worms, as much as convenient with lime from the bottom of the vessel containing the wash; I then, with my brush washed the trei from the ground upward about five feet to the limbs; finding in a short time, that the desirable effect had been produced. I threw some lime around the roots of the trees, in order more fully to test its utility and increase the thriftiness of the tree; sufficiit to say, my most sanguine expectations have beer answered in regard to them; my trees are in a very thrifty state, and no worm has disturbed them in more than two years. I place a small quantity o lime around the roots every spring, and repeat the washing. Yours &c.

Richmond, Ms. July 29, 1830. W. BACON.

MASSACHUSETTS HORTICULTURAL SOCIETY

Saturday, July 31, 1830.

Apples .- A basket of Early Harvest, by John PRINCE, Esq. of Roxbury, very fine Sopsavine by RUFUS HOWE, Pine apple by same.

Apricots .- A number of boxes of fine appear ance by Dr Robbins of Roxbury. A specimer of this fruit of large size, upon the branches, mucl injured by the late rains, WM GRIDLEY, of Bos ton-supposed to be the Moor Park. Those ex hibited by Mr Aspinwall, of Brookline, were very

Plums, -- Moroeco Plums, of good appearance BORN, a specimen of the Morello Cherry, upon the 6. From this sap are formed two general sub-branches, of handsome and rich appearance, but

Honey -A box of very superior honey was shown by John Paince, Esq. of Roxbury.

In a note to the Society, Mr Paince states that fall. They have produced four fine swarms this season, all hived in Beard's Patent Slide Hives, The first swarms, of the 27th May, produced the box now exhibited, and three others making 25lbs. net, taken off 15th July.

The success of Mr Prince certainly furnishes a striking example of what may be done by our abundant materials for the labors of the honey Bee; and in what way could a farmer expend a few dollars, to so much profit, to say nothing of the comfort and pleasure derived, as in the purchase of a swarm of bees that work without pay, and accumulate without capital? Mr Beard, of Charlestown annually brings a considerable number of swarms of Bees from Maine, which, with his patent hives, the best now in use, he sells at a very moderate price.

A basket of beautiful fruit from the garden of S. G. Perkins, Esq. of Brookline, was exhibited at the Hall of the society on Saturday, and attracted much notice. The following communication accompanied it.

DEAR SIR,-I send you a basket of fruit containing specimens of fine grapes and nectarines not generally known here. The bunch of white about a hundred plants of this species of fruit for sale in pots: the other kinds of grapes are better known here under the names of St Peters, Black Hamburg, and White Muscat.

The nectarines are, 1st, the Lewis or Boston nectarine; this is a yellow and red fruit which originated in the yard of Mr Thomas Lewis many years since. I obtained buds from the tree the second season it showed fruit, soon after which it was destroyed; so that by mere chance the fruit was preserved. Mr Lewis assured me that it was raised from a peach stone, which is possible, though not by any means common, the nectarine being nothing more than a smooth skin peach.

I shall have some handsome specimens next week when I shall be happy to present one or two to the committee on fruit that they may be painted, agreeably to your request. This fruit was painted some years since by my order, and sent to the Horticultural Society of London, but I have understood that doubts have been entertained as to the correctness of its coloring, it being thought too brilliant to be natural. You will, however, see by the specimens I shall present you, that there is no deception on this score.

The white nectarine is the 'Varmach' or 'Peterborough,' an old fruit long known under these names, and commonly called the White Nectarine.

The cold and wet weather during the last week has prevented me from sending you some larger and finer bunches of grapes; as they have not ripened the last six or seven days as much as I expected they would have done. Some of the berries in the bunch of the 'Bar sur Aube' measure three inches round by actual measurement made by me this morning.

Respectfully yours, SAMUEL G. PERKINS. ZEBEDEE COOK, Jr. Esq.

Dahlias from DAVID HAGGERSTON.

Agricultural Premiums-The Middlesex Society | much property. of Husbandmen and Manufacturers announce the following premiums to be awarded at the annual meeting, 7th of October next .-- For the best culfarmers in providing themselves with this rich and tivated farm \$25; the second best \$15; the wholesome luxury .- Our fields abound with third \$10. For the best Apple Orchard, planted or set out since 1820, containing not less than 75 trees, \$15; the second best \$12; the third \$9. The Trustees have appointed Josiah Adams, Esq. of Framingham, Honorable Benjamin F. Varnum, of Dracut, Moses Whitney Esq. of Stow, Reuben Brown, Jr. Esq. of this town, the committee to inspect the farms and fruit trees, and adjudge premiums.

The gentlemen are requested by the Trustees to visit the farms and orchards about the first of September; and in each case to take with them, either one of the selectmen of the town where the farm lies, or some other respectable neighbor, who shall aid them in their duties, and add his impartial testimony, to such other evidence as the owner may lay before the committee. This precaution will secure a fair representation of the case, and prevent any dissatisfaction.

Enterprising farmers should attend to the subgrapes which lays on the top of the basket is the ject without delay. For the Trustees have voted, real 'Chasselas d'or, &c. Bar sur Aube.' I have that those persons, who wish to have their farms or orchards inspected, must make application either to Mr John Stacy, of this town, the Secretary, or to one of the Committee at an early day in Aguust .- Concord Gazette.

From Silliman's Journal of Science &c, for July, 1830.

Mode for Adjusting Lightning Rods. Columbus, (Ohio,) May 24th, 1830 TO THE EDITOR, FROMMR P. B. WILCOSS.

Sta-The Scioto valley in which this town is situated, is liable to heavy thunder storms. A contrariety of opinion and of practice prevails in attempting to secure houses by rols from the effects of lightning; and I have been requested by several gentlemen, to address you upon the subject, to ascertain the proper manner in which to put up rods, so as most effectually to protect buildings. , Some of the difficulties are as follows:

1. The depth to which the rod should be inserted in the ground .- It has been remarked in this state and in Kentucky, both lime stone countries, that very frequently rods furnish no protection to houses. In the summer season the earth becomes perfectly dry for several feet below the surface. and it is supposed by some that there is not sufficient moisture at the termination of the rod in the

2. Another difficulty is, the proper height of the rod above the highest point of the building.

3. Another very serious difficulty seems to be the manner in which the rod should be attached to the building. The common practice here is to place the rod by the side of the house and at proper distance, let the rod run through small pieces of iron, one end of which is driven into the house, the other having an eye sufficiently large to admit the rod. Through this eye, and before the rod is inserted, the neck of a glass bottle, the end of a horn, or some non-conductor is placed, so that the what the liquid was.

The following flowers were exhibited: Erythina | building stands isolated. Serious doubts are entercristi-galli, or Cockscomb Coral Tree; Lilium tained whether the practice is correct or not, superbum; Tigridia pavonia, or Tiger flower; Indeed there is nobody here who knows how to in March last be purchased two Hives, of Mr Agapanthus umbellatus, Asplenium; and fine put up a lightning rod, and rest satisfied that be BEARO of Charlestown, brought from Maine last double Holyhocks from John Lowell, Esq.; is correct. Will you be good enough to give us Double Dahlias from Gen. Dearrorn, and Double the necessary information? With your permission I would make public your views upon the subject. as I have no doubt it may save many lives and

> Answers given by Prof. Olmsted of Y. College at the Editor's request.

I. The rod should be closely joined together throughout, either by securing one part within another, or by welding several parts together; this will prevent the interruption occasioned to the passage of electricity through links or loose joints.

2. The points of the rod above should be gilt, since the conducting power of iron is impaired by oxidation.

3. The rod should descend into the ground far enough to be always in contact with moist earth. This depth will vary in different places. In some places five feet will be sufficient; in others, six or seven will be required; and in soils peculiarly dry it may be prodent in the season of thunder storms, to connect the bottom of the rod (by means of a chain or the rod continued,) with a well or vein of water. The chain or rod may be inclosed in some substance, or be painted with a thick coat of lampblack to keep it from rusting. When the bottom of the rod terminates in the ground it may branch off in several directions.

4. The height of the rod above the building should be regulated on this principle; that a lightning rod will protect a space in every direction from it, of twice its length above the building. Thus, if it rises fifteen feet above the roof, it will protect a space of thirty feet every way.

5. The rod should be fastened to the house by wooden in preference to iron stays. For, although electricity takes the shortest route yet in case the rod were imperfect, the passage of the fluid into the building would be favored by iron

6. The kitchen chimney, being that alone in which a fire is usually kept during the summer, requires to be especially protected.

7. Paint, made of lampblack is best suited to lightning rods, this substance being a better conducter than other kinds of paint.

With regard to the failure in lightning rods mentioned in the foregoing letter, it is probably owing chiefly to the dryness of the soil; and therefore, in that region particular care will be required in fixing the bottom of the rod, so as to make it convey off the electricity in the best manner, and this is most effectually secured by a thorough metallic communication with moist earth, or better with permanent water.

In addition to the above remarks, drawn up at my request by Prof. Olmsted, it may be suggested, that, as the gold leaf on lightning rods is in a few years removed by the weather, it would be better to terminate the rods with solid silver, or better still with the platina points prepared by Mr Lukens of Philadelphia.—Ed.

A black woman has been committed for trial at New York for throwing some liquid into the eyes of a printer, which prevented him from seeing at all for three weeks, and the sight of only one eye is now restored. The physician could not tell

INSECT ARCHITECTURE.

It can never be too strongly impressed upon a mind anxious for the acquisition of knowledge, that the commonest things by which we are surrounded are deserving of minute and careful attention. The most profound investigations of Philosophy are necessarily connected with the ordinary circumstances of our being, and of the world in which our every-day life is spent.

This is peculiarly applicable to the economy of insects. They constitute a very large and interesting part of the animal kingdom. They are everywhere about us. The spider weaves his curious web in our houses; the caterpillar constructs his silken cell in our gardens; the wasp that hovers over our food has a nest not far removed from us, which she has assisted to build with the nicest art; the beetle that crawls across our path is also an ingenious mechanic, and has some curious instincts to exhibit to those who will feel an interest in watching his movements; and the moth that eats into our cloths has something to plead for our pity, for he came, like us, naked into the world, and he has destroyed our garments, not in malice or wantonness, but that he may clothe himself with the same wool which we have stripped from the sheep. An observation of the habits of these little creatures is full of valuable lessons, which the abundance of the examples has no tendency to diminish. The more such observations are multiplied, the more are we led forward to the freshest and the most delightful parts of knowledge; the more do we learn to estimate rightly the extraordinary provisions and most abundant resources of a creative Providence; and the better do we appreciate our own relations with all the infinite varietics of Nature, and our dependence, in common with the ephemeron that flutters its little hour in the summer sun, upon that Being in whose scheme of existence the humblest as well as the highest creature has its destined purposes. 'If you speak of a stone,' says St Basil, one of the Fathers of the Church, 'if you speak of a fly, a gnat, or a bee, your conversation will be a sort of demonstration of His power whose hand formed them; for the wisdom of the workman is commonly perceived in that which is of little size. He who has stretched out the heavens, and dug up the bottom of the sea, is also He who has pierced a passage through the sting of the bee for the ejection of its poison.

As a proof of the extraordinary number of insects within a limited field of observation, Mr Stephens informs us, that in the short space of forty days, between the middle of June and the beginning of August, he found, in the vicinity of Ripley, specimens of above two thousand four hundred species of insects, exclusive of caterpillars and grubs,-a number amounting to nearly a fourth of the insects ascertained to be indigenous. He further tells us, that among these specimens, although the ground had, in former seasons, been frequently explored, there were about one hundred species altogether new, and not before in any collection which he had inspected, including several new genera; while many insects reputed scarce were in considerable plenty.

There is, perhaps, no situation in which the lover of nature and the observer of animal life may not find opportunities for increasing his store of facts. It is told of a state prisoner under a cruel and rigorous despotism, that when he was excluded from all commerce with mankind, and was shut out from books, he took an interest and found consolation in the visits of a spider; and there is no improbability in the story. The operations of that persecuted creature are among the most extraordinary exhibitions of mechanical ingenuity; and a daily watching of the workings of its instinct would beget admiration in a rightly constituted mind. The poor prisoner had abundant leisure for the speculations in which the spider's web would enchain his understanding. We have all of us at one period or other of our lives, been struck with some singular evidence of contrivance in the economy of insects, which we have seen

want of knowledge, have prevented us from follow- tainty as a fire or an inundation; and ships even have ing up the curiosity which for a moment was excited, been destroyed by these indefatigable republics. And yet some such accident has made men Natural- Our own docks and embankments have been threatists, in the highest meaning of the term. Bonnet, encd by such minute ravagers. evidently speaking of himself, says, 'I knew a Naturalist, who, when he was seventeen years of ago, having heard of the operations of the ant-lion, began by doubting them. He had no rest till he had examined into them; and he verified them, he admired disciple and the friend of the Pliny of France's

(Reaumur.)

An accurate knowledge of the properties of insects is of great importance to man, merely with takes a long time for the public to discover a good relation to his own comfort and security. The injurthing, and appropriate it. The tomato is easily raised, relation to his own comfort and security. The injuries which they inflict upon us are extensive and and may be had from the vine for more than a quarter by the destruction of those creatures, both insects, hirds, and quadrupeds, who keep the ravagers in check, are generally aggravations of the evil, because they are directed by an ignorance of the economy of nature. The little knowledge which we have of the modes by which insects may be impeded in their destruction of much that is valuable to us, has probably proceeded from our contempt of their individual insignificance. The security of property has ceased to be endangered by quadrupeds of prey, and yet our gardens are ravaged by aphides and catcroillars. It is somewhat startling to affirm that the nothing but a cellar and a garret, or a roof built over condition of the human race is seriously injured by these petty annoyances; but it is perfectly true that the art and industry of man have not yet been able to overcome the collective force, the individual perseverance, and the complicated machinery of destruction which insects employ. A small ant, according to a most careful and philosophical observer, opposes almost invincible obstacles to the progress of civilization in many parts of the equinoctial zone. These animals devour paper and parchment; they destroy every book and manuscript. Many provinces of Spanish America cannot, in consequence, show a secret to preserve provisions fresh in hot weather, written document of a hundred years existence, and believe in it because they comprehend it notof a people assume, if there be nothing to connect of ice houses -Ibid. the present with the past-if the depositorics of human knowledge must be constantly renewed-if the monuments of genius and wisdom cannot be transmitted to posterity?' † Again, there are beetles which deposit their larvæ in trees, in such formidable numbers, that whole forests perish, beyond the power of remedy. The pines of the Hartz have thus been destroyed to an enormous extent; and in North Amer- uniform and homogeneous, add a pint of sour milk ica, at one place in South Carolina, at least ninety trees in every hundred, upon a tract of two thousand acres, were swept away by a small, black, winged according to the season; -then knead it afresh, and bug. And yet, according to Wilson, the historian of American birds, the people of the United States were in the habit of destroying the red-headed the shade, and place them in layers in large pots or woodpecker, the great enemy of these insects, helkegs, where they may remain a fortnight. The cause he occasionally spoilt an apple. The same delightful writer, and true naturalist, speaking of the labors of the ivory-billed wood-pecker, says, ing worms and of being preserved fresh for many 'would it be believed that the larvæ of an insect, or years, provided it is kept in a dry place, and in well fly, no larger than a grain of rice, should silently, closed vessels.—Bull. Univ. and in one season, destroy some thousand acres of pine trees, many of them from two to three feet in diameter, and a hundred and fifty feet high? in some places the whole woods, as far as you can see around you, are dead, stripped of the bark, their wintry-louking arms and bare trunks bleaching in the sun, and tumbling in ruins before every blast.' The subterrancous larva of a species of beetle has often caused a complete failure of the seed corn, as in the district yields a calf about once a year, she is less profitable of Halle in 1812. The corn-weevil, which extracts The prohibition of the sale of very young calves, the flour from grain, leaving the husk behind, will destroy the contents of the largest storehouses in a less than a month old, the flesh of the calf is not very short period. The wire-worm, and the turnipfly, are dreaded by every farmer. The ravages of the locust are too well known not to be at once recollected, as an example of the formidable collective power of the insect race. The white ants of tropical coun-

[To be concluded next week.]

TOMATOES.

Some late paper contains a paragraph in praise of the tomato, one of the very best plants for the table, them, he discovered new facts, and soon became the and in daily use, when in season, over all parts of the country, but New England. It has not won its way to public favor according to its merits, though this may be said of a great many men and things. It complicated; and the remedies which we attempt, of a year. The fruit is so rich in appearance that it should be cultivated if only for ornament.—Tribune.

ICE HOUSES.

In the city, people must purchase their ice, but there is little excuse for a good farmer who has no ice house. The Dutch in Pennsylvania, living in a limestone district, where the springs gush from the surface, have generally a little dairy house erected over one of these, well knowing the advantage of keeping milk cool in summer. Two men may construct an ice house in two days in autumn; for it is a cellar; and the roof even may be substituted by a quantity of hay thrown upon bars.

The saving in a year will exceed the expense, and the amount of comforts would be cheaply purchased at a higher rate. Fresh provisions may be preserved in ice a long time, and taken out in a better state to be eaten, than when put in. Butter in such weather as we have lately had, unless kept with ice, must be caten with a spoon instead of a knife, and how much better is fruit when it is cold?

Many men, would expend ten dollars in buying a What development,' he adds, 'can the civilization who yet neglect the safe, obvious, and cheap resource

> POTATO CHEESE .- In Thuringia and part of Saxony, a kind of potato cheese is made which is very much sought after. The following is the recipe: select good white potatos, boil them, and when cold, pcel and reduce them to a pulp with a rasp or mortar; to five pounds of this pulp which must be very and the requisite portion of salt;-knead the whole well, cover it, and let it remain three or four days, place the cheeses in small baskets, when they will part with their superfluous moisture;-dry them in older they are the finer they become.

> This cheese has the advantage of never engender-

FLESH OF YOUNG CALVES .- By a municipal law in Paris, it is forbidden to expuse for sale the meat of calves less than six weeks old. The great profit arising from the sale of milk furnishes an inducement to the violation of this law. Many thousands of cows are kept and fed in cellars, within the walls of Paris for the sale of the milk, and unless a cow

is deemed of great importance to public health. At even gelatine, but a viscid and glutinous juice, containing very little fibrine, (which is an animal substance essentially nutritious,) still less ozmazome, a principle exciting to the digestive organs. Hence there are few stomachs capable of supporting such food; and were it digestible, it would strengthen and nourish the body very badly.

Contemplation de la Nature, part ii. ch. 42.

^{*} Stephen's Illustrations, vol. i., p. 72, note.

HOBRICVLTURB.

MR FESSENGEN-I am happy to find, by the llowing notice, in the 33d. No. of the Annales Horticulture, recently received, that the scions d grape vines, which we sent to the Horticultur-Society of Paris, have reached their destina-

Meeting of the Council of Administration on e 7th of April, 1830.'

After the Proces-verbal of the last meeting d been read and adopted, the President commicated a letter from Mr Dearborn, President the Massachusetts Horticultural Society, conning information on the labors of that institun accompanied by a collection of grafts, couting of ten varieties of Pears, six varieties of ples, one variety of Cherry, and three varieties Grape Vines. The Council voted thanks to Dearborn and to the Massachusetts Society, d decided that the present be honorably menned in the Anuales. The Grape Vines were ifided to M. Lacouete De Murinais, and a regisof inscription, for the distribution of the grafts s immediately opened.'

The letter sent with the scions and vines, and description, the varieties furnished by Mr Dow-, are published, in the above named number the Annales.

DOUBLE FLOWERS.

As double flowers are unnatural and are conered accidental, or the result of some peculiar de of cultivation, but which has ever been inved in mystery, I inclose an extract from the nales de Horticulture, containing an account of ovel theory, which has been illustrated by sucsful experiments.

Although botanists consider double flowers as asters, they are still much admired, and florists e been assiduous in their efforts to produce m. Numerous methods have been suggested the cultivator, but as vague and unphilosophical, he recipes of the alchymist, and with results, experiment, equally unsatisfactory. If the pros, which has succeeded so completely with the na Aster, should prove to be applicable to er flowers, an important and most interesting overy has been made in the economy of the etable kingdom. To ascertain this, experiits must be multiplied on a great variety of amental plants, and they are worthy the attenof all, who are zealous to extend the delightdomain of Floriculture.

With sincere esteem,

Your most obedient servant. inley Place, Roxbury, H. A. S. DEARBORN.

EXTRACT NO. XIX.

From the Annales D' Horticulture.

thod of obtaining Reines Marquerites, Aster Chitensis, with double flowers, from the seeds proluced by Reines Marquerites, with simple flowers ; y M. Poiteau.

n collecting the seeds of the China Aster, it is general custom to give a preference to those the superior flowers, as they are larger and betnourished; and this choice is founded on the ief, that the double flowers are the result of augmentation of vigor, and of a more considere development in the plants which produce in.

ten see, that the plants, whose flowers are double. also become more vigorous, than those of the same species which produce simple flowers. They also see that double flowers become simple, when their culture is neglected, or when they are abandoned entirely to the care of nature.

Notwithstanding, a contrary doctrine has been maintained, by some of the learned, within fifteen or twenty years: Bose participates in it, and he has endeavored to establish it in Deterville's Cours d' Agriculture. This doctrine consists in regarding the double flowers as the result of an impoverishment of the plants, instead of an augmentation of vigor and development. This is the principal argument adduced in its favor; that all t'e substance of a double flower in a dried state. is less than that of the seed and its appendages which would have been produced, if the flower had not become double.

I shall not attempt to urge the objections which might be raised to this doctrine; but the fact which I am about to state is favorable to it.

In 1786, having in my garden only single China Asters, a curate of the neighborhood desired me to give him some seeds; I did so; he planted them and obtained only single flowers; but I was much astonished, on visiting the curate the second year, to behold bis China Asters all double, and of the greatest beauty. Presuming he had obtained his seeds elsewhere, I hastened to ascertain of whom he had procured them. The seeds, he replied, were collected from your China Asters, which have produced these beautiful flowers. Still more astonished, I desired him to inform me how he had done it. 'I have,' he replied, 'collected them only from the little heads of the inferior branches of the plants; it is necessary to have patience to do this, for these little heads do not all contain seeds, and most of them have but one or two,' The same year I gathered only the seeds of the small heads of my plants and the year following they yielded magnificent double

This process, as has been seen, is not new, for it was known before 1786; nevertheless, I believe that many amateurs are ignorant of it. I publish it for the interest of Horticulture, and as a fact in support of the theory, which assigns, as the cause of double flowers an impoverishment in the plants which produce them.

From the Windsor (Vermout,) Chronicle.

NEW ENEMY TO WHEAT.

We have just returned from examining a field of Spring Wheat, belonging to the Hon. J. II. Hubbard of this place. On approaching the field, the appearance promised a good crop. On examining the heads, minute black spots were found, generally near the centre of the chaffy covering of the kernels, which appear to have been made by some insect, piercing the chaff to deposit its eggs. On removing the chaff, the kernels were found to be infested with small yellow worms, subsisting upon its juices. They commence their operations on the surface of the kernel, where the egg was at first deposited. In some cases, only a of shape.' In others, where the mischief seems to tart, without being aware of our testiness. have commenced earlier, the juices of the kernel It is very natural, indeed, that cultivators should have been wholly consumed, and a mere speck whom we attributed that article he is the last per-

attribute the cause of double flowers to a more | remains. Several worms were commonly found considerable development, because they very of- feeding on the same kernel. On one we counted ELEVEN. Some heads are nearly destroyed, others less, and others little if at all. There will be from our fourth to half a crop. They were first observed about the middle of last week, when they were much larger and more active than at present. We hear that several other fields of Spring Wheat have sustained similar injury. Some fields of Winter Wheat have escaped; others have not.

Here is work for our entomologists, scientific farmers, and Lyceums. Let us learn the whole history of this insect, and we shall doubtless find some way to attack him successfully. In order to this, many persons must busy themselves in collecting facts, and these facts must be brought together, compared and arranged. We invite attention, therefore, to the following points:

1. A description of the perfect insect; the time when, and the circumstances under which, it first appears and deposits its eggs.

2. How long before the egg becomes a worm; and are there any circumstances, which hasten or retard the change?

3. What other changes does it undergo, before it becomes a perfect, and, as it probably does, a winged insect; and how long is the time; and what effect has any kind of weather, or other circumstances, on its progress?

4. Where, and in what condition, does it spend the winter?

5. Does it, in any of its states, feed on any plant except wheat; and if so, on what?

6. Are there any kinds of wheat, which it does not attack,-and if so, what appears to be the reason?

Any one can collect information on these aud similar points, and all, put together, will teach us how we may best guard against this new enemy of our agricultural interests.

new england farmer.

BOSTON, FRIDAY, AUGUST 6, 1830.

BLIGHT IN PEAR TREES.

We are sorry to perceive, by an article in the last National Egis, that our remarks on a disease in pear trees, [page 6 of our current volume] have been thought to be intended to 'earp at' some observations on the same subject by 'Agricola,' which were republished from the Ægis, and immediately preceded the observations alluded to, We were perhaps unfortunate in expressing our ideas, but we meant to convey opinions coincident with those of that writer, viz. that the insect in pear-trees, technicaly called Scolytus Pyri was one cause, but not the sole cause of what is called the blight in pear-trees. We had no intention of being 'pungent,' and our similes were meant to elucidate, not to throw an air of ridicule on the subject. The quotations from Coxe and Miller were intended to corroborate the opinions of 'Agricola,' who observes 'that there is a disease often affecting the pear tree, external indications of which are similar to those exhibited on limbs of that tree girdled by bugs or insects, which originates from an entirely different cause.' The fact slight injury is inflicted, the growth of the kernel is, that like some other cross-grained people we on that side is checked, and the kernel grows 'out sometimes have the appearence of being a little

If the author of 'Agricola' is the person to

willingly give any cause of offence. And when owner, in 1827, received from the Massachusetts with proper care, and as near the surface as por we observed that 'the blight mentioned above by Agricultural Society, a premium of a silver cup of ble, vegetation commences almost instantaneous "" Agricola" is probably what is called by writers the value of 20 dollars. Mr Lowell, then Presi, they will not require to be supported by stakes, a fire blight, the blight in the limb of a pear tree dent of that Society, in an address, delivered at will grow nearly as much the first as any subsent us by Dr Fiske was, no doubt, caused by its public meeting, Oct. 17th, 1827, states that a quent year.18 Scolutus puri,' we intended merely to express our concurrence in opinion with 'Agricola,' and we then which application had been made for a premium, quoted certain authors as authorities on the same examined an orchard planted by Elias Phinney, side of the question, without wishing to claim any Esq. of Charlestown and Lexington. Mr Phinney 'inferences' of our own which were not deducible as well from Agricola's premises as from other the south, covered five years since with shrub- together with all the vegetable matter on and ne sources. In short our article was meant to be oaks and rocks, and there planted his orchard, 400 the surface, be buried and retained to ferment a understood as an approving and corroborating trees in number, of the best fruits. The trees comment on that writer's text.

Since writing the above we have conversed with Dr Harats, of Milton, whose acquisitions in and their general health gave the best evidence of entomological science are as honorable to himself as beneficial to the community; who expressed society had been offered to the orchard in all rehis acquiescence in these opinions, advanced as spects best managed, without any regard to number, well by Agricola as the writer of this article, rel- Mr Phinney would probably have carried the preative to different causes of blight in pear-trees.

SCIENTIFIC, JUDICIOUS, AND PROFITA-BLE FARMING.

We have lately enjoyed the pleasure of viewing the beneficial results of correct cultivation, as exhibited on a farm of about 140 acres, 80 acres under cultivation, belonging to Elias Phinney, Esq. of Lexington, Mass. Mr Phinney began to cultivate this place about seven years since. The farm, previous to that time, though mostly cleared | tees may devise, indicative of his merit, as a farfrom its native growth of wood, shrubs, &c, was ' carried on,' according to the old fashioned modes of farming, in which every agricultural operation was conducted with the least possible labor, and the crops were in due proportion to the deficiency of science, means, and exertion used for obtaining them. . The grass-land was 'bound out,' that is, the sward was so matted and tufted as to be almost unfit for vegetation; and the plough-land was 'run out,' or exhausted of food for plants; and no judi- shaped and thinned by judicious and skilful prucious methods were adopted for accumulating, ning that the limbs did not interfere with, nor appreserving, and making the most of manure. The proach too near each other, and were so arranged amount of hay usually cut on the farm, was from that the fruit must have the full benefit of the sun 7 to 10 tons a season; and the other produce in and air. Where limbs had been cut off there was about the then usual proportion to that quantity of scarcely any appearance of a scar or cicatrix, nor

to which his superintendence and occupancy have. In order to effect this, the excision was at such a extended, has about ten folded the ordinary annual distance from the stalk or branch from which the produce of the farm! Instead of from seven to limb cut off was divided, that the stub or stump left to ten, he now cuts seventy or eighty tons of hay, might just be inclosed or covered with the next and obtains other articles of customary culture in season's growth of the tree, and thus the stem was New England, in about the same proportion. He not weakened and no cavity left to admit water, has, moreover, successfully introduced new products as well as new modes of cultivation. Among others, the Tall Meadow Oats Grass, (Avena clatior) of which he favored us with some notices given in the New England Farmer, vol. viii. p. 300. In these he states that 'in the Spring of 1827, I sowed with barley a field of four acres and put on 21 bushels of out grass seed per acre, spring. This was done to avoid the necessity of (3 would have been better) 5 pounds of red clover, and 2 of white clover seed to the acre. The soil, was thin and had been exhausted by long cropping. I intended it for pasturing, but in the spring it looked so promising that I concluded to mow it the first season. On the 3d of June, 1828, it was if not fatal to the tree, often injures its future cut, and gave me two tons to the acre, of the finest and best hay either for cattle or horses, I have tionably, when the sap is least active. If taken up ever had in my barn.'

' committee appointed to examine orchards, for selected a most favorable spot, declining towards he directs to tlet the roots and tops of the grast were in the most beautiful condition-every superfluous twig carefully and judiciously extirpated, judicious management. If the premium of the

'The general state of Mr Phinney's farm, was, however, so perfect, considering the means applied to it-there was so much good judgment in all his operations-he having made also the first and a very successful experiment in making wine from the native grape, that your committee recommended, and the trustees have voted, to present to Mr. Phinney, a silver cup of the value of 20 dollars, with such inscriptions as a committee of the trusmer.'

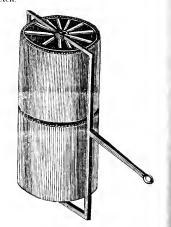

The trees in this premium orchard are at this day in a most prosperous condition. We have never seen any whose verdure was so deep, bark so smooth, and appearance of thrift so promising and luxuriant. This orchard has been kept almost constantly under the plough, and, when we saw it, was covered with a very fine crop of Indian corn and potatoes. The tops of the trees were so hay, on similar farms in this section of the country. the least rottenness, drynesss, or cavity in the wood Mr Phinney, however, within the seven years of the stem from which the severance was made. and cause decay or gangrene in the parts adja-

In 'a reply to inquiries of the Ilon. Mr Lowell, and others of the Agricultural Committee,' Mr Phinney says 'Most of my trees were taken from the nursery in November, the roots placed in trenches and covered with dirt until the following setting them out before the ground had become warm and dry. If left in the nursery till spring they are seldom or never taken up until the sap has begun to flow. When removed after this takes place, the check occasioned by the removal. growth. The best time to take up trees is unqueslate in autumn, and the roots secured from the sun 'Mr Phinney's farm is adorned with an orchard, and air, they may be kept with perfect safety till

son in the world to whom we would wittingly or composed wholly of choice fruits, for which its the middle of May; and if planted out at this ti

Mr Phinney is not only eminently successful a cultivator, but obtains his crops at a less exper of labor than has been deemed requisite by the system of husbandry. In ploughing sward la decompose, and the poor earth be brought to a retained on the surface, where by culture and posure to the atmosphere it will soon become body of rich mould,' He has given the details his mode of culture by which from two acres sward land, which had been considerably exhaus by long cropping, yielding less than a ton of a top and herds grass to the acre, ploughed the fi of May, 1828, he gathered from 70 to 80 bush of Indian corn to the acre in the September si ceeding; and the next summer 694 bushels excellent rye, with which the land was laid do to grass. In this way he obtained, by one ploug ing, only, two large arable crops, and stocked land to grass, which has yielded at the rate of tons the acre. He raised from 70 to 80 bushels Indian corn, and about 35 bushels of rye to 1 acre, on land, which had usually yielded but fre 35 to 45 bushels of the former, and 15 bushels the latter to the acre. | He has, moreover, plous ed up grass-ground in May, raised a crop of bar with which he laid the land down to grass aga and in another instance, having turned the swe completely over, and passed a roller over 1 furrows, he sowed grass seed without grain, & thus renewed the growth of grass, without an a ble crop. The success in all these experime was the consequence of keeping the sod under! soil, till the former was completely decomposed

Ma Phinney has made improvements in t structure of the Roller, an implement of which makes great use; of which we here give

His improved roller consists of four worn

^{*} For further notice of Mr Phinney's mode of cultiv ting fruit trees, see N. E. Farmer, vol. vi. p. 122. † See N. E. Farmer vol. viii. p. 42.

n iron axle of about 6 feet in length, and 14 inch n diameter; the old holes in the hubs having been reviously filled with wood, and a new hole made brough this of proper size to admit the iron axle. The whole of the wheels are then covered with ak-planks, four inches wide, and 21 inches in nickness. The roller is then separated into two arts with the saw, leaving two wheels fastened ogether by the outside planks, for each half; a ame is then made round the whole, the ends of hich are fitted on the ends of the axle; a brace f iron a quarter or half an inch in thickness with hole for the axle to turn in, is extended from the entre of the axle between the two parts of the ller and fastened to the forward and after part f the frame, and a spire fitted into the forward art to draw by, completes the roller.

The roller is five feet in diameter, and presents e following, among other advantages. 'If the cound be very mellow a small roller is apt to raw it into ridges, the small stones to be crowdl into heaps before it, rather than pressed into e earth where they lie, and the surface conquently left uneven; and when used upon the ound in the spring of the year, which had been wn with grass seed the fall previous, the roots the tender plants are often injured by its tenncy to drag rather than to roll over the ground. hese difficulties are all cured by enlarging the ameter. The large roller also moves easier, d the weight falling more directly upon the nall stones, they are better pressed into the rth; the lumps of earth more finely broken, and e snrface left much smoother.'

Mr Phinney has introduced other improveents among which are new and valuable varies of field and garden vegetables, improved leeds of domestic animals-articles not yet of mmon culture in this section of the country, ch as grapes, tomatoes, Sinclair beets, a variety choice and rare fruits. &c, &c,

His barn is large and well adapted to the purses of ntility and convenience; and every part his premises shows that science, skill, and instry have united to produce a pattern farm, d place its owner in the front rank of New Enand Cultivators.

Another excellent farm in the neighborhood of r Phinney's, owned and cultivated by Capt, ANIEL CHANDLEA, will soon receive such notis as our time, room and opportunities for exnining its improvements may hereafter admit.

HDDLESEX AGRICULTURAL SOCIETY. The public are reminded that the Committee on arms, Fruit and Forest Trees, will attend to their ty in the course of a few weeks-and that applition must be seasonably made either to the Secrey of the Society, in Concord, or to one of the lowing

JOHN STACY, Secretary. Concord, July 24, 1830.

To Correspondents.-A very valuable and elaborate article on the importance of the culture of Silk in the United States, and on the new Chinese Mulberry tree (Morus Multicaulis,) by Gen. Dearborn, was received too late for this week's paper-also one on the Passe Colmar and Napoleon pears, from Mr Prince, of New York-and one on the best mode of cultivating the Potato onion.

Yellow Locust Seed, &c.

For sale at the Seed Store' connected with the New England Farmer, 52 North Market-street,

Fifty pounds of genuine and fresh yellow Locust Seed, saved for us by a gentleman in Harrisburg, The excellence of this timber for posts, its uses in ship building, its easy culture, rapid growth, &c. recommend it to the notice of farmers. Directions for its culture furnished gratis.

Also, seed of the Gleditschia triacanthos, or Honey Locust—or three thorned Acacia,—for live fences. This is the sort recommended by Judge Buel, (in the New England Farmer, vol. viii. page 164) as the hest plant that can be cultivated for hedges: of very rapid growth, long and abundant thorns, and with hard and strong wood, and it is attacked by no insect, which gives it a decided advantage over Hawthorns. Aug. 6.

Ruta Baga Seed.

Just received at the Seed store connected with the New England Farmer, 52 North Market-street,

A few pounds of the new Red Top Ruta Baga Turnip Seed, from Scotland, where it is considered much superior to the common sort.

Also, 100 lbs. of the common Yellow Top Ruta Baga, all warranted of the first quality.

Turnip Seed, &c.

For sale at the Seed Store connected with the New England Farmer Office, 52 North Market-street,

An extensive assortment of Turnip Seeds, of the most aluable sorts for family use or stock. The most approvvaluable sorts for family use or stock ed kinds for the farmer, are the White Dutch, White Stone, Yellow Stone and Yellow Malta. The two latter are of uncommon excellence, and keep well. Loudon describes the Yellow Malta as 'an excellent and beautiful root,' and of delicious flavor. Of the sorts for field enture, the White Norfolk, Yellow Aberdeen, White Flat, and Ruia Baga, are the best. The Yellow Aberdeen is most approved among the Farmers of England and Scotland, as it grows to a large size, is very sweet and nutritious, and keeps till June. The above seeds were saved in Europe expressly for this Establishment. and the utmost dependence may be placed on their genuine quality.

200 lbs. of the finest English White Flat Turnip Seed. raised this season, expressly for this Establishment, by Mr. AARON D. WILLIAMS, of Roxbury, and warranted of the first quality, for sale, wholesale and retail.

Also, a variety of Long and Turnip rooted Radishes, suitable for sowing the ensuing months, Long Prickly, and able for sowing the ensuing mounts, and many other varieties of Cucumbers for pickling.

July 9.

Chloride of Soda.

For sale at the Seed Store connected with the N. E. Farmer, 52 North Market-street-A few dozen bottles of Chloride of Soda, for preserving meat, removing offensive smells, neutralizing pestilential exhalations, and destroying contagion; prepared by the New England chemical company for Lowe and Reed. This valuable article is

Bolivar Calves, Saxony Bucks, and Bremen Gresc For sale, 4 Bull Calves, sired by the celebrated imported improved Durham short horned bull Bollvar which stock have produced 36 quarts of milk a day. No 1, dam Grey Brown, half Cwlebs and half Galloway. No: 2, dam Juno, three fourths Fill Pail. No. 3, dam Ceres, her sire Colebs, her dam Mr Gray's imported Cow. No. 4, dam Beauty, half Colebs and half Galloway. The

Calves are beautiful, and their dams all great milkers. Two imported Saxony Bucks, 2 Yearlings, and 2 Lambs, 3 pairs of Bremen Geese. Inquire of Benjamin Shurtleff, Jr, Chelsea, or at 52 Hanover Street, Boston.

Brighton Market -- Monday, August 2. [Reported for the Chronicle and Patriot.]

At Market this day, 275 Beef Cattle, 20 Cows and Calves

238 Stores, 2448 Sheep.

Prices—Beef-Cattle—From \$4 to 475; 3 or 4 extra were taken at \$5, and there were some sold for less than \$4-a great proportion of the Cattle to day were small and of an ordinary quality.

Cows and calves Quite a number were sold at \$15 a

Stores.-The first at market this season, nearly all of which were sold.

Sheep and Lambs.—Quick sales, fair lots at 1 37½ a 1 87½ two or three lots were sold at \$2, and one lot of about a hundred were taken at \$1 08, one lot of wethers at \$2 32 and one at \$3.

A TRUE SKETCH.

The depopulating pestilence that walketh at noonday, the carnage of cruel and devastating war, can scarcely exhibit their victims in more terrible array, than exterminating drunkenness. have seen a promising family spring from the parent trunk, and stretching abroad its populous time, and yet it is not above a Mile, where there is limb like a flowering tree, covered with a green and healthy foliage. I have seen the unnatural decay beginning upon the yet tender leaf, and gnawing like a worm in the unopened bud, while they dropped off, one by one, and the scathed and ruined shaft, stood alone, until the winds and rains of many a sorrow laid that too in the dust. On one of those holy days when the patriarch, rich in virtue as in years gathered about him the great and the little ones of his flock-his sons with their sons, and his daughters with their daughters, - I. too, sat at the festive board. I, too, pledged bounded on the North with the River Canada (so them in the social wine cup, and rejoiced with them round the hospitable hearth; and expatiated with delight upon the eventful future; while the good old man warmed in the genial glow of youthful enthusiasm, wiped the tear of joy from his glistening eye. He was happy. I met with them again when the rolling year brought the festive season round. But they were not all there. The kind old man sighed as his suffused eye dwelt upon the then unoccupied seat. But joy yet came to his relief, and he was happy, A parents' love knows no diminution—time, distance, poverty, shame, but give intensity and strength to that passion before which all others but dissolve and melt away. Another year elapsed. The board was spread. But the guests came not. The old man cried, 'Where are my children?' And echo answered, where? His heart broke-for they were not. Could not heaven have spared his gray hairs this affiction? Alas! the demon of drunkenness had been there. They had fallen victims of his spell. And one short mouth sufficed to cast the veil of oblivion over the old man's sorrow and the young one's shame. They are all dead .- N. Y. . Imerican.

Daunkenness .- Drunkenness is the occasion of nine tenths of the grief and guilt that aggravate the inevitable distresses of the poor. Dry up that horrid thirst, and the hearts of the wretched would sing aloud for joy. In their soher senses, it soldom happens that men, in a Christian country, are such savages. But all cursed passions latent in the heart, and seemingly, at least, dead, or non-existent, while that heart heats heartily in sober industry, leap up fierce and full grown, in the power of drunkenness, making the man at once a mimic, or rather at once converting him into a fiend .-Blackwood's Magazine.

The following extracts are from an old book by John Josselyn, Gent., printed in London, 1672. If the descriptions were true then, the things described have much changed since.

' Fourscore miles (upon a direct line) to the Northwest of Scarborow, a Ridge of Mountains run Northwest and Northeast au hundred leagues, known by the name of the White Mountains, upon which lieth Snow all the year, and is a Land-mark twenty railes off at Sea. It is rising ground from the Sea shore to these Hills, and they are inaccessible but by the Gullies which the dissolved Snow hath made; in these Gullies grow Saven Bushes, which being taken hold the top of the highest of these Mountains is a large

nothing grows but Moss; at the farther end of this Plain is another Hill called the Sugar-loaf, to outward appearance a rude heap of massive stone piled man at Toulouse, writes us, March 14, 1830, that one upon another, and you may, as you ascend, step from one stone to another, as if you were going up a pair of stairs, but winding still about the Hill till you come to the top, which will require half a day's also a Level of about an Acre of ground, with a pond of clear water in the midst of it; which you may hear run down, but how it ascends is a mystery. From this rocky Hill you may see the whole Country round about; it is far above the lower Clouds, and from hence we beheld a Vapour (like a great Pillar) drawn up by the Sun Beams out of a great Lake or Pond into the Air, where it was formed into a Cloud. The Country beyond these Hills Northward is daunting terrible, being full of rocky Hills, as thick as Mole-hills in a Meadow, and cloathed with infinite thick Woods.

' New-England is by some affirmed to be an Island, called from Monsieur Cane) on the South with the River Mohegans or Hudson's River, so called because he was the first that discovered it. Some will have . Imerica to be an Island, which out of question must needs be, if there be a Northeast passage found out into the South Sca. The Northeast people of America, i. e. New-England, &c. are judged to be Tartars called Samoades, being alike in complexion, shape, habit and manners, (see the Globe :) Their Language is very significant, using but few words, every word having a diverse signification, which is exprest by their gesture; as when they hold their head of one side the word signifieth one thing, holding their hand up when they pronounce it signifieth another thing. Their Speeches in their Assemblies are very gravely delivered, commonly in perfect Hexamitre Verse, with great silence and attention, and answered again ex tempore after the same manner.'

'The Porcurine.-The Porcupine in some parts of the Country Eastward, towards the French, are as big as an ordinary Mungrel Cur; a very angry Creature and dangerous, shooting a whole shower of Quills with a rowse at their enemies, which are of that nature, that wherever they stick in the flesh, they will work through in a short time if not pre-

vented by pulling of them out.'

'THE JACCAL.—The Jaccal, is a Creature that hunts the Lion's prev, a shrew'd sign that there are Lions upon the Continent; there are those that are yet living in the Country, that do constantly affirm, that about six or seven and thirty years since an Indian shot a young Lion, sleeping upon the body of an Oak blown up by the roots, with an Arrow, not far from Cape Anne, and sold the Skin to the English. But to say something of the Jaccal, they are ordinarily less than Foxes, of the color of a gray Rabbet, and do not scent nothing near so strong as a Fox; some of the Indians will eat of them: Their Greese is good for all that Fox Grease is good for, but weaker; they are very numerous.'

'THE POND FAOG.—The Pond Frog, which chirp in the Spring like Sparows, and croke like Toads in Autumn: Some of these when they set upon their breech are a Foot high; the Indians will tell you, that up in the Country there are Pond Frogs as big as a Child of a year old.'

The French expedition, fearing that the Algeriaes may poison the wells along the coast, have taken ti00 dogs with them, as tasters. If they drink with impunity, men will have nothing to fear.

Census of Boston.—The population of Boston falls some short of 61,000. The population in 1820 was 43,298. Increase in ten years about 17,500, or about 40 per cent.

Moss Mattresses.-Mattresses made with fine moss are now getting into general use in Russia and of are a good help to the climbing Discoverer; upon Sweden. They are filled to a depth of twelve inches, are very elastic and wholesome, and the cost of re-Level or Plain of a days journey over, whereon newing them is of course trifling.

PROPAGATION OF THE CHINESE MULBERRY TR IN THE SOUTH OF FRANCE.-Mr Barthere, nurse has so far been successful in propagating the Mo: multicaulis, that he will be ready next fall to delifrom 8 to 10,000 of them of different ages. We i glad to announce that source of supply to our nun rous applicants, for what we could neither give 1 sell. Mr Barthere has also experimented with t by rearing silk worms and manufacturing their silk now deposited in the Library of the Royal Hor cultural Institute-the plants which have produc that silk were cuttings of the same year, which we as good as those of four or five. He says that t tree does not grow so high as the white mulber but suffices to alleys and shades of eight or ten fe and is confident that in grounds and vineyards whi could hardly give two per cent, this tree will no insure at least ten per cent .- Horticult. . Innales, A 13, April, page 44.

Hoven cattle, - A correspondent of the Buc County Intelligencer recommends the followi remedy for cattle which have been hoven by e. ing damp clover .- Mix a double charging of Gu powder in a pint of new milk, and give it to t animal with a horn or bottle. In nine casont of ten, (says the writer) this will disperse t fixed air contained in the stomach, and affo

Oneida Indians .- Rev. Mr Davis, who accor panies 250 Oncidas, removing to the neighborhoof Green Bay, states that many of them had ma considerable progress in learning and were go agriculturists. We found one of them in o office, says the editor of the Detroit Journal, rea ing very carefully the New England Farmer, at the general appearance of the party was in eve respect superior to that of most of the oth tribes, with which our streets have been throng during the summer.

New Work on Farriery.

Just received and for sale at the Seed Store connect with the New England Farmer Office, No. 52 No. Market Street.

The Veterinary Surgeon; or, Farriery taught on a ne and easy plan: being a treatise on all the diseases a accidents to which the Horse is liable; the causes a symptoms of each, and the most improved remedies en ployed for the cure in every case; with instructions to t Shoeing Smith, Farrier, and Groom, how to acqui knowledge in the art of Farriery, and the prevention Diseases. Preceded by a popular description of the armal functions in health, and showing the principles which these are to be restored when disordered. By Jol Hinds, Veterinary Surgeon. With considerable addition and improvements, particularly adapted to this countr by Thomas M. Smith, Veterinary Surgeon, and Membe of the London Veterinary Medical Society. Price \$1,2

Subscribers to the New England Farmer are it formed that they can have their volumes neatly ha bound and lettered by sending them to this office.

Published every Friday, at \$3 per annum, payable at the end of the year—but those who pay within sixty days from it time of subscribing, are entitled to a deduction of fifty cents. The paper will be sent to a distance without payment before the paper will be sent to a distance without payment before the paper will be sent to a distance without payment before the paper will be sent to a distance without payment before the paper will be sent to a distance without payment before the payment of the p

ing made in advance.

NEW ENGLAND FARMER.

PUBLISHED BY J. B. RUSSELL, AT NO. 52 NORTH MARKET STREET, (AT THE AGRICULTURAL WARRHOUSE.)-T. G. FESSENDEN, EDITOR.

VOL IX.

BOSTON, FRIDAY, AUGUST 13, 1830.

SHOLE ASHRUMMOD

FOR THE NEW ENGLAND FARMER.

Thomas G. Fessenden, Esq.—You will perhaps think it quite a strong remark for me to make, when I state that the object of this communication is to show that the pear trees cultivated at Boston under the name of 'Napoleon,' are wrong-and next, that all the 'Passe Colmar' trees which are not identical with the '. Napoleon,' there so called, are wrong also, as the one called 'Napoleon' is identically the 'Passe Colmar.' These assertions are not ventured until after examinations made, with that scrupulous exactness which doubts itself until it attain to conviction past all doubt. I will now give the description of the Passe Colmar pear, as detailed in the London Pomological Magazine, and to which I find myself enabled to add more synonymes than the London Horticultural Society have done.

PASSE COLMAR.

Synonymes.

Fondante de Panisel. Beurre colmar grise, dite Precel, Poire-Precel. Colmar épineux, Passe colmar épineux, Passe colmar gris, dit Precel, Chapman's.

'A most abundant bearer, either as a standard or upon a wall; the trees make fine clean and, and have not been observed to have the least canker. The fruit has the flavor and form of the

Colmar, whence its name.

Wood fine, clear yellow brown, sprinkled with a few pale brown spots ; leaves small, oval, tapering to both ends, erect, or spreading, nearly flat, not waved, with a finely toothed margin; stalks rather slender. about an inch in length, &c. The leaves on the fruit spurs are almost entire, and in this as well as in most other pears, are narrower, with much longer stalks than those on the young wood.

Flowers middle size, with pointed petals; fruit middle size, obconical, flattened next the eye, which is open ; stalk about an inch long, moderately thick, slightly sunk at its insertion; skin green, when ripe becomes yellowish and sprinkled with russet, and if well exposed, having a considerable tinge of red. The surface is somewhat uneven, with some slight longitudinal farrows running downwards from the stalk end; flesh yellowish, melting, buttery, juicy, very rich, and most excellent.

This is said on the continent to be in season from December to February. It will keep till the latter period with us, but December and January are the months in which it is in its greatest perfection.'

To the list of synonymes I now add the following.

Colmar Reul, Colmar Preul,

Passe colmar vineur, Beurre d'Argenson ? \ Boston Napoleon.

of various European and American catalognes.

It is singular how readily the three titles ending with Precel, Reul, and Preul, may be confused with each other by a partial variation in forming the letters.

the Pomological Magazine to have been given by a market gardener of that name, near London; but have managed them differently and have had there are two other distinct fruits known in this country under the name of Chapman pear, one of which is cultivated in France, and commerated in the catalogues of that country, and was thence imported by ourselves; the other is a variety so called, about Philadelphia, which we also have in our collection. It is necessary, therefore, to be watchful, or we may be led into error in adopting this synonyme. The genuine 'Napoleon' pear, which we imported about five years since, is thus described in the Pomological Magazine, and by comparing the wood and leaves, I find it exactly to correspond. Ripe fruit I have not yet seen.

'NAPOLEON PEAR.'

Synonyme.

Medaille. Wood strong, dark yellowish green, moderately sprinkled with whitish spots; leaves tapering to a point, widely serrated; flowers remarkably large, expanding late; fruit large, form of a Colmar, angular about the eye, a good deal contracted in the middle; eye a little depressed; stalk rather more To the Editor of the New England Farmer. than half an inch long, slightly sunk at the insertion; skin smooth, bright green, in which state it re-It ripens in the middle of November, and remains in perfection several days. It is necessary to bear in mind that this pear is not fit to eat till its deep green color become very pale; as early as the beginning of October, the fruit is sweet and pleasant.'

By comparing these descriptions of the trees themselves it will be perceived that two varieties are very dissimilar in several points and readily distinguishable by the most casual observer; and the Passe Colmar has a peculiarity of growth and general appearance of wood and foliage, that give to it a most marked distinction. In addition to which it is a winter fruit, while the Napoleon is an autumnal fruit.

With your permission, I shall indulge in some occasional disquisitions on similar subjects, and point out some errors into which the Pomological Magazine has itself been led.

With much respect, WM. ROBERT PRINCE.

Linnman Botanic Garden,) July 30, 1830.

FOR THE NEW ENGLAND FARMER.

THE POTATO ONION.

This is indeed a very singular plant. The only one, I believe, that bears no kind of seed .- It resembles the Canada or Magic Onion, which like this is viviparous, and like this has no sexual organs. The Magic Onion produces its offspring along the side of the parent stalk, while the potato onion spontaneously brings forth a numerous progeny, from its matrix or bosom, below the surface of the ground.

it extremely difficult to preserve them in a healthy and that the whole field would give an average state through the winter. A small degree of frost of full two and an half tons to the acre; which will kill or injure them very much, and if kept in estimate I am persuaded was not too high. And

The synonymous title 'Chapman's,' is said in so exhaust themselves, as to produce very little the next summer. For the last two years I much better success. By the first of August or as soon as the tops fall and wither, they should be taken out of the ground and after lying several days in the sun, should be put away in a dry place until October; they should then be re-set in the ground like tulips. The beds intended for them should be previously well wrought, and the plants set in rows about a foot apart. The small or young ones should be separated from the others, for these grow larger but produce no offspring the first year. Before the approach of winter some coarse litter may be spread over them, which should be removed in the spring-and they will vegetate early and produce a plentiful crop. Cultivated in this way I think this new plant a valuable acquisition, and well deserving a place in every garden. It is ripe early, and universally esteemed upon the table for its mild and agreeable

Florida, July 3, 1830.

ON REARING CALVES.

DEAR SIR-I send you inclosed a letter from GORHAM PARSONS, Esq. of Brighton, believing mains sometime after the fruit is guthered; it finally you will think it well deserving a place in your changes to a pale green, becomes very melting, &c. useful paper. The circumstance which gave rise to it was this: In May last Mr Parsons sent me as a present, a very handsome heifer-calf of the full Mooded, short horned and Alderney breed, which, by the way, is only one among the many assistances, which he has generously afforded me in improving my little farm. And as I wished to take that course in raising the calf, which promised the best result, I addressed a letter of inquiry to him on the subject, and it was in reply to that letter that I received the one I now transmit to

> It ought in justice to be observed, though the letter needs no apology, that it was not written with the least expectation that it would come before the public, and it is now sent without his knowledge. He will, I hope, excuse me for the liberty I have taken, and the public, I know, will be thankful that any circumstance puts them in possession of the practical wisdom of a man who has so much experience in the interesting and important business of agriculture, and the justness of whose observations is supported by so many successful experiments.

I am, Mr Editor, respectfully yours, GARDNER B. PERRY.

East Bradford, August 4, 1830.

P.S. In support of this last observation, 1 will just remark that, being a week or two since, at the paternal estate of Mr Parsons, in Byefield. in company with another gentleman, I walked into a field of some 20 acres, where his workmen were engaged in hay-making, who, upon inquiry observed that they thought in some parts there When I began to propagate these roots, I found would be more than three tons of hay to the acre; a temperature above freezing, they vegetate, and it is my opinion, after having looked at the other

erops, growing upon the farm, that the grass of this field was nothing more than a fair sample of the whole farm.

ON RAISING CALVES, MANAGEMENT OF BEES, &c. Extract of a letter from GORHAM PARSONS, Esq. to Rev. GARD-

Respecting the proper time and manner of weaning calves, I have considered if you intend raising the calf at the time it is calved, it is best to take it from the cow the day after, or not to exceed two days-unless the udder of the cow is swollen or hard, then it may require the process, that nature points out for the calf, the forcible application of the head against the udder, which generally reduces the swelling and hard bunches; while either remain, I should not take away the ealf. But supposing no difficulty of that kind, the calf should be taken from the cow the first day, or twelve hours after it is calved, then fed from a bucket, or small tub with two quarts of milk from the cow in the morning and evening, the finger held in the milk will very soon induce the calf to suck, and in a very short time be will drink the milk freely and readily. I have had a piece of leather (upper leather) sewed together of the size and in the form of a cow's test, a small opening at top, the bottom so cut as when nailed to the bottom of a bucket or tub with three pump nails, the milk will pass under easily and flow to the orifice of the teat, the calf will soon press for it with as much earnestness as for that of his dam, and shortly he will be so impatient for his breaktast and supper, that the process of sucking will be too tedious, and he will drink freely-it will not be necessary to increase the quantity of milk beyond two quarts night and morning, but as he advances in size, add a little water, a pint at first and increase it, of the same warmth as the milk, to which add a gill of Indian meal which may be increased to a pint, although I prefer using double the quantity of wheat bran, and think it far better for milch cows than Indian meal-offer him second crop bay, (if before the season for grass) he will soon eat it, and may have skimmed milk soon substituted for new milk made warm with water, as milk direct from the cow-

When four or five weeks old he will eat grass and drink water, and be quite as large as if he had taken all the milk from the cow. The saving of milk will amp'y pay for the trouble, and the calf will not be stinted in size. I think we err in permitting calves to suck too much at first, even when intended for the butcher, they fat better by beginning moderately, and increasing gradually, as gorging is injurious to the brute creation as well as to the human race.

Let a man purchase an animal as prepared and presented at our cattle shows for premium, stuffed and pampered for the occasion, then let him feed fairly as a good farmer would and ought to feed, and before the next cattle show, the animal would be like the lean kine of Pharaoh. You see I differ from many good men as to the condition in which animals should be exhibited at our catthe shows-I do not mean the eattle as fatted for Beef, although in that case I should lean to the farmer who presented well fatted beef at the least expense. I have thought it better to have rather small enclosures of grass for calves, and change them every two or three weeks. If the feed should be short or the flies so troublesome as to prevent their eating in the day time, feed with a quart of wheat bran or three pints

ernsts of bread occasionally of which they soon become fond. I am fully of opinion calves should be so fed as to keep them in a growing state, but never gorged, or nampered. It frequently occurs that they require a very small piece of their tail cut off; the necessity is ascertained by pulling the tail, and if the bones are loose and the skin spongy, cutting is necessary, they are what farmers term tail sick. They should be provided with salt to lick when they please. I use the crude lump salt from Liverpool; my cattle of every description lick it freely. It is economy to use if, and I think it answers the purpose quite as well as white and granulated salt that is more expensive-you can see some of it at my farm in Bye-

The age at which they should have their first calf does not appear to be settled, as I find farmers disagree, some preferring two years old past, or the month of June succeeding the spring when they were two years old, others three years old past-1 am rather inclined to prefer the latter age, unless the calf grows rapidly and has attained great size, and may be considered a forward animal, never allow a heifer to calve till June, the very last of the month is preferable; they will then have a flow of nutritious grass feed, which will swell the udder, give health and strength, and unless a violent and cold rain storm no injury arises from calving in the pastures.-I have thought it best to use bows, straps or stanchions, to tic them up as it is termed; the first fall they are brought to the barn, I have had practised, (and my father before me who was remarkably fond of handling the udder almost every morning, when tied up, feeling the teats, and, if I may use the term, make believe milking, if done gently, it will save trouble, which frequently happens with Heifers with the first calf .- I think I have known several spoiled for want of this attention, and were of no value as milch cows-requiring their legs tied, and were not milked well, becoming the terror of female and finally of male milkers.

I believe you will think full enough has been written on this subject, and that I may as well proceed to answer your inquiry respecting Mrs Griffith's Hive-I have never used one, but I have no doubt the manner of securing the bottom is a great improvement, as the eggs lodged by the Bee moth can be daily cleared off; the suspending the Hive I think an improvement, as it will only permit the assailant moth to attempt cutrance at the threshold, and Bees know them as an enemy, and will repulse them when they do not steal in at the back door. As to the top, when you are informed that I now have all the Hives and glasses as described in Wildman's pamphlet, filled with honey, and can hardly admit Mrs Griffith's an improvement, you will, I think, readily bear me out in my opinion. GORHAM PARSONS.

INSECT ARCHITECTURE.

Concluded from page 60.

THE ANT-LION.—The observations of the continental naturalists have made known to us a pitfall constructed by an insect the details of whose operations are exceedingly curious—we refer to the grub of the ant-lion. Its habits require that it should walk backwards, and this is the only species of locomotion which it can perform. Even this sort of motion it executes very slowly; and were it not for the ingenuity of their stratagems, it would fare but sparingly, since its chief food consists of ants, whose ceed, that it abandons the design and commences

per day-it no bran, a pint of Indian meal-some | activity and swiftness of foot would otherwise render it impossable for it to make a single capture. Nature, however, in this, as in nearly every other case, has a compensating power to the individual animal, to balance its privations. The ant-hon is slow-but it is extremely sagacious; - it cannot follow its proy, but it can entrap it.

The snare which the grub of the ant-lion employs consists of a funnel-shaped excavation formed in loose sand, at the bottom of which it lies in wait for the ants that chance to stumble over the margin, and cannot, from the looseness of the walls, gain a sufficient footing to effect their escape. pitfall is intended to be small, it only thrusts its body backwards into the sand as it can, throwing out at intervals the particles which fall in upon it, till it

is rendered of the requisite depth. By shutting up one of these grubs in a box with loose sand, it has been repeatedly observed constructing its trap of various dimensions, from one to three inches in diameter, according to circumstances.
When it intends to make one of considerable diameter, it proceeds as methodically as the most skilful architect or engineer amongst ourselves. It first examines the nature of the soil, whether it be sufficiently dry and fine for its purpose, and if so, it hegins by tracing out a circle, where the mouth of its funnel trap is intended to be. Having thus marked the limits of its pit, it proceeds to scoop out the interior. Getting within the circle, and using one of its legs as a shovel, it places therewith a load of sand on the flat part of its head, and it throws the whole with a jerk some inches beyond the circle. It is worthy of remark that it only uses one leg in this operation-the one, namely, which is nearest the centre of the circle. Where it to employ the others in digging away the sand, it would encroach upon the regularity of its plan. Working with great industry and adroitness in the manner we have just described, it quickly makes the round of its circle, and as them, and an excellent judge of their qualities) it works backwards it soon arrives at the point where it had commenced. Instead, however, of proceeding from this point in the same direction as before, it wheels about and works around in the contrary direction, and in this way it avoids throwing all the fatigue of the labour on one leg, alternating them every round of the circle.

Were there nothing to scoop out but sand or loose earth the little engineer would have only to repeat the operations we have described, till it had completed the whole. But it frequently happens in the course of its labours, sometimes even when they are near a close, that it will meet with a stone of some size which would, if suffered to remain, injure materially the perfection of its trap. But such obstacles as this do not prevent the insect from proceeding: on the contrary, it redoubles its assiduity to remove the obstruction, as M. Bonnet repeatedly witnessed. If the stone be small, it can manage to jerk it out in the same manner as the sand; but when it is two or three times larger and heavier than its own body, it must have recourse to other means of removal. The larger stones it usually leaves till the last, and when it has removed all the sand which it intends. it then proceeds to try what it can do with the less managcable obstacles. For this purpose, it crawls backwards to the place where a stone may be, and thrusting its tail under it, is at great pains to get it properly balanced on its back, by an alternate motion of the rings composing its body. When it has succeeded in adjusting the stone, it crawls up the side of the pit with great care and deposits its burden on the outside of the circle. Should the stone happen to be round, the balance can be kept only with the greatest difficulty, as it has to travel with its load upon a slope of loose sand which is ready to give way at every step; and often when the insect has carried it to the very brink it rolls off its back and tumbles down to the bottom of the pit. This accident, so far from discouraging the ant-lion, only stimuates it to more persevering efforts. Bonnet observed it renew these attempts to dislodge a stone, five or six times. It is only when it finds it utterly impossible to sucin getting a stone beyond the line of its circle, it is dressed snails unconsumed .- Liverpool paper. not contented with letting it rest there; but to prevent it from again rolling in, it goes on to push it to

a considerable distance.

inches in diameter at the top, about two inches deep, and gradually contracting into a point in the manner of a cone or funnel. In the bottom of this pit the ant-lion stations itself to watch for its prey. Should an ant or any other insect wander within the verge of the funnel, it can scarcely fail to dislodge and roll down some particles of sand, which will give notice to the ant-lion below to be on the alert. In order to secure the prey, Reaumur, Bonnet, and others have observed the ingenious insect throw up showers of sand by jerking it from his head in quick succession, till the luckless ant is precipitated within reach of the jaws of its concealed enemy. It feeds only on the blood or juice of insects; and as soon as it has extracted these, it tosses the dry carcase out of its den. Its next care is to mount the sides of the pitfall and repair any damage it may have suffered; and when this is accomplished, it again buries itself among the sand at the bottom, leaving nothing but its jaws above the surface, ready to seize the next victim.

The ant-lion is carnivorous, but he has not the quickness of the spider, nor can he spread a net over a large surface, and issue from his citadel to seize a victim which he has caught in his outworks. He is therefore taught to dig a trap, where he sits, like the unwieldy giants of fable, waiting for some feeble one to cross his path. How laborious and patient are his operations-how uncertain the chances of success! Yet he never shrinks from them, because his instinct tells him that by these contrivances alone can he preserve his own existence, and continue that of his species.

Abstinence and fasting are recommended as necessary to mental perfection; but facts-strong facts -stare this opinion in the face. Dr Paley-to begin with a high authority-was a divine of a large 'capacity;' he liked a good dinner, and what was more, he liked his plate well filled. A leg of lamb served him merely for a collation, and he was wont when alone, to sit down to a shoulder of mutton. Mr Best, out of delicacy to the memory of his friend, has passed over this failing-as he thinks it-somewhat lightly, but he admits the Doctor's partiality to a well filled larder.

Dr Johnson was another example of high mental endowments being associated with a decided love of good eating. Though his manner of helping himself was somewhat boorish, he could not conceal his anger at the prospect of scanty provender. After leaving the table of a friend, Boswell was loud in praise of the dinner they had just been discussing. The dishes he said, were numerous, the wine good, the pastry excellent. 'Sir' said the great moralist, 'the dinner was well enough, but nothing to invite a man to.' When in Wales, his hostess treated him, early in the season, to peas, to which the Doctor paid a somewhat greedy attention. 'Do you like the peas, Sir?' she inquired. 'Madam' he replied, 'they are very good for hogs.' 'So I perceive', retorted the lady, 'von feed heartily on them.'

Mr Fox affords another instance of a large capacity in a double sense; and poor Sheridan was not wont to scatter about 'wit and wisdom at will,' cept after a good dinner. Dr Adam Smith, though generally abstracted, was fond of lump sugar and roast beef; and Sir Walter Scott relates in the Quarterly Review, an amusing anecdote of the celebrated Dr Hutton's partiality to curious 'morsels.' To show his superiority to vulgar prejudices, and to prove that excellent and available food was neglected, he invited a scientific friend to a feast of snails. The unimals were dressed, peppered, salted, and served up. The great mathematician took one, his friend took an licited, sued for. I learned that there was a white other; they tasted, looked at each other, and paused lead manufactory at Clichy, where the workmen died

BURNS AND SCALDS.

It is a principal object to prevent the blister from The pitfall, when finished, is usually about three breaking, as a considerable discharge might be the consequence, and danger apprehended. Sir James Earl and other eminent practitioners, recommend the use of cold water, even ice; but Mr Abernethy is of a different opinion. Mr A. recommends the use of the oil of turpentine, mixed with basilicon; to give the patient a little warm wine, and a few drops of opium, and afterwards to place him in a warm bed, brought into that city from Bordeaux. They were Recollect, however, (says Mr Abernethy,) that this stimulating plan of treatment is not to be continued after the equilibrium of the temperature is restored.' The following has been in use, for a length of time, in St Thomas' Hospital:

Take of olive oil, three ounces; lime water four ounces. This may be placed over the affected part

with a feather or camel's hair pencil.

In order that the most correct treatment for burns and scalds should be known, Mr Abernethy lately recommends his pupils to dip two of their fingers in boiling water, and let them be fairly scalded; then take them out, put one in a hasin of cold water, and dress the other with the turpentine and basilicon. 'I do not want to try, (remarked Mr A.) I have decided already, and therefore have no occasion to scald my fingers.'-Book of Health.

All that is required to be done for a trifling cut, is to wash away the blood and dirt with a sponge and cold water, bring the edges of the wound as close together as possible, and then put on a piece of adhesive plaster (strapping.) If the wound be large, a space should be left between each slip of plaster. The plasters should remain for several days, to give time for the wound to unite; when the pain is great, or inflammation be present, it will be necessary to take a little opening medicine. The bleeding may usually be stopped by pressure; but the application of a cobweb scarcely ever fails.—Ib.

Land has recently been sold at Chilicothe at thirty, forty, filty, and even sixty dollars a foot. The Sciota Gazette states, that a market house has been crected this year, 270 feet long, and equal to any on the Atlantic. This prosperity is owing to the vicinity of a

A Rattlesnake was killed on Oak Hill, in Williamstown, in the ryc-field of G. T. Bulkley, Esq. He measured five feet three inches in length, nine inches in circumference, had fourteen rattles, and weighed seven pounds and three ounces. A full-grown rabbit was found in his stomach.

The almost incredible fact is stated, that the increase of productive power through the aid of steam and improved mechanism, with other scientific appliances, during the last forty years, is equal to the additional supply of labor of Six Hundred Millions of

The method by which females in Peru are accustomed to mount en croupe behind a horseman, proves the extreme gentleness of the animal. A knot is tied in the horse's tail; into this the foot is introduced as into a stirrup; the female then gives one hand to the rider, and is by him assisted into her place on the back of the animal, which, habituated to this contrivance, never thinks of resenting the indignity.

A poor man who resolved to be honest till want became too strong for his resolution, is thus made to describe the difficulty of finding employment in Paris.

I went to the scavenger, and offered myself as a sweeper, raker of kennels, but there was no room effect, for me; no work however dirty, that I have not so-'Very green,' said one; 'd-d green,' said the like flies.-Well, to get admission there, they asked

arother pit in a fresh situation. When it succeeds other, and both started up from the table, leaving the me for certificates. In the same way at the lookingglass manufactory, to be qualified to poison one's self by the vapor of mercury you must have protectives. They told me I might get employment on the port as a ship breaker, or on the canal wheeling the barrows, but I did not succeed better than any where else. They told me that the executioner of Versailles wanted an assistant, but rather than mount in that way I would scrape the puddles, and there were more than three hundred applicants for the situation.

> The N. Y. Conrier says-13 haskets of water were a part of a lot of annisced, but the exporter falling short of the article, filled the bottles in the thirteen baskets with water. There was no seizure on the part of the Collector.

> Dyspersia Bread.—The American Farmer publishes the following recipe for making bread, which has proved highly salutary to persons afflicted with that complaint, viz,-

> 3 quarts unbolted wheat meal, 1 do soft water, warm, but not hot, I gill fresh yeast, I do molasses, or not, as may suit the taste, I tea spoonful of sal-

This will make two loaves, and should remain in the oven at least one hour; and when taken out placed where they will cool gradually. Dyspepsia crackers can be made with unbolted flour, water and saleratus, that will be much esteemed, and found, very convenient for travelling.

TO PREVENT HORSES BEING TEASED BY FLIES.

Take two or three small handfuls of walnut leaves, upon which, pour two or three quarts of cold water, let it infuse one night, and pour the whole next morning into a kettle, and let it boil for a quarter of an hour :- when cold it will be fit for use. No more is required than to moisten a sponge, and before the horse goes out of the stable, let those parts which are most irritable be smeared over with the liquor, viz. between and upon the ears, the neck, the flank, &c. Not only the lady or gentleman who rides out for pleasure, will derive benefit from the walnut leaves thus prepared, but the coachman, the wagoner, and all others who use horses during the hot months .- Farmers' Receipt Book.

Capillary altraction .- A weight being suspended by a dry rope will be drawn upwards through a considerable height, if the rope be moistened with a wet sponge. The attraction of the particles composing the rope for the water is, in this case, so powerful, that the tension produced by several hundred weight cannot expel them.

The whole number of Tax Bills issued in Boston in 1829, was 13,353, of which 5851 were for Poll Tax only-5243 persons paid over \$1.50. (poll tax) and under 21-924 from \$21 to 40. In Boston, the education of children, the probate of wills, and the settlement of the estates of deceased persons, are at the public expense. By the erection of reservoirs, fences and out houses are not now demolished at fires as formerly. An alarm of fire in a man's neighborhood used to cost him \$30 or 40 in fences.

The Philadelphia Gazette recommends, to restore the beauty of brick buildings, washing them with a small quantity of oil of vitriol mixed with much water-other acids will produce the like

It is stated in a Quebec paper of the 17th, that upwards of 17,000 emigrants have already arrived at that port from Europe,

HORTICULTURE.

SILK.

Mr Fessenden-There can no longer remain a doubt, that the culture of SILK will become one of the most important branches of our national industry; and like that of Cotton, combine in its favor, the triple interests of agriculture, manufac- to pay for the single article of silk worn in this tures, and commerce. As a product of the soil, country ;it may even claim precedence over that great staple, from the universality of its adaptation to all important article of export from this country, for the various climates embraced within the bounds of the United States. Experiments sufficiently numerous have been made, to establish this fact beyond all question; and a zeal has been exhibitevineive of the deep interest, which exists in favor, national prosperity. of this culture,

The national government has deemed it worthy of direct patronage, and measures have been taken by Congress, to diffuse intelligence, incite inquiry, and encourage its prosecution. Many of our most distinguished statesmen, and legislators, have ardently cooperated, with the intelligent farmer and enterprising manufacturer, in the same honorable career. Several useful books of instruction, on the rearing of mulberry trees and silk worms, have been published within the last thre eyears; and numerous nurseries and plantations, of the former, have already been established.

In the last number of Professor Silliman's justby celebrated Journal of Science and Arts, is an interesting article on these subjects, in which the recent works of Duponceau, Pascalis, and Ilo-

The high estimation, in which P. S. Duponceau, Esq. and Dr Felix Pascalis are held, for their scientific attainments and conspicuous services in the republic of letters, will not more endear them to their fellow citizens, than their commendable efforts to subserve their country, as patrons of rural economy. Mr Duponceau, the patriarch of silk-culture, in the United States, has country of their adoption. long devoted the energies of his great mind to its successful introduction; and Dr Pascalis has exhibited a spirit of patriotism and philanthropy, which entitles him to the benedictions of his countrymen. Not satisfied with the promulgation of theoretical intelligence, he has introduced, from France, a new and most valuable species of gal, where it has been considerably multiplied. the mulberry,-the Morus Multicaulis, which is represented as possessing such decided superior- this Mulberry from its congeners, are those which ity over all others, as to be speedily substituted result, 1st, from the remarkable property, which for them in every region of the globe.

Finding a detailed account, by M. Perrottet, of this invaluable tree, in one of the late numbers of the Annales De Fromont, I send you a translation for the Farmer.

Mr Perrottet returned, about nine years since, from a botanic excursion round the world, in a national vessel, and among a vast collection of seeds and plants, was this Chinese mulherry tree, are petiolate, cordate, accuminate, dentate towards which has been rapidly disseminated throughout their summit, marked with nerves and appear France and other parts of Europe, and will soon curled on the surface; 4th, and lastly, from the be acclimated in this country,

By a report, made in Congress last March, it appears, that American silk is superior to that of particular care, even before they have acquired a all other countries, as eight pounds of cocoons complete ligneous consistence. Your most obedient servant, Prinley Place, Rexbury, / August 4th, 1830. H. A. S. DEARBORN.

EXTRACT NO. XX.

From the Annales De Fromont.

Remarks on the Culture and Uses of the Many-stalked Mulberry, (Morus Multieaulis.) - By M. Perrottet, Agricultural Botanist and Traveller of the Marine and Colonies.

The Morus Multicaulis, which we noticed for the first time, in the Annales de la Societie Linneenne de Paris for 1824, appears to have originated in the clevated regions of China, from whence it has been disseminated throughout the low plains near the sea shore. It is believed that it is cultivated in all parts of that vast empire, where the mergue, on the culture of silk, are honorably men- education of silk-worms is an object of commercial importance. It was introduced into Manilla and all the islands in the Asiatic Archipelago, from Canton, where it was only cultivated for ornamenting gardens. The Chinese are entitled to the credit of this introduction, who, in emigrating from their country, have, from motives of industry, endeavored to multiply it, that they might render it useful to them, in the new

In August, 1821, we brought it from Manilla, the capital of the Philippine Islands, and first introduced it into the Isle of Bourbon and from thence into Cayenne and France. At a later period, it was sent from Cayenne to Martinique, and from France to Guadaloupe and also to Sene-

The characters which essentially distinguish its roots possess, of throwing up numerous small flexible stalks without forming a principle trunk; 2d, from the great length, which these stalks assume, in a very short time; 3d, from the remarkable development which the thin, tender and soft extraordinary facility, with which the stalks and young branches strike root, as cuttings, without merous whitish lentulæ with which the stalks and That in the year 1828 the silk imported into branches are covered; a very apparent character-

\$7,189,102 of those, which we have enumerated. The floral organization of this mulberry is as follows.

> Each male flower has a calix of four concave, oval membranous leaflets; four stamens, with filaments accompanied with a tridentate appendage; the authors sagittate and bilocular,

> Each female flower has an ovary terminated by two divergent styles; the ovary is unilocular, containing a single pendant seed, which is frequently blasted, or imperfect,

> Among the number of mulberries, now cultivated by the Chinese, for the education of silk worms, the Morus Multicaulis appears to be the most esteemed of all, not only from the facility with which it is propagated and grows, but still more from the essentially nutritive property which the leaves pessess. We have been enabled to verify this important fact during the five years which we passed at Senegal. Our observations tend to prove, that when this species shall be sufficiently multiplied in Europe, a preference will be given to it, for the education of silk worms, over the white mulberry (Morus Alba) which is now generally employed. We will make successively known, the result of the experiments which we have tried at Senegal, on the education of silk worms, nourished with leaves of our species, and the causes, which appeared to us, adverse to the complete development of the cocoons under the scoreling climate of that African

In the garden of the establishment placed under our direction, we had a certain number of the Morus multicaulis, which, being properly watered produced very beautiful tufts of flexible stalks, but without assuming, however, a very great development, but whose long branches, loaded with numerous leaves bent under their weight, and trailed even upon the ground. April, 1828, there was sent to us, from the establishment at Richard Tol, a small quantity of the eggs of the silk worm, which the colonial government had received from France. Placed upon a table, in an airy apartment, these eggs generally hatched and gave birth to a certain number of well formed worms. We distributed among them, the young tender leaves, collected from the extremities of the branches of our mulberry; they delayed not to eat them with great avidity. But few were given them at a time, and three or four times a day, in consequence of the rapidity with which the leaves wither from the action of the air, which was almost absolutely dry. Larger leaves which were more perfectly developed, were successively given to them in proportion and in quantity, as they incremed a size. The worms eat with the same avidity, without any previous preparation. Finally, at the end of a month or more, our worms thus nourished, had acquired a develleaves speedily acquire, and the promptitude with opment, very satisfactor, for the country, and which they are renewed. Their length is often delayed not to form their encours, which, in eight inches, and their width about six. They truth, appeared to us, less beautiful than those of the same species born in Europe,

The difference of size between these seemed evidently to be the result of the physical causes of the climate, rather than that of the food.

A few days later the moth appeared, in a very good form, and exhibited characters of a strong constitution. Our location was very bad for the education of this species of insect, and was, without doubt, one of the obstacles, which prevented its perfect copulation, nevertheless some \$8,463,563 istic, and which seems to us, to offer a certain eggs were produced, which appeared to us beauti-1,274,461 means of indentifying our species, independently ful and well organized, but they did not hatch,

which was also attributed to the excessive dryness of the air, which produced a kind of compression, and deprived them of the faculty of reproduc-

Like attempts have several times been made in favorable results .

The cocoons produced by these various exthe period when they were developed. Sometimes, they have been equal in weight to these produced in Europe; the silk did not vield in beauty, to that of the latter, which is an unequivocal proof in favor of the use of the Morus Multicaulis, for feeding silk worms,

nake comparative experiments with their leaves, and of those of the Morus Alba, for the education of silk worms. It is probable that the first will e generally preferred.

Besides the advantages which we have above named, we may still add, that they are admirably alculated for forming regular plantations; that hey can be placed very near without an injurius effect; and by heading down the stalks, anmally, near the ground, a rich vegetation is proluced with a complete development of vigorous branches and leaves; and tinally, it is easy to nultiply them by thousands, from the roots, in he course of a year, and to form vast and regdar plantations of them the second. But a few ears, then, are sufficient to obtain considerable elds in full vigor, sufficient to support an imgense quantity of silk worms, and that with the reatest facility, as they are reproduced in a maner, almost indefinite.

Besides, this mulberry braves the most rizer. us winters. We saw on our arrival at Havre, July last, in the field of M. A. Eyries, plants, which had endured, in the open ground, the vinter of 1828, and which appeared vigorous and eautiful.

This species will be readily acclimated in Euope, because it originated from an analogous reion, as to climate, to that which we inhabit. It ppears not to suffer from the excessive cold of ne northern, or the intense heat of the intertropial regions, for the plants deposited in the gardens f the Government at Cayenne, acquired, in the pace of eight months, a truly remarkable develnat colony, in June, 1821, they were clothed vith leaves of an extraordinary size. Those also which we cultivated at Senegal, although sitated under a dry and scorching sky, and planted an arid soil, offered an appearance, sufficiently utisfactory; but they had acquired less developent, in all respects, than those which have vegtated under the humid climate of Guiana.

* We learn that the wish expressed by M. Perrotet has been fulfilled, in a great degree on the one de by M. Delille, Profesor at Montpelier, and n the other, by M. Loiseleur-Deslongchamps at

The last named gentleman has transmitted to us he following note on this subject.

'From a little experiment, made with the leaves of he Morus Multicaulis, an account of which I shall oon publish, they have appeared to be at least as dvantageous, for the nourishment of silk worms, as hose of the common white mulberry; and that the ocoons, made by the worms, fed only with leaves of this species, are even rather heavier.'

modates itself to all kinds of soil; but we have re- into six parts. These were immediately placed the produce of leaves most abundant, when plac- The stalks were cut off, to the height of about other parts of Senegal and particularly at Rich- ed in a friable, light and rich soil. Its long and eighteen inches, in order to place them, more ard-Tol, which have not been crowned with more tender roots absorb with great avidity the nutri- commodiously, in the situation which had been tive salts of the earth; and besides, its imper- designated for them, in the ship. The branches fectly ligneous branches being very porous, equal- answered for cuttings; not any were thrown away; periments, were of different sizes, according to by explains the facility with which they pump up all were reduced into pieces, of from four to six the humidity of the earth and leave it dry. Our inches in length, and put into hoxes, filled with observations, in this respect, induce us to believe, light earth; this gave us two nundred and fifty that the development of the numerous branches, cuttings, which, during the two months, occupied and leaves of this shrub is accelerated in proportion to the frequency and regularity with hon, took root without exception. They had even which the soil is impregnated with humidity. The It is desirable that the persons in France, who form of the leaves also varies, according to the eped branches, from a foot and a half to two feet now passess a number of these mulberries, should nature of the soil; they are large and cordiform in length. We also remarked, that some of them, in a rich soil, but small, cliptical and without the which had been set out without any buds at the heart shaped indentation, at the base, in a dry and base as is generally done, and whose wood had arid soil. The branches are filled with fructification in this last named soil, which rarely happens in the first. It appears expedient, then, that plantations of this mulberry should be made upon a humid rather than a dry soil, to obtain in all respects a satisfactory result; for a too great quantity of water does not appear to have been injurious to it, even when the roots have been ticulæ were endowed with a property of producoften covered; on the contrary, it is the situation in which the leaves are more completely developed. Moving the earth between the plants, with the hoe and spade at proper times, has an excellent effect upon this shrub; it facilitates, in a singular manner, the formation of new rootlets, and consequently increases the number of sponglets, or absorbing mouths.

It not being natural for this mulberry to grow tall or to form any trunk, properly so called, regular plantations can be formed of it, without difficulty by planting the shrubs at a distance of six or eight feet from each other,-a space sufficient for the extension of the branches, to facilitate the culture and for collecting the leaves. This last operation is so much facilitated by the flexibility of the stalks, that a child is sufficient for furnishing the food, of a large establishment of silk worms.

In order that the development of the principle stalks may be completely effected, it is necessary to suppress all those, which do not present the aspect of a vigorous constitution, and which, from their excessive numbers may be directly injurious to the others. The stalks can also be anpment, and at the time of our departure from nually headed down, at will, to a certain height, with the view of producing a new and more vigorous vegetation. This method practised at Senegal, has generally produced satisfactory results.

We have already remarked, with what singular facility this mulberry can be propagated. In fact it only requires to insert a cutting a few inehes into the earth, and in a short time roots are produced, with a considerable development of but merely with mats. We think this method young shoots. The numerous plants, which are will advance the plants and render them stronger already disseminated in the divers climates of Africa, America, and Europe, have been all produced, from the two individuals, which we procured at Manilla.

The fortunate discovery of this precious shrub took place in the garden of a Chinese cultivator, who, after having informed us of its properties, and the important purpose for which it was used in his own country, yielded to our solicitations, and sold us two bushes for ten Spanish piasters, assuring us, that he had introduced it into Manil- long, by the end of October, and some of them had la, where it had been considerably extended.

These two bushes were sent on board the ves-The many stalked mulberry, generally accom- sel, in which we were to embark, and divided marked its vegetation was most vigorous, and in two large boxes filled with rich, light earth. in the voyage from Manilla to the Isle of Bourfilled the boxes' with numerous roots, and develscarcely a ligneous consistence in this part, had not only developed roots, but several shoots, which formed as many distinct stalks. This new vegetation appears to be attributable to the numerous lenticulæ, with which the bark of the shoots is covered, which confirms the opinion, which we have long entertained, that these lening roots and buds; or that some of them may exclusively develope buds and others roots. Not having had an opportunity to verify this assertion, by direct observation, we present it here but as a mere suspicion.

> We left at the Isle of Bourbon a part of the scions, which had taken root, with two of the old plants, detached from the bushes, of which we have spoken. The remainder were preserved for Cayenne and France.

> The manner of making cuttings of this mulberry is not difficult; it is sufficient to cut the branches into pieces eight or ten inches long, at most, and always to leave on the part destined to be put in the ground, good buds and especially one at the end; for although the roots are formed, without the aid of this organ, it is not less true, that their development is much more prompt. when the scions are provided with it. It is not necessary to leave more than one bud on the unper end of the cutting.*

Prepared in this manner, the cuttings should be placed in a moist and rich soil, and a shaded situation,-that is to say, so covered, as to protect them, for some time, from the rays of the sun, which might otherwise occasion too great a transpiration. It will be beneficial to water them slightly, from time to time, so as to keep the soil constantly refreshed, without being too wet. It would, perhaps, be advantageous, in an European climate, to cut the scions in March and plant them in a warm bed, without being covered with glass,

^{* &#}x27;In confirmation of this advice, we insert the following observation, which M. Loiseleur-Deslong-champs, has communicated.' This shrub is not only produced, in the common mode, by cuttings; but cuttings with a single eye, take with facility, which offers a great advantage, in rapidily multiplying this plant. Cuttings with a single eye, which had but just been planted, when I read a note on this subject, in the meeting of the Hon. Soc. on the 17th, of June, had almost all made shoots 18 or 20 inches obtained a length of 3 feet and one of four.

before winter. The movement of the sap will indicate, the most certainly, the period for making

Another mode still easier of multiplying this mulberry, is by suckers, or layers. As it throws es-Conquest of Granada-Life of Sir Thomas up numerous stalks, it is only necessary to heap up the earth about them, to make them produce roots; and there is nothing to prevent their being laid down; on the contrary, they present an advantage in doing it, as new stalks are formed at the base of those laid down, which rise vertically and immediately replace them.

new engrand farmer.

BOSTON, FRIDAY, AUGUST 13, 1830.

CUCUMBERS.

'Who shall decide when Doctors disagree?'

A popular periodical has lately condemned the use of the Cucumber as an article of diet, and quotes an adage directing to 'peel it, slice it down into pieces, put vinegar and peoper to it, and then -throw it away.' This wise saying has been attributed to many other sages besides Dr Abernethy, and still eucumbers are eaten by featherless bipeds with impunity, and some suppose with advantage.

The medical gentlemen who condemn the cucumber, tell us 'the principal mischief produced by the use of this fruit, and which has caused it to be ranked among the most unwholesome articles serv ed at our tables, arises independent of an acrid principle which it is supposed to contain, from its indigestibility, in other words its insolubility in the stomach. In consequence of this it is retained in the latter organ for a long time, producing more or less uneasiness in every instance; and in the dyspeptic, the gouty, and those of a nervous and feeble constitution, giving rise to violent pains, cramps, and other severe affections.

But other professors of the healing art appear to entertain opinions less hostile to this vegetable. Dr Willigh's Domestic Encyclopedia asserts that 'cucumbers are a salubrious, cooling fruit, and may be safely allowed to consumptive patients; as they sweeten acrid humors, at the same time are gently laxative, but being in a considerable degree acescent, and sometimes attended with flatulency and diarrhœa, such effects may be prevented by cating them with moderation; or with the addition of vinegar and pepper, which counteract their natural coldness. If properly pickled (without coloring them with that poisonous metal, copper; or rendering them too acrid with stimulent spices,) they are an excellent antiseptic; yet we consider them highly improper, either for children or wetmurses.

We shall not assume the part of an umpire in this controversy, but our own experience and observation give us a decided bias in favor of the moderate and prudent use of the cucumber as a healthy and agreeable article of aliment.

Raspberries-The St Johns, (N. B.) City Gazette of July 28, states that there were that morning brought into the Country Market of that City. 1378 quarts of Raspberries, (equal to 43 bushels) at three pence per qt. would produce £17 4s. 6d.

Turnips-Sow strong wood ashes over the ground about the time they are springing up. This will cause the young plants to grow sooner out of the way of insects, produce a large crop, and cause the crop to be sweet and palatable.

Quarterly Review-Wells & Lilly, Boston, bave just republished the 85th Number of the London Quarterly Review, which contains articles on the following subjects :- Polynesian Research-Munro-Egyptian Hieroglyphics-Travels in Peru-Evidences of Christianity-Politics of France -Causes of Pauperism in England-Poor Laws -List of New Publications. Published quarterly at \$5,00 per annum.

AMERICAN SILK.

A gentleman from Mansfield, Con, informs us that it is computed that at least four tons of raw silk have been raised in Connecticut this season; and that the Silk raised in Mansfield and the adjoining towns this year has amounted to \$24,000, -all of which has found a ready sale.

MASSACIJUSETTS HORTICULTURAL SOCIETY.

Saturday, August 7, 1830.

Apples .- Early Red Mayaut, by R. MANNING. Esq. of Salem. Red Juneating, by MR A. D. Williams, by the same. For a history of this valuable variety, see N. E. Farmer, for the Cattle Show, viz. the 13th of Oct. nex No. 2, vol. ix; Sopsavine, by Mr RICHARDS, of Dedham.

Pears .- Passe Madeleine, by R. Howe, from the garden of Mr Downer. This fruit is the Hon.O. Fiske, and to give public notice through produce of scions sent from the London Horticultural Society. In the garden of Mr D. as well as change of the day of the Brighton Cattle Show. in those of others, where this variety has been tried, it has failed in good qualities. Amber Pear, by J. PRINCE, Esq. This is a good fruit, a great and constant bearer, is above medium size, a handsome fruit, something like the Queen Catharine. Fondante D'Ete, or Summer Melting, a good Early Pear, by J. PRINCE, Esq. This pear tree was imported by Mr Prince from Long Island, about 18 years since-it has rather a vigorous growth-has hitherto borne moderately, though it now increases in quantity rapidly every year; and if grafted on old trees, would probably soon become a good bearer. Mr Prince considers it the best pear of the season. English Catharine, of Extract from an address delivered before the Horticultural Society New-York, by Mr William Curr. fine appearance, by Dr Shuatleff. July Pear, so called, by Mr E. M. RICHARDS.

Plums .- Early Apricot Plums, very handsome, of rich flavor. The tree a good and constant bearer, from Mr Downer's Garden. Monsieur Hatif, from John Prince, Esq. This promises to be a fine fruit, and is a great bearer—the specimen sent was hardly ripe. Royal of Tours, a fine plum, by Mr WM, F. GARDNER, of Salem. Italian Damask, by Mr R. Manning, of Salem.

Peaches, - John Prince, Esq. exhibited a spec imen of this fruit from a natural tree, fully ripe, grown in open field. A valuable variety on account of its ripening early; fruit under size, but may, no doubt, be improved by cultivation.9

*With regard to this new early peach, Mr Prince has politely favored us with the following account.

Jamaica Plains, Aug. 7, 1830. DEAR SIR,-In compliance with your request about the Early Peaches exhibited this day at the Horticultural Hall, I have only to say, that in April last in destroying a small Peach Nursery, I left a few seattering of the largest trees, without paying any attention to their being worked ones. I knew several of them had fruit on-no attention had been paid to keeping down weeds, and only on the 3d of August, accidentally passing through them, I observed a tree with two or three dozen ripe fruit, the bees, &e. having attacked most of them. It is evidently not a budded tree, as in the part where it stands, Early Ann buds were used, and this is a bright red fruit, and

Apricots .- An elegant specimen of this fruit together with buds for distribution among th members of the Society, was shown by Hon. John Welles, from a tree imported from France.

CATTLE SHOW NOTICE AND CHANGI OF DAY.

At a special meeting of the Board of Trustees o the, Massachusetts Society for Promoting Agricul ture held at the Hall of the Union Bank, Aug. 5 1820

A letter from the Hon, O. Fisk, Corresponding Secretary of the Worcester Agricultural Society was laid before the Board. It having been the practice of the Massachusetts Society for promoting Agriculture, to hold their Cattle Show on sucl days as would best accommodate the County So ciety in their annual shows; and the Worceste County Society having reference to the term of the Supreme Court for that County having felt obliged to fix their day of exhibition on the 31th of Oc tober next, the same day on which candidates fo premiums had been invited to attend by the Stat

It was voted that the day heretofore fixed upon be changed for the succeeding Wednesday, viz. th 20th of October next, and that the Corresponding Secretary be requested to answer the letter of th the New England Farmer and other papers, of thi

From the Records.

BENJ. GUILD, Recording Secretary. August 5, 1830.

All candidates for premiums, or persons desirou of making entries for exhibition will therfor tak notice that the printed hand bills and Cattle Shov pagers should read as if printed October 20th in stead of October 13th, and all the offers and reg ulation made for entries, &c, will hereafter hav reference and be attended to on the 20th instea of the 13th,

CULTIVATION OF THE STRAWBERRY

The patch on which I have my strawberries had been under the same plant several years. Fo the month of September, 1819, I laid on about fiv inches thick of well rotted manure, which I du down with the old vines. I then set out plants of the Hudson kind of strawberry, at the distanc sixteen inches each way, taking care to c have them in line the long way of the ground In the month of November, I covered the plant with a thin coat of long litter, which I took off i the beginning of April, and pointed the ground with the spade, and raked it smooth. The ground was kept clean by hoeing, till the fruit began to form. I then took short grass cut from the walks and spread between and under the vines, which had the effect to keep the fruit clean, the weed down, and kept the scorching drought from pene trating into the roots of the plant.

As soon as the fruit season was past, I pointer in the grass between in the bed. In September

considerably red on the inside, I think when budded or other trees and cultivated, it will prove from its earliness an acquisition, as I have not heard of any ripe Peache from standard open ground trees this year. I shall make use of what few buds are on it in a few days, and nex season shall be able, to disseminate some of them. I have called it the 'Spring Hill Earliest.'
Very truly yours,

J. PRINCE.

1820, I cut out all the superfluous runners, and dressed the hed, and in the month of November covered as before.

On the first of March of last year, 1821, I took the covering from a part of the patch, and replaced it with one inch of straw, which I burned off as directed by Dr Miller. I then gave a slight eight or ten days the leaves began to make their appearance. On the 22d of March, I uncovered another part of the patch, a part of which I burned with straw as before, and the other part with a parcel of dry leaves, which I laid on two nches thick. The remainder of the patch I nucovered in the beginning of April, and dressed in the usual way,

The first burned part continued to keep more orward than the others, and showed flowers eight lays sooner than the unburned part of the patch. The unburned grew less rapid, and was considerbly less productive of fruit. The part burned was the most luxuriant in growth, the quantity of ruit nearly the same as those burned with straw. The burning has this good effect, that it keeps be ground more clean of weeds, and will doubtess kill a great many insects and their eggs; beides, it clears the vines from all decayed leaves ad hardened bark, gathered around the body of ie plant; and by that means, allows the free exausion of the leaves and flowers.

I am of opinion that leaves, when dry, will anwer the purpose of burning equally with straw, nd their ashes prove a good manure.

I shall now give a few observations concerning ne selecting of proper plants for planting. reat deal lies in choosing proper plants; for if iev are taken promiscuously, the greater part rill prove barren, producing plenty of flowers ut no fruit. Those when examined, will be ound to have abundance of stamina, but no stiles ; that it often happens among those barren plants. lat some of them have a part of an imperfect, ught, therefore, never to be taken out of old negcted beds which have been allowed to spread nd run into a multitude of suckers, nor from any lants which do not produce plenty of fruit, 'hose suckers which stand nearest the old plant, rould always be selected, in preference to those roduced from the trailing stalks, at a distance om the fruit bearing plants.

There have been some kind of strawberries reatly improved by seed selected from the largst and fairest fruit. In this case the seed should e sown as soon as possible after the fruit is eaten. 'he best way is to sow the seed in pots or boxes, laced in the shade.

To Correspondents .- A valuable article from Genearborn, on the culture of the Rose-and some others e received, and will soon appear.

Notice.

A special meeting of the Massachusetts Horticultural ciety will be held on Saturday the 14th inst. at the Hall the society at 11 o'clock, for the purpose of making rangements preparatory to the celebration of the anniersary festival. R. L. EMMONS, Rec. Sec.

Turnip Seed, &c.

For sale at the Seed Store connected with the New England Farmer Office, 52 North Market-street.

An extensive assortment of Turnip Seeds, of the most valuable sorts for family use or stock. The most approved kinds for the farmer, are the White Dutch, White Stone, Vellow Stone and Vellow Malta. The two latter are of uncommon excellence, and keep well. Loudon describes the Yellow Malta as 'an excellent and beautihoeing and raking. At this time there was hardly ful root, and of delicious flavor. Of the sorts for field the least trace of vines left on the ground; but in Flat, and Ruta Baga, are the best. The Vellow Aberdeen, White Flat, and Ruta Baga, are the best. Flat, and Ruta Baga, are the best. The Vellow Aber-deen is most approved among the Farmers of England and Scotland, as it grows to a large size, is very sweet and nutritious, and keeps till June. The above seeds were saved in Europe expressly for this Establishment, and the utmost dependence may be placed on their genuine quality.

200 lbs. of the finest English White Flat Turnip Seed, raised this season, expressly for this Establishment, by Mr AARON D. WILLIAMS, of Roxbury, and warranted of the first quality, for sale, wholesale and retail.

Also, a variety of Long and Turnip rooted Radishes, suit able for sowing the ensuing months, Long Prickly, and many other varieties of Cucumbers for pickling. July 9.

Chloride of Soda.

For sale at the Seed Store connected with the N. E. Farmer, 52 North Market-street-A few dozen bottles of Chloride of Soda, for preserving meat, removing offensive smells, neutralizing pestilential exhalations, and destroying contagion; prepared by the New England chemical company for Lowe and Reed. This valuable article is particularly described, page 390 of this week's New Engand Farmer .- Price \$1,00 per bottle, with directions.

For Sale,

The well known FARM in Dover, occupied for the last fourteen years by the subscriber, containing about 200 acres, well located in a square, bounded on the south by Cocheeho river, and on the east by Fresh creek, on which Cochecho river, and on the east by Fresh creek, on which is a tide mill, with an apparatus for pounding and grinding plaster. The Buildings consist of a large two story Brick House, of 46 feet by 38, with a wing of 20 by 16, all well finished, adjoined to which is a shed 34 feet by 14, conceting the cider house 27 by 37, two stories, with one plastered room, where all the spinning and weaving its state of the constant of the spinning and weaving the state of the formula of the spinning and weaving the state of the state of the spinning and weaving the state of the formula of the spinning and weaving the state of the spinning and weaving the spinning and the spinning and weaving the spinning and done for the family; two Barns, one of which is 100 feet by 42, with two wings of about 40 feet each, one employed as a stable, the other for a sheepfold, with a good yard well walled in; the other is a Store Barn of 45 feet square, of 16 feet post, and will contain 60 tons of hay; a pig-gery of 50 feet by 30, with a cellar of 18 feet square under it, with boilers set to make soap, brew, and cook for uit formed, which sometimes ripens. Plants swine. The fields are divided by permanent stone walls, and consist of one of 40 acres in front of the house, one and consist of one of 40 acres in from of the house, one of 17 on the East, one of 10 acres on the North, (principally orehard,) one of 15 Northeast, and one of 30 acres West of the house, with three pastures of 20 to 25 acres

> The Farm has been gradually improving for the last ten years, and the two last has cut each year one hundred tons of hay, and 20 to 25 tons of thatch. It is one and a half miles from the village of Dover, which affords a good market. There has been planted some hundreds of Fruit Trees, principally Apple, many of which are grafted-with Pears, Cherry, Plum, Peach and Quince trees, and many in bearing, with a small nursery.

> The terms of sale may be known by applying to Major Andrew Pierce, of Dover, Mr Samuel Lord, of Portsmouth, or the subscriber on the premises June 11. WILLIAM FLAGG.

Grass Seeds.

For sale at the Seed Store connected with the New England Farmer, 52 North Market street,

A large assortment of Seeds of the various grasses cultivated in New England, viz:

HERDS GRASS; RED TOP; ORCHARD GRASS:

TALL MEADOW OATS GRASS; FOWL MEADOW GRASS;

LUCERNE, or FRENCH CLOVER;

RED CLOVER; WHITE HONEYSUCKLE CLOVER; also BUCKWHEAT, FLAX, MILLET, FIELD PEAS, and 14 varieties of the most esteemed FIELD TURNIP SEED, cultivated in Europe and America, all warranted

Aug. 13,

Bolivar Calves, Saxony Bucks, and Bremen Geese.

For sale, 4 Bull Calves, sired by the celebrated imported improved Durham short horned bull Bolivan. which stock have produced 36 quarts of milk a day. No. 1, dam Grey Brown, half Corlebs and half Galloway. No 2, dam Juno, three fourths Fill Pail. No. 3, dam Ceres, her sire Cœlebs, her dam Mr Gray's imported Cow. 4, dam Beauty, half Codebs and half Galloway. The Calves are beautiful, and their dams all great milkers.

Two imported Saxony Bucks, 2 Vearlings, and 2 Lambs. 3 pairs of Bremen Geese. Inquire of Benjamin Shurtleff, Jr, Chelsea, or at 52 Hanover Street, Boston.

BRIGHTON MARKET-Monday, August 9.

Reported for the Chronicle and Patriot, 1

At Market this day, 283 Becf Cattle, 130 Stores, 6 or 8 Cows and Calves, 2747 Sheep, 360 Swine.

Prices—Beef Cattle—From \$3.75 to 4.75.

Stores—Those mentioned above were most of them the

same we reported last week. We were mistaken in stating they were nearly all sold-have noticed only a few sales to day.

Cows and calves-We noticed the sale of two only, at \$20 a \$25.

Sheep and Lambs .- We noticed lots sold at the following prices \$2, 1 871, 1 621 1 50, 1 33, and 1 25. Some old Sheep were sold, price not noticed—a few were sold the close of last week for \$3 25.

Swine-None having been at market for several weeks previous, a sale was easily effected. Lots were taken at of the first quality, and at the customary market prices. about 4½c; one lot of about 100 was sold by the 'lump' at 4½ a 5½c.

MISCELLANIES.

HINTS TO MOTHERS.

Parents, and especially mothers, should be aware that the natural effect of the extreme heat of the season, and of teething, separate or conjoined, is feverish disturbance, diminished appetite, and impaired digestion in their children. They ought to know also, that whatever deviation is made from extreme simplicity and regularity of the diet of these young beings, will necessarily aggravate their restlessness and sufferings. All the trash of fruit, cakes and pastry of any kind; coffee or any beverage except pure water, ought to be sedulously withheld. The question at this time is not what is agreeable at the moment to the child, or chimes in with the oftentimes silly fondness of the mother, but what will be most likely to guard it from an attack of summer complaint, and in fact to save its life. To preserve coolness of the skin by light and loose dress; bathing twice daily, in lukewarm water, or even cold water, if the skin be hot and dry; regular airings out of doors, in the morning, and out of the approach of evening; the bedroom well ventilated, but the air so admitted that it shall not blow directly on or over the bed, are among the additional means of prevention. Finally, we would conjure mothers, when their infants are unwell at this season, we might add at any season, to give no medicine on their own responsibility-to listen to no neighboring gossip-to be deceived by no impudent quack; and every quack is as impudent as he is generally ignorant, or he would not be every reason to believe that they, in common with periling the lives of his fellow creatures, by thrusting on them alleged sovereign cures for bowel complaints, under the title of vermifuges and the like. If mothers delay in sending for physicians, a dozen groans over hard times and dull business. let them also delay in giving physic. They may, when their infants are ailing, sometimes arrest diseases, by curtailing the usual quantity of food, and giving it of a still simpler quality; or what is still better, by enforcing abstinence except from such drinks as rice, or barley, or gum arabic water, slightly sweetened or salted as may be most agreeable. Beyond this, mothers are bewildered; and if they will go blundering on, theirs be the penalty, as theirs assuredly will be the blame.

OBEDIENCE,-Let thy child's first lesson be obedience, and the second may be what thou wilt. -Fuller.

The directors of the Liverpool and Manchester Railway have determined to open the road the whole length on the 15th of September. A company has been formed for the establishment of a railway from Manchester to Sheffield.

The first experiment by the directors of the Liverpool and Manchester Rail Road, of travelling the whole line, thirtytwo miles, was made June 14, with the most gratifying success. The Arrow steam engine drew a carriage with twelve inside passengers, another with thirty outside, and seven carriages loaded with 34 tons of rough stone. The journey was made from Liverpool to Manchester in two hours and twenty minutes, including the stoppages for water, which occupied 13 1-2 minutes, being at the rate of 14 miles an hour, including stoppages.

A man in Cattskill, N. Y. with his wife and a boy, in six days, recently cut, cured and housed 15 loads of rye, 3,000 sheaves, and 6 loads of sullen and learful animal, awed by the presence of Modized, L. C.-A. lowAss, Bookseller. boy, in six days, recently cut, cured and housed

hay-drinking molasses and water, milk and water, and nothing stronger. He is 42 years old, and offers to bet any man \$10 that he can jump over a six rail fence, any time of day. During the six days he went twice to the village, 10 miles, and hoed teans half a day besides.

M. de Ruyter, a descendant of the famous Dutch Admiral, lately died at Toulon, aged 82. He left marriage portion for the most virtuous girl and the best sailor, to be decided by the Mayor and the Maritime Prefect

from a ship's cabin, was found to be a villain who had married two wives in three months, and was committed therefor.

A shark was caught off Fulton Market, New York, on Wednesday morning, July 28. When brought on the deck of the smack, he snapped at the leg of a bystander, but his monstrous jaws closed only on the pantaloous. There were others in company when first seen, and several boys were bathing near.

1MPORTANCE OF GARDENS.

Many of our mechanies, and most of the truckmen in this town, occupy their leisure, this year, in cultivating land in the vicinity. We mention this to express our hearty approbation of the practice, and to recommend its adoption elsewhere. It it had a musket on his shoulder, with pistols, a poig gives us pleasure to say, that at present there is others, will reap a plentiful harvest,

Every bushel of Potatoes raised in this way will do more toward maintaining a family, than half

ALLIGATOR.

these pretty creatures from a friend in South Carolina. and like Jacques runs into such a vein of metaphor, that it is as good to the Editor as 'an allegory on the banks of the Nile.' Such presents are in the true spirit of charity-twice blessed; profitable to the giver and acceptable to the receiver. 'You cannot feed capons so,' for the alligator is so little dainty that he will eat whatever he can get, and you may feast him like a statesman, or a retiring Editor, for his digestion is equal to his appetite; he will grind a bone that has been well polished by a cur, or he will fatten upon a knot of pitch pine, or as they say in recommend it to the notice of farmers. Directions fo Carolina of 'lightwood.' But the proprietor of the its culture furnished gratis. animal must trust himself to the clemency of the South Carolinians, if he would see an alligator lying on a bank 'alone in his glory.' He will find one twelve feet in length, and may have sport with him if he will attack him in his castle. The alligator makes a hole like a fox's, except that it is filled with rapid growth, long and abundant thorns, and wit water; the entrance may be staked up and a new hard and strong wood, and it is attacked by no insect one opened from the surface directly upon the back which gives it a decided advantage over Hawthorns of the tenant. A few blows will fill him with rage when he will try to come forth that he may, as was desired by Ajax, see and confront his foes. While he is creeping forth at the hole thus made, his hunters can despatch him by striking their axes into his brain. If however he should come upon the green sward in the exercise of his natural powers. the siege will be raised; for he makes a noble sally. It is never safe for the hunter in his retreat to fall within reach of his jaws; which close upon a man like a miller's trap upon a mouse: the muscles that enable a miller's trap upon a mouse: the muscles that enable | Philadelphia- D. & C. Landerth. 35 Chestnut-street. him to bite are particularly strong, and his teeth | Baltimore-G. В. Sмітн, Office of the American Farmer. though of the hue of ebony, are equally well adapted to the same service.

mankind, and (unless when assailed) more ready to retreat than to attack. They are not the bold creatures described by Bartram, and are as much diminished in number as depreciated in courage. In Alabama they still thrive, and the low lands there that produce seventy bushels of frogs to the acre, have, it is said alligators enough wherewith to fence them in.

The old hunters that used to seek for deer by night, and shoot between the luminous eyes reflectthe rent of a house, 1800 francs, as an annual ing the torch light, avoided the alligator, also, by the reflection of his eyes, which seem like two burning coals, differing in appearance from the eyes of any other animal.

But in South America the alligator comes to his A man lately arrested in New York for stealing largest growth, and is the monarch of the rivers. Sometimes he is said to work himself under the moist earth which cracks with a loud report when dry, and discloses a huge alligator, completely mailed like Minerva, when she sprung from her concealed existence. 'This is (we think) mentioned as a common story by Humboldt.

Marco Polo describes these animals (or crocodiles' as, huge serpents ten paces long and ten spans wide, round the body. At the fore part near the head they have two short legs, having three claws like those of a tiger, with eyes larger than a fourpenny loaf and very glaring; the jaws are wide enough to swallow a man, the teeth are large and very sharp and the whole appearance is so formidable that neither man nor any kind of animal can approach then without terror.'- Tribune.

Turkish Unconcern .- A boat was sent off from shore to reconnoitre, and the man who commanded nard, and an immense flask of powder suspended fron his belt. He recognized the captain, who had been absent a month, 'Oh!' cried he, 'Ali Reis, you are welcome. Mahmoud Selim, welcome! Who are the infidels?' 'They are sons of Frank gentlemen whom we are taking to Trebizond.' 'You are well come.' 'What news?' 'Nothing—the son of the Aga of Riza has murdered his cousin for jealousy, an he has taken refuge with us; he is a fine youn fellow. Oh! I forgot-Husseis has blown up you The Courier acknowledges the receipt of one of neighbor's house with gunpowder; five persons were ese pretty creatures from a friend in South Carolina, killed.' Wonderful!' What would you have, the were only children.' Such are Turkish greetings o the coast of the Black Sea .- Foreign Review.

1 offer friendly salutations,

And am most respectfully, Your obedient servant.

Brialey Place, Roxbury, August 9th, 1830. H. A. S. DEARBORN.

CULTURE OF ROSES,

RUDDED UPON SWEET BRIARS. By M. ALFRED DE TARADE.

Est modus in rebus.

It is for you, Amateurs of roses, that I have illected some ideas upon the culture and educaon of Sweet-Briars, which has occupied me durg many years. I commenced my operations, in informity to the counsels of those who had great operience, and it is only by daily observation. at I have been able to rectify my labors.

I shall be happy, if I attain the object, which I ive in view, and enable you to introduce civilizaon among savages, by transforming, with sucss, the perfidious and prickly Sweet-Briar, into various and elegant rose! What a pleasure, ter long continued efforts, to behold, in the morng of a magnificent day, the expanding rose, hich in the evening was but a bud! This pleas-

be pleased to bestow upon me: A thousand times happy is he,

Oni dit, sans s'avilir, les plus petites choses, Fit, des plus sees chardons, des willets et des roses,

Et sut même aux discours de la rusticité Donner de l'elégance et de la dignité.

Many well informed persons have given excelare interested in this delightful cultivation, should lent instruction and pointed out good methods for be enabled to increase their collections, in the budding and grafting fruit trees; but they appear most easy and expeditious manner. To accome to have distained the sweet-briar, as none of plish this, hudding upon sweet briars and other them have indicated a precise and clear method of wild stocks, is now very generally practised in Eu-succeeding, and arriving at the point, which we rope; and what are called standard roses, which have attained. This culture is now so fashionable, that there is not a castle, a country seat, or even a small garden, where efforts are not made to form amphitheatres, and avenues of swectital, that are to be seen the beautiful coupsd oril to old stumps, and if portions of them on dead brars; it is especially in the environs of the capwhich are produced by these shrubs; but which stalks and long roots are allowed to remain they have not been thus collected, without a great will, by rotting, cause the plant to perish, in one expense to the proprietors.

You, therefore, who live in the country, can avoid this great expense, by following my instructions, and by all means avoiding those old methods, to which some persons obstinately continue to ad-

Let us then follow together, and progressively, this culture, from the moment the sweet-briar is As Sweet-briars are abundantly scattered over extracted from the hedge, to that when it is taken from the nursery, to form avenues, amphithenires, on graduated lines. We will pursue the following order.

- I. Selections of the Sweet-Briars;
- Prining of the roots;
- Protection of the ends of the stocks by a composition;
 - 4. Mode of forming the nursery;
 - Stakes, or supports :
 - 6. Care to be taken in managing the shoots;
 - Destruction of worms and caterpillars;
- Care to be taken in pinching off the ends of the long shoots:
 - 9. Destruction of the spines;
- 10. Time of budding and the manner of doing it;
- II. Time of loosening and removing the bandages;
 - 12. Pruning the branches;
 - 13. Protection in winter;
 - 14. Pruning in March;
 - 15. Manner of treating the aspiring bud;
 - 16. Supports for the young shoots;
 - 17. Winter Pruning;
 - 18. Transplanting;
 - 19. Annual pruning;

The labor, thus divided, which it is necessary to perform, presents us an occupation for two years, the requisite time for cultivating a sweet-

1. SELECTION OF THE SWEET-BRIARS.

The epoch for collecting the sweet-briar is the e has charms for me, which will be doubled, if month of November; that being the time, when be understood at the first view, is much more shall succeed in enabling you to participate in the sap has entirely descended. It is in old hedge pleasing than that which is not; it is for this reaes and the borders of the woods, that selections son, that I recommend a regular organization of It is for you I write, and I claim your indul- can be made with the greatest success. Those your nursery; and the following are the means of nce. I shall endeavor to be clear and precise, sweet-briars whose bark is gray or variegated effecting it. The roots of all the sweet-briars hav-

so as not to abuse the moments, which you may with green and gray are to be selected, and such as have red bark are to be rejected, as they do not answer for budding. The workmen, who take them up, should be directed not to cut off the branches below the first fork, as you will be enabled by this precaution to cut them where you choose, in order to make creet trees.

As most of the sweet-briars grow upon the old stumps, it is sometimes difficult to take them op; in this case, the workmen should be informed that it is not always necessary to take up the stump-provided they perceive a few new roots emanating from the steck, as they are sufficient.

II. PEUNING THE ROOTS.

This operation is very essential, because it leads to certain success, and will enable you to preserve your plants, a much longer time. As it is rare to find sweet-briars, which are not attached er two years; it is therefore necessary to obviate this difficulty, which can be done, by cutting out all the dead wood with a little saw and shortening the long roots, taking especial care to preserve all the small roots and fibres which emanate from the stalk.

This operation has the double advantage, of removing from the trees injurious and useless roots, and permitting con to plant them with facility, in

As soon as the roots have been removed by the saw the wound should be made smooth with a knife.

This operation having been completed, you will ascertain to what height each tree can be cut and leave it straight. This should be carefully done with the saw, and the end smoothed with a knife.

III. PROTECTING THE ENDS OF THE STOCKS WITH A COMPOSITION.

The sweet-briar has a pith, and when cut or pruned, should be covered from the rain and moisture, which, otherwise, would enter and cause the tree to perish. The composition which I recommended for this purpose is as follows.

One pound of White Burgundy Pitch;

A quarter of a pound of black pitch;

A quarter of a pound of rosin;

A quarter of a pound of yellow wax;

Two ounces of tallow;

An ounce of pounded mastie;

Half an ounce of saltpetre;

These are to be put in a sauce-pan, over a moderate fire and left to melt and mix, for about three quarters of an hour, when all the ingredients are thoroughly melted and mixed, you take the sweet-briars, one at a time, and dip the ends in the composition; but it must be only warm. If the trees have been planted out, the composition is to be applied with a spatula.

IV. MODE OF FORMING THE NURSERY.

Anything which is clear and precise, and can

ing been | runed, and cut of the proper length, and the wound covered with the composition, you then commence, by taking the largest to form one row, then those of a mean size for a second, and the smallest for the third, observing always this gradation, where your plantation is extensive. But as in each of the selections, which you make, there will exist a slight difference in their height, it is proper to adjust them so that they may appear regular, when they are set out. Upon the ground, which should have been well manured and prepared in September you extend a line, and commence by setting out a sweet-briar at each end and in the middle, in order to make the row of trees perfectly straight. The hole for each plant, should be about seven or eight inches deep.

V. STAKES OR SUPPORTS.

Your Sweet-Briars being thus planted out, are very insecure, and a high wind may suddenly displace them. To obviate this, it is necessary to secure them to stakes, or to a rail supported by stakes at proper distances, to render it secure.

VI. CARE TO BE TAKEN IN MANAGING THE SHOOTS.

It is in the month of March, that you commence reaping the first recompense for your labors, by perceiving your sweet-briars throw out their buds.

As it will be useless and dangerous to your sweet-briars to leave all the shoots, which may appear, it is necessary to examine the vigor of each, and leave only such as can be nourished, that is to say, two, three, four and sometimes five. The shoots which are reserved, should be at the top of the stalk and directed in a triangular manner, in order to form, on your trees, a little head, or ball, the first year it is budded. When you have selected the shoots, which you wish to retain, you must daily destroy, with a knife, all the others which may appear.

VII. DESTRUCTION OF WORMS AND CATERPILLARS,

There is no part of your labor more important, than that devoted to the destruction of worms and caterpillars. The little worm which attacks the sweet-briar, is a daugerous and a difficult enemy to combat, as he always is concealed; but with scrupulous attention, you will be able to discover him. It is not bigger round than a pin, and is ever shut up in one or more leaves which he rolls up and secures with his gum. He remains in this habitation, until he has consumed all the food, which surrounds him. The caterpillars are larger and of course not difficult to be seen-but it is necessary to exterminate all of them.

VIII. CARE TO BE TAKEN IN PINCHING OFF THE ENDS OF THE LONG SHOOTS.

As it is impossible that all the shoots should be equally large, it is necessary to withdraw the nourishment from the most greedy, in order to divide it among those which are smaller. For this purpose each sweet-briar is to be separately examined, and when you observe upon the same stalk, where you have left three shoots, (for instance,) that there are two, which are nearly of the same size, and that the third suffers, then pinch off the summits of the two shoots which are the most vigorous. By this means you will check the sap which flowed too freely upon those two shoots, and compel it to take a direction into that which is feeble. This operation must not be regulated, because the beauty of the shoots, upon which you intend to bud, depend upon it,

IX. DESTRUCTION OF THE SPINES.

Before budding is commenced there is a little operation which must not be neglected. It is the destruction of the spines on the shoots, where the buds are to be inserted. This should not be deferred to the last moment, but performed at least a month before you insert the buds, in ord r that the small wound which the removal of each spine occasioned, should have time to heal. The proper time of performing this operation is during the month of July.

N. TIME OF BUDDING AND THE MANNER OF DOING IT.

It is on the perfection of this operation, that depends the success of your labors, and it is from it, that you are to expect the recompense for the cares, which you have bestowed upon your sweetbriars, up to that moment.

that the bads may not dry, even in your branch ding may be preferred; for the buds shoot with which you are about to insert; therefore, when great vigor, the first year, and form immediately. you have a whole nursery to bud, I advise you to have an adroit and experienced assistant, to put on the ligatures, who should be cautioned, not to make them too tight.

filled with the water, in such a manner, that the the buds were inserted; if it has been humid, the end of each scion is constantly wet. Each scion ligatures may be removed in twenty or thirty days; should have a label attached to it, designating the but, if on the contrary, it has been bot and dry, species; you should also have parchment labels it is necessary to wait, at least six weeks. This prepared, and when you have inserted a bud, it should be attached to the tree, and the name of the rose written upon it, with a pencil.

I shall not enter into any details upon the manner of taking off the bud for inoculation, because the description would be imperfect, and I believe it is better to see the operation, than to read an account of it; but I will observe, that the bud should be placed as near as possible to the axil of the shoot, that there may be a greater facility in healing the wound and that the new shoot may unite more completely with the stalk.

There are two modes of budding; the first is called escocheon with a growing bud and the second escocheon with a dormant bud, upon the new or

The results from the escocheon with a growing bud, are not so certain, that I can advise you to employ it; it nevertheless possesses some advantages under particular circumstances. It can be used to bud certain species, such as the Bengoles, from experience, I find it is very difficult to suc-

Therefore we adopt the escocheon with a dormant bud, which is thus called, because it does not immediately shoot, but sleeps during the winter, in order to develope itself, with greater vigor, in the inately, all the branches to the length of eight spring. The time for inserting this bud is the latter part of July and first of August.

After the bud is inserted nothing is to be cut off, but the shoot on which it is placed is to be left at its full length.

ESCOCHEON UPON THE STALK.

I have spoken to you of the success which you would have in budding upon the branches of from the space between the trees. a year's growth, during the months of July and August. I will now speak to you upon budding the stalk and of the cases where it is very advantageous; the success is as certain as in the preceding mode.

If at the epoch of budding a great drought has deprived your sweet-briars of sap, or other occupations have prevented you from attending to them, or if they have not sent out sufficiently vigorous shoots, he not discouraged, leave them as they are, with all their branches; in the following spring these branches will send out many others and form a little head of wild roses.

In this state and during the first days of July, you will bud them upon the stalk, below the branches, placing two buds opposite each other, and at an equal height, in such a manner that the same ligature may answer for both. You will leave your trees in this state, without doing any thing to them, until the following March. At that time you must cut off the head of the sweet-briar, a half an inch above the buds.

My observations and experience induce me to believe, that from the facility with which the This operation should be promptly performed, stalk covers from the wound, this method of buda small head to the tree.

XI. TIME OF LOOSENING AND REMOVING THE LIGATURES.

To perforn this operation without risk, it is neation you should keep the scions in a vessel half cessary to consider the state of the weather since

As it will not do to entirely remove the ligature, but only to loosen it, you will make use of your budding knife and with the point, cut a portion of the middle of the ligature on the side opposite the bud; this must be carefully done, so as not to wound the bark. By this means your buds will be relieved and remain protected by the yarn * ligature from the rays of the sun, which would be injurious, by eausing the incisions to open. About three weeks after, the ligatures are to be removed. This is the most expeditious method, and I employ it in my nurseries; but if you have but a few stalks, I advise you to loosen the ligatures and then fasten them again very gently, in order to keep down the edges of the incision, which was made for the reception of the bud.

XII. PRUNING THE BRANCHES.

It is a labor which you will behold and execute with pleasure, because you will then know the result of your efforts and be able to reestablish good Multifloras, Noisettes, Four seasons &c. But order in your nursery, by eradicating the large wild branches, which render it inaccessible,

This labor should be performed about the 10th or 12th of October, when vegetation has entirely ceased. This can be best done with pruning shears. With this instrument you cut, indiscrimor ten inches.

XIII. PROTECTION IN WINTER.

Before winter commences, it is necessary to protect your sweet-briars from its rigor; to effect this the roots should be covered with manure which should be slightly secured against dispersion by the winds by drawing the earth over it

XIV. PRUNING IN MARCH.

In October you pruned the branches of the sweet-briars to the length of eight or ten inches;

^{*} It thus appears woolen yarn is used for the ligatures.

should be done in the fore part of March. The leaves on. object of the autumnal praning was to clear out the nursery, and to prevent the trees from suffering, in the event the end of the boughs should be henoth

With your shears, cut off the branches, so as to leave but one bad, above that which had been inserted;-the one thus left is called the aspiring bud; upon this bud depend the success and vigor of the one which had been placed on the branch, As to the end of the stalk, above the highest branch, and which is generally dead, it is necessary to cut it off with a saw, pare the edges with a knife, and then cover it with the composition.

XV. MANNER OF TREATING THE ASPIRING BUD.

When your sweet-briars have been well pruned, the most important thing to be attended to, is the destruction of all the sprouts, which are called gourmands, that issue from the top of the tree,

When the aspiring bud has thrown out two or | March. three little leaves, it is time to pinch off its summit. The aspiring bud aids in developing that which has been inserted, as it draws up the san, and you cause that to flow into it, when the end of the aspiring bud is pinched off. When your inserted bud has grown four or five inches, and it is able to collect its own nourishment, then the aspiring bud is to be entirely cradicated with a knife.

XVI. SUPPORTS FOR THE YOUNG SUCOTS.

This precaution is very important; if neglected, a gust of wind, a storm, or even a bird may, in a'moment, destroy the results of all your labers, which have been bestowed upon your trees, for eighteen months.

At the moment when your bud begins to develope, collect small sticks, about the size of your little finger and two feet in length; these are to be secured to the trees by two ligatures, leaving the uper end about eighteen inches above the top of the stalk.

When the buds have sufficiently grown they are to be secured to these supports, by ligatures delicately applied.

Now behold the term of your desires,-the recompense of all your cares, and all your labors. Each morning will bring you new joys, and I charge you not to lose a single moment; for this jev will be shert,

'Et, roso, elle a vecu ce que vivent les rocs, L'espace d'un matin.'

MALBERRE.

But there is a method of prolonging these pleasures; it is by budding the reblooming or perpetual roses, such as the Bengoles, Noisettes, Portland, Four seasons &c, by this means you can have roses until November.

The sweet-briars produce the most beautiful roses the first year after they have been budded, and I shall instruct you how to preserve them in this state, and to prevent them from degenerating.

XVII. WINTER PRUNING.

Towards the middle of October, when the sap has descended, it is necessary to prune your rosebushes. Each branch should be cut off, to about a foct in length; this labor prepares them for transportation to the place, for which they may be destined. Forget not to cut off with scissors, such leaves as remain on at the time they are ta-

XVIII. TRANSPLANTING.

When your sweet-briars have been taken up, the extremities of the roots should be cut off. injured by the severe cold of winter, if left at full largest should be selected, if it is intended to form an avenue, a graduated line, or an amphitheatre; each of these modes of planting has its advantages, and the selection must be left to your good taste.

Whatever be the mode which you adopt, of planting out the trees, forget not what I have said, in the article on STAKES AND SUPPORTS, which should be placed as soon as the plantation has been completed,

XIX. ANNUAL PRUNING.

I have promised to inform you of the means of continuing your beautiful roses and preventing them from degenerating; and this is the moment to indicate the last operation which you have to perform on your sweet-briars, and which it is neand of the suckers which spring up from the root, eessary to commence, annually, in the month of obligations to Dr Fisks, and are happy to perceive

> This consists in pruning them short, -leaving but two buds on each branch of the shoot, produced by the inserted bud. It is to be observed, however, that there are many species which require to be left a little longer. Fear not to eradicate the beautiful shoots, which grew the preceding year; it will produce others more beautiful, and you will lose nothing. This is the time to cut off the end of the little wild shoet, on which little more than 2 inches, and the other a little more you left the aspiring bud.

CLIMBING SPECIES OF ROSES.

Before terminating my instructions, I ought to make known to you, a happy idea of one of my neighbors, as to the management of the climbing species of roses, such as the Multiflora and its varieties, the Boursault and its varieties, &c. I have delighted at the fine effect which was produced.

The Multifloras and the Boursaults extend their branches far, and are, consequently, very easily trained on a railing; but if in the midst of a plantation, you desire to unite these species, it is very unpleasant to have the branches falling to the ground, or extending over the other rose trees; to prevent this, care should be taken, the first year, to preserve these falling branches and to leave them until the end of October, that their wood may be thoroughly ripened; then raise all the branches and unite them in the form of a globe, as regular as possible. In the month of march there is no pruning to be done, and the moment the sap ascends you see them covered with leaves and a vast quantity of buds. The higher the globe is elevated the more admirable is the effect; and in my opinion it is the best mode of managing these climbing species.

Believing that I have attained the object which I proposed, that of detailing to you, information on the education of sweet-briars, and the mode of prosecuting this culture with success. I will terminate my instructions and leave you in the midst of your children, being certain, that like a good father of a family, you will extend to them, your assiduous attentions, in gratitude for the pleasures which you have experienced.

INSECT IN PEAR TREES.

MR FESSENDEN-1 have spent the morning with ressary to prevent the trees from perishing which you by Gen. Heard, the result of our investiga- Health.

now it is necessary to cut them shorter, which loften happens, if they are planted out with the tion. The large block of wood shows the manner in which the insect girdles the tree-the others, how they penetrate it. In sunday exervations we found a whole family, from the nit to the perfect bug, under their progressive transformations. The tree is a Jargonelle in bearing. The body of the tree hore the principal marks of their ravagesbut the effect is seen in the branches. This is probably the principal reason why the insect has eluded the search. Whatever has been our opinion respecting the agents of this desolation, we had abundant evidence in this case that the destruction of this vigorous and healthy tree was the sole work of the Scolylus Pyri.

> Inclosed in a paper I send the insect in its different stages. They are probably to be found also in the wood.

Yours, respectfully,

O. FISKE.

Worcester, August 12, 1830.

Remarks by the Elitor .- We are under great that the Governor takes an active part in investigations which relate to the great interests of the cultivator. The section of the trunk of the tree, which was sent to us as above, is between 4 and 5 inches in diameter, and a small horizontal cut or channel just within the outer part of the alburnum, or sap wood, evidently the work of an insect, extends about one third part round the tree, One of the limbs affected by this woodcutter, is a than an inch in diameter. We had supposed that the operations of this destroyer were confined to small limbs, and that at least a partial remedy might be obtained by cutting off and burning the branches, which indicated its presence. But when it attacks the body of the tree, the evil becomes general, and the destruction complete. Further made the experiment on some of mine and was investigations of that subject are respectfully so-

TURNIPS, AS FOOD FOR SHEEP.

Ma Russell-Having seen it stated, more than once, that turnips are injurious to ewes with lamb, I take the liberty to request, that some of your correspondents, if any there are, who have found them so, will state the fact from experience. I also should be glad to learn their value for sheep, from any one who is satisfied of their good properties as winter food,

Anson, Mc. August 17, 1830.

Tight Shoes. -Shoes of too restricted dimensions distort and blister the feet, and produce, invariably, these small but painful excrescences denominated corns. Nine women inten upon the most reasonable calculation, before the age of twenyfeur, have to a certain extent, deformed and suffering feet from this cause alone. Such individuals, also, as adopt this unnatural practice of forcing their feet, like a wedge, into a tight pair of shoes, are uniformly bad and ungraceful walkers-the spring and elasticity of their feet is lost, and their gait is afterwards cramped and hobbling. They who would avoid these unseemly and painful defects, must remain satisfied with the original confermation of their foot, and wear shoes corresponding to its shape, and answering in every respect to its bulk. In purchasing shoes ready made, or professing to be made to measure, let them, if in the least degree too tight, be stretched upon the last, and not upon the feet. The shee must be made ken out of the nursery. This precaution is ne- the Governor in dissecting a Pear tree, and send to the foot, and net the foot to the shoe. - Jour. of FOR THE NEW ENGLAND FARMER.

HAPPINESS THE RESULT OF INDUSTRY.

The wealth which a man acquires by his honest industry affords him greater pleasure in the enjoyment, than when acquired in any other way; and men who by personal labor have obtained a competency, know its value better than those who have had it showered upon them without any efforts of their own. Idleness engenders disease, while exercise is the great prop of health, and health is the greatest blessing of life. Which consideration alone ought to stimulate men to pursue some useful employment; and among the almost endless number of those to which good laws and well organized society give birth and encouragement, there are none equal to the culture of the earth, none which yield a more grateful return. The pleasures derived both from agriculture, and horticulture, are so various, so delightful, and so natural to man, that they are not easily to be described, and never to be excelled: for in whatever way they are pursued the mind may be constantly entertained with the wonderful economy of the vegetable world; the nerves are invigorated and kept in proper tone by the freshness of the earth, and the fragrancy of the air, which flush the countenance with health, and give a NORTHWOOD. relish to every meal.

PEACH TREES.

The following communication, from a practical agriculturist, contains a valuable suggestion .-The specimens referred to, are in our possession, and may be examined by the curious in these matters. To the unpractised eye, the covering in which these worms wind themselves, would pass for particles of earth and water, accidentally collected around the root. It would be well for every owner of a peach tree, to set about examining the roots, and ridding them of this encmy. It is strange that more attention is not paid to this valuable fruit. A farmer near Philadelphia, the last year, sold \$13,000 worth of peaches. from a spot of ground that would not have yielded two thousand dollars, with grain crops.]

MR HALLETT-If you are a lover of fine peaches, it may not be amiss, to remind the owners of the few remaining peach trees, that the worms infesting the roots of these trees, are now about assuming their wings. In a few weeks, they will be inhabitants of the air, ready to lay the foundation of a new colony of worms, to prosecute their work of destruction the ensuing year. The observation of a minute is sufficient to determine whether a tree is infested by them. A mass of gum mixed with particles of wood, much resembling saw dust, attached to the root at the surface of the ground, or within an inch or two below is a certain indication of the presence of the worm. The greater part of these insects, according to my observation, are already enclosed in their cocoon, undergoing their transformation into the Nymphal less than an inch in length, and one third of an retain all their freshness and agreeable flavor. inch in diameter, as you will see by the three speeimens enclosed. They are easily found in the gummy mass above mentioned .- But the worms not yet enclosed, will be found in the cavity which in 1802, we found a receipt for the destruction of necessary .- R. I. American of July 22.

BOTTS IN HORSES.

lowing as a sure remedy for the botts in horses, destroyed. With one gill of this spirit, we were and says it was practised by a vetermary surgeon enabled to cleance five trees of these destructive who came to this country during the revolution, vermin. Our author says trees do not receive the with Baron Steuben:-First drench the horse slightest injury by using this remedy.-Reading with a quart of new milk saturated with honey, molasses or sugar, (to be preferred in the order in which they are named:) have him two homs, at rest; drench him again with a pint of strong brine, previously made by dissolving in boding water as much common salt as it will hold, and leave the horse undisturbed two hours more. Then administer half a pint of linseed oil, and the treatment is complete.

The rationale of this course, according to the writer, is as follows: Botts destroy horses by feeding upon and perforating the integuments of the stomach; but, preferring sweetened milk to a fiesh diet, they leave the substance of the stomach and glut on the milk, of which they partake so much that they are greatly distended, exposing a thin skin to the action of the brine when administered, which easily destroys them. Oil is afterwards given to heal the wounds in the stomach made by the worms,

John Hinds, in his Treatise on Forriery, (a work which should be in the hands of every man who has the charge of horses,) attributed the generation of worms to irregular feeding, and to feeding upon indigestible substances, musty hay, grain, &c, and in some aged horses to imperfect mastication. These causes produce indigestion, and ultimately worms. Mr Hinds recommends, that, when it is certainly ascertained the horse is attacked by worms, the following bolus or ball be administered: Calomel, 11 drachms; Annis seed, 5 drachms, mixed with treacle into a paste for two doses, to be given on two successive nights, the first dose to be preceded by water gruel, and the last one to be followed, the next day, by a purgative compound of, Barbadoes aloes 4 drachus, Gamboge 11 drachms, prepared kali 2 dr. ginger I dr. oil of amber a teaspoonful, syrup of buckthorn sufficient to form the whole into a ball for one dose. Should the horse be weakly the first mixture may be divided into three doses for as many successive days, to be followed on the fourth morning by the purgative. The horse in the mean while should be fed with fresh grass, cracked corn, mashed potatoes or other food easily digestible; accompanied occasionally with salt. As the discase is produced by impaired digestive organs, it must be cured by restoring to those organs their healthful tone towards which the medicines recommended have a favorable tendency,

Preserving Vegetables Green for the Winter .-Take green eern either on the ears, or carefully shelled, peas, beans in pods, and dip them into boiling water, and then carefully dry them in a room where there is a free circulation of air. or Chrysalis state. WATER.

Clear water is the best drink to preserve health. It ought not, however, in hot weather, to be drank very cold, as it will prove injurious-although that is the time when most people prefer to have it the coldest. Some will put ice in it, which helps the doctors, and enables tavern-keepers to sell more of their liquors. Spring or well water should stand awhile before a person that is warm drinks freely

Horses and cattle will not drink water that is very cold, when they can obtain that which is warmer. They will, in warm weather, drink water from a brook, or at some distance below a spring, rather than from the head of a spring, because it is too cold; but in winter, they prefer water near the head of the spring, because it is then not so cold as that in the brook.

It seems as though mankind might know as much as horses and cattle; yet it appears they are not so prudent about their drink.

Cold water is good for a bruise or wound, when used immediately - no matter, in this case, how cold. Snow may also be used in lieu of it, when most convenient, though I should rather prefer water; for it wets the flesh sooner; but either will renet the blood, and help to heal the wound.

My first information of the utility of cold water for curing wounds, was from General Sullivan, of New Hampshire, who learned it from the Indians during the revolutionary war.

After he returned home from the army, his wife burt her arm very badly, just as he was about to leave home : he poured on cold water until lint was prepared, which he applied, and put a bandage round the arm, telling her to keep it on until his return, which he expected would be in two or three days -- directing her to wet it occasionally with water containing a little spirit, (though no spirit was used at first.)-She followed his directions, but he did not return under a week. He asked her how her arm did? She said she had not taken off the bandage, for it did not pain her. On removing the bandage and dressings, he found it was completely well.

Gen. Sullivan said he had cured many wounded men, by the application of cold water, afterwards putting on something to keep the air from the wounds, which, in the common mode of dressings would probably have proved fatal. I have used it and seen it tried for about fifty years-many times with wonderful success.

If a finger, toe, hand or foot should be mashed, put it into a pail or brook of water, squeeze it to its place, and put the hones right-it will generally get well without much else being done to it.

A FARMER.

By late foreign medical journals we learn that they have formed between the bark and wood of caterpillars. We tried it, and, we are happy to M. Coster, a French surgeon of great eminence, the root, and generally near the bottom of it. If say, with complete success. It is briefly this, has devoted his attention to the subject of animal the root of the tree appear fair and sound to the Take a long reed or pole, and tie a piece of sponge poisons. He has discovered that chlorine has the depth of two or three inches no further search is at the end-dip this in spirits of turpentine, and wonderful power of decomposing and destroying

ter—as Wordsworth nobly says—

A virtuous household, though exceeding poor.'

English Opium Eater,-With whom it has been early made a partaker in pleasure and in praise and felt its common lumanity, as it danced before its father's steps when he walked to his morning labor-or as it knelt beside him at morning and evening prayer; and what a contrast will there be, not in the happiness merely, but in the whole nature of those two beings!

Shepherd.—A rose-tree full in bearing, balming and brightening the wildcruess-a dead withered recommended by English writers, for farmers

Raglish Opium Enter .- Change their lot, and you will soon change their nature. It will, indeed, he difficult to reduce the glad, and rejoicing, and self-exulting child to the level of her who was so miserably bowed down in something worse than desnair; but it will be easy-a week's kindness will do it-to rekindle life, and self-satisfaetion, in the heart of the orphan-slave of the workhouse-to lift h r, by love, and sympathy, and praise, up to the glad consciousness of her moral

Shepherd .- Ave-like a star in heaven set free frac the cruel clouds.

English Opium Enter .- So essential is self-estimation, even to the happiness, the innocence, and the virtue of childhood; and so dependent are they on the sympathy of those to whom nature constrains it to look, and in whom it will forgive and forget many frowning days for one chance smiling hour of transient benignity!

VORACITY OF INSECTS.—The amount of leaves eaten by the caterpillars produced from one ounce of eggs, is upwards of 1200 lbs! A single silk worm consumes, within thirty days, about 60,000 times its primitive weight.

A table spoonful of the spirits of Camphor, is said to be an infallible remedy against the fatal effects of drinking cold water io warm weather. Several instances of its good effects are quoted in the Newark (N. J.) Eagle.

To Destroy Thistles .- The Canada papers tell us of a very easy and effectual way to destroy Thistles, which are gradually encroaching upon some parts of our country, and are likely to be as injurious to our agriculture as theirs. Let the thistles be mown before they go to seed, and the first rain, by soaking into the stalks, will cause their decay.

NEW ENGLAND FARMER.

BOSTON, FRIDAY, AUGUST 20, 1830,

RYE.

This very useful grain is capable of being cultivated on most kinds of land, but light sandy soils, where wheat will not thrive, are the sorts of soil on, which, in general its culture will be most profitable.

In Memoirs of the New York Board of Agriculture, vol. i, page 82, it is said, 'Rye should be sowed the last week in August, or the first week in September, at the rate of about thirty six quarts, per acre, some say forty eight quarts. But if it is not sowed at that time, it ought to be delayed until late in November, so that it may not come up till spring, A. Worthington had a good crop, which he sowed in a January snow storm. Rye raised on upland makes much better flour than that which is raised on low or damp land."

Rye may be sown in autumn to great advantage for green fodder for cattle and sheep, particularly the latter, in the spring | Ewes and lambs will derive great benefit from it, at a time when little or no other green food can be procured. When it is meant for this purpose, it should not only be sowed early in autumn, but should be sowed thicker than when it is intended to stand for a erop of seed. Some say that it may well be mowed for hav two or three times in the course of the summer, and this piece of husbandry has been whose lands are mostly dry or unsuitable for grass.

MAGAZINES OF MANURE.

Take advantage of this warm and dry weather mines of manure, such as peat, marl, mud, &c, With regard to the last mentioned substance, the following observations may be of service: 'In ponds and rivers the sediment is made up of fine dust, together with a variety of other substances, ticles of the neighboring soils, washed down into them by rain. That is supposed to be the richest mud, which is near to the borders, and which has been alternately flooded and fermented; as it will ferment when it lays bare in some degree.'

' In rivers and in long ditches that have currents, there is a greater proportion of soil in the mud. It has been brought down from soft, mellow lands, through which the rivers pass; and some of it doubtless from heds of marle, which readily dissolve in the water.

· Some ponds are totally dried up in a hot and dry summer, and all ponds and rivers are so diminished by a copious evaporation, as to leave part of their beds uncovered. And these beds, where there has been no rapid current, are always found to contain a rich mud. In some places it reaches to a considerable depth. This mud, though taken from fresh waters, has been found to be a valuable manure; more especially for dry, sandy and gravelly soils. I have known it to have as good an effect as barn dung, in the culture of Indian corn, upon such soils-The advantage of it is not found to be limited to one season; it meliorates the land for several years. It restores to a high piece of ground what vegetable mould the rains in a long course of years have been washing away from it.

· It is happy for the farmer that Providence has prepared for him those magazines of manure in all parts of the country. None but the stupid will let them lie unnoticed or unremoved. When a dry autumn happens, the prudent farmers will be very industrious in carting mud up from evaporated ponds, and other sunken places in their farms, and laying it on their light soils, especially on high gravelly knolls; or into their barn vards, if

the distance be not too great.

But with respect to using mud as a manure, the maritime farmers have the advantage of all others. For the sea ooze, which appears on the flats and in creeks and harbors, along the shores; of the sea, has all the virtues of fresh water mud, with that of sea salt superadded, which is one of the most important ingredients in the composition of the best manures. I might add that it abounds more than any other mud, with putrefied animal substances. Much of these are contained in the sea itself: and innumerable are the fowls and fish that have perished on flats since time begun; and the component parts of their bodies have been inclosed by the supervenient slime.

· Mud taken from flats where there are shell-fish, or even where they have formerly lived, is better for manure than that which appears to be more unmixed. The shells among it are a valuable part of its composition. If it abound much with shells it becomes a general manure, fit to be laid on almost every kind of soil.

· That mud, however, which is a richer manure

been greatly enriched by the scouring of foul also, as the one called the "Napoleon" is iden streets, and from common sewers; as well as cally the Passe Colmar. These assertions are i to search your premises for what may be styled from an unknown quantity of animal and vege- ventured, until after examinations made with the table substances, accidentally fallen, or designedly scrupulous exactness, which doubts itself, until thrown into such places.

'Sea mud may be taken up at any season. whenever the farmer has most leisure. It is a good method to draw it upon sleds from the flats tirely and wholly in error, and in very hasty e which have been wafted in the air, and have fall- in March, when the border is covered with firm amination. on into the water; together with the subtlest par- ice. I have thus obtained mud from flats with great expedition and with little expense,

'Mud that is newly taken up, may be laid upon beon figured in the Pomological Magazine. grass land. But if it be ploughed into the soil, it should first lie exposed to the frost of one winter, pear, and is precisely what Mr Prince describes The frost will destroy its tenacity, and reduce it from authority. to a fine powder; after which it may be spread like ashes, But if it be ploughed into the soil, with Mr Prince's description of the true Pas before it has been mellowed, it will remain in Colucar. As he is now our authority, we can lumps for several years, and be of less advantage.

A layer of mud will be no bad ingredient in a are often found in the banks of rivers, and which heap of compost. But it should be contiguous to a stratum of lime if that can be obtained. But between them, than between a St Germain and where this is wanting, new horse dung as the best |St Michael's, substitute, to excite a strong fermentation.

'The best method of managing all sorts of mud, were it not for increasing the labor would be to Colmar, were identical? Did he ever examit lay it in farm yards, and let it be thoroughly mixed with the dung and stale of animals. When it is so managed, the compost is excellent, and fit own qualifications to pretend to decide; but the for almost any soil, though best for light ones. Perhaps the advantage of it is so great as to pay for the increased expense of twice carting. For it will absorb the stale of cattle, and retain it better than straw, and other light substances.' Geor- ripened and eaten) agree with all the description gical Dictionary.

MAKING BUTTER.

Butter is made from cream or milk by the ehemical union of the oxygen or vital air of the atmosphere with those materials. If a churn were perfectly air tight, butter could not be produced within it for want of oxygen, which composes about one fifth part of the air, with which we are surrounded. The more free the access of air, other things being equal, to the contents of the churn, the sooner butter is manufactured.

A knowledge of these facts induced Mr John Mears, of Dorchester, to insert a small tube in the top of his churn, extending several inches above said top, and descending as far below it as is practicable, without impeding the motion of the dasher. This tube was open at top, closed at bottom, but gave access to air by means of a perpendicular slit from near the top of the churn to near the bottom of the tube. The consequence of this improvement was the accelerating and facilitating the production of butter by about one half,

FOR THE NEW ENGLAND FARMER

NAPOLEON AND PASSE COLMAR PEARS. Thomas G. Fessenden, Esq.—It is much to be regretted, that Mr W. R. Prince should have used such confident language on a topic which we shall munication to the Post Master at Charlestown show, he did not understand; as its tendency is to unsettle established names, and to weaken the public confidence in his own authority. I shall ing been more successful in raising the tree of use no other proof, than Mr Prince's own very singular note. The source of his mistake we cannot divine,

name of Napoleon, are wrong, (says he) and next, your paper, the progress 1 have made in cultive than any other, is taken from docks, and from the all the "Passe Colmar" trees which are identical ung this new kind of cabbage, called by my old sides of wharves in populous towns. For it has with the "Napoleon" there so called, are wrong Gardener, Wild Cabbage."

attain conviction beyond all doubt.'

So far Mr Prince.

Yet this very confident assertion is founded e

The Napoleon, so called here, is not identical the Passe Cohnar; but it is identically the Nap

The Napoleon, so called here, is an autumn

The Passe Colmar, so called here, agrees precise safely appeal to that against himself. The Pas Colmar will keep into January here-the Napole ripens in October. There is no more resemblan-

How could Mr Prince know, that the two tre: cultivated at Boston as the Napoleon and Pasthem on the originally imported trees? Never.

The Boston cultivators are too diffident of the they do assuredly know, that they received the Napoleon and Passe Colmar from one of the mo exact cultivators in Europe, Mr Knight, with de scriptions from his pen, and their fruits (actual and, most of all, with Mr Prince's own,

COW CABBAGE.

MR EDITOR-I have noticed in the last Fre Press and Repository, a communication copie from the N. Y. Farmer, signed by James Thach er of Plymouth, (Mass.) on the importance of cultivating what he calls the Cow Cabbage, or ces arian kail, ' the seed of which was sent by Docto James Mease. Through the politeness of the Post Master in Charlestown, I too received, it May, 1829, some of the same kind of cabbag seed (spoken of by Mr Thacher) from Docto Mease of Philadelphia. The Doctor in his comgave the plant the name of Tree Cabbage. Living as I do in a more Southern climate, and hav-Cow cabbage, than either Mr Thacher or his neighbor, 'who took up his plants in the autumn and put them into his cellar,' I will, with your per-The pear trees cultivated at Boston under the mission, make known, through the columns of

sowed a few of the seeds in my garden early May, 1829; they germinated quickly, and proed thirty plants; twenty of these I transplanted the first of week of October following, placing m two and a half feet apart-eight of the nts I did not remove, suffering them to remain same distance apart of those I transplanted remained through the winter without shelter my kind, and only two stalks killed by the Those not transplanted were most luxurisome of them are at this time nine or ten feet -those transplanted are from four to five high, Doct. Thacher speaks of this Cabbage g very valuable as provender for cows. I have tried it in that way, but think it may answer ood parpose: I can speak with certainty r experience, and say, that it is very valuable table greens, called in Virginia, 'sprouts.'-It ready for use last Spring before any other ns-one stalk will produce more than a bushsprouts. Doct, Thacher speaks of this cabliving four years. Doctor Mease, when he smitted the seed, said they would live three s. This is only the second year since those seed, and the stalks appear on the decline .ther incline to the opinion it will only last two b, but am by no means positive, as there are is time among thuse in my garden, many g shoots springing from the roots of the old

Strawberry Plants - Keens' Secaling, &c. For sale at the Seed Store connected with the New

England Farmer, 52 North Market-street.

A superior collection of Strawberry Plants, from Mr. Haggerston's Charlestown Vineyard, comprising the following sorts :- the Roseberry, Downton, Bath Searlet. Pine Apple, Royal Scarlet, Mulberry, Wilmot's Superb, and Keens' Seedling. For a particular notice of the last magnificent variety, we beg leave to refer to the Report of the Committee on Fruits, of the Massachusetts Horticultural Society, June 19, 1830.

The specimens of "Keens' Seedling," offered by Mr Haggerston, of the Charlestown Vineyard, exceeded anything of the kind we had ever seen. This new variety, introduced into this country by that enterprising and skilful horticulturist, fully sustained the high character given of it, in the English publications, and all that is said of it in the Pomological Magazine, where it is de Settled as being 'very large, very good, and very prolific.' Taking all the properties of this justly celebrated strawberry into consideration, it may be said to have no rival. Some of the largest of those exhibited by Mr Haggerston measured over 54 inches in circumference, and the arerage circumference of the sample, heing about one quart, it is believed was over 4 inches. A few of them were of cocks-comb shape, but mostly round or ovate. The produce upon the stalks of a single plant, set last autumn, was exhibited at the Hall by Mr Haggerston, which, on counting, was found to consist of the astenishing number of 157 ripe and green herries. The size and strength of y garden were planted : they are now loaded the fruit stalks, its broad, deep green leaves, and the general healthiness and vigor of the plant, are well adapted to the support and protection of the enormous size and quantity of fruit which it yields. The committee on fruits are therefore unanimously of opinion that Mr Haggerston is entitled to the Society's premium for the best strawberries, which is accordingly awarded him; and they further award him a premium of \$5,00 for introducing this new and most valuable variety.

By order of the Committee, E. Phinney, Chairman.'

The first mentioned varieties, may be purchased at the rate of \$1 per hundred; Wilmet's Superb, at \$5 per hundred; Keens' Seedling, at \$15 per hundred, \$2,50 per dozen, or 25 cents per single plant.

Notice

A special meeting of the Massachusetts Horticultural Society, will be held on Saturday, August 21st, at the Hall of the Society, at 11 o'clock, by adjournment. R. L. EMMONS, Recording Secretary.

Boy Wanted.

An active, intelligent, faithful lad, of good address as a salesman, of from 12 to 15 years of age, is wanted in an establishment in this city. A boy from the country, who can give satisfaction in the above respects, will meet with good encouragement. Apply at the office of the Farmer. August 20,

Strawberry Plants.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street—direct from the Brighton Nursery.

A large variety of Strawberry Vines, comprising the Pinc Apple, Roseberry, Bath Scarlet, Royal Scarlet, Muls most approved among the Farmers of England berry, Wood, Chili, &c., at \$1 per hundred. Also Wilbland, as it grows to a large size, is very sweet tritions, and keeps till June. The above seeds reasonable rate.

Grass Seeds.

For sale at the Seed Store connected with the New England Farmer, 52 North Market street, A large assertment of Seeds of the various grasses cultivated in New England, viz:

HERDS GRASS; RED TOP; ORCHARD GRASS

TALL MEADOW OATS GRASS; FOWL MEADOW GRASS;

LUCERNE, or FRENCH CLOVER;

RED CLOVER; WHITE HONEYSUCKLE CLOVER; also BUCKWHEAT, FLAX, MILLET, FIELD PEAS.

and 14 varieties of the most esteemed FIELD TURNIP SEED, cultivated in Europe and America, all warranted of the first quality, and at the customary market prices. Aug. 13.

Subscribers to the New England Farmer are informed that they can have their volumes neatly half bound and lettered by sending them to this office.

BRIGHTON MARKET-Monday, August 16.

[Reported for the Chronicle and Patriot.]

At Market this day, 472 Beef Cattle, (nearly 100 unsold at the close of the market,) 335 Stores, 12 Cows and Calves. 4106 Sheep and Lambs, and 252 Swine.

Prices-Beef Cattle-A depreciation of about 17 cents per 100 pounds from last week: we quote from \$3,50 to \$4,50; we noticed 3 or 4 sold for \$4,621.

Stores-Few sales only noticed, too many at Market for the season.

Cows and catves-No sales noticed.

Sheep and Lambs .- From \$1,17 to \$1,75-fair lots were taken at about \$1,50 a \$1,62\frac{1}{2}.

Swine-We noticed one selected lot of 46 taken at 4 cts. and one of 61 to close at 3½ cts.-at retail, 4½ a 5 cts.

Providence.

Sickness at Sea .- One who has never been at sea, can form no idea of the peculiar feelings of desertedness and solitude that seize the wretch, whom the fates visit with any kind of indisposition of body, when out of the reach of the faculty nurses, warming pans, chicken broths, and all those conveniences, that make a fit of sickness at home, a kind of 'otium cum dignitate' affair -a surt of temporary withdrawing one's self from the cares and vexations of this vile world, while the increased solicitude and anxiety of friends give one a feeling of consequence and importance, peculiarly gratifying, provided nevertheless, that the sickness aforesaid is not unto death, in which case, perhaps the difference between sea and land is merely imaginary. But at sea no one can be spared to wait upon the patient; chickens are minus, warming pans and doctors ditto. cook is indeed er officio nurse general, and is in fact called the 'doctor' in all merchant ships, though his culinary avocations render his attentions to the hospital department extremely uncertain and intermittent, for the axiom that 'a living dog is better than a dead lion,' or even a sick one, is gospel at sea, and of course greater care is taken to supply the healthy with food than the sick with comforts.

In addition to this, I have always remarked that the masters of American merchantmen will seldom believe that a man is sick till the agonies of death take place, it being the chief corner stone of their belief to look after their employer's interest first and foremost, and rather to kill a man by hard work and exposure, than to permit him to defraud the owners by his

untimely sickness.

trying the experiment.

ISLE OF FRANCE .- Very high up on the side of one of the highest mountains near the harbor, is a telegraph station, which seemed inaccessible to any animal but a very smart, active monkey; from which vessels could be seen twentyfour hours before their cirival, from the extreme clearness of the air.

In this island, originated the science of 'nauscopy,' or, as an Irish philosopher defines it, 'the art of seeing a ship before she is in sight; the theory of which is this, that the refraction of the air, shows an inverted image of the ship above the horizon, while the ship is still below or rather beyond its limits. This 'notion' attracted some attention at first, but was soon exploded, people generally being contented with seeing in a straight line, and doubting the utility of looking 'round a corner,'

CALCUTTA .- The Fukirs, a class of devotees, may be seen in almost every street, practising their religious mummeries. One of these fellows that I saw, had made a vow to keep his arm in an upright position for seven years, but long before the expiration of half that term, the muscles shrunk and withered and lost all their power so that the limb remained fixed aloft, like a sloop's topmast, or a lightning rod. Another had vowed to lie upon a plank bed, covered with blant iron points, about half an inch long. His yow was he ewise for seven years, and when I saw him, his hide was callused and as hard as an alligator's, and I have no doubt was equally impenetrable, though I had no convenient opportunity of

A third wretch had made a vow not to sleep at night, and for the purpose of preventing the carnal man from getting a nap without the privity or consent of the spiritual, he uttered a roar every four or five minutes during the night. In the course of the 'pilgrim's progress' he took up his station directly under my chamber window. I bore it with most exemplary fortitude for one night, muttering curses, not loud but deep, and meditating 'brave punishments' and schemes of vengeance for my murdered sleep, for these periodical howls had the double effect of keeping both himself and me awake. The next night, in company with a fellow lodger, I took my stand at the window, well provided with brick-

From a 'Marine's Sketches,' lately published in and melodious howl, to which we immediately responded by a shower of missiles, whose peculiar dull banging sound, announced that they had come in contact with the 'soul's dark cottage' of the saint, who was soon after seen clearing out, and to 'make night hideous' somewhere else.

If one walk for recreation in one of the same spicy groves, there is ten chances to one, that he disturbs the repose of a 'cobra di capello,' or hooded snake, whose bite sends him to the shades in fifteen minutes, so that unless he has his testamentary documents previously prepared, he runs some risk of dying intestate, and chousing the judge of probate out of his fees; if he is tempted by the shade of a tree to take a nap under its branches, he finds when it is too late, that is, when he wakes in another world, that he has been sleeping under a manchineel, or some other whose narcotic shade is an introduction to the infernal shades; if he sit down to rest himself, a scorpion or centipede crawls up his pantaloons and the envenomed sting leaves him a leg out of pocket: if he extend his walk far into the forest, he meets with a tiger, or a boa constrictor, who happens, just at that moment, to be in search of a dinner, and the unfortunate admirer of spicy groves finds an ignoble grave in the bowels of a wild beast; if he feel oppressed by the heat and takes a fancy to bathe in the cooling stream, an alligator, a mile long, introduces him to ' worlds below the flood;' if he avoid the spicy groves and perambulate the open field, a 'coup de soleil,' delu inm and brain fever close the scene.

South Shetland Islands-The seals, on our first arrival, were so tame, that when hanling our boats on shore, it was frequently necessary to kick them out of the way. I saw one beach where upwards of three hundred had been killed, almost every one of which had a young one as black as a coal, and looking at a little distance like black water spaniels. These poor little wretches were standing whimpering and whining each one by the mangled carease of its dead mother, a piteons spectacle.

On one of these rambles we unexpectedly came across an old wig [male seal] on an immensely high cliff. He was probably rusticating to avoid the extermination that was raging on the sea-coast. It was immediately resolved, nem con. that he should be compelled to jump off the cliff forthwith, a resolution which we proceeded to put in practice, Notwithstanding his roarings and caperings, his reluctance, and his 'nitor in adversum' behavior, he gradually approached the brink, till at last he took the 'lover's leap.' I ran and looked over the edge of the cliff, and saw him bounding like a foot-ball from one projection to another till he alighted in the roaring surf below. As soon as he had extricated himself from the tremendous surf into which he fell, and which flew half way up to us, though elevated nearly four hundred feet above the level, he turned his head towards us, and, I presume, roared lustily, though his voice was not distinguishable from the roar of the surf. By way of appeasing him we kicked off a score of penguins, that had colonized the place.

We were just getting the frying-pan and coffee kettle under way, the mate was compounding a large tin pot of hot 'blackstrap,' when a huge monster of an old wig bolted in among us without ceremony, and deliberately placed himself in the middle of the fire, which was large enough and hot enough to have roasted a cattle-show premium ox. I saw him after the snow had abated, smelling at his scorched flippers from time to time, as if at a loss to account for their crisped condition.

Lascars--Nothing occurred to vary the scene but a very heavy thunder squall near the equator. Not a single black fellow could be persuaded or forced to go aloft, they all fell prostrate on deck, crying 'Allah! Allah!' I made shift to coay one, who had been in an English man of war, to go aloft A'bany-II on Jissi. Bull. Realing, N. Y. War Prance & Sons, Prop. Lia. Bot. Garden with me, and got him as far as the main top, when Prance & Sons, Prop. Lia. Bot. Garden an exceedingly bright flash of lightings, that most bats. About ten o'clock the mortifier of the flesh an exceedingly bright flash of lightning, that most Halifar, N.S.-P. J. flot Land, Esq. Recorder Office. panied by a clap of thunder, like the explosion of dozen or twenty powder mills, overthrew his fort tude and he slid down one of the maintopniast bael stays, and joined his howling countrymen. The have likewise a great antipathy to cold .- Talkir with one of them one day, he said that on the coa of Chili, in the winter, it was 'two jacket cold' goir round Van Dieman's Land was three jacket cold but the English channel in the winter time, wi · pleuty jacket cold.'

OVI. REGARD. - I was going aloft and had got as fi as the futtock shrouds, when a rathin broke under m feet, and I fell backwards. My first sensation wa surprise; I could not imagine where I was, but soc ascertained from the rushing of the air by my ea that I was falling and that headforemost. Dr John son says that the near approach of death wonderful concentrates a man's ideas. I am sure it did mir for I never thought so fast before or since, as I d during the few seconds that I was tumbling. I an instant the recollection came into my head the one of the quarter deck guns (No. 20) was direct under me, and I should in all human probability, t dashed to pieces upon it. I would have given the world to vent my feelings in eries, I tried to gathe my limbs together, to contract my muscles, to shrir my body into as small a compass as possible, ar with unspeakable terror awaited the 'death shock

All this time there was a blood red light before my eyes, through which a thousand horrible form were constantly gliding. Then I thought of hom and the forms of all I hold dear on earth, and mar others, 'strangers of distinction,' besides, floated by fore me. Then the recollection of the infernal gu and the consequent smash across the breech of it, po all these phantoms to flight, and I felt that peenly sickness and distress at the stomach, which it is sa one experiences when on the point of undergoin a sudden violent and painful death, and I though to myself 'surely it must be almost time for the shock.

A shock I certainly did receive, and that no ver gentle one across the back of the head, neck at left shoulder, and in an instant all was dark and sti 'It is all over,' thought I 'this is the state betwee death and resurrection.' I really thought I had pa sed the first and awaited with increased terror f the second, when to my utter dismay, I felt myst falling a second time, but the sensation was differen the blow that I had received had turned me, and was descending feet foremost. But no words can e: press my delight, my eestasy, at finding myself ove board, instead of on the gun. I kept going dow down, till it appeared to me that the seven fathon and a half, (the depth of water at our anchorage had more than doubled since we let go our ancho After a while I became stationary and soon begs slowly to ascend. When I looked up I saw high very high above me, a dim greenish light, which became brighter and brighter till at last I bounce on the surface like a cork.

LETTE LULTUMMOU

NAPOLEON AND PASSE COLMAR PEARS. Mr Fessenden-Will you please to notice an rratum either of the press, or pen, in my xtract from Mr W. R. Prince's note in your last aper. The word 'not' before the word 'identini was omitted-it should have read which are not lentical.' The error is a material one, though asily corrected by looking back to the next preeding paper.

I presume that Mr Prince never read your paer giving an account of the exhibitions of our ewly imported pear. Please to insert the followg extract from the Mass. Horticultural Society's port of the pear exhibited on Saturday, the 24th October, 1829. 'By John Prince, Esq. speciens of the Napoleon pear from Mr Knight's seions, peantiful, high flavored pear, in fine order, meltg, sprightly, and full of delicious juice.'

It will be seen, then, that the Boston cultivators ish, with deep yellow flesh, for a green pear, eenish yellow when ripe, with white flesh, nor a ar, the most extravagant and profuse bearer ever seen here, for one, which is but a common one that respect. The Napoleon of Mr Knight is ithe Pomological Magazine-ripens at the same he, and has the same qualities. Our Napoleon is the method of Forsyth;) or, to take off at its hope therefore) is not spurious, although Mr Ence claims his own 'as the genuine.' Mr Right told us, that the Passe Colmar was so pat a bearer that he was obliged to take off nine eths of the fruit,-and so is ours. A FARMER.

Roxbury, August 21st, 1830.

GOOSEBERRIES.

IR RUSSELL -As we have within these few ers received great additions to our stock of seberries from Scotland, and as the different ned varieties are so dissimilar in size, producness, and flavor, it seems important that those ch are really worth cultivation should be own. My means of ascertaining those which plesirable, are so limited, that I have known a few choice kinds, among which are the folng,-labelled, 'Jolly Gardener,' 'Whitesmith' 'Jolly Angler;' this last is a particularly fine , of good size, and amber color when ripe.

here is one variety with us (the name lost) h is very prolific, three pints having been tafrom a two years old bush; it is an acid fruit, ble only for cooking. The largest fruited in our neighborhood is not worth cultivait is very large, very acid, and very astringent, mbling in this last quality the Dwarf Choke ry (Prunus obovata,) it was received from Glasby the high sounding name of 'Emperor.'

would confer a favor on the community if of your correspondents would send in to office a list of those kinds, which they would

has one or two varieties which have never suffer. each direction; but specimens of this latter shape ed from that pest.

Yours truly, Salem, Aug. 17.

" UNPRODUCTIVE PEAR TREES.

MR FESSENDEN-I would crave the indulgence through the medium of your useful paper, of inquiring what is the probable cause of the unfruitfulness and decay of the St Michael pear trees. 1 have on my farm a considerable number of these trees of different ages, and of almost every size, and the fruit ripens at the end of September or They are and have been for a number of years cumberers of the ground; and I am determined to have them hewn down, unless something can be done to make them more profitable than they are at present. If you or any of your correspondents will please to give any information on this subject you will perhaps oblige more than one SUBSCRIBER.

Renarks by the Editor-' A Treatise on Gardenere not so very ignorant, as to mistake a winter ing, by John Armstrong of Duchess,' published er for an autumnal one a yellow pear, with a in Memoirs of the N. Y. Board of Agriculture, vol. iii. page 27, gives the following directions relative to the management of Pear Trees.

'When an old tree becomes unproductive, one or two methods should be adopted-either to cut it down within eighteen inches or two feet from erfect model of the drawing of the Napoleon the ground, and train up anew some selected graft, which may have pushed from the stump, (which

a, every branch which does not want at least twenty degrees of being perpendicular, and all spurs from such other branches as by adopting this rule will be left. Into these, (the retained branches) at their subdivisions, and at different distances from their bases quite to their extremities, grafts must be carefully inserted, which, when they attain sufficient length, (say twelve inches) must be trained downward-the lower ones almost perpendicular, and the upper ones just below a horizontal line; and so placed as to distance that the leaves of the one will not at all shade the other.'

We hope some of our correspondents will give the results of practical science on this subject.

FOR THE NEW ENGLAND FARMER.

PEARS.

MR FESSENDEN-As I have heard much discussion at various times about the Mouthwater, Mouilk-bouche, or Verte-longue pear, I deem it appropriate to send you a precise description of it for insertion in your paper. Another variety totally different is cultivated in some collections, and erroneously called by the titles appertaining to Very respectfully,

WM. ROBERT PRINCE.

Linnean Botanic Garden, August 12, 1830.

MOUTHWATER-Prince's Catalogue, No. 32.

Verte-longue, -Duhamel-Mouille-bouche,

Verte-longue d'automne, of some collections.

This pear is most commonly of an exact pyra-

are not very often met with. The position of the eye is even, or nearly so, with the outer surface of the fruit, and the stem is green and 8 or 9 lines in length. The skin is, even at the period of maturity, of an uniform shade of rather dark green. and is also perfectly smooth; in some cases, however, one may observe a grayish streak running lengthwise of the fruit. The flesh is rather firm, but melting, and of a pleasant flavor, with some sweetness and richness. The seeds are brown early in October. The tree is of thrifty growth, with dark green foliage, and it has altogether a very healthy appearance.

AMBRETTE.

There having been much discussion also relative to the Ambrette pear, I now send a description of the only winter pear so called in Europe. It will be seen that it differs from that described under this name by MR Coxe, and particularly so in regard to its thorns. I also send you a description of another fine pear, the 'Angleterre,' of Duhameland I pen this communication with that most admirable and correct work lying before me, in order to be enabled to support my comments by the highest authority.

Very respectfully, WM. ROBERT PRINCE.

Ambrette-Duh mel-Forsyth. Pr. Cat. No. 86.

Ambrette d'hiver,

Ambrette avec épines, of various Ambrette d'hiver avec épines, publications. Ambrette grise,

Thorny Ambrette.

This pear is two inches in diameter, and 25 lines in height. Its form is rounded and inclining to oval, diminishing a little towards the stem, which is large, 9 lines in length and inserted in a very small cavity, whose circumference is swellen by some small protuberances. The head is very round and the eye is placed in a slight depression. surrounded by some small projections. The skin is whitish and sometimes grayish, according to the soils. The flesh is greenish white, melting, and of a sweet, rich, and very pleasant flavor. The seeds are black and contained in broad cells, and the fruit begins to ripen in November, but keeps till in February. The branches are thorny and the tree may be ingrafted on both the pear and the quince. It delights in a dry and warm soil, with a good exposition, and succeeds better as a standard than as a dwarf; in wet and cold soils the fruit is far inferior to that produced in more favorable situations.

Angleterre—Duhamel.

Poire d'.Ingleterre,

Beurré d'Angleterre, Pr. Cat. No. 119. .Ingleterre or English Beurrée, Coxe.

The form of this pear is exactly pyramidal. Its amend for general culture, not sacrificing midal form, its height 33 lines, and its greatest height 33 to 36 lines, and its breadth 23 to 25, r to size. It has been suggested to me by diameter 26, tapering very much towards the stem. but there are occasionally some of larger and some servant horticulturalist in Salem, that some Sometimes it assumes a turbinate form of equal of smaller dimensions. The skin is generally are less liable to mildew than others, as he breadth as height, being then 28 or 29 lines in light green, without any other particular shade,

tect maturity, and the sunny side acquires a red- the overflowings of the sea by strong dykes; yet dish tint; in all cases it is dotted over with numer- these countries are the most famous for richness ous grayish specks. The flesh is very melting of soil, for abundant harvests and case of cultivaand replete with rich and pleasant juice. It ripens tion, of any upon the earth. I have often wonin September and becomes soft soon after. The dered why our farmers should suffer the rich valseeds are blackish brown, large, and perfect, leys and meadows to lie useless and uncultivated, There is no variety of the pear more extensively while they toiled and dug among rocks and sands cultivated at Paris and its envirous than this, and upon the barren hills, for a scanty harvest. during the month of September the markets are filled with the fruit. The tree is very productive new experiments lately made upon lands heretoand seldom fails to produce a erop. It is only propagated on the pear stock, as it does not succeed by several credible reports of the facts, I deteron the quince. I perceive Forsyth quetes this mined to look for myself, and now send you the from Duhamel as a synonyme of the Brown result of my inquiries. The place to which I al-Bourré, which is a great error, it being a very Inde is called Turkey Bog, lying about three miles melting pear, and therefore the appellation of Beurré in every case misapplied.

PRESERVING VEGETABLES FOR WINTER, &c.

Mr Fessenben-Seeing a paragraph in the last N. E. Farmer respecting the preservation of green vegetables for winter use, I have been induced to offer a remark or two in order to prevent if possible, others suffering the mortification which i endured myself the last winter. I have tried the same method, as well as some others, several June planted twenty acres of corn, which now times and have invariably been disappointed. Peas, Corn, and Beans, are rendered tasteless and insipid. Beans, though they retained in a small degree their flavor, were so hard as to be unfit for use. I state these facts merely for the benefit of those who like myself are lovers of vegetables, that they may not be disappointed.

Aug. 21, 1830. A SUBSCRIBER.

Remarks by the Editor-We did not publish the paragraph alluded to as a discovery of our own, but gave our authority for the report. There may, perhaps, be a process for preserving vegetables for winter's use, which may prove successful, though others have failed.

A Treatise on 'The Art of Preserving all kinds of Animal and Vegetable Substances, for several Years,' by M. Appert, was published by order of the French Minister of the Interior.

In this it is stated that M. Appert's process consisted.

1. In inclosing, in bottles the substances to be preserved.

2d. In corking the bottles with the utmost care; for it is chiefly on the corking that the success of the process depends.

3d. In submitting these inclosed substances to the action of boiling water in a water bath (Balneum Maria) for a greater or less length of time, according to their nature, and in the manner pointed out with respect to each several kind of substance.

bath at the period described,

A translation of this Treatise may be found in the Appendix of the second American edition with the greatest hopes of success. of Dr Willich's Domestic Encyclopedia, published in Philadelphia, in 1826.

From the New Hampshire Statesman.

CORN ON TURKEY BOG-OR EGYPT IN AMERICA,

MR PRINTER-Ilistory informs us that the richest and most productive parts of the earth are intervals and meadows. Such is Egypt-such is Holland. The one is covered with water several says 'wheat that has been cut this season from a

but sometimes it becomes a lit. e yellowish at per- months every year-the other is defended from

These reflections have been occasioned by some fore considered useless. Having been informed from this village, partly in Concord, and partly in Bow. This bog is supposed to contain about 1500 acres, covered with a thick growth of white maple-and has been valuable only for wood. The soil is a black, rich mould, of considerable depth. During the drought of last year, the fire eaught by accident, and ran over many acres, killing and destroying the wood. This part was owned by those enterprising farmers, Messrs Carter and Abbot, of this town. They cleared off the wood in the winter, and about the first of appears flourishing, and promises an abundant harvest. Of the sixty acres of corn owned by these gentleman, none appears so luxuriant, of so deep and healthy a color, as that growing on the bog, and none presents a fairer prospect for a great crop. There were also many large pumpkins growing among the corn, together with potatoes, turnips, onions and beets, flourishing finely upon this once neglected bog. This was indeed a beautiful sight; where but one year ago the wild fern and alder grew, now the rank corn waved as far as the eye could reach.

I have been informed that several years ago a piece of this bog being burnt over in a similar manner, was sowed with rye by Mr Waker, of Bow, which produced a very large erop of grain. There are some of the most convenient parts of this immense meadow, which are already cleared. yielding a great supply of hay, some at the rate of three tons to the acre. It has been estimated that the whole meadow would produce 4000 tons of English hay: yet although owned by wealthy farmers, it is suffered to remain as nature formed it, a useless waste. I do not mean only this particular meadow, for every town contains thousands of acres equal to the richest parts of Egypt and Holland, which now are overgrown by briars and thorns. While the bighlands are exposed to the ravages of insects, these rich bottoms are free from the destroying worm and pinching drought.

I think Mr Printer, that the public are much 4th. In withdrawing the bottles from the water indebted to Messrs Carter and Abbot for the enterprise they have undertaken, and hope they will pursue their undertaking, as I learn they intend, of last year, the trees were weakly, and unable

Concord, Aug. 10, 1830.

MR EDITOR-By some experiments tried this season, I have ascertained that sulphur will relieve the slabbering of horses, oceasioned by eating the Euphorbia. My method is to give a teaspoonful of the flowers of sulphur with a little salt, -Western Tiller.

Heavy Wheat .- The Hillsborough (N. C.) Recorder ships:

field in the vicinity of that place, which yielded 15 1bushels per acre and the grain taken indiscriminate! from the heap, on repeated trials, weighed 70 1pounds to the bushel, after having been long an thoroughly dried in the sun.

A large proportion of the wheat crop lately & promising about Haverhill. N. H. has been destroye by a little yellow maggot, 1-8 of an inch long, grow ing from a nit deposited by a long yellow-legged fly which did much damage near Montpelier, Vt. 2 o 3 years since.

NATIVE PEA.

There is a species of wild or native pea that grow on the sandy beaches in this county, which brought into cultivation might become a valuab addition to the products of the kitchen garden. usually grows about one foot in height, and bea some resemblance to the cultivated kind calls Blue Imperial.'-The pods grow in clusters, of fro four to eight, each containing several small size brownish colored peas, ripe in July. It is said be perennial, roots living and throwing out fre. shoots for several successive years, and it flourish where nothing but beach grass would vegetate. W have heard it asserted that this pea is poisonous, as therefore unfit for the table; but, we believe, th assertion will not prove true; for the plant has t gennine characteristics, and the fruit the flavor at taste of the pea genus. We have collected a sm quantity for seed, and intend planting them anoth season.— Barnstable Journal.

BREAD.

A new kind of bread, called pain animalise, is no manufactured in Paris. It having been found tl the gelatine of bones, used for soups, was exceeding nutritious, it was imagined that if this gelatine con be introduced into bread from potato flour, which very much less nutritious than wheaten flour, ! former would be equally pleasant, and even me nutritive than wheaten bread. The experiment! been tried with great success, and beautiful loan of bread, made in this way, are now sold in Paris, a much lower price than bread from wheat flo The gelatine is so purified as to impart no unplease flavor, and the potato bread, thus manufactured, is agreeable as it is wholcsome. As a cheap, nutritio and useful article of food for the poor, the pot bread thus made, is unequalled. A large quant of biscuit sent out with the African expedition w prepared in this manner .-- Salem Gazette.

There will be but little cider made this year Somerset and Devon. The orchards put forth th blossoms rather profusely, but, from the overburth sustain their promise. It is only from the few to which did not bear last year, that fruit may now expected .- Taunton [Eng] Courier.

SPONTANEOUS COMBUSTION.

A correspondent of the Troy Sentinel relates! occurrence of several cases of spontaneous combi tion. His statement being brief, we extract it, important to those engaged in caulking or repair

While repairing the tow-boats, large quantities hother

pitch and rosin are used, mixed with a quantity of ous to apply heat too freely; but it is quite necessary cettle used is carried remote from the fire: the workmen apply this hot cement with a mop made of voollen varn. In one instance the mop took fire while in the hands of the workmen; in two instances hev took fire while lying on deck; and in another he mon was placed against a pile of boards, when he men went to breakfast. In about half an hour he mop took fire to the pile of boards: considerable xertion was necessary to extinguish the flames .alem Gazette.

THE STAGE REGISTER.

There is hardly any publication except the Alnanac to which the public make a more frequent eference than to this. We are as much a travelling cople as the Arabs, though it may be that we reain longer in a place. We travel for pleasure, r profit, for health, and from idleness. Whenever e would go in the Northern States, by steam boat, inal, or stage, the route, distances, and fare are to found in the Register .- Tribune.

DROWNING.

TREATMENT.-If apparently drowned-send ickly for medical assistance; but do not delay the flowing means;-1, Convey the body carefully with e head and shoulders in a raised position, to the arest house. Great care should be taken in reoving the body, that it be not bruised, or shaken plently, or in any way roughly handled, nor card on the shoulders with the head hanging down r rolled on the ground, on a barrel, &c; such ethods formerly resorted to with the view of caus-Iz the water to flow out of the stomach, are now ensidered highly injurious .--- 2, Strip the body, and b it dry; wrap it in hot blankets, and place it in a urm bed in a warm chamber. - 3, Wipe and cleanse 13 mouth and nostrils .- 4, In order to restore the itural warmth of the body, move a heated covered irming-pan over the back and spine, put bladders bottles of hot water, or heated bricks to the pit the stomach, the arm pits, between the thighs, and so to the soles of the feet; ferment the body with It flannels; (if possible immerse the body in a warm Ith, as hot as the hand can bear, as this is preferle to the other means of restoring warmth;) rub 12 body briskly with the hand; do not however susnd the use of other means at the same time .- 5 order to restore breathing, introduce the pipe of common pair of bellows (when the apparatus of Humane Society is not at hand) into one nostril. refully closing the other and the mouth, at the ne time, drawing downwards and gently pushing ckwards the upper part of the wind-pipe, to allow a are free admission of air. Blow the bellows gently, the breast be a little raised; the mouth and nosis should then be set free, and a moderate presre made with the hand upon the chest : repeat the neess till life annear.

The treatment to be employed where animation is spended by lightning, is the same as is laid down drowning.

in attempting the recovery of those who have ing themselves, the same means are to be resorted with the addition of bleeding.

EXPOSURE TO COLD.

In the management of those who havebeen too long posed to extreme cold, as to be apparently dead. body must be restored to its natural heat by slow grees; by first rubbing it all over with snow ice, or dd water. After this friction has been employed for ne time, the body must be wiped quite dry, sabtted to the friction of several warm hands, then apped in flannel, and put in a warm room. At s stage, the lungs should be inflated with warm n, and a little lukewarm wine and water conveyed to the stomach. In these cases, it is highly danger-

coarse whale oil to pay the seams and decks. The that the means above mentioned should be persevered in for a considerable time. When infants have been overlaid or suffocated by the inattention of their nurses, or when animation has been suspended by convulsions, the same mole of treatment must be pursued as is laid down for 'suffocation by drowning.'-Book of Health.

> Shoking.- 'The young man who, unjustified by the plea of ill-health, or unsanctioned by the prescription of his physician, has acquired the habit of smoking pipe or cigar, may assuredly congratulate himself on having reached the second stage of his progress from temperance to dissipation,-from elasticity of spirit and vigor of frame to premature imbecility and decay. As the reckless poacher is gradually led on, from his work of midnight depredation in the woods, to more daring acts of violence and rapine; so will the youthful smoker be too often insensibly allured from a wanton indulgence in the cigar to the sins of intexication, and the ultimate saerifice of his health, his character, and prospects. Let parents, then, as they appreciate the responsibility which devolves upon them, solemnly protest against, and resist, the first encroachment of this pernicious habit in their family. Let the women of this country, whose influence is commonly as beneficent as irresistible, exert their powers in decrying the noxious practice, and averting from those in whose reputation and welfare they are so deeply interested, the moral pestilence. If the leaders of fashion in the land are resolutely bent on destroying the little remnant of energy and character which they still possess, let them pursue their ignoble propensities, and achieve the work of moral ruin as they are wont to dissipate their fortunes, in private. Society will be disposed to contemplate with singular philosophy and forgiveness, any act of moral suicide which these 'Spoilers of human hive' may be tempted to commit. But let them not contaminate with noxious exhalations the public atmosphere .- Illustrations of Medicine.

RECOVERY FROM AN ELECTRIC SHOCK.

During the thunder-storm of last Saturday evening, one of our citizens, Mr Samuel Seaton, coming near a tree, which stood in front of the house in which he resided, at the instant of a very vivid flash of lightning, which fell on the tree, received the whole charge in his head and body, which violently threw him to the ground, and deprived him of all appearance of life. Dr James Reid being called in, restored animation in about thirty or forty minutes by plentiful effusions of cold water on the breast and face, (not wishing to lose time in stripping the body,) succeeded by bleeding.

This case being, perhaps, in its vinlence, equal to any on record, we have thought it important to state some of the particulars, as a matter of public interest. There must have been a great accumulation of the electric fluid, as, in entering his body, it tore his coat, (made of linsey) vest, and shirt, into rents the breadth of his shoulders, both across and along his body, burned his ear, singed the hair on the side of his head, and, descending in a stream of four to five inches broad, crossed his breast, then descending to the loins, divided, and passed down both extremities, and out through his shoes, perforating them with holes as though buck shot had been forced through them; -in some places breaking the skin, and scorching it in its whole course, so as to give the appearance of an extensive burn.-Shawneetown (Ill.) Gazette.

The largest holly tree now known in Europe, rows at present in the garden of Richard Armstrong, Esq. of Ballgaly; it is upwards of sixty feet in height.

An ingenious mechanic in the neighborhood of Hull has invented a small lamp, which may be attached to says the Troy Budget, have been planted in that spectacles of a particular description, by means of vicinity; —Dr Corning and Mrs Pawling, are each which and a reflector, any person may read in the feeding several thousand silk worms.

darkest night; and the contrivance is such, that the only light visible is on the part of the book that is

A happy thought .- If you wish to find anything that is lost in a well, or ascertain the cause of any impurity there may be in the water, place a common mirror over the well in such a position as to eatch, and throw the rays of the sun directly to the bottom of the well, which will instantly become illuminated in a manner so brilliant that not only the smallest articles, such as pins, needles, spoons, knives, &c, can be distinctly discerned, but also, that the smallest pubbles and stones at the bottom can be as effectually examined as if they were held in the hand. The sun is in the best situation to be reflected in the above manner in the morning or afternoon of the day. 'This simple experiment,' says the editor of the Hampden Whig, 'was communicated to us by a worthy patriot, with a wish that we should give it to the public.'

Filial Affection .- Heywood, in his account of certain persons who suffered in Scotland, on a charge of witchcraft, says, that one of them, a woman, when fastened to the stake, cried to her son for water. 'Helpe me to any drink, be it ever so little, for I am most extremely drie,' to which the hopeful youth replied, 'By no means, deare mother, will I do you that wrong, for the drier you are, no doubt you will burn the better.'

Prevention of Musquitoes .- A correspondent o the N. Y. Courier, suggests the following mode of preventing the abundance of Musquitoes that are apt to make their appearance about this scason of the year. It merely consists in sifting a peck of wood ashes into each eistern, to destroy the animalculæ from which the musquitoes are produced. So small a quantity of ashes will not injure the water; and the remedy is at least worth trying.

Remedies for Stings and Bruises, -In the trials, of many years, in our own family, we have never found Olive Oil, or Common Sweet Oil, to fail of giving immediate relief, and effecting a complete cure of poisonous stings, if gently rubbed on immediately, and continued for a short time. And, for a bruise, the application of Water, as hot as it can be borne, either by a wet cloth, or by immersing the part, we have always found effectual. It may be necessary to continue the application of water, and to renew the heat, for a considerable time, and to rub the swollen party sofily .- Penn. Examiner.

Elder leaves, put around the roots of peach trees, is recommended as a perfect antidote for the injury arising from worms .- N. Y. Farmer.

To destroy Slugs-I have always remarked that slugs will attack the leaf of a somewhat withered cabbage in preference to those in a more thriving condition. When I plant out a bed of eabbages, therefore, I strew the leaves that I ent off all over the bed and the slugs will lie under them and feed on them in the shade. Every day or two I have the leaves gathered up and given to the pigs and then strow more leaves, and so on, till I get rid of the slugs entirely .- Ibid.

WINE FROM NATIVE GRAPES.

We acknowledge the receipt of four bottles of wine from Major Adlum, accompanying his receipt in our paper of today for making wine from the wild grape, as a specimen of what our country can produce with triffing labor. How much better would it be for the health, comfort and morals of our farmers, if they would bestow more attention upon the manufacture of an article which requires so little trouble and expense, and which is so infinitely superior to the poisonous. trash of every description sold under the various names of spirits.

Domestic wine, Cider and Perry are not only more wholesome but cheaper than ardent spirits We have every variety of soil and climate, and only need a little experience to rival the most famous wines of Madeira, France or Spain.

Mr Editor - As there is now growing over the whole face of our country, thousands of bushels of wild grapes, and as the Fox-grape is now nearly of the size it will come to when at maturity, I have written the accompanying receipt, which if you publish in your useful paper, it may be of some advantage to the public in general.

I have, according to this receipt, made wines of various qualities, some of which accompanies this-it was sometimes at three or four years old equal to the best Madeira, according to the opinions of good judges, and none of it so bad as the low priced rot gut wines now imported, much as your Malagas, Clarets, &c, and it is as salubrious as the best of those imported. I have made wine of a Fox-grape that was pronounced by Mr Jefferson and others, equal to the Burgundy of Chambertin, one of the best wines in France, and it was at the time compared with Burgundy he had on his table, imported by himself when he was President of the United States. And last autumn I made a pipe of wine from the common small grape, growing spontaneously on the fences, stoneheaps and shrubs, by some called the Chicken, and by others the Ciolyon grape; it is the Vitis sulvestris, or blue bunch grape of Bartram. This wine was pronounced by several ladies and gentlemen recently from France, equal to, and of the flavor of Burgundy, that cost in France five francs per bottle. I am, Sir,

Very respectfully yours, &c. JOHN ADLUM.

TO MAKE WINE OF IMMATURE GRAPES,

Although wine may be made in any stage of their growth, and of any kind of grape, I would advise them to be left on the vines until they have attained their full size-and as the skin and stem of the unripe grape has no bad flavor, the grapes may be used in any stage of their growth. Grapes of different sorts and sizes may be mixed together.

The following receipt is for ten gallons, which may be increased to any quantity by taking the

fruit, &c, in proportion:

To a tub of the capacity of fifteen or twenty gallons, take forty pounds of immature grapes, (no matter for the variety whether wild or cultivated,) and bruise them in successive portions, by a pressure sufficient to burst the berries without breaking the seeds: four gallons of water are then to be poured into the vessel, and the contents are to be carefully stirred and squeezed by the band until the whole of the juice and pulp are separated from vat or tub, along with the sugar in the first stage of ground, excepting grass and buckwheat, without

main at rest for a period from six to twenty four rapid, and the wine prove stronger and less sweet hours, when they are to be strained through a but it will acquire more flavor. coarse bag, by as much force as can conveniently be applied to them-one gallon of fresh water may afterwards be passed through the marc, for the purpose of removing any soluble matter which barrel, may have remained behind. Twentyfive pounds of good clean sugar, either brown or white, are brisk wine, the sugar may be increased five pound now to be dissolved in the juice thus procured, and for every ten gallons. And in this case if th the total bulk of the fluid made up with water, to the amount of ten gallons and a half,

The liquor thus obtained is the artificial must, which is equivalent to the juice of the grape. It is now to be introduced into a tub of sufficient capacity, over which a blanket or similar texture, covered by a board, is to be thrown, the vessel if it is not bottled in March, it will, after th being placed in a temperature of from 60° to 80° of Fahrenheit's Thermometer. Here it may remain for twentyfour hours or two days, according to the symptoms of fermentation which it may show, and from this tub it may be drawn into ferment. When in the cask it must be filled to the bung-hole, that the seum which arises from months after it is made. the bottom may be thrown out-as the fermentation proceeds, and the bulk of the liquor in the eask diminishes, the superfluous portion of the when the sugar is from 25 to 30 pounds. If, durmust (viz. the half gallon) which was made for the ing the fermentation of wine thus formed, ther express purpose, must be poured in so as to keep should appear any danger of the sweetness van the liquor still near the bung-hole. When the fermentation becomes a little languid, as may be known by the diminution of the hissing noise, the bung is to be driven in and a hole bored by its side, into which a wooden peg is to be fitted-this peg may be drawn once in two or three days, for a few minutes, to let the air that has been generated thirty to thirty four gallous : escape-and in about three weeks or a month it may be drove in permanently tight.

The wine thus made must be put into a cool cellar, as it is no longer necessary to promote the fermentation process. If the operator is not inclined to bestow any further labor or expense, he may examine it in some clear cold day in January or February, or the beginning of March, when if and then drive it tight-and in from eight t it is fine and bright, as it frequently will be, it may twelve days it will be beautifully fine and bright be bottled without further precautions. To insure its fineness, however, it is the better practice to rack or decant it towards the end of December into a fresh cask (finnigated with sulphur) so as to clear it of its lees. At this time also, the operator will be able to determine whether it is not too sweet for his views. In this case, instead of racking it, &c, he will stir up the lees so as to clear of, either by fermentation or fining, it wil renew the fermenting process, taking care also to then keep for an age or ages - no matter for it increase the temperature at the same time. At strength, without it should extract some ferment whatever time the wine is racked it ought to be | ing principle out of the cask. fined. Sometimes it may be necessary to rack it a second time into a fresh cask, (if the wine is not perfectly bright,) and again repeat the operation of fining. All these removals should be made in clear, dry, and if possible, in cold weather. In any case it must be bottled during the month of March.

The wine thus produced will generally be brisk, and similar in its qualities to the wines of Champaigr, with the strength of the best Sicily.

Circumstances which cannot always be controled, will sometimes cause it to be sweet and still, and at others to be dry.

VARIATIONS OF THE PROCESS DESCRIBED ABOVE.

The skin of the grape or the whole marc, as well as the juice may be fermented together in the the solid matter. The materials are then to re- the process. The fermentation will thus be more the fertilizing aid of rich manures to support the

Cream of tartar, or, which is preferable, crud tartar, may be added to the must in the proportion of six ounces to ten gallons or one pound to:

If it is wished to have a very sweet as well a fruit is increased to fifty pounds instead of forty or in that proportion, and keep it two years in th eask, it will assume a Madeira flavor, and it will b a pleasanter and better wine than most Madeira nor imported. If the wine is intended to be less swee that is, five pounds less of sugar to the ten gallous month of August or September, be a better winthan the French Madeira now imported. But i all the above processes if it is bottled in March, i will seven times out of ten sparkle like Champaigr And all sparkling wines to drink them in perfection ought to be drank in from twelve to eighteen

To insure briskness without excessive sweet ness, the fault must be increased to fifty pounds ishing altogether, it may be racked into a cask furnigated with sulphur, and the fermentation checked by fining. Thus it will be speedily fi for use.

The best mode of fining wines that I am ac quainted with is as follows, say for a cask of fror

Draw off a gallon or more wine, then take one quart of milk immediately from the cow after milking and before any separation takes place, t which add two table spoonfuls of salt and one c the sweet spirits of nitre-mix it with the win drawn, and pour it into your cask and stir it wel and leave the bing loose for about twelve hour and is ready to bottle.

If the fermentation is complete, and all th sweet principle turned to alcohol, fining is unneces sary, as the wine will be perfectly fine and brightand it is only to be fined when there is small par ticles floating in it, or cloudy; and when all the sediment, mucilage and other impurities are go

Remarks on the general principles of husbandry -1. Whatever may be the nature of your soil and situation of your farm, remember that there is no soil so good, but it may be exhausted and ruined by bad tillage; and that there is none so bad that cannot be rendered fertile by good tillageeven barren heath, if it can be ploughed and swarded.

2. The true art of husbandry consists in suffering no crop to grow upon your land, that will so far exhaust your sail, as to lessen the value of your succeeding crop, whatever profit such a crop may afford you.

3. To avoid this, suffer no one crop to grow two years successively, upon the same piece of trength of the soil; and then change of crops cleanse well the roots, cut them into slices, and rill generally do best, excepting onions, carrots,

4. Every plant derives from the earth for its his plant, when followed successively for two or he soil of those properties peculiar to itself, withut lessening its powers to produce some other lants: this fact is most striking in the article of ax, which will not bear to be repeated oftener han once in seven years, and is common to all rops, with the exception of those mentioned

5. To avoid this evil, arrange your farm into such visions as will enable you to improve all the vaety of crops your lands may require, in such gular succession, as to form a routine of five, six, seven years, according to the nature, quality, nd situation of your farm.

6. This method will make poor land good, nd good land better. Try and see .- Montgomy Co. Free Press.

Tood for Cattle. Every traveller who pass Alsfelt, a little town between Frankfort and eimer, remarks the beauty of the oxen employ-I in agriculture in that neighborhood, and yet ey are only fed on straw and roots, straw being o only fodder raised in that part of the coun-. It is prepared as follows:

The straw is cut very small by the chaff cutter; is then put into a cauldron, mixed with potatoes d carrots, and boiled till it forms a kind of jelly. is mixed with a sufficient quantity of water, served in due portion to the beasts. The anals so fed require no water, and so well do ey thrive on this mess, that they are, notwithinding the summer labor, ready for the butcher the end of the year.

Jour, de Soc. Agric, Practiq.

From the Palladium.

Tomatos .- We see, by the papers, that the iladelphia Market is already abundantly suped with this delicious and healthy vegetable. e have been sorry to learn, from our Hortiturists, that they do not bring the Tomato into rket so early as they might, for the reason t there is here so little demand for it. Of all getables, the Tomato is, for the summer, the st healthful, palatable, and refreshing. On the rbary coast, in the South of Europe, and in all Southern States they are prized above all er summer vegetables. Its culture has not, within a few years past, been generally introed into the gardens of Pennsylvania and New sey, but it now receives much attention there, I has become a great favorite at every table. progress in public favor, in New England, is no means commensurate with its merits; ugh it can be raised in as great perfection I abundance here as anywhere. The maxim he Romans, in regard to another vegetable, etter applicable to the Tomato:

Cur moriatur homo, cui crescit in horto.

TOMATUM?

Cheap substitute for Malt .- The Mechanics' gazine (London) announces the roots known the name of Mangel-wurtzel, as a cheap substifor Malt in the preparation of Beer. The nner in which they should be used is this:

put them into a boiler in which as much water counts of abundant harvests of wheat, and that will be placed as will suffice to cover them, lay a weight on them to press them down; let them rowth, such properties as are peculiar to itself; be taken out and pressed; the liquor so extracted from the roots is to be, with the water in which nore years, upon the same ground, will exhaust the roots were hoiled, again set over the fire and reduced, by boiling, to such strength as suits the palate; then add so much Hops as may be considered necessary; let the extracted matter be again set on the fire for one hour; when taken up, let the liquor be cooled as quickly as possible, and a sufficient quantity of yeast to work, it is generally done with ale. The expense does not exceed 7 English shillings for 16 gallons. The refuse left from the press is an excellent food for

> Remedy for Burns and Scalds .- From the number of accidents which have lately taken place, and by which several persons have been so dreadfully burned as to cause death, we recommend the following simple remedy, by which the pain from either a burn or scald is instantly relieved; let clarified honey be applied on a linen rag, and in one moment the pain will cease. This remedy has been tried several times, and it always relieved the moment the honey was applied .- Newark Times.

> Corn Cobs .- It has been pretty occurately ascertained that thirteen bushels of Indian Corn in the ear, ground up corn and cobs together, afford at least as much nutriment in feeding cattle, as nine bushels of corn without the cobs. The difference is owing to the great quantity of saccharine matter contained in the cobs, as well as in the additional stimulus of distention afforded by the food, which is all important for graminivorous animals,-Columbia (Penn.) Spy.

TEMPERANCE AND PATRIOTISM.

The Anniversary of American Independence was celebrated on the 5th ult. at Putney, Vt. Some very spirited toasts were drank without the aid of artificial stimulus, so common on such occasions; 'forming' (says the Bellows Falls Int.) 'a new era in the celebration of the illustrious day, and adding a new article to the declaration of Independence that we are, and of right ought to be, free and independent' of and from the slavery of ardent Spirits.

Salt is usually sent to market too soon after it is removed from the salt works. The Hon. Josiah Quincy, who is largely concerned in the manufacture, expressed it as the result of his experience that salt ought to remain in store at least six months before it is fit for market. This is little time enough for salt to drain and become sufficiently dry for use, and we think our manufacturers would find it for their profit to keep their salt on hand a longer time than is now usual, and the consumer would be better-satisfied with the domestic article.

An extensive swamp or marsh in the southern part of Whately, has been drained by cutting a channel to the Connecticut-in some places to the depth of 20 or 25 feet. We are informed that some interesting vegetable remains were found twenty feet below the surface-large stumps on which marks of the axe were visible, &c. .

Hampshire Gazette.

From all quarters of the country we have acthe quality is very superior. The weather in our immediate neighborhood is most favorable for corn, as far as hot sun and frequent showers can insure a good crop. Farmers who are out of debt, may keep so by observing economy and simplicity in their household and mode of living, but estates are rapidly crumbling to pieces, and families falling into poverty by frequent, legal and voluntary divisions. Those whose mothers rode in carriages must ride on horseback, and the daughters of those who rode on horseback will have to walk. This general progress of things may be retarded by restricting our labor and manure to smaller spaces, and by great economy and great saving, by giving away old horses if you can find any body fools enough to take them, and substituting oxen and mules for young ones, as fast as possible; by driving idle sons from the parental roof, as the ben does her chickens, when they can provide for themselves, in short, by keeping no dead capital, and feeding no idle months; and by regarding as the first objects of ambition to beout of debt-with a clean conscience and a clean shirt .- American Farmer.

Cure for the Ringworm .- Take the root of the common yellow, or wild dock; wash it clean, bruise it, or cut it in very thin slices; put it in a cop, or other small vessel, and add vinegar sufficient to cover it. Let it stand a day or two, then apply the mixture to the ringworm, by jubbing it with a piece of the root, two or three times a day, for a few successive days. This, it is said, will effect an entire cure.

Cure for the Croup. - The Croup, one of the most dangerous and rapid of diseases, may be effectually checked by the external application to the throat of equal parts of camphor, spirits of wine and hartshorn well mixed together .- I'unterdon Gazette.

Ardent Spirits .- Dr Porter, of Portland, in reply to the question how much ardent spirits a person may use as a medicine in case of sickness, gives a short and decisive answer as a result of nearly sixty years' experience in the profession .-His reply is 'None at all necessary. When the Temperance Society in Portland was formed, I disliked the exception, as being totally unnecessary and improper, giving unlimited toleration to the use of ardent spirits under this pretext.

According to the Marblehead Register, 36 1,000 fish were carried into that port from the Grand Bank within ten days, which, when ready for the market, will be about 12000 gtls.

VERY DEAF.—One day last week a man was fishing in a pond near Chichester, when the owner of it came up to him and ordered him off; the man, playing the deaf ear, answered that the d-d fish would not bite, and he did not think there was anything in the pond but carp. The owner was so enraged at the fellow's answer, that he threatened to throw him into the pond; upon this, the intruder offered to lend him one of his rods to fish with. Unable to suppress his anger, the proprietor ran up to him. for the purpose of giving him a ducking, but, at the moment, the deaf man hobbed his head down. and the incensed gentleman's foot slipping, he fell headlong into the water-a depth of six feet-and was obliged to call upon the deaf man to assist him in getting out: who told him he did not expect to catch such a large fish in that pond, or he would have brought a stronger line.-Brighton Herald.

MEW ENGLAND FARMER.

BOSTON, FRIDAY, AUGUST 27, 1830.

PEAT FOR MANURE.

Lord Meadowbank, a British nobleman, published a pamphlet on the best mode of converting peat into mannre, from which the following is extracted :-

thet the peat-moss, of which compost is to be form d, be thrown out of the pit for some weeks or months, in order to loose its redundant moisture. By this means it is rendered the lighter to carry, and less compact and weighty, when made up with fresh dung, for fermentation; and accordingly, less dung is required for the purpose, than if the preparation is made with peat taken recently from the pit. The peat taken near the surface, or at a considerable depth answers equally well. And the more compact the peat, and the fitter to prove good fuel, so much the more promising it is to be prepared for manure.

· Take the peat-moss to a dry spot, convenient for constructing a dunghill, to serve the field to be manured. Lay the cart-loads of it in two rows, and the dung in a row betwixt them. The dung thus lies on the area of the compost dunghill, and the rows of peat should be near enough each other, that the workmen in making up the compost, may be able to throw them together by the spade. In making up let the workmen begin at one end; and at the extremity of the row of dung. (which should not extend quite so far at that end, as the rows of peat on each side of it do,) let them lay a bottom of peat, six inches deep, and fifteen feet wide. Then throw forward, and lay about ten inches of dung above the bottom of the peat; then four or five of dung; and then cover it over with peat at the end where it was begun, at the two sides and above. The compost should not be raised above four feet and a half high, otherwise it is apt to press too heavily on the under parts, and check the fermentation; unless the peat, when dry be very puffy and light, and then a much greater height is desirable. Neither should it he much lower, otherwise it will prove wanting in the compactness, and soon also, if the weather is very dry, in the moisture required for the ingredients of which it consists to act chemically on each other. When a beginning is thus made, the workmen will proceed working backwards, and adding to the column of compost as they are furnished with the three rows of materials, directed to be laid down for them. They must take care not to tread on the compost, or render it too compact, and of consequence, in proportion as the peat is wet, it should be made up in lumps, and not much mashed or

In mild weather, seven cart-loads of common farm-yard dung, tolerably fresh made, is sufficient for twentyone cart loads of peat-moss; but in cold weather, a larger proportion of dung is desirable; at least it is prudent to omit putting any peat between the two upper layers of dung, and rather thicken the outer coating with peat. It is also proper in winter, if ground with a dry bottom can be conveniently employed for the purpose, to increase greatly the breadth of the dunghill, which, in that case may be done without any limit, by adding all round the dunghill circles, consisting of layers of dung and peat of seven feet in breadth. And if the mass of the dunghill is thus enlarged,

there is little occasion to exceed the proportion of dung recommended for making up to prepare in the milder season; especially if a covering of er, in a communication republished in the New coarse vegetables of any sort, such as waste hay England Farmer, vol. v. page 187, states that he or straw, tushes, broom, or furze, or brush wood of had much improved the genuine Tuscarora corn evergreen is thrown over the dunghill. In fact, a by never planting a grain that was not selected in covering of this sort is scarce less useful in sum- the fields (for four or five years past) from those mer to prevent the escape of moisture, than in stalks which produce two or more cars.' Joseph winter to exclude cold.

'To every twentyeight eart loads of the compost when made up, it is of use to throw on above it a cart load of a-bes, either made from coal, peat, or wood; or if these cannot be had, half the quantity of slacked lime may be used, the more finely powdered the better. But these additions are in no wise essential to the general success of the compost, provided a sufficiency of time is allowed to the preparation to compensate for the want of them.

The dung to be used should either have been recently made, or kept fresh by compression; as by the treading of cattle or swine, or by carts passing over it. And if there is little or no litter in it, a smaller quantity will serve, provided any spongy vegetable matter is added at the making up the compost, as fresh weeds, the rubbish of a stackyard, potato-shaws, sawings of timber, &c. And as some sorts of dung, even when fresh, are much more advanced in decomposition than others, it is material to attend to this; for a much less proportion of such dung, especially if abounding in animal matter, as is less advanced, will serve for compost, provided care is taken to keep the mass sufficiently open, either by a mixture of the abovementioned substances, or, if these are wanting, by adding the peat peace-meal, that is first mixing it up in the usual proportion of three to one of dung, and then, after a time, adding an equal quantity, more or less, of peat. The dung of this character, of greatest quantity, is shamble dung, with which, under the above precautions, six times the quantity of peat, or more, may be prepared. The same holds as to pigeon dung, and other fowl dung; and to a certain extent also as to that which is collected from towns, and made by animals that feed on grain, refuse of distilleries, &c.

The compost, after it is made up, gets into a general heat sooner or later, according to the weather, and the condition of the dung; in summer in ten days or sooner; in winter not perhaps for many weeks, if the cold is severe. It always, however, has been found to come on at last; and in summer it sometimes rises so high as to be mischievous, by consuming the materials, (fire fanging.) In that season a stick should be kept in it in different parts, to pull out and feel now and barrel. then; for if it approaches to blood heat, it should either be watered or turned over; and on such an occasion, advantage may be taken to mix with it a little fresh peat. The heat subsides after a time and with great variety, according to the weather, the dung, and the perfection of the making up of the compost; which then may be allowed to remain untouched, until within three or four weeks of using, when it should be turned over, upside down, and outside in, and all lumps broken: then it comes into a second heat, but soon cools, and it is fit to be taken out for use. In this state the whole, except bits of the old decayed wood, appears a black free mass, and spreads like garden mould. Use it weight for weight, as farm yard dung; and it will be found in a course of cropping, fully to stand the comparison.

SELECT SEED CORN.

Mr J. Mercer, a writer for the American Farm-Cooper, Esq. of New Jersey, in a letter to a gentleman in Philadelphia, states that 'A friend sent me a few grains of a smaller kind of Indian corn, the grains of which were not larger than goose shot, which he informed me by a note in which they were enclosed, were originally from Guinea, and produced from eight to ten cars on a stalk .-Those grains I planted, and found the production to answer the description, but the ears small, and few of them ripe before frost. I saved some of the largest and earliest, and planted it between rows of earlier kinds of corn, which produced a mixture to advantage; then I saved seed from the stalks that produced the greatest number of the largest ears, and first ripe, which I planted the ensuing season, and was not a little gratified to find its production preferable both in quantity and quality to that of any corn I had ever planted .-This kind of corn I have continued planting ever since, selecting that designed for seed in the manner I would wish others to try, viz .- When the first ears are ripe enough for seed, gather a sufficient quantity for early corn or replanting; and at the time you would wish your corn to be ripe generally, gather a sufficient quantity for planting the next year, having particular care to take i from stalks that are large at bottom, of a regula taper, not over tall, the ears set low, and contain ing the greatest number of good sizeable ears o the best quality; let it dry speedily; and from the corn gathered as last described, plant you main crop, and if any hills should be missing, re plant from that first gathered, which will caus the crop to ripen more regularly than is commor which is a great benefit. The above mentioned have practised many years, and am satisfied it ha increased the quantity, and improved the qualit of my crops beyond what any person would imag ine, who has not tried the experiments.'

MOLASSES FROM SWEET APPLES.

The Rev. Jared Elliot, in his 'Essays on Fiel Husbandry' observed that 'A barrel of eider o sweet apples when made into molasses, will b worth three pounds, abating five shillings for th making, when eider made of common apples, wi be worth but twenty shillings, exclusive of the

How to prepare Molasses for preserving Fruits, & -Take 8 lbs. molasses, bright New Orleans o Sugar House; 8 lbs. pure water, I lb. coarsel powdered charcoal .- Boil them together for 21 minutes, then strain the mixture through fine flan nel, double-put it again in the kettle with th white of an egg, boil it gently, till it forms a syru of proper consistence, then strain it again.

MASSACHUSETTS HORTICULTURAL SOCIETY Saturday, August 21, 1830.

FRUITS.

Apples-Mr E. M. RICHARDS of Dedham, pre sented some seedling Apples, from the original tree now standing on land of the late Mr Benoni Fair banks in that town; they are called the Benor Apple-all of a fine red color, yellow flesh, an good flavor, and the committee consider them a valuable summer Fruit.

Pears.—Mr Alfred Baylies, of Taunton, exhibited some pears from a seedling tree, which was produced about 60 years ago from the seeds of the primitive pear, and is now flourishing in Dighton. The specimen was not a favorable one, but the committee judged the fruit to be well worth cultivating. Skinless pear (Poirc sans peau, No. 7 of Cox) were presented by Mr Manning of Salem, a valuable summer Fruit.

Also by the same, English Red Cheek Pears, (No. 30 Prince's Treatise) this variety is inferior to others which ripen at the same time : also-Pears from a French tree—similar to the preceding.

Grapes.—A bunch of Black Hamburg Grapes, weighing 24 ounces, was received from Doct. Aus-TIN, of Newton,-remarkably fine.

Plums .- Mr Manning, of Salem, presented fruit of the Italian Damask Plum. This variety is of large size, and the tree a great bearer, (Supposed by some persons to be same as Violet Reiue Claude.) Also from the same, Orleans or Red Damask Plums. Also Seedling white plums, fruit small but great bearers. MR POND, of Camfrom the garden of the late Henry Hill, Esq. This variety is large and good, and well deserves cultivation.

Peaches .- From Mr Whitmarsu, of Brookline, were received Natural Peaches, the exterior of a red and yellow color, red flesh, and good flavor.

Also from the same person, peaches marked
Royal Kensington, a good carly variety but the name is undoubtedly wrong. Also from the same erson, peaches marked 'English Swalsh.'

Black Apricots. - [No. 15 of Prince's Treatise,] rom R. Manning,-these are not worthy of cultiration. By order of the Committee.

R. M.

Loubat's Vineyard .- Mr Loubat, at his extensive Vineyard near N. Y. city, has 60,000 permanent Grape Vine stocks—besides a large number of this new and most valuable variety. young cuttings for sale. The fruit is now well ormed, and the enterprising proprietor has a prospect of maturing between four and five thouand pounds of grapes this season, the principal part of which is intended for the New York marret.

The N. Y. Daily Advertiser states that a sloop oad of whortleberries lately sold in that city for \$400. They might be carried from Cape Ann, in eason, with profit, as they do not grow near New Fork.

The Trement House, in Boston, is now the most pacious and splendid Hotel in the United States.

Of Medicines prepared in Distilled Spirits .- Dr Rush, in his 'Observations on the duties of a Phyician,' has the following remarks:

'Give as few medicines as possible in tinctures nade with distilled spirits. Perhaps there are few ases in which it is safe to exhibit medicines prepared in spirits in any other form than in drops. Many people have been innocently seduced into love of strong drink, from taking large or freuent doses of bitters, infused in spirits Let not our profession be reproached in a single instance. with adding to the calamities that have been enailed upon mankind by this dreadful species of ntemperance.'

To Correspondents.—We think it proper to state that we have received a letter from Mr Wm R. Prince, dated August 22, in which he alludes to a communication containing some further remarks about the Napoleon and Passe Colmar pears, which he says was sent us by mail the day before. No such communication has been recieved by us.

For Sale,

A valuable Farm at Leehmere Point; consisting of 30 acres-on the Craigie road, less than three miles from Boston, With a good two story honse and barn thereona thriving young orchard and other fruit trees.

For terms and other particulars, inquire of Wm. E. Payne, No. 5 Court-street. epto1 Aug. 27.

Strawberry Plants - Keens' Seedling, &c.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street,

A superior collection of Strawberry Plants, from Mr Haggerston's Charlestown Vineyard, comprising the following sorts:-the Roscherry, Downton, Bath Scarlet,

Pine Apple, Royal Scarlet, Mulberry, Wilmot's Superb, and Keens' Scedling. For a particular notice of the last magnificent variety, we beg leave to refer to the Report of the Committee on Fruits, of the Massachusetts Horticultural Society, June 19, 1830.

'The specimens of "Kecns' Seedling," offered by Mr Haggerston, of the Charlestown Vineyard, exceeded anything of the kind we had ever seen. This new variety, introduced into this country by that enterprising and skilful horticulturist, fully sustained the high character bridge, exhibited Plums, the fruit of suckers taken given of it, in the English publications, and all that is said of it in the Pomological Magazine, where it is de scribed as being 'very large, very good, and very prolific. Taking all the properties of this justly eclehrated strawberry into consideration, it may be said to have no rival. Same of the largest of those exhibited by Mr Haggerston, measured over 51 inches in circumference, and the aver-Royal Kensington,' a good early variety, but the produce upon the stalks of a single plant, set last autumn, name is undoubtedly wrong. Also from the same was exhibited at the Hall by Mr Haggerston, which, on counting, was found to consist of the astonishing number of 157 ripe and green berries. The size and strength of the fruit stalks, its broad, deep green leaves, and the general healthiness and vigor of the plant, are well adapted to the support and protection of the enormous size and quantity of fruit which it yields. The committee on fruits are therefore unanimously of opinion that Mr Haggerston is entitled to the Society's premium for the best strawherries, which is accordingly awarded him; and they further award him a premium of \$5,00 for introducing

By order of the Committee, E. PHINNEY, Chairman.

The first mentioned varieties, may be purchased at the rate of \$1 per hundred; Wilmot's Superb, at \$5 per hundred; Keens' Seedling, at \$15 per hundred, \$2,50 per dozen, or 25 cents per single plant.

Bolivar Calves, Saxony Bucks, and Bremen Geese. For sale, 4 Bull Calves, sired by the celebrated im ported improved Durham short horned bull Boliv AR which stock have produced 36 quarts of milk a day. No 1, dam Grey Brown, half Cælehs and half Galloway. No 2, dam Juno, three fourths Fill Pail. No. 3, dam Ceres her sire Cœlehs, her dam Mr Grav's imported Cow. 4, dam Beauty, half Coelebs and half Galloway. The Calves are beautiful, and their dams all great milkers.

Two imported Saxony Bucks, 2 Yearlings, and 2 Lambs. 3 pairs of Bremen Geese. Inquire of Benjamin Shurtleff, Jr, Chelsea, or at 52 Hanover Street, Boston July 9.

Grass Seeds.

For sale at the Seed Store connected with the New England Farmer, 52 North Mirket street,

A large assortment of Seeds of the various grasses cultivated in New England, viz:

HERDS GRASS: RED TOP: ORCHARD GRASS; TALL MEADOW OATS GRASS; FOWL MEADOW GRASS;

LUCERNE, or FRENCH CLOVER: RED CLOVER:

WHITE HONEYSUCKLE CLOVER; also BUCKWHEAT, FLAX, MILLET, FIELD PEAS, and 14 varieties of the most esteemed FIELD TURNIP SEED, cultivated in Europe and America, all warranted of the first quality, and at the customary market prices.

Aug. 13.

Strawberry Plants.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street-direct from the Brighton Nursery,

A large variety of Strawberry Vines, comprising the Pine Apple, Roseberry, Bath Scarlet, Royal Scarlet, Mulberry, Wood, Chili, &c, at \$1 per hundred. Also Wilmot's Superb, Keens' Imperial, and Keens' Seedling, at a reasonable rate.

Subscribers to the New England Farmer are informed that they can have their volumes neatly half bound and lettered by sending them to this office.

Brighton Market-Monday, August 23.

[Reported for the Chronicle and Patriot.]

At Market this day, 471 Beef Cattle, (inc'u-ling 60 unsold last week) unsold this day about 70; 260 Stores, 12 Cows and Calves, 3603 Sheep and 145 Swine.

Prices-Beef Cattle-From \$3,50 a \$4,50; a small number were taken at \$4,75.

Stores-Sales quite brisk, though at a low price; more than half the number were sold.

Cows and calves-Sales good; we noticed several at \$20, 22, 25, 28.

Sheep and Lambs .- From \$1,33 a 1,84; we noticed several lots taken at \$1,50 a 1,62½; a small number of prime wethers were taken at \$4,25.

Swine-Not much doing; no sales of lots; a few were taken at retail at 44 a 54 cts.

MISCELLANIES.

MAXIMS FOR MARRIED LADIES.

The following maxims, if pursued, will not only make the men in love with marriage, but cause them to be good husbands ;-the first is, to be good yourself. To avoid all thoughts of managing a husband. Never try to deceive or impose on his understanding, nor give him uneasiness; but treat him with affection, sincerity and respect. Remember that husbands, at best, are only men. subject like yourselves to error and frailty. Be not too sanguine, then, before marriage, or promise vourselves happiness without alloy. Should you discover anything in his humor or behaviour not altogether what you expected or wish, pass it over, smooth your own temper, and try to mend his, by attention, cheerfulness, and good nature. Never reproach him with misfortunes, which are the accidents and infirmities of life-a burden which each has engaged to assist the other in supporting, and to which both parties are equally exposedbut instead of murmuring and reflections, divide the sorrows between you; make the best of it, and it will be easier to both .- It is the innate office of the softer sex to soothe the troubles of the other. Resolve every morning to be cheerful all day, and should anything occur to break your resolution, suffer it not to put you out of temper with your husband. Dispute not with him, be the occasion what it may; but much sooner deny yourself the trifle of having your own will, or gaining the better of an argument, than risk a quarrel or create a heart-hurning, which it is impossible to foresee the end of. Implicit submission in a man to his wife, is even disgraceful to both; but implicit submission in the wife, is what she promised at the altar, what the good will revere her for, and what is, in fact, the greatest honor she can receive. Be assured a woman's power, as well as her happiness, has no other foundation than in her husband's esteem and love, which it is in her interest, by all possible means, to preserve and increase. Study, therefore, his temper, and command your own.-Enjoy with him satisfaction, share and soothe his cares, and with the utmost assiduity conceal his infirmities .- . Amer. Farmer.

MARRIAGE,-I would have our young ladies impressed with the idea, that their happiness and respectability does not necessarily result from marriage, but from the cheerful and faithful discharge of the duties before them, in whatever state or station they may be placed .- Ladies' Magazine.

HINTS TO MOTHERS,

Under this head the following extract is published in the Portland Courier. They are valuable and welltimed hints. Let fathers, too, profit by them; for though less with their children than mothers, their example and carriage toward them is equally important.

In my intercourse with mothers, I have noticed particularly their various methods of family government, and the errors to which they are most liable. I believe that most of them may be traced to a want of patience. While the judicious mother is laudably anxious that her children should imbibe right feelings and dispositions, she should recollect that during the first five or six years of their lives, when impressions are always the deepest and most permanent, they are preparing their little code of morals and forming their habits of sit up till midnight, and, as a consequence, to lie action, not so much from her precepts as her in bed in the morning.

example. She should therefore look well to her own conduct, and while she is endeavoring to educate them, let her beware that she neglect not educate them, let her beware that she neglect not beginning indisposition. Abstinence, or reduce herself. Let her examine her own disposition, and diet, timely commenced, will obviate all the risk if that is irritable and impatient, let her take heed from these causes. - Jour. of Health. that it does not betray itself in her intercourse with her children. With them, all should be calmness and consistency; nothing should appear to be the result of passion or caprice. They should always be able to see that their parent has a reason for the course of conduct she pursues. Those parents, who are always complaining of the stubbornness and ill humor of their children, may depend upon it the fault lies more with themselves than they are aware, or would be willing to acknowledge. The mother is perhaps hurried and oppressed with cares of her family, and a child commits some fault, which perhaps at any other time would have only elicited a slight reprimand, but now she rebukes it in terms entirely disproportioned to the offence, and the child becomes angry and turbulent, for he feels as if rebuked, not for doing wrong, but for giving his mother trouble; not for the offence he has committed, but for his mother's want of patience to bear with it; and he consequently sees not his own fault, but that of his parent. For myself, I never detect a fault in a child, or have occasion to punish one, without examining myself with the most scrutinizing severity, lest there should be something in my example to foster the fault I am so anxious to eradicate from my child.'

Unseasonable and Dangerous Practices.

After a long and fatiguing walk, or laborios exercise of any kind, to throw off coat or outter garment, untie cravat, expose the neck and breast, and then sit down at an open window, or door, in a current of air in the evening.

To drink, after such fatigue or exposure, very cold iced water; or to take iced cream, in place of a draught of clear river water, or that which has been exposed some time to the air.

To eat much of any kind of fruit, or any at all, of that which is unripe, especially in the evening; or to suppose that the evil consequences are to be obviated by a glass of wine, or cordial, or spirits

To eat much animal food, or to drink liquors of any kind, under the idea of thereby removing the weakness caused by the great heat of summer.

To give to infants, or children in general, any such detestable compositions as milk punch, wine or porter sangaree, or toddy. This practice ought to be an indictable offence at common law.

To give infants and children any of the various quack medicines, which are recommended as cures for worms, or summer complaints, even though sold for twentyfive cents a bottle. The common causes of disease, from teething, weaning, excess or irregularity in food, extreme heat, &c, are suffieiently destructive without the auxiliaries of patent and quack medicines, old women's cures, or mother's sweet gifts.

To sleep exposed directly to the night air, especially if it be very damp, and much cooler than the air of the day.

To have recourse to morning bitters, drams, or antifogmatics of any description, other than sponging the whole surface of the body with salt water, or using a tepid bath of the same.

To be tempted by the fineness of the evening to

To take the usual meals, when excessively fa tigued from want of sleep, unaccustomed labor, c

Garden Strawberries .- A gentleman in Mary land burns his strawberry vines every spring, b covering the bed about an inch thick with dr straw, and setting fire to it when there is a gentl breeze. He burns one third of his vines at first another third 15 or 20 days later; and the re maining third still later, and thus secures a succes sion of crops. He thinks that vines managed in this way yield a third more in quantity than others

WINES.

There is a point to which temperance societie have not directed their energies. They have me the fiend and almost vanquished him, and as a pre caution have generally prohibited even wine. This is without doubt a proper caution in this country where the wine most consomed, is, if called Claret part logwood, brandy and water, or if called Madeira cider, honey, and brandy. It is like the patent medi cines that are warranted to contain no mercury, bu the old enemy is there under a new form, and the more dangerous because in disguise. It is a well known fact that the coentries producing the greates quantity and variety of wines, are the most distinguished for temperance, and even in the large cities of France or Italy a person intoxicated is an uncommon sight. As men in all ages have used wine, i will probably be impossible to make them forego i now, though it would be advantageous. Our own cider is a stopifying drink, and is often drunk to ex cess .--- Tribune.

Damp Cellars .- Much complaint sometimes ari ses from those whose cellars are damp and moul dy, and the air disagreeable and unhealthy: tha the dampness not unfrequently gets dispersed through all the lower parts of a house, A rem edy is said to have been found by having a fire place in the cellar which is done at a small extra expense when building; by which means, a free and constant circulation of air through the cellar is obtained. The writer has two houses in which there are fireplaces in the cellars, and no complaint is made, as stated above, by those whe occupy them .- Mech, Magazine.

The companion of a gentleman into whose ear a weevil had flown, poured some whiskey into his ear, having seen it recommended in the newspapers, which killed it, and it was drawn forth.

The season gives the very best promise. English Grain of all kinds will be heavy: Hay abundant; Indian Corn somewhat backward, but begins to look up well. Fruit killed in the valley by the late frosts, but the boughs bend under the weight on the hill .- Kecne N. H. Sentinel.

FOR THE NEW ENGLAND FARMER.

DESCRIPTION OF FARMS, AND MODES OF CULTURE.

MR FESSENDEN - Nothing has recently contriber, of Mr E. Phinney's Farm in Lexangton,and also his general management, and improveame publication I also noticed that in due time to insert it, similar description of Mr D. CHANDLER'S Farm. would appear in the New England Farmer, 1 or one of your subscribers must say, that I most ordially approve, and earnestly request that such ind of potices of the management, and improveagnts of our most emment, and intelligent agriulturists, might more frequently be found in your aluable and interesting paper. I think march seful information and instruction might be thus nparted, and as it would be such as would be ounded on the result of actual experiment, it robably would be highly beneficial to all engagd in the sciences-I make these suggestions, Mr Editor, flattering myself that many will bereafter ave the goodness to forward to you for insertion unilar communications-where your engageients may prevent your attending to it personally Yours. J. N. H.

Bennington, Vt. August 24, 1830.

FOR THE NEW FAGGAND FARMER.

CANADA THISTLES.

Mr Fessenger-In the summer of 1829 I disovered a patch of Canada thistles in my pasture f about twelve feet square. I cut them repeat-Hy, sprinkled salt on them, but they looked flourhing this season. The first of July, 1830, I careilly dug round each stem, about two inches deep, it about one gill of salt round each stem, and overed the salt with dirt, and pressed it down. about a week the thistles were all dead, and have never seen any signs of them since. If is method is not the cheapest way to kill Canla thistles, I presume it is the surest, T. C.

Yours, &c. Windham co. Con., .lug. 20.

FOR THE NEW ENGLAND FARMER.

GREAT PRODUCE FROM BEES. Mr J. B. Russell-It seems to have become fashionable of late, as well as landable, to conunicate any good result, from the culture and anagement of Bees, and being a subscriber and mirer of your highly valuable paper, I take the ceess in this branch of rural economy,

In December last, I purchased of Mr Beard of harlestown, two hives of bees, from which I ve received six swarms, all bived without my fficulty, in Beard's new constructed Hive, alough an entire stranger in the business-tak is r Thacher's Treatise for my guide.

From the first swarm, which came off on to

feetly white and limpid, weighing net 31 lbs, 3 the Passe Colmar of correct authority, and thence ounces, leaving the lower part of the live entire- I inferred that fall the Passe Colmar trees not ly filled, and extending down below the bottom of identical with the Napoleon there so called were the hive, having kept the floor let down during also wrong, and any one who will examine the the season, as recommended by Mrs Griffith,

ited more to my edification, than the statistic ac- later swarms, leaving the lower part of the hives marks just referred to, accidentally omitted the count in vol. ix. No. 3, of the New England Farm-nearly filled, which remains for their winter pro- word not; which impairs the meaning,

> Yours respectfully, Bristol, R.I. Aug. 27. JOHN D'WOLF 2d.

PASSE COLMAR AND NAPOLEON PEARS.

THOMAS G. FESSENDEN, ESQ.-DEAR SIR-Had I supposed that there existed a possibility of difference in opinion between the enlightened writer who signs himself in your last

paper 'A Farmer,' and dates his letter 'Roxbury,' and myself, as to the subject matter of my communication relative to the Passe Colmar and Napoleon pears,' I should most certainly have connot to be contested or doubted .- I arrayed myself against no man's opinions nor intended offence to any one, but simply to explain an inadvertence-M, position however being contested, I will now proceed to show, that if I was misled, it did not ' such confident language on a topic' which I ' did net understand,' and whether my 'very confident assertion is founded entirely and wholly in error and in very hasty examination,'

In the spring of 1825 I received from a Boston ed -In November of 1827 I received another spring I received grafts from two different persons at Boston all these bearing the same title-In the summer of 1820, I saw in several gardens near Beston, trees so called and said to be engrafted from the original, and in the spring of 1830, I received grafts from several persons under the same nane. Each and all of these trees and grafts have proved to be identically the Passe Colmar pea;, and in their transmission two persons referred to the original tree as the source whence the grafis were obtained-at a number of those period. I received from the same persons trees and grafts of the Passe Colmar (so called) and these perty of transmitting to you an account of my were in no case similar to those called Napoleon, and consequently were themselves inaccurate. This point I deem important, as it evinces that the error probably originated from a transposition of labels or sorts.

It will be perceived by these remarks that one nference drawn from my communication is conrary to its intent-I never meant to assert 'that the two trees cultivated at Boston as the Napoleon st day of May, I have taken out to the firs: of and Passe Colmar pears were identical, but that and the Capiaumont as the Cassiomont, a slight

August, eight boxes of pure honey and wax per- the one there called 'Napoleou' was identically passage will see that I was right.-The writer to I have likewise taken several boxes from the whom I am replying, in his quotation of the re-

Finding my impressions that an error existed, confirmed at each subsequent examination of the trees and grafts received during five years, and that all called Napoleon were the Passe Colmar, I still felt diffident as to hazarding my opinion unconfirmed by others, and evinced that I equally appreciated the intelligence of Bostonians with the gentleman I am replying to, by addressing letters to two of the most accurate pomologists in its immediate vicinity. To them I stated my impressions on the subject, and asked them to examine critically and advise if I were right-They both fully confirmed my opinion. Under date of 10th of last month one of them remarks thus 'my Nazoleon came from Mr L.,* and he still thinks it correct, but great errors have been comsulted his opinion before venturing mine. But, sir, mitted somewhere; my tree has fruit on it : I had so repeated, and so forcible have been the proofs the Passe Colmar from Mr Parmentier; it is no presented to me that I deemed the matter one doubt the same with the one we call Napoleon; I thought so for some time and told W. K.* of it, but I said to myself that Mr Parmentier had made a mistake, and Mr L. must be right; but last year I got a grak of Mr J. B. Russell, of the Napoleon, which is unife Mr Lis, and this spring I got the originale with myself, and that the assertions made Passe Colmar Epineux from B. & W., * which were supported by the evidence, after which it will agrees with Mr L's Napoleon and Parmentier's remain for others to decide whether I advanced Passe Colmar, and I think with the Pomological Magazine. Mr L.'s Passe Colmar is very different, and resembles in leaf the pear sent by you as d'Aremberg-The Marie Louise exhibited at the Hall last autumn was different from the figure in the Pomological Magazine, No. 122.- I should gortleman the first Napoleon pear (then so call- say your Napoleon is wrong and you are right.'-So much for this. The other gentleman writes as tree from Boston under the same name-In April, follows funder date of 8th of last month,- The 1829, I received three trees more, and the same Napoleon I sent you is the identical same I received from Mr L. * I mentioned to you once that being there last summer, and on his pointing out the original tree, I stood some time looking at it; the tree is very peculiar, he has noticed this; the wood waving and twisting; this sort of all others I know for certainty mine to be the same he calls so; yet that no mistake has ever arisen since sent him from Mr K, by transposing, we have reason to conclude, for he says the fruit so far as produced is identically the same."

In addition to the foregoing most conclusive documents, I will hereafter, if necessary, refer to the trees themselves that I have seen in different collections. I think however it will now be conceded that if I have not examined the original tree, my information nevertheless flows from near the fountain, and I also have been taught to suppose that a tree grafted from the original partook of the parental properties. As further proofs that errors in names may arise even among the most correct and intelligent, the Forelle pear, if I mistake not, was first promulgated as the 'Florello,'

take, and were I disposed I might touch on similar instances and even on transpositions.

In concluding my remarks I have to state that pears the most unlike possible, my communication was not intended for those who had the Pornological Magazine before them, and could consequently correct the error if it existed, but for such as did not possess that advantage .-I did not designate or imply that the error originated or existed with any particular person,-And even if the proprietor of the original tree (who is similar, the Mr L. referred to, and the same gentleman to whom I am replying) has been invarially correct, a 'synonyme,' without seeing and testing the fauit. still if by some fatality, many others have been in the wrong, my arguments as to the existence of are two sorts of St Germain pear, which are so the error are equally conclusive, and I now flatter alike in foliage, wood, and flower, that the most acam replying, will perhaps allow that the examination' which commenced five years ago, has not comparatively miserable—the other a winter pear been so 'very hasty,' and that my 'very confident assertion' was not 'founded entirely and vholly in error,' when it has many of his most irrelligent neighbors to support and confirm it; and, lastly, I have to reiterate that my communication was not intended to censure or to wound the feelings of fruit. any one, and least of all him who is well known to be the 'Roxbury Farmer.'

Very respectfully,

WM ROBERT PRINCE. Linnman Botanic Garden, !

August 21, 1820

P. S. Presaming that the writers of the two letters referred to would not object to my mentioning their names to you, I do so in a private letter accompanying this, and you can estimate the correctness of their authority.

NAPOLEON AND PASSE COLMAR PEARS. Mr. Fessenden-Win. R. Prince, Esq. of New York, having made a publication, in which he denies that the pear sent to mo by the President of the London Horticultural Society, as the Napoleon, is really that pear, and having with equal confidence affirmed, that the pear so called by Mr Knight is the Passe Colmar of the European gardens, 1 feel it my duty to Mr Knight and the public to represent the facts. The Passe Colmar is a winter pear, yellow within and without ; the Napoleon favor of his Napoleon being correct, that I scarcea fall pear, wholly green, with white flesh. If Mr by deem it needful to add, that I have raised and cat-Prince's authority is good in relation to the Napo-len it, and compared it most carefully with a drawleon, which he never saw, it is equally good for the ling of it, and I could not discern the least differ-Passe Colmar, which he also never saw. The Napoleon of Mr Knight has repeatedly borne fruit with us, and it ripens in October as the Napoleon of Europe does. The Passe Colmar ripens with us in December and January as it does in Europe. Mr Prince is therefore wholly wrong, in stating as the result of most careful deliberation, so careful as to remove all doubts, that the Napoleon of Mr Knight is the true Passe Colmar of European authers. Being then so mistaken as to one point, have we any reason to think his opinion of any weight on the other?

But Mr Prince's errors will be of public service is no more like a Passe Colmar, than a Jargonelle Society as the Mela Carla, supposed the best apple Secretary; Robert Manning, Benjamin Balch, is like a Pound pear, and yet this experienced in the world.'

difference in the writing probably causing the mis- man, an author on pomological subjects, was so

I should not have made these remarks but for their very important practical bearing-nei ber mologist ever relied on the wood, leaves, flowers

They would have rejected the idea of settling Miffer, Duhamel, and Kuight agree, that there and excellent. Knight says they are so difficult to distinguish, that much the greater number sold

Nothing can be more injurious to us (novices as as we are) than to rely on anything short of the

at the murseries in England are spurious.

Let me now say one word as to Mr Knight's fruit. I have more confidence in their correctness, than in any fruits ever imported, even from the London Horticultural Society itself. I have known mistakes from that source. The reasons of my confidence are,-

- 1. That Mr Knight, having been requested by me to name a nursery-man on whom I could rely, replied, that he feared there was too much confusion in all the large nurseries, owing to the number of laborers, but he would cheerfully send me fruits which he had raised, and tasted. That it would be to him a source of pride and pleasure to be the first to send these then new fruits to America.
- 2. Mr Knight described all the first fruit he seit as of his own knowledge; indeed it must have been so, as at that time no written or printed descriptions of them existed.
- 3. They were all labelled in his own hand wri-
- 4. Eight sorts have borne, and no one las differed from his description,

These facts furnish so strong a presumption in

I pledge myself, as a friend of Horticulture and correctness in the nomenclature of fruits, to make known to those who have taken the Knight fuits on my recommendation, as soon as I am satisfied of any error in Mr Knight's name. I hold miself freely open to conviction.

In pursuance of this resolution I must say that I am convinced from actual inspection of the fruit grown by Gorbam Parsons, Esq. that the Mela Carla apple sent by Mr Knight is not the true Mela Carla of Italy.

But this, so far from being any impeachment of -they will show the danger of trusting to de- Mr Knight's accuracy, affords a strong proof of his scription; and to the leaves, and wood, without scrupulous caution. It was the only fruit out of seeing the fruit. This case proves, that a 38 he has sent, which he explicitly disclaimed man may mistake one fruit for another to which any personal acquaintance with. His words were Prosecution of Trespassers of Orchards, &c. E. it hears no resemblance. There can never be a va budded tree which shot two branches the last | Hersy Derby, President; Daniel Sage, Vice Presistronger case than the present. Our Napoleon scason, of an apple, which came to the Horticultural

That he should have taken this precaution, and for deceived by trusting to figures, and the exam-that this alone out of all that have borne should be ination of leaves and wood, as to confound two wrong, is much in favor of his accuracy, and wa-

I have a high respect for Mr Prince, for his zeal, his acquisitions, his ambition to be useful; but a Duhamel, Miller, nor Knight, nor any other po- respect for evidence and correct principles is superior to the regard due to his abilities. The examand seeds for any other purpose but as aids and ple of naming a fruit without seeing it-of boldly assistances in discriminating fruits, which are very putting down 'Boston Napoleon' as a synonyme to the Passe Coltaar without ever seeing either fruit, is not to be praised, and may lead us into a confusion, if possible, worse confounded, than that from which we have been striving to emerge,

JOHN LOWELL,

P. S. I have thought this explanation (though myself that even the writer himself to whom I curate physiologist cannot possibly distinguish long) due to the thousand persons who have on Mr them, yet the fruit of one ripens in autumn, and is Knight's authority taken from me grafts of his

Roxbury, Aug. 27, 1830.

CONNECTICUT RIVER PLUMS.

Mr J. B Russell-

DEAR SIR-I take the liberty of sending you a few samples of Plums from various gardens in this town. They are not sent with the expectation of competing successfully with eminent horticulturists in the vicinity of Boston, but to endeavor to convince you, that although the science here is yet in its infancy, some little attention is paid to it. We think our soil and situation remarkably favorable for the production of fruits generally, and you need not be disappointed if in a few years you should see samples from the banks of the Connecticut that will be far from inferior.

The upper sample in the box which is not packed is from niv own gardens, and the others are from the gardens of HENRY DWIGHT, Esq., and other gentlemen, whose names are on the papers spread over them. These are not selected from the trees (which were very heavily laden with the fruit,) but were taken promiscously. The variagated Plum, from Maj, E. EDWARDS, was from a seed (or scion, I am not certain which) and was brought from the city of Amsterdam to Whitesborough in the state of New York a few years since; and I do not know the proper name for it. We call it the Lombard Plum, from the circumstance of Mr Lombard of this town having brought it from Whitesborough,

Yours very respectfully, Springfield, Aug. 26. CHARLES STEARNS.

P. S. I received the cherry and pear buds, that Gen. Dearborn was so kind as to forward through you, but the buds were so much wilted that I fear they will not live; they are however all inserted. The truth is, there cannot be any profitable communication between your city and the Connecticut River until the Rail Road is built which we all trust will take place sooner or later.

The box containing the above Plums reached us with the fruit generally in good order. The plums, which were of several of the finest varieties, exceeded anything of the sort we have seen in our market, this season. Some of them meastred 6 inches in circumference.

Officers of the Salem Society for the Detection and lent : Samuel Webb, Treasurer : Eben Hathorne, Itilip Chase, Directors.

^{*} These names are in full in the original letters.

From the Pawtucket Chromicie.

POISONOUS CHEESE.

Ma Painter—Having seen in one of the Boston papers an article headed poisoning with cheese, I send you the following:

That some cheese possesses emetic properties, was professionally called to a respectable farmer's amily in the county of Bristol; soon after my arival the gentleman informed me that he had sent theese to market which had made many persons omit, and as he was identified, public suspicion ather rested on him. This opinion I found was fixed,-that some unfriendly hand had conveyed Emetic Tartar to the milk prior to its being changed to curd. In a short time I called on him again, and at his request we walked to the cow-pasture, or the purpose of viewing the cows. As soon as entered the field, I saw Lobelia inflata, (Indian obacco) in great alumdance. I was very careful n my examination of it, the grass being very hick set and high, nearly equal to common mowng lands. I opened it in many places for the ourpose of detecting the lobelia, which I found in secluded situation among the grass. Where he cows had eaten the grass, the emetic weed ad been apparently avoided by them, but I oberved numerous plants partly bitten off, and othrs removed nearly to the ground. It appeared hat the cows must have eaten much of the laelia where the grass was thickest. After a careal investigation, I informed the gentleman, that ndian tobacco was the cause of the emetic effects f his cheese. I pointed out the plant, informed im that I prescribed it in asthma, and other disases; that it was a powerful agent, and that two r three of its capsules would vomit an adult. he farmer observed he was perfectly convinced f the cause, and should give himself no further onble about it, as he had other pasture lands there the emetic weed did not exist. Since that me no complaint of his cheese has come to my nowledge. In pastures where the grass is thin, ows can more easily avoid the lobelia than where

I found no hyoscyamus niger, phytolacca decanria, stramonium, or any other poisonous plant the enclosure.

Cure for the Whooping Cough.—Take one gill f new rum—one gill of linseed oil—and one gill f Honey—mix them together—administer one ble spoonful every time the patient coughs.

A gentleman informs us that this prescription ill effect a cure in a few days. He has admintered it to his children, and known it used by thers with perfect success. It is not disagreeable to the taste.

A physician can be inquired of as to the safety f the ingredients and the combination, if desired. -Palladium.

The silk establishment begun by Mr d'Homerue, in Philadelphia, is said to be doing even beter than was anticipated. All that is wanting is lenty of cocoons. Reclers are learning the art accessfully, and a good deal of beautiful silk has een already manufactured. No doubt is enterined of the complete success of this important aterprise. The atmosphere and the waters of its vicinity appear to be admirably adapted for . The present season will prove by actual reducts, of which it is expected the public will be

That some cheesa possesses emetic properties, there is no doubt. More than twenty years ago I was professionally called to a respectable farmer's ation, prevent the fatal effect of corrosive sublimate taken into the stomach. It should be taken in as large quantities as the patient can drink, and some unfact which had made many persons some as may be. The recent melancholy death of Mr Keep at Baltimore, from drinking this poisable taken rested on him. This opinion I found was such accidents are happening but too often, the Emetic Tartar to the milk prior to its being change.

The Wm Byrnes has brought out the celebrated stud horse Leviathan. He belonged to the late King of England, from whom the animal was purchased by Lord Chesterfield. Leviathan is between 6 and 7 years old, about sixteen and a half hands high, is of chesnut or sorrel color, and is said to resemble in a great degree our celebrated horse Eclipse. He was purchased from Earl Chesterfield for James Jackson, Esq., of Alabama, and is under the charge of Mr George A. Wyllie, of Virginia. Leviathan is well known as a celebrated racer.—Mer. Adv.

From the New York Farmer.

TRANSPLANTING TREES.

It is a rule among gardeners, that herbaceous plants may be successfully removed at any time during summer; but that trees or shrubs should only be transplanted in spring or autumn. By some writers indeed we are directed to suspend this operation on fruit trees, 'till the trees have shed their leaves.'

No doubt there is a great difference in the climate as well as in the soil of the middle and eastern States; and the best season for transplanting in one place will not be the best in another. But I am partial to antumnal planting, and in this oorthern part of the 43d degree of latitude never hesitate to remove our common fruit trees after the close of the 9th month (Septenber.) A more general rule might be given, which would serve for an extensive region, to wit: it is safe to transplant trees or shrubs as soon as the summer heat is over, and the fall rains have wet the ground.

To know what may be done in this line with a reasonable prospect of success, is important to borticulturists on their travels, where opportunities for procuring desirable plants may not recur. Permit me therefore to detail some of my own experience, and it will appear that the ordinary rules may be sometimes disregarded.

In the early part of the sixth month (June) 1827, I brought Juniperus prostrata 150 miles, planted it on the north side of a board fence with perfect success though the new leaves were expanded.

On the 4th of the ninth (Sept.) 1828, I was presented with a pear tree (a rare variety,) brought it 340 miles, and could not discover it injured by that untimely removal.

On the 20th of the eighth month (August) 1829, I procured ilex canadensis from a swamp at the distance of 20 miles. Bog moss was plentifully inlaid round the roots, when it was planted in my garden, and those shrubs are now growing.

On the 21st of the ninth month (Sept.) 1829, I removed two grafted Cherry trees in full leaf, and

their vegetation is now vigorous and rapid. At the same time, I transplanted three of the malvoise vine. A few weeks after, or taking up one of those for a friend, I found a new root $2\frac{1}{2}$ inches long. Both are now growing well.

In the four last cases it should be remarked that the season was wet.

D. T.

Mulional Character.—A foreign author gives the following portrait of the American woman: She is generally graceful in her figure, slow in her gait, mild in her looks, proud in her mien, engaging in her conversation, delicate in her expressions, quick at blushing, chaste in her thoughts, innocent in her manners, improving on aequaintance, generous to a fault, ready to weep with one in distress, solicitous for the poor, sincerely religious, eminently humane, constant in her attachment, a fond wife, a tender mother, tenacious of her word, jealous of her honor, prudent in her conduct, circumspect, and—cannot keep a secret.

Charles Carroll, is the only one of the signers of the Declaration of Independence, who survives to the present time. James Malison, the only one of the Convention in 1789, which formed the Federal Constitution. Paine Wingate, the only one of the first Senators of the United States, when the Federal Government was organized at New York, April 1789—and Eghert Benson, and Mr Madison, the only two Representatives in the first Congress, at the same period, who are living. Mr Madison was also a member of the old Congress in 1781.

General Putnam—After one of those skirmishes in which the Americans had been successful, an English officer was left dangeronsly wounded on the field of battle. Gen. Putnam, who had been bred a carpenter, threw off his regimentals, and constructed a cradle in which the wounded officer was conveyed with ease to the hospital. When Putnam heard of his recovery, and that it was owing to his humane care, without which he must have bled to death, he exclaimed, 'then I glory more in being bred a carpenter than if I had been born a prince.'

Carter and Hendee have now for sale a book recently published at N. York, called the Dysaperite's Montron. It contains explanations of the nature, causes, and cure of that troublesome disorder, under all its various forms. Doctor S. W. Avery, the author, states that he has himself suffered severely from dyspepsia; that a short readence in Europe cured him; and that on his return his old enemy revisited him. This convinced him that the sual American mode of living would in a short time place him where he was when he left the country. The object of this clever little book is similar to that of the Journal of Health. We look upon it as peculiarly magnanimous in physicians thus to enlighten the public at the expense of dimnishing their own practice.

We make the following extract, because we think the subject cannot be too much urged upon our counflywomen. 'A sort of in-door existence may unfortunately be said to be a national characteristic of our married ladies; the habit of going out daily for the sake of exercise alone, so universal in other civilized countries, is scarcely known among them. The consequence is, most of them are blanched by seclusion from the fresh air, nature segrent restorative; and very few have much of the rosy tint of health, or are entirely exempt from some of the symptoms of indigestion. The frame is delicate and feeble, the system irritable, and its functions easily deranged by trifling causes; and the mind, morbidly sensitive; not unfrequently impairing the health by its immoderate emotions. But the evil does not stop here; for the offemotions. But the evil does not stop here; for the off-spring will be certain to inherit more or less of the mother's constitution and proneness to particular diseases. We hear a great deal about hereditary gout, consumption, madness, &c., but there are undoubtedly many other diseases, though not at all suspected, that are quite as much so as they.

shire, Franklin, Hampden Agricultural Society. By FESTI'S FOSTER.

· The general principles, necessary to be observed by the agriculturist, are few and simple. It is an established law of nature that death sustains life. Some species of animals are supported by the death of others, and some by the destruction of vegetables. Animals, which have been found most useful to man, are wholly of the latter kind. The first attention of the farmer, therefore, must be directed to the production of such vegetables as contribute to the support of man and such animals as he has selected for his use. In the production of vegetables, the same law of nature prevails-death is necessary to life. You must, therefore, seek that dark, loamy soil, which has been formed by the decay of vegetables for a series of years, and as you exhaust it by repeated crops, add either animal or vegetable decomposition, and like the fabled Phenix, one crop will arise from the askes of another. Excepting a few tender and delicate plants, manures are most efficacious when applied in a state of fermentation. They communicate a slight degree of warmth and action to the adjacent soil, salutary and even necessary to vegetation. Any animal or vegetable substances, compacted in a mass and imbibing a moderate degree of moisture, will soon pass into a state of fermentation, by which they are decomposed, and fitted to produce another crop. Hence every farmer may manufacture composts to almost any extent. The value of manure is different on different soils. It is p.oductive on all, and on some indispensable. Land. once brought into a state of high cultivation, by returning the proceeds of its crops, will not degenerate. Sterile lands, and such as have been exhausted or neglected, may be made productive in a few years by compost and the plough.

'Where different and opposite soils lie contignous, much benefit may be derived by admixtion. A sandy or gravelly soil may be greatly improved by a covering of loam, mad, or clay. On the contrary, cold, wet, muddy land will be greatly meliorated by a coat of sand or gravel, A soil warm and dry, especially if sloping, may be made highly productive by irrigation. If accompanied by an occasional top dressing of barn manures, the farmer will be well repaid. In a mountainous region, like some parts of the territory within the limits of your society, where precipitous streams abound and whole farms lie on a declivity, I am persuaded great advantages might be derived from this use of water. A few days labor would add some tons of fine hay to your annual income, To the agriculturist this must be considered a staple article. It is the support of your animals, and the means of enriching your arable lands, and gathering from thence a golden harvest.

'Upon the culture of plants, I have time to say but a word, and that is, treat them not with neglect. They require your friendly visits, and the repeated application of the hoe. The garden will demand your daily attention. This may be a pleasant resort, when you have borne the heat interest, as well as the dictates of humanity, reand burden of the day, and the evening tide invites to meditation. There you may breathe the fragrant air, succor the young plants emerging with lenity and kindness. from the earth, and watch their progress through all their changing forms,

'The cultivation of trees is a subject to which, I

Extracts from an address delivered before the Hamp-farmer, an orchard of choice fruit, well fenced, arts and sciences, is progressive, and must never the forest.

> 'There is one species of trees entitled to your particular regard. It is the sugar maple. This, flourishing on almost any soil, yields to none in cleanliness and beauty, is excellent for fuel, and furnishes sugar little inferior to that of cane. One hundred of these extended on the margin of your fields, or set in the form of an orchard, would afford an ample supply of sugar and molasses for ball a century or more, and when they began to decay, reward you with fifty or an hundred cords of the best fire-wood. The expense of transplanting them will be but trifling, their injury to the land, if any, inconsiderable, and a few years will give to them great beauty and value.

'The value of the locust and of the mulberry deserve particular notice, but they are believed to be duly appreciated by your Society.

'In the management of your various animals, having selected the best bloods, you have only to provide for them warm, dry, and commodious shelters, and deal out to them sweet and wholesome fodder, and pure, clean water. Neatacss and cleanliness in this department will contribute much to the health, growth, and corpulency of your stock. A slattern in the house is not more disgusting and unprofitable, than a sloven is the barn. In the treatment of those patient and docile animals which perform your labor, let me erave your mercy. Neither suffer them to moan with hunger or thirst, nor to be loaded or driven beyond their strength. A mild and generous usage will secure their attachment, excite their courage and resolution, and dispose them to volunteer their most vigorous efforts in your service. Your quire that you abstain from all ernelty and abuse. and that your dominion over them be tempered

'To carry into effect the objects of your association, and give to your occupation all the imtention. Not only would I recommend to every much vigorous bodily effort. Agriculture, like all

I fuel and lumber will diminish your population- have said, that heretofore the sciences held no that the expenses will absorb a great portion of fellowship with agriculture. A better day has bethe income of your fertile and well cultivated gun to dawn upon that long neglected occupations. farms, and your splendid villages and temples fall Men of genius and learning have devoted their to decay. The time seems to have arrived when, talents to lighten the burdens of the laborer, and instead of cularging our fields, we must better give success to his efforts. As the powers of naimprove them; instead of making strip and waste ture begin to be developed, and its laws are better in our woodlands, we must cut sparingly; instead understood, difficulties diminish and experiments of feeding or cutting down the underwood and succeed. The sciences have already done much shoots, we must carefully preserve them. Great-to aid your cause, and may be expected to do still er economy must be adopted in cooking our food more. A new era has commenced, in no longer and warming our houses. The ail-devouring confining science to the cell of the monk, and the chimnies of our ancestors must give place to the chamber of the philosopher, but in communicastove and the furnace. Our houses must be made ting it to the world at large, and applying it to usea better defence against the cold, and their ma-|ful and practical purposes. The discoveries of terials must be taken from the earth rather than the geologist, and the experiments of the chemist are spread before you, through the agency of the press. Much mutual benefit may also be expected from your Society and similar associations. They emphatically mark the spirit of the age, as distinct from that of any former period. Other nations have had their festivals and their fairs. The Olympic games of Greece, and the gladiatorial exlabitions of Rome characterize the age and ruling passion of each of those great empires, which in succession gave law to the world. But when, or where has jublic attention been excited and directed to the interest of agriculture and the mechanic arts? When have men of wealth, and science, and influence, taken such a deep interest in the welfare of the laboring part of the comminity? When was information upon these subjects so widely diffused and so eagerly sought? These signs of the times indicate that a better state of things is to be expected-that causes are in operation which, if continued, will effect a mighty revolution. The united efforts of the great mass of intelligence cannot be fruitless. By repeated experiments and careful observations, from year to year, something will be gained. Whatever discoveries or improvements are made by one, will become the property of all, and never: he lost.

Agriculture and manufactures are not insulated interests. They are intimately connected with other arts and occupations, with the sciences. and the laws and policy of our own country and of foreign nations. The prosperity of the agriculturist depends not prerely upon the quantity and quality of his produce, but upon the readiness, certainty, facility, and advantage with which he can vend the surplus, or exchange it for such articles as he may need. The same doctrine is true in its application to the manufacturer. It is in vain that he produces the best wares, unless they can find a market; and the easier and cheaper they can be conveyed, the greater will be his' profit. Whetever, therefore, tends to furnish a provements of which it is susceptible, will require sure and steady market, or to diminish the expenthink, I may with great propriety invite your at- the unremitted energies of your mind, as well as see and risk of transportation, or to reduce the price of articles to be received in exchange, is to

e farmer and manufacturer a direct and positive encfit. In this view the construction of rail eads and canals through an extensive inland ountry, and improving the navigation of rivers, pening a free trade with such nations as will puriase our produce and manufactures, or in exrange, supply us with such articles as we may ant, prohibiting or imposing duties on such imortations as come in direct competition with the roduce of our farms and the wares of our workops,-are subjects in which the interest of the rmer and the mechanic are deeply involved. A gard to your interest, therefore, requires that our views be extended beyond the cultivation of e soil and the increase of your flocks, Your ir state and national legislatures. The opinion sound, intelligent, and practical farmers, is enled to great consideration; and I am happy to y, that the time has come when gentlemen of cry profession are disposed to treat it with refar as legislative aid can advance your interests, ate execution.-Literary Gazette. ou may expect the co-operation of a wise and ttriotic legislature.

'In times like the present, of general depreson in every branch of industry, you must expect participate with your fellow-citizens, Econoy, at all times commendable, now becomes an perious duty. If the products of your labor n find no market abroad, let them, at least, supv your wants at home. To effect this, I place cat reliance on the industry and ingennity of ur virtuous wives and daughters. They will rtail your shop bills by furnishing many articles apparel of their own manufacture. Like the od wife described by Solomon, they "will seek ool and flax, and work willingly with their nds. They will lay their hands to the spindle, d their right bands hold of the distaff; their ndle goeth not out by night." Such merchanze is better than that brought from afar-such dustry is above rubies,

'You will not deem me to have surpassed the ovince assigned me, when I recommend to you e exercise of that influence and authority which e vested in an employer over those in his serce, in suppressing all lewdness, profanity, ininperance, lying, gaming, pilfering, and whater is opposed to good morals, and a decent d orderly behaviour. Your interest, your selfspect, and your duty to your domestics and to our country, demand this at your hands. When large portion of our population shall become

debased and degraded as the great mass of e people in the Eastern hemisphere, our elecons will be a farce, and our political edifice will Il and bury us in its ruins. He, therefore, who tempts to reclaim some who begin to go astray. prevent the fall of others, and to inspire all ith a due sense of the value of character, and elevate them to a decent standing in society, erforms the best of charities to the individuals, nd is a public benefactor.

While we regard the moral deportment and elfare of others, may we not neglect our own hile we till the ground from which we were ken, and of which we must return, let, our treases be deposited in that "better country," where ws "the river of life," where stands " the tree life," and where "the light of the sun and of e moon" will be extinguished in the brighter dender of Gop's eternal day.'

Improvement of the breed of Horses in France .- of some landable purpose or object, which keeps The Duke de Guiche has lately published a very awake and enlivens all our powers. Our happiinteresting paper on the improvement of the breed ness consists in the pursuit, much more than in of horses, in which he proposes to confine them the attainment, of any temporal good. Rest is to two distinct classes; one, of light horses, to be agreeable; but it is only from preceding labors obtained by crossing with English horses and Ara-that rest acquires its true relish. When the mind bian mares, which class would include race-horses, cavalry-horses, coach-horses, and all those employed in post work and light agriculture. In but the pleasures which it proposed to obtain from the second class be includes wagon-horses, horses for heavy agricultural work, and all horses for slow and heavy draught. He proposes to establish for each of the two classes a number of haras, (studs,) proportioned to the extent of the be a pleasing enjoyment of themselves in wealth, respective demand. The Duke advances many in activity and profound repose; where they exnice must be heard, and your influence felt in sensible arguments in favor of his plan, and pected to find an elysium they have found nothproves that, as the soil and climate of France ing but a dreary and comfortless waste. Their are decidedly favorable to the breeding of horses days have dragged on with uniform languor: there is no reason why, with judicious crossing, they should not be quite as good as those of Great Britain. The plan has been taken up ect. By continuing to merit the esteem of your warmly by the French government, and it is exllow-citizens, you will not fail to receive it; and pected that it will be carried into almost immedi-

> states, in his history of North Carolina, that the planting of Rice was commenced in this country, in the year 1693, as follows: - A brig from Madagascar, on her way to England, came to anchor off Sullivan's Island .- Thomas Smith, going on board, received from the Captain a bag of seed Rice, with information of its culture in the East, its suitableness for food, and its incredible increase .- Smith divided the seed among his friends, and an experiment being made in different soils, the success surpassed the expectation the Captain had excited. Thus, from this small beginning, accidentally occurring, arose the staple commodity of Carolina, which soon became the chief support of the colony; and the great source of its opulence,-Ral. Reg.

New England .- The cry of decline is one of the causes of decline. Many hear this cry and hearing no answer to it, take it to be true. We, on the other hand, take the liberty to assert, that although nominal prices are not as great as they once were, and although there are more stores and houses than are wanted, the state of things in New England has at no time been sounder and healthier than it is at this day. What is the condition of our coasting trade ?- What is the condition of the manufactories that are managed with skill and economy ?--What is the condition of the agricultural interest of New England? what portion of the earth is one to go, to find more general comfort, and natural thrift, than in New England? but Commerce is depressed. Where, in the world, at this moment, is it not depressed, compared with what it has been, under different circumstances of the world .- Bost. Dai. Adv.

The following is extracted from the New Monthly and London Magazine of last July:

'Silk .- The cultivation of the Mulberry tree and the production of silk are increasing in North America, with great rapidity. A very interesting volume of essays on the subject, has recently been published in Philadelphia.

Long Life,-Ile who knows not what it is to labor, knows not what it is to enjoy. The felicity of human life depends on the regular prosecution

is suffered to remain in continued inaction, all its powers decay. It soon languishes and sickensrest, end in tediousness and insipidity. To this, let that miserable set of men bear witness, who after spending a great part of their life in active industry have retired to what they fancied was to with the melancholy remembrance, often returning, of the cheerful hours they passed, when they were engaged, in the honest business and labors of the world.

Stall Feeding .- One of the quickest and most certain methods of fattening eattle in the stall is Introduction of Rice into America .- Martin by feeding with bran and linsced oil mixed, the proportion two pecks of bran a day divided into three feeds; and half a pint of oil to each feed, mixed well for small cattle; the proportion to be increased for large, -Lambert's Treatise on Farming.

> Breeding Live Stock .- Avoid consanguinity and breeding from the same family, or what is commonly termed breeding in-and-in, as such will, if persevered in prove highly injurious; you must therefore procure your males from those having a similar breed but of different blood from your own. A skilful breeder will not use the tuns bred on his own farm, although superior to any he can procure; and those possessed of the best stock, both of the short and long horned cattle, keep two or three separate lines of blood to avoid consanguinity; but a crossing with different breeds will generally disappoint when prolonged in the line, each breed in its kind should be kept distinct. -- Ibid.

Water drinking among the Arabs .- Dr Madden, in his travels in Egypt, remarks that the Arabs in journeying over their deserts, beneath a burning sun, use but little water during the day, but take copious draughts at night fall. They state that drinking in the heat of the day creates thirst. while the more water they use at night, the less will be their desire for it on the morrow. The Arabs gave this caution to the traveller, he practised it, and experienced the benefit. Among the many preventives from the injurious effects of drinking cold water in the time of excessive heat, this Arabian custom is worth relating.

In France bread has been made of wheat straw chopped and ground. It is said to be found nutritions, and must be better than the bark bread of Sweden. It is, probably, a certain cure for the dyspepsia.

To preserve Cheese from Mites .- Red pepper so called is a complete antidote against flies impregnating cheese, so as to produce maggets. Take one and put it into a delicate piece of linen, moisten it with a little fresh butter, and rub your cheese frequently. It not only gives a very fine color to your cheese, but is so pungent that no fly will touch it .- Hass. Agr. Rep.

ven buggand by

BOSTON, FRIDAY, SEPTEMBER 3, 1830.

FINE GRAPES.

We have been much gratified by a view-of bowers of grape vines, skilfully cultivated by Mr DAVID FOSDICK of Charlestown, Mass. The vines are trained to espalier-rails, which are arched over head and the clusters of grapes, mostly suspended from the horizontal part of the railing, are among the finest we have ever observed. Mr Fosdick's modes of forming and manuring his soil and training and pruning his vines appear to us very judicious as well as successful, and might afford profitable subjects of contemplation to those who are about commencing the culture of this wholesome and delicious fruit.

MIDDLESEX CATTLE SHOW.

We learn that extensive arrangements are making for the approaching cattle show and exhibition of manufactures at Concord, Mass., by the Middlesex Society of Husbandmen and Manufactures : and we are happy to be able to state that the annual address will be delivered by ELIAS PHINNEY, Esq. of Lexington, from whose practical as well as theoretical knowledge of the art and science of Agriculture, much may be anticipated, which will prove a valuable contribution to the best interests of New England Cultivators.

NEW YORK HORTICULTURAL FESTIVAL

The New York Horticultural Society are making splendid preparations for their anniversary, which takes place on the 7th and 8th of September. The address, dinner, and great show of fruit and flowers will take place on the 7th-and in the evening of the 8th, they give a grand Ball at Niblo's Saloon and Gardens, which are to be splendidly illuminated.

FARMERS' WORK FOR SEPTEMBER.

Too the stalks upon your Indian corn close to the ears in due season, but care should be taken not to cut them too early. Dr Deane observed that 'Perhaps the best rule is to examine whether the ears are pretty generally filled out, and whether they are so firm as to resist a slight impression of the finger nail. In that case they may be cut without injury, but while in a growing state it is inexpedient to cut them.

We are certainly guilty of an error when we harvest this corn too early. The difference of early and late corn may be seen by the shrinking of corn to the former case. In drying, large spaces may be left betwen the kernels on the cobbut that which is well ripened on the stalk will show no such interstices. The corn will andoubtedly be growing better till the stalk below the ear is perfectly sapless, and the cob dry; receiving continual nourishment from the sap, until the frost or some accident should happen to prevent it. Squirrels and other animals drive people to early harvesting; but there is commonly more lost than saved by it. Where corn stands tolerably safe from the attacks of tame and wild animals, harvesting early is an unpardonable error. The sentiment of Dr Deane, on cutting the stalks of Indian corn too early are corroborated by Lorain, and other able writers, as well as by the experience of cultivators in this vicinity, [See New England Farmer, vol. viii. p. 73, 74.]

to the ground, in fair weather, with a sharp knife vation, or sickle, and lay two rows into one, in small bundles, as when you top and secure your stalks; Royal George, (of Floy's Catalogue.) By MR same day in small stacks, either upon the borders of your field or upon an adjoining field; you flavor and good appearance. may then plough and sow as upon fallow grounds; secure your stacks by doubling down the tops, and Siberian Bitter Sweet. By Mr P. S. HASTINGS, of binding the heads with a pliable stalk; this will Lexington, a red striped apple of good appearance, exclude the rains, which otherwise would damage name unknown. By Mr _____, fruit from a your corn. This corn will be ripe at the usual tree brought from Europe 35 years since, by GEN. time, without the least diminution in its color E. H. Derby, of Salem, shape oblong, of a whitweight, or value : but in the opinion of some of ish yellow color, and very fair appearance. By the best farmers, (who are in the steady practice S. Downer, of Dorchester, an apple well known of this mode from choice,) with an increased value in the market for some years past under the name of the grain. The increased quantity and value of the Porter Apple,' (a Wilding.) The original of your stalk, will richly pay the expense; you tree of this variety, we learn from good authority, may in this way bring forward the sowing of your belonged to Rev. Samuel Porter, of Sherburne, at harvest repay the expense of cleaning your This fruit is deservedly a favorite as a summer corn-fields. If you house your corn stalks be- and early fall apple. Apples. - By Messrs Winships', fruit of Knight's winter grain, 2, 3, or 4 weeks, which will again Mass, which was blown down some years since. size, over medium, shape oblong, and very perfect; cession, commencing about the middle of August. stant and good bearer. It is already much cultivated in this vicinity.

Graves .- By Ma D. HAGGERSTON, fruit of Hending. The difference in the mode of husking, derson's Early Burgundy or Black Cluster Grape. will at first be considerable; but a little practice This fruit was raised in the open air. By H. NEWMAN, Esq. of Roxbury, fruit of a native For the Committee on Fruits,

VEGETABLES.

Capt. D. Chandler of Lexington, presented speeimens of the Tuscarora corn for boiling-and also of a superior variety of the Sweet Corn, the seed of which was received by him from Susquehanna county, Penn.

The following extract was presented by Capt. Smith, of Quincy, with a sample of the manure : Extract of a letter from Mr Samuel Sweetser, of Baltimore, received from Wm. F. Taylor, Esq. American consul at Arcquipa, Peru, relative to a kind of manure, called by the Spaniards, Guano. He directs it to be used by sprinkling (as much as you can hold between your fingers) around the plant twice a month, and drawing the soil over it. He observes that its action on their lands is very violent indeed, and by its use they have three crops a year, and without it their lands would very soon be exhausted. I have not had time to examine it particularly, though inclined to believe it a salt, as it readily dissolves in the mouth. This is obtained from an Island near the Iqueia on the southern coast of Peru.

At a special meeting of the Massachusetts Horticultural Society, held on the 14th ult., a committee to make arrangements for the annual festival of the Society was chosen.

Mr EBENEZER BAILEY, Doct. GEORGE HAYWARD.

were admitted as Members of the Society.

At the adjourned meeting of the Society held on the 21st ult .-

ALLYN CHARLES EVANSON, Esq., Sec'y King's County Agricultural Society, St John, N. B. was admitted an Honorary Member.

EDWARD W. PAYNE, of Boston, a Subscripion Member.

The meeting was then adjourned to Saturday,

HORTICULTURAL CELEBRATION.

The Massachusetts Horticultural Society will celebrate neir annual festival on Friday the 10th day of September, y a public dinner and an address.

The address will be delivered by ZEBEDEE COOK, JR. iso, first Vice President of the Society, at the Lecture from of the Athenaum, precisely at cleven o'clock in the The room will be opened at ten o'clock. orenoon.

An exhibition of fruits and flowers will be submitted or the inspection of visiters, in the Hall of the Exchange offee House, immediately after the conclusion of the dress, and will close at 2 P. M.

The dinner will be provided by Mr Gallagher, at the xchange Coffee House, and the Company will sit down

the tables at 3 P. M.

The Committee on Fruits and Flowers, will be in atendance at the Coffee House, on Thursday afternoon and riday morning, to receive and register the several arties that may be sent in for exhibition, the decorations of ie Hall, and the fruits to compose the Dessert for the ble.

Contributors of fruit and flowers are respectfully reuested to accompany the same with a list of them so r as may be convenient, and more especially of those tended for exhibition and for premium.

It is desirable that all fruits and flowers should be deered at the Coffee House on Thursday afternoon, or at before eight o'clock on the morning of I'riday, to enle the committee to complete the arrangements and derations of the dining hall before eleven o'clock on that Per Order,
GEO. W. PRATT.

Chairman of the Committee of Arrangements.

Tickets for members of the Society, and others, at 2.50 each, can be had of J. B. Russell, at the office the New England Farmer, and of JAMES BERGEN, at e office of Z. Cook, Jr, Congress-street, Boston; of TARLES LAWRENCE, Salem-A. & H. A. BREED, & . Lynn-John Lemist, Roxbury-T. J. Goodwin,

parlestown, and of either of the Committee of Arrange-

ANNIVERSARY OF THE MASSACHUSETTS HORTICULTURAL SOCIETY.

The Committee on Fruits, &c. of the Massachusetts brticultural Society respectfully invite all members of Society, and others, who may wish to promote its ohts, to furnish for the approaching festival of the Society, ch fruits as may be deemed worthy the occasion; as tipes, plums, peaches, pears, apples, tuelons, &c.; esrially all such as may be considered new, or rare, or ricularly fine. This, besides adding to the interest and asures of the festival, may serve to make known new I valuable varieties of fruits, which often remain for my years entirely unknown, except in the immediate ighborhood where they are raised. They can be sent the Exchange Coffee House, on Thursday afternoon, before 8 o'clock on Friday morning, where some of the amittee will be in readiness for their reception and exination. Any fruits sent from New York, by the Steam at line, directed as above, would probably reach Boston good order, if properly packed. Gentlemen are re-Per Order,

E. PHINNEY, Chairman.

The Standing Committee of the Massachusetts Hortiltural Society, on ornamental Trees, Shrubs, Flowers, request that members of the Society, and others faably disposed, should forward to the Society's Hall, or the Exchange Coffee House, such ornamental plants, ange and lemon trees, bouquets of beautiful flowers. toons and wreaths, as will tend to the floral decoration the dining hall. Care will be taken of such plants as nay be desirable to have returned.

Per Order, R. L. EMMONS, Chairman.

For Sale,

A valuable Farm at Lechmere Point; consisting of 30 res—on the Craigic road, less than three miles from ston. With a good two story house and barn thereonpariving young orchard and other fruit trees.

For terms and other particulars, inquire of Wm. E. yne, No. 5 Court-street. eptoI Aug. 27.

Strawberry Plants.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street—direct from the Brighton Nursery.

A large variety of Strawberry Vines, comprising the Pine Apple, Roseberry, Bath Scarlet, Royal Scarlet, Mulberry, Wood, Chili, &c, at \$1 per hundred. Also Wilmot's Superb, Keens' Imperial, and Keens' Seedling, at a reasonable rate.

Strawberry Plants - Keens' Seedling, &c. For sale at the Scel Store connected with the New England Farmer, 52 North Market-street,
A superior collection of Strawberry Plants, from Mr

Haggerston's Charlestown Vineyard, comprising the following sorts :- the Roseberry, Downton, Bath Scarlet, Pine Apple, Royal Scarlet, Mulberry, Wilmot's Superb. and Keens' Seedling. For a particular notice of the last mignificent variety, we beg leave to refer to the Report of the Committee on Fruits, of the Massachusetts Horti-

eultural Society, June 19, 1830.
'The specimens of "Keens' Seedling," offered by Mr Haggerston, of the Charlestown Vineyard, exceeded anything of the kind we had ever seen. This new variety, introduced into this country by that enterprising and skilful horticulturist, fully sustained the high character given of it, in the English publications, and all that is said of it in the Pomological Magazine, where it is described as being 'very large, very good, and very prolific.' Taking all the properties of this justly celebrated strawberry into consideration, it may be said to have no rival. Some of the largest of those exhibited by Mr Haggerston, measured over 54 inches in circumference, and the average circumference of the sample, being about one quart, it is believed was over 4 inches. A few of them were of cocks-comb shape, but mostly round or ovate. The produce upon the stalks of a single plant, set last autumn. was exhibited at the Hall by Mr Haggerston, which, on counting, was found to consist of the astonishing number of 157 ripe and green berries. The size and strength of the fruit stalks, its broad, deep green leaves, and the general healthiness and vigor of the plant, are well adapted to the support and protection of the enormous size and quantity of fruit which it yields. The committee on fruits are therefore unanimously of opinion that Mr Haggerston is entitled to the Society's premium for the best strawberries, which is accordingly awarded him; and they further award him a premium of \$5,00 for introducing this new and most valuable variety.

By order of the Committee, E. Phinney, Chairman. The first mentioned varieties, may be purchased at the rate of \$1 per hundred; Wilmot's Superb, at \$5 per hundred; Keens' Seedling, at \$15 per hundred. \$2,50 per dozen, or 25 cents per single plant. August 20.

For Sale.

The well known FARM in Dover, occupied for the last fourteen years by the subscriber, containing about 200 acres, well located in a square, bounded on the south by Cochecho river, and on the east by Fresh creek, on which is a tide mill, with an apparatus for pounding and grinding plaster. The Buildings consist of a large two story Brick House, of 46 feet by 38, with a wing of 20 by 16, all well finished, adjoined to which is a shed 34 feet by 14, conaccting the cider house 27 by 37, two stories, with one plastered room, where all the spinning and weaving is done for the family; two Barns, one of which is 100 feet by 42, with two wings of about 40 feet each, one employed as a stable, the other for a sheepfold, with a good yard well walled in; the other is a Store Barn of 45 feet square, of 16 feet post, and will contain 60 tens of hav; a piggery of 50 feet by 30, with a cellar of 18 feet square under it, with boilers set to make soap, brew, and cook for swine. The fields are divided by permanent stone walls, and consist of one of 40 acres in front of the house, one of 17 on the East, one of 10 acres on the North, (principally orchard,) one of 15 Northeast, and one of 30 acres West of the house, with three pastures of 20 to 25 acres each.

The Farm has been gradually improving for the last ten years, and the two last has cut each year one hundred tons of hay, and 20 to 25 tons of thatch. It is one and a half miles from the village of Dover, which affords a good market. There has been planted some hundreds of Fruit Trees, principally Apple, many of which are grafted-with Pears, Cherry, Plum, Peach and Quince trees, and many in bearing, with a small nursery.

The terms of sale may be known by applying to Major ANDREW PIERCE, of Dover, Mr SAMUEL LORD, of Portsmouth, or the subscriber on the premises.

WILLIAM FLAGG.

June 11.

Savon Sheep.

On Thursday the 2 d day of September, at Hartford, (to close a concern) will be sold by Public Auction, an entire flock of superior full blooded Saxon. Sheep, bred with care from the best stock imported by Messrs, George & Thos. Searle in 1825 and 25; consisting of 14 Rams, 30 Ewes, 11 Ram Lumbs, and 10 Ewe Lumbs.

Also, the we'l known full bended Durham Improved Short Also, In? we t known run o suggestionably the best Bull in Morned Bull Wye Comet, unquestionably the best Bull in W. WOOLBRIDGE, HENRY WATSON. August 50, 1330.

At Market this day, 580 Beef Cattle, 553 Stores, 6520 Sheep, and 720 Swinc. From 100 to 150 Beef Cattle, a large proportion of Stores, from 1000 to 1500 Sheep, and about 200 Swine, remained unsold at the close of the

Prices-Beef Cattle-From \$3,50 a \$4,50; a few brought a title over \$4,50; and a considerable number of small thin Cattle were sold as low as \$3.

Sheep and Lambs .- From \$1,25 to \$1,871; we noticed one lot of about 300 taken for \$1,03 per head; one lot of Wethers wo e sold for \$3.

Swine .- Lots of about 50 were taken at about 4 a 41 cts.; at retail 4 a 5 cents.

MISCELLANIES.

At the conclusion of the exhibition of the Boston Public Schools, the Rev. Dr Homer, of Newton, rose and remarked that he came at the request of his school mate, Admiral Sir Isaac Coffin, to express by proxy, his regret at being unable to attend the examination of this school, of which he was formerly a member; and that the Admiral desired him to say that he was often reminded of a few lines in his Ainsworth's Latin Dictionary, which he used at school, and that he was remind-

ISAAC COFFIN, his Book: Gop give bim grace therein to look. Not only look, but understand That learning is better than house and fand. For when house, and land, and money is spent, Then LEARNING is most excellent.

The Admiral (continued the worthy Doctor) attributes his elevation in life to the observance of the precepts in these lines, joined with babits of industry and honesty, and recommended the same to the pupils; and I will add, says the Doctor, that honesty which is formed in strict piety and merality.

An avarieious person who kept a very seanty table, dining lately with his son at an ordinary in Cambridge, whispered in his car, ' Tom, you must eat for today and tomorrow,' 'O yes,' retorted the half-starved lad, 'but I han't eaten for vesterday and the day before, yet, father,'

'I cannot do it,' never accomplished anything -'I'll try,' has done wonders

Medicine for a cough .-- The following medicine for a cough has performed such extraordinary cures in private practice, that the possessor is induced to publish it for the benefit of society .-- Take six ounces of Italian liquorice (that stamped Solizzi is by far the best) cut into small pieces, and put into an earth en jar, with a quarter of a pint of the best white wine vinegar; simmer together until the liquorice is dissolved; then add two ounces of the oil of almonds, and half an onnce of the tracture of opium, stir the whole well together, and it is fit for use. in the day time.

Friday.—It has been a prevailing notion among sailors and some other classes of people that Friday is an unlucky day of the week, and few can be found willing to go to sea on that day. But in proof that Friday does not always introduce misfortunes, it may be observed that Christopher Columbus embarked on his voyage for the discovery of America on Friday, August 3, 1492, and landed on Friday, October the 12th, of the same

The absurd notion that Friday is an unlucky day to commence any operation affects landsmen as well as sailors. Did not God create Friday as well as other days of the week?-Penn. Agr. Almanac.

FROG MARKET AT BRUSSELS,-There is in Brussels a market for frogs, which are brought alive in pails and cans, and prepared for dressing on the spot. The hind limbs, which are the only parts used, are cut from the body with scissors, by the woman who bring the animals for sale.

night in preference to the day; therefore, mothers and nurses ought to remove everything which ing into Mercantile Business. may tend to disturb their rest, and not to attend to every call for taking them up and giving food at improper periods. Infants cannot sleep too long; when they enjoy a calm, long-continued rest, it is a favorable symptom. Until the third year, children generally require a little sleep in the middle of the day; for, till that age, half their time may safely be allotted to sleep. Every succeeding year, the time ought to be shortened one hour; so that a child seven years old may sleen ed every day more and more of their truth. They about ten hours. Children ought to rise at six o'clock in the summer, and at seven in the winter. It is extremly injudicious to awaken children with a noise, to carry them immediately from a dark room into the glaring light, or against a dazzling wall; the sudden impression of light may debilitate the organ of vision, and lay the foundation of weak eyes. Wet clothes or linen, should never he allowed to be bung to dry in the hed room, as an impure atmosphere is attended with various and often fatal consequences. Banish (says Professor Hufeland) feather beds, as they are unnatural and debilitating contrivances. The bedstead shall not be placed too low on the floor, and it is highly improper to suffer children to sleep on a couch which is made without a sufficient elevation from the ground .- Book of Health.

HINTS TO MECHANICS AND WORKMEN.

If you would avoid the diseases which your particular trades and work are liable to produce, attend to the following hints,

Keep, if pessible, regular hours. Never suppose that you have done extra work, when you sit up till midnight, and do not rise till eight or nine in the morning.

liquors. Let your drink be, like that of Franklin, fast, when he was a printer-pure water,

Never use tobacco in any form. By chewing, smoking, or snufling, you spend money which would help to clothe you, or would enable you, if single, to make a useful present to an aged mother or dependent sister; or if married, to buy your Take two tea spoonfuls when going to bed, and the wife a frock, or get books for your children. You same quantity whenever the cough is troublesome also, by any of these filthy practices, injure your health, bring on headache, gnawing at the stomach, its culture furnished gratis. low spirits, trembling of the limbs, and at times, sleeplessness.

> Be particular in preserving your skin clean, by egular washing of your hands and face and mouth, before each meal, and of your whole body at least rapid growth, long and abundant thorns, and with once a week; and by combing and brushing the Lair daily.

Always have fresh air in the room in which you work, but so that you shall not be in a draft.

Take a short time in the morning, if possible, and always in the evening or towards sundown, for placing your body in a natural posture, by standing erect and exercising your chest and limbs by a walk where the air is purest,

If confined in doors, let your food consist, in a being made in advance. large proportion, of milk and hread, and well boiled vegetables. Meat and fish ought to be used sparingly, and only at dinner. You are better without coffee, tea, or chocolate. If you use any of them, it ought not to be more than once in the day .- Journal of Health.

Persons into whose ears insects have crept, need Sleep of Children. Infants from the time of feel no alarm that they will find their way to the their birth, should be encouraged to sleep in the brain, as they cannot pass the drum of the car.

Directions from a Parent to his son, on his ente

1. You are to give your constant attendance at the Counting Room or store (business or n business) during office hours, except you are ser out by Mr -- or go by his permission.

2. When out on business, finish it with do spatch and return immediately.

3. Keep your store in the most regular an neatest order, especially your desk, books, an files of papers.

4. Whatever business you may have on hand execute it, not in a hurry, but in the best style instantly without delay. Procrastination is the thick of time.

5. Whenever you deliver an article, see that be charged the very first thing you do. It wil require your utmost attention and consideration t enable you to execute your duties faithfully and correctly, especially full practice makes husiness

6. The last and most important; you are invio lably to keep your master's secrets, relate none o his business, not even to your most intimat friends. A breach of this injunction would be trea son on your part, and the reason will be obviou to you. Mr ---- will cheerfully grant you ever indulgence,-Should you want to be absent a hour, or even more, he will not object; but you must be careful never to ask these favors when your presence is necessary in the store. Think i not derogatory to perform any work among the goods in the store; the exercise will be useful to strengthen your muscles and preserve your health Be careful to improve your handwriting by copy ing in the best style, and when you write a letter you should do it as if it was to be inspected b Abstain from ardent spirits, cordials and malt all your acquaintance, and you should never writ

Yellow Locust Seed, &c.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street,

Fifty pounds of genuine and fresh vellow Locus Seed, saved for us by a gentleman in Harrisburg Pa. The excellence of this timber for posts, its use in ship building, its easy culture, rapid growth, &c recommend it to the notice of farmers. Directions for

Also, seed of the Gleditschia triacanthos, or Honey Locust—or three thorned Acacia,—for live fences This is the sort recommended by Judge Buel, (ir the New England Farmer, vol. viii. page 164) as the hard and strong wood, and it is attacked by no insect which gives it a decided advantage over Hawthorns

P Subscribers to the New England Farmer are informed that they can have their volumes neatly half bound and lettered by sending them to this office.

COUMUNICA FIONS.

CULTIVATION OF SILK.

Mr Fessenden-I enclose a letter from P. S. Du Ponceau, Esq. of Philadelphia, on the culture of silk, which contains much important information and evinces such a liberal and patriotic spirit, hat it would be doing great injustice to the whole community, to withhold it from publication.

The life of that illustrious scholar and jurist has been marked by a zealous devotion to the best nterests of his country. He commenced his listinguished career as an officer of the Revoluion,-in literature and science he has attained an Kalted station in both hemispheres, and we now ehold him, in the fulness of years, prosecuting nvestigations, subservient to all the great branches f national industry, with the vigor and enthusi-

If we look back only a few years, and recollect what has been accomplished, it will not be diffiult to appreciate the immense value of the exeriments he is so generously making, and the onsequences which must result from their success.

In 1784 an American vessel was seized in Livpool for having on board ' eight bales' of cotton, it was considered impossible that they could the growth of this country; and in 1829, there ere imported into that city, from the United tates 640,998 bales.

But a few years since, there was not a cotton anufactory in the Union, and now, in the small ore than five times round the earth.

e commendable exertions of Mr Vernon of node-Island and of Mr Cobb of Dedham, to adnce the culture of silk, and ann happy to learn at they are as well known and as highly estisted at a distance, as at home, and to avail of s occasion, not only to bear testimony to their erits, but to aver that 'in their own country,' Il of the republic.

Most respectfully,

Your obedient servant, rinley Place, Roxbury, Sept. 2, 1830. H. A. S. DEARBORN.

PHILADRIPHIA, Aug. 29, 1830.

A. S. DEARBORN, Esq.-ROEBURY, MASS.

different parts of our Union; but no means grate.

appearing of making that culture profitable, there was danger of its being speedily abandoned, as it States, is to learn the art of reeling silk for manhas been repeatedly in this country and in differ- ufacturing those stuffs with which our females ent parts of Europe. As the cocoons cannot be exported in kind, nor can they be used in mannfactures without a certain preparation called try, as it has been ascertained that the cost of reeling, or spinning from the cocoons, unknown transporting cocoons from one part of the Union among us, the farmer or planter did not know to the other, would render them valueless to the what to do with those that his silk worms product grower, unless filatures were established in his imed, and they became a prey to rats or to devour- mediate neighborhood, or at some reasonable ing insects.

It is true that in Connecticut and in some other of the cocoons, which found a cash price in our commercial cities and could only be disposed of by way of barter. It is true also that by a similar process, some of the coarser stuffs, such as vestings, stockings, gloves, and perhaps even ribknown that all those articles in Europe are made is reserved for those delicate stuffs, for which we pay yearly so large a tribute to Europe, and particularly to France.

To reel or prepare the silk for making these finer stuffs, is an art known only in its perfection in the north of Italy and the south of France. Even in China, the native country of the silk wom, the material is not so well prepared as it of filatures in their respective neighborhoods, and is in those two countries. In the Turkish domin-employ women to perform the nucchanical work ions and in Bengal, the preparation is still inferior.

to the latter country, I beg leave to quote the llage of Lowell, which is a creation of vester- opinion of an English silk broker, communicated iy, a thread is daily spun, which would extend by the respectable house of Rathbone, Brothers, & Co., of Liverpool, to a gentleman of S. Carolina, in I sincerely regret, that I unintentionally ren- a letter received in the course of the present year. y venerable correspondent. I was aware of the proper selections and recling of them (the cocoons into the hanks,-although our importations from the East Indies are great, and this trade is of such vital importance to our successful competition with the Continent (of Europe), it is to be regretted that neither the East India Company, nor the private merchants, have hitherto employed any competent person to superintend the reeling of are ready to do them honor, and are proud to the silk. If that were done, I have not the slightin them as fellow-citizens, who have deserved est doubt but that silks of the Eastern production would render us altogether independent of either France or Italy; for it is an established fact, that silk of the best quality can be produced in the East Indies at a lower rate than in Europe.'

This speaks volumes-It is evident that if competent persons to superintend the reeling of silk could be easily procured from Italy or France. Great Britian, situated in the vicinity of those DEAR SIR-I have received the 4th No. of vol. countries, and having such a high interest to proof the New England Farmer, which you have mote, would have obtained them. The reason icle written by yourself, in which you are Europe, the mechanical process of reeling is perased to ascribe much more merit to my weak formed by women, under the directions of overorts for promoting the culture of silk in this seers. The women are ignorant, being taken intry than they are in strict justice entitled to, from the very lowest class of the people; no conside first impulse to this important branch of ag-ulture, was given by the House of Representa-is of the United States, in the year 1826. are few, and generally men of an advanced age ce which time Mulberry trees have been plant- and have families. They are well compensated

The great desideratum, therefore, in the United are almost universally clothed, and not only to learn it, but to disseminate it through the whole coundistance,

A fortunate chance in the course of last sumparts, a kind of inferior sewing silk was made out mer, brought Mr D'Homergue to this country, a young man 25 years of age [now 26] well skilled in the art of reeling silk from the cocoons and in other branches of the silk manufacture. His work, which no doubt you have seen entitled ' Essays on American Silk,' made him generally bons, might have been made; but it is now well known, and Congress took so much notice of it, as to refer it to their committees on agriculture. of floss or refusee silk, and that the finer material | The committee of the House of Representatives, perceiving the importance of keeping this young man in the country, reported a bill to the House the object of which was to employ him in teaching the art of reeling silk to 60 young men, to be selected from the different States of the Union in certain proportions, who, when sufficiently instructed, might establish themselves as directors under their discretion. Thus the art of preparing silk would be introduced in its perfections, equally and uniformly torough our extensive country, and the results might be easily anticipated.

This bill, however, in consequence of the pressure of other business, could not be taken up at ared myself obnoxious to the gentle rebuke of 'Everything,' says the silk broker, 'depends on the last session, and lies over till the next, when the fortunes of this country, as far as they depend upon silk, will either be effectually secured or put back for a period, the duration of which cannot be foreseen.

Determined, however, as far as depended upon me, to keep Mr D'Homergue in this country, at least until the next session of the national legislature, I have resolved to employ him during the present season in making experiments on American silk, whereby the nation might be still more fully convinced of the importance of the art he professes. For this purpose I have purchased cocoons, and established an experimental filature in this city, in which ten reels are at work. My object is to test the price which our raw silks will produce in the markets of England, France, and Mexico, into which countries large quantities of the article are annually imported, as they have, silk manufactures and do not raise silk worms, but import that material from abroad at a consid-I the goodness to send to me, containing an why it cannot be done is this. In the filatures of erable expense. I expect no profit from this undertaking; as far as I can judge, on the contrary, there will be a not inconsiderable loss; but it is not profit that I have in view. Experience in everything must be purchased. I have fixed a sum, which I am willing to lose, and which I shall not regret, if the country is to be benefited by it. The silk that my filature has hitherto produced, is of the most beautiful kind, and is and silk worms raised in various quantities in for their labor, and have no temptations to emilat least equal, if not superior to any in the world. I would wish to try the quality of the silk cocoons raised by silk worms on the leaves of the as to give them the required size and strength, a extent I had at first contemplated. But this difficulty will vanish in the course of another year. mer than will be wanted for any object that this country will be able to compass.

In the recess of my filatures, occasioned by a temporary deficiency of coccons, desirous of doing everything m my power to show what might be done with American silk, I have prevailed on Mr D'Homergue, out of the silk that he has reeled and prepared, to weave the flag of the can silk, I have been not a little astonished that United States, and he is now engaged in the work, which is expected to be finished in about a fortnight. The warp is already fixed upon the loom, the silk is dyed, and next week the weaving of your own state. I hope the proverb does not hold acres of good corn growing, and promising as the webb will begin. The flag will be twelve, feet long by six feet wide, and so fine will be the texture of the stuff, that it is expected that it will not weigh more than twenty ounces. This flag is intended to be presented to the House of Representatives of the United States, as a beautiful specimen of the first result of real value, which the impulse which they have given has produced. It will show that the finest of silk stuffs may be made in this country,

It has not been an easy task to produce this result. Everything, even the loom, has had to be made new and for that only purpose. The machine, too, occasioned much difficulty-there are implements necessary for weaving silk, different from those employed in weaving other substances. Despairing of obtaining them in this country, I had written to France for them, and they are not yet arrived. When I least expected it, fortune threw in my way a young emigrant from Europe, who has made these tools in the highest perfection. The dying also embarrassed me. It was generally understood that the beautiful colors of the French silks could not be imitated here. What was my delight when I discovered two other emigrants, a Frenchman and German, just set up in the dying business, and who have dyed our silk with the most brilliant red and blue, (the celors of our flag) so that nothing can surpass that beautiful coloring!

I have also discovered that we have in this country, from England, France, Germany and other places, manufacturers of silk of almost every description. We have silk throwsters, silk dvers, silk weavers, silk manufacturers, all but good reelers, without which the labor of the others must be at a stand. These then are all waiting for employment, some of them being in very poor circumstances. All we want is the art of recling, and everything else will follow. As to mulberry trees and silk worms, let but a good price be given for the eccoons, and they will be produced in quantities as if by magic, Everything, as the silk broker says, depends upon good reeling.

Having spoken of silk throwsters, I ought to say that the operation of throwsting will be the only one that our flag will not receive. Throwst- hives were weighty. Here was little expense and ing consists in uniting and twisting together by a good encouragement to farmers, thought I, as I means of machinery, several threads of silk, so passed along.

wild or red American mulberry, but I have not throwsing mill, as it is called, is a very costly been able to procure a sufficient quantity for that article, and cannot be had in this city. - Mr D'Hopurpose. In general, I have found it difficult to mergue asserts that no other but American silk obtain cocoons; because their value is not yet (such is its nerve and strength) could be wove withfixed, and the profit to be made by the sale of out undergoing that operation. What succedaneum and but little attendance. I was shown a vast them not sufficiently ascertained. Therefore I be will employ for it I do not know; but I think many occoons of the last year, and some easy shall not be able to carry my experiments to the I may safely say, that the flag will be as beautiful a web of silk as can be produced anywhere. As I have thought, Sir, that it would be agreeable A great impulse has been given, and I have no to you to know the progress that we are making doubt that more ecocons will be raised next sum- in this City in the important business of Ameri- again there was but little expense and good en can silk, I have taken the liberty of extending this letter to its present enormous length, for which I shall make only the common apology, that But as your paper is valuable, I shall defer other 'I could not make it shorter.'

As in your article in the New England Farmer, you have noticed citizens of different states who have exerted themselves in the cause of Ameriyou have left out the men of New England, and particularly William H. Vernon, Esq. of Newport, R. I. and Jonathan H. Cobb, Esq. of Dedhau, in with you, that, no man is a prophet in bis own abundant harvest to its enterprising cultivators country;' at any rate, it will not be unbecoming in a Pennsylvanian to give due credit to the mentorious efforts of those two sons of the renowned acres growing on this bog, which, until recently pilgrims.

I am with great respect, dear sir, Your most ob't, humble servant, PETER S. DU PONCEAU.

PROFITABLENESS OF BEES.

Mr Fessenden-Noticing the account in the last New England Farmer of the produce of Mr D'Wolf's Bees in Bristol, (R. I.) I am inducel to offer you the following statement of the produce of three hives, on the farm of Mr Parker at Charlestown Neck,-the Bees were under my care a part of the summer.

The three hives of Bees in question produced six swarms, from two of which, placed in Beard's Patent Hives, was produced 40 lbs, of pure honey, besides leaving enough in those hives for wintering the Bees-the 40 lbs. of honey were sold at wholesale at 25 cts per lb. producing \$10,00-and leaving the whole stock of nine swarms on hand; (seven of which, unfortunately are in the common old fashioned hives which can give no return of honey this year, excepting the usual supply for breeders another season.) The above nine swarms will now sell readily at an average of \$8,00 each, producing \$72,00, which, with \$10,00 for the honey, is equal to \$82,00-the produce of the three original hives of Bees, in one season.

EBENEZER BEARD.

Charlestown, Mass, Sept. 7, 1830.

FOR THE NEW ENGLAND FARMER.

HONEY AND SILK.

Mr Fessenden-Having little to do, I wander for my amusement on foot or otherwise, as occasion or circumstances happen.

In August, being on an excursion, I stopped at the house of a farmer, and entered into conversation with him.

He took me to his Bees. He had in the spring, he said, one hive only. There were now five! This diligent swarm had sent out four colonies. The season, he said, had been favorable, and the

I entered into conversation with the next I met and was invited to walk in and look at his silk worms; (for our country folk are a social people) I found the worms were winding themselves in (or spinning.) There were many of them at work many cocoons of the last year, and some easy modes of management, such as placing the legof the table in vessels of water to prevent the ants troubling them, &c.

As I left my very observing friend, I thought couragement to the farmer.'

The hand of industry, thought I, maketh rich incidents of my excursion and wait to see how our country folk look in print.

A WANDERER. Yours, &c,

THE GREAT CORNFIELD.

MR PRINTER-Having heard a great deal said concerning the great cornfield on Turkey Bog, 1 resolved to visit it in person. I there found 20 This bog is extensive, and we may expect to see in a few years, instead of twenty, hundreds o has yielded nothing but alders. But few meadows can compare with this in richness of soil or extent of territory. I hope this experiment wil serve to turn the attention of our farmers to thei bogs and meadows, as I believe they may be made the most productive parts of a farm when they exist,-If our farmers would make a practi cal use of the hint contained in the toast of Hon Roger Vose, delivered at a celebration of the Cheshire Agricultural Society, a few years since viz, ' May there be more draining of swamps, an less draining of the bottle,' we should hear ver little about hard times and a scarcity of money tpay taxes, or to pay for the newspaper.

Concord, Aug. 27, 1830.

Progress of the Silk Culture,-An incident oc cured in our office a day or two since, which we wish all the people of the United States could have witnessed. It was the exhibition of a speci men of American silk. Mr Rapp, the respectable head of the society at Economy, in Pennsylvania paid us a visit, wearing a most beautiful figurer black silk vest, and black silk handkerehief, the material of which was made, from the worm to the loom, by his society. In a conversation with him he remarked, (what he had stated before in a letter to the Editor, published in a late numbe of the Farmer,) that they found no difficulty it any branch of the silk culture; that it was no more difficult than raising wheat, and much less laborious; and that he had little doubt that we should export silk in ten years. We feel assured that no person who saw the vest and handkerchiel and heard Mr Rapp's remarks upon the subject could have harbored a doubt for another momen of the practicability of cultivating silk, as a staple in the United States. We shall, probably, shortly have a specimen of this silk in the office, and shall gratify our own feelings by exhibiting it to all who may find it convenient to call .- . American

CULTURE OF SILK.

worm's eggs, as well of the silk cocoons. The process of reeling was performed on a machine improved by Mr Cobb, in a satisfactory manner.

We advise our agriculturists to call on Mr Cobb. nd obtain the information to enable them to comnence the culture of silk, which we believe is lestined ere long to become an important branch of New-England husbandry. The first thing to be done is to plant the white Mulberry trees, in ufficient numbers to supply food for the silk vorms. After this has been done the rest of the process is easy and within the means of every amily. The work can all be done by females, ld men and children, who are unfit for the severe abors of husbandry. Considerable attention is ow given to this subject in New-Hampshire and the vicinity of Philadelphia. One town in onnecticut produces, annually, silk to the amount f \$25,000. The climate of the United States peculiarly adapted to its culture, so much so, as give superiority to the American unmanufacired article. It is not rash therefore to predict, iat the production of silk may yet become one f the great employments of American industry nd a new source of national wealth. It is well orth the attention of every intelligent agriculrist .- Boston Patriot.

Bog Meadow .- Ilon, James Fowler of Westeld, in the spring of 1828, covered over 108 rods Bog Meadow land with loam from adjoining land. The loam was spread about 6 inches ep. The land was then sowed with herds ass seed, and the first year produced little but eeds .- This year, bowever, it produced at the te of 5 tons 780lbs. of best hay per aere, and fore the putting on the loam the yield was not ore than a ton per aere, and that of an inferior rality. The expense of covering the land was out 20 dollars per acre.

Horticultural.—We have this year cultivated a w kind of bean, the seed of which we procurat Nantucket, which, for cooking pods, is eernly the ne plus ultra of excellence. We do call it a string bean, because the pod is cnnot run very high, and are quite prolifie. We for our family, and shall have some seed to the effort to remedy the evil. are, which we intend shall be judiciously disbuted .- Mass, Spy.

How to avoid Dysentery .- Rules which the celebrated Dr Rush recommends for the prevention of this disease: He advises that spices, and particularly Cayenne pepper, and the red peppers of our own country, should be taken with our daily food. Mr Dewer, a British surgeon, informs us, that the French, while in Egypt, frequently escaped the diseases of the country by carrying pepper with them to eat with the fruits of the land. Purging physic should also occasionally be taken, as any medicine of a laxative nature by preventing costiveness, will act as a preservative from this disease. A militia Captain in the year 1778, while stationed at Amboy, preserved his whole company from the dysentery which prevailed in the army, by giving each of them a purge of sea-salt; and some years afterwards saved his family and many of his neighbors from bited a bull in Canandaigua of two years old, which the same disease, by distributing among them a few pounds of purging salts. This disease was also prevented in an Academy at Bordentown, N. J. by giving molasses very plentifully to all the scholars; which had the effect of keeping their bowels in a laxative state.

Another rule to be observed is to avoid exposure to the dampness of the night air; and when necessarily exposed, the bowels should be more The Egyptians, Mr Dewer, tells us, for this purpose, tie a belt about their bowels, and with the happiest effect. These directions emanate from a high source, and deserve serious consideration. The facts adduced are striking, and should induce others to adopt similar measures for the prevention of this destructive disease .- N. Y. Obs.

Iron Pumps,-Agreeably to a resolution submitted in the Common Council by Mr Engs, an iron pump has been put down at the corner of William and Cedar streets, which is believed to have many advantages over the common wooden pump. It takes much less room, is of greater strength, and will endure for ages. Mr Thomas Brownwell, the maker, states that it will greatly improve the water, and will be much less liable to get out of order. The expense is only 25 cents a foot more than the wooden pump. - N. Y. Daily Adv.

Remedy for Poisoned Animals .- Raw eggs given to sheep and eattle, which have been poisoned by eating laurel or ivy leaves, it is said, will effect a speedy cure. The dose is, one egg for a sheep 4 eggs for a cow. They can be administered by simply breaking the shell and slipping the yolk and as much of the white as is practicable, down the animal's throat.

It is said that of the 17,000 passengers who have arrived in Canada this season, from Great find their way immediately into the United States.

From Prince's Treatise on the Vine.

THE VINE.

The Peach and the vine being natural productions of the same region of the East, the opinion has been uniformly adopted, that a climate favorable to the one could not fail to be suitable to the other. And where, let me ask, does the former thrive to a greater degree than in many sections of our country? From the shores of Long Islan I, and even much farther north, to the most southern limits of the union, the peach flourishes and produces fruit of the highest quality. In the south of France and Italy, the culture of the more choice and delicious varieties had given to those climes a fame, to cope with which required the possession by other countries of such as combined equal natural merits. The choicest they could boast have been latterly introduced among us, and we have also originated many most luseious seminal varieties; and those who possess them know from their own experience, and from the opinions of others who are familiar with the produce of the countries referred to, that in this fruit we have no longer a rival in Europe. Hence we may deduce the most sure prospects of an equal success for the Vine, whose culture when compared with that of the Peach, is yet in its infancy.

The power, wealth, and happiness of France, are principally attributable to the foresight she has evinced in the introduction to her soil of the most valnable natural productions of other countries. It has been remarked that perhaps no enterprise in rural economy devised by the genius of a single man, has carried with it more important results than the first plantation of the Mulberry in the garden of the Tuilleries, formed at the commencement of the seventeenth century, by the command of Henry IV. At this moment, though but little more than a century has elapsed, during only the latter part of which suitable attention has been paid to the culture of silk, the value of the raw material amounts to \$4,700,000, and that of its fabrication to above \$16,000,000. making a total of about \$21,000,000. The Olive, the Almond, and the Fig, were in like manner adopted in the agriculture of France, together with numerous other fruits of miner importance. The vines indigenous to her soil were absolutely worthless, and those originally brought from other countries were not superior in quality to many of the native kinds found in our forests; and the number of esteemed French varieties, even as late as the year 1720, was far less than we are already able to enumerate as the natural products of our woods and prairies, the spontaneous gifts of nature, unaided by the hand of man. Yet, at the present period, that adopted country of the vine, has nearly 4,000,000 of acres devoted to its culture, which yield an annual product of one thousand millions of gallons, of the average value of more than \$150,000,000.

And what country ever presented a more eligible theatre for agricultural pursuits than the United States? The land proprietors are not oppressed by feudal tenures, exorbitant taxes, vexatious tithes, or exhausting poor rates. The land is both fertile and cheap, and the great diversity of soil and climate seem to invite the introduction of the varied products of other climes. The country penetrated in every direction, even to its remotest bounds, by navigable rivers, and intersected by canals and artificial roads, offers every advantage for speedy transmissson of its productions.

at no distant day!

The Sugar Cane, for which France and the residue of Europe are dependent on the Indies, already forms a most important item among our productions, and promises ere long to be ranked among our exports.

The product of the vine in like manner will be ours, with all its attendant advantages and blessings. The elive culture is already extending in the south; and the almord, the fig, the date, the orange, lemon, lime, citron, filbert, maron, pomegranate, guava, stone pine, and almost every other production which has been heretofore enumerated among our importations, are destined hereafter to become the abundant products of our own fields, and articles of supply to other nations. Such are the happy coincidences of country, of climate, and of government, that all which is required of us is but to exercise our judgment and our skill in perfecting the advantages which nature has so liberally tendered; by the exercise of which, the balance of trade, of wealth, and of power, cannot fail to be for ever secured to us.

The present extent of American vineyards, and the rapid advances now making in their formation, do not properly constitute part of the present volume; but on that subject the most ample and detailed information will be given in the ensuing one. I will here therefore only give some cursory remarks on that head from the pen of an intelligent writer of Pennsylvania.

'The vine culture seems to have become a favorite pursuit with the agriculturists of the present day, and forms an object of great promise in York eounty, Pa. Experiments have already shown that the vine will not only flourish in the poorer soils of that county, but that excellent wine can be made there, and that vineyards will become as profitable as any other agricultural pursuit. A portion of the lands in York county is poor and thin, commonly called barrens, and it has been proved that the vine succeeds well on it, and twenty acres of it, which can now be bought at from \$6 to \$10 per acre, when planted with vines, and at maturity, will be more productive to the owner than two hundred acres of the best land in the county, devoted to other culture. There are perhaps not less than thirty or forty vineyards within twenty miles of the borough of York, and nearly all commenced within three years. Should this disposition increase, and as a consequence the wine-press be made to take the place of the distillery, it will benefit the morals of the community. Among what are called civilized nations, the vice of drunkenness has always been found to prevail most extensively where the vine is not cultivated; while on the other hand, where that culture is widely extended, the temperance of the people is proverbial.

Similar sentiments and like prospects of success seem to pervade all parts of our country where the culture of the vine has received merited attention; and the daily increasing devotion to the subject in the formation of additional vineyards, will ere long cause each section of our republic to respond to the efforts of the others.

The information which I have elicited on this head from every part of the union, and which will evinces, when concentrated, advances so much sugar.

What a revolution has not the introduction of greater than could well have been anticipated at cotton already effected! What results does not this early stage of our progress, that I doubt not is the silk culture already promise us as our reward will strike with amazement even the most sanguine friends of the vine. Suffice it here to say, that a degree of perseverance and enthusiasm seems to pervade all the votaries of this delightful pursuit. and a warm and friendly interchange of views and sentiments exists among them, which has been comparatively unknown in other species of culture; and although the operators, from being disseminated over so great an extent of territory, are consequently more widely separated from each other, still the existence of a connecting link, by friendly co-operation in one common cause, may justly and appropriately assimilate their united exertions to that joyous period in the history of France, when, during the reign of Probus, thousands of all ages and sexes united in one spontaneous and enthusiastic effort for the restoration of their vineyards. Nor indeed when the far greater limits of our territory are considered, can the combined efforts of our fellow-countrymen fail to produce effects even more important, from the greater extent of their

The opinions of some political writers, that we should continue to import adulterated wines and spirits of all kinds, in order to afford the government the means of thence deriving a revenue of a per centage on their value, even at the sacrifice of the morals of the nation, and the diminution of its wealth, by a course seemingly less objectionable, because less direct; but which is not less fatal in exhausting our resources: seem fast merging to that oblivion, where the desire and the pride of. a truly national independence should consign them: and we may hope that the day is not far distant, when America will fully establish and claim a rivalry with the most favored lands of the vine and the olive, and proudly disclaim being tributary to any foreign clime.

NEGLECT OF ADVANTAGES.

We do not make all the use we might, either of our materials or of our knowledge.

Thus the laburnum tree, which the French sometimes call the green ebony of the Alps, is one of the most beautiful of woods for furniture, yet it is seldom or ever used for that purpose.

It has been proved in many parts of France, that the walnut tree, if grafted, produces tenfold; vet I believe that walnut is seldom or ever submitted to that process, at least in this country.

Mr Dawes, of Slough, discovered that the covering of a wall with black paint would facilitate the ripening of wall-fruit, and yet not one wall in twenty thousand is so painted.

The knowledge that charcoal is the best ingredient in the foundation of buildings exected in moist places, is as old as Theodorus, who according to Diegenes Lacrtius, proposed the forming the foundation of the Temple of Ephesus with that material, because it would become so solid that no water could penetrate it. This, I say, has been known more than two thousand five hundred years, and yet I am not aware that charcoal has ever been used in this country, for the purpose above referred to .- London Mag.

Preserving Seeds. If seeds are intended to be sent a great distance, or it is wished to preserve them a long time, they should be wrapped in form part of the matter of the ensuing volume, absorbent paper, and surrounded by moist brown

Salmon Fishery.—A correspondent of the Wisasset Citizen gives the following account of this shery in the Kennebec.

The Salmon is a river fish. All the theories especting its wintering at sea, &c, are unfoundd. Several facts are well known that make it vident this fish remains in the deep holes of all ur fresh rivers the greater part of the year, When Col. Wm Lithgow commanded at fort Ialifax, he discovered Salmon in the month of anuary on Tyconuk falls. Salmon have also een taken from Peirpoles hole in the Sandy river, the town of Strong, in the winter season. A entleman informed me, when first acquainted ith that fishery, that Salmon were never taken entifully, until after the spring freshet; and I and that to be the case every year. And they bounded according to that occurrence invariably hile I owned Salmon privileges at the mouth of e Kennebec. The first that are taken on the ennebec in the spring, are at Jones' Eddy, Parer's Flatts, and Back river. The conclusion I aw from this is, that the fish drop down with e current in search of salt water; and meeting ith it in those large eddies, leave the channel id play in shore. But by far the greater part what are called school Salmon, go directly to a and follow the current until it is lost in the ean to the westward of Seguin. They then rike in shore and follow the shore into the river, stinctively steming the current to the source of e river or rivers, to which they belong. The feale Salmon are about three in five of the whole imber. There is no external difference between e sexes. Those who have split thousands of em, are not sensible of the marked difference tween the spawn, and a substance lying in the me place and order in their bodies resembling e white of a duck's egg, inclosed by a flesh cored case, of the same form as that in the female ntaining the spawn. The Salmon deposit their awn thus: The female in the month of August akes a little incision in the sand in clear water ith her fin, and drops a quantity of spawn, each out the bulk of a middling sized pea-she then rts forward seeking a place for another deposit the male follows her, and impregnates it, and en moves himself forward with a dexterous toke of the tail, stirring spawn and sand togeth-They make this deposit in clear water, here the current is moderate, and the bottom vel, and so shallow that the back of the Salmon e out of water.

But few men now on the stage, appear to have lowledge of the superabundance of these fish as r back as the period before the Revolution. If

y memory does not misgive me, a Mr Rogers d his company, seven in all, in the year 1784 or at Hunnewell's point, exclusive of Fox island, ok in set nets between eight and nine thousand ilmon. The average weight of each was 20 ounds of the first shoal, and the last eighteen unds. When I owned the same fisheries, the dinon were two or three pounds lighter. Where ogers caught a thousand, my fishermen had ed be industrious to get one hundred. In the ar 1813, I kept an account of the number and eight of Salmon caught. In five nets, were ught that year, 1143 Salmon. The last run ere usually smoked for the New York market, to in number weighing 2564, and 1765 when loked fit for market, sold at 14 cents the pound

to know the amount of Salmon caught on the Kennebee below Fiddler's reach. Fox Islands caught 1000-all the births at Cape Small Point. 500-Hunnewell's point 1143-Stago Island and all on the east side below the Fort 1500. All the above was one eighth of the quantity below Bath on the Kennebec, of Salmon only making 33,000. You perceive that the small schools, from the above would average about \$1 to the Salmon. Those sold fresh in Boston, before the middle of May did average 121 cents net profit, and 18 to 20 and 22 lbs. each, so that in a lot of 13, weighing 270 lbs. sold May 1st, of that year I received \$33 76. From which data, the conclusion may be drawn that every Salmon caught, was at that time worth a dollar. The Salmon fishery alone then on the Kennebec, below Fiddler's reach, was worth to the State \$33,000. And it is a fair estimate to value the Shad and Alewive fishery within the same compass at one half of the Salmon, making a total of \$49,500 to the Kennebec, below Fiddler's reach in the year 1813. This appears large, but by the manner the trade was carried on, the fact can be demonstrated with tolerable certainty. One third at least of the Salmon were sold fresh in the markets of New York, Newport and all the seaports between that and Portland, There were three regular trading sloops with a capital of about 3,000 dollars each, who purchased Salmon only, and generally exchanged the whole of their produce readily for that article, making up 9,000 dollars value. And II,000 for the consumption of the inhabitants was but a reasonable proportion in all the other methods of saving and cooking that fish. If therefore the Salmon, Shad and Alewive Fishery, even in that part of the Kennebec could be restored, it would give a source of wealth to the State about equal to the amount of the State tax.

Some facts illustrative of the tardiness with which mankind adopt improvements.

Canal Locks were invented in 1581 by engineers of Viterbe, in Italy. They were nearly a hundred years in getting fairly into use in France, and about one hundred and fifty in crossing the British Channel,

At this time it was made felony in several European States to ride in wheel carriages.

The Steam Engine was invented, or rather the principle of it discovered, by the Marquis of Worcester, as early as 1660. Few encouraged and none understood him. He died in great mortification. The honor was

afterwards engrossed by Savary. In 1765 the Earl of Stanhope applied the steam engine to propelling a vessel. A steam boat was run 20 miles on the Sankey Canal, Liverpool, in 1797, and another on the Forth and Clyde Canal, in 1801. Mr Niles, of the Register, says that he made a trip on the Delaware in a steam boat as early as 1791. In 1807, when Fulton was fitting up his first steam boat at New York, respectable, and sensible, and grey-headed men, said he was a fool. Now there is scarcely an interest in the community that does not depend, more to illustrate the case; which must be my apology or less, on steamboats.

OLIVER EVANS went before committees of Legislatures, first in Pennsylvania and then in Maryland, with a project of a steam carriage as early as 1804. He asked a little aid to defray the expense. They could hardly be prevented from reporting in favor, not of steam engines for carriages, but of a straight jacket for himself. Now we seem to hear the huzzas of a transatlantic nation, who have had the sagacity and ingenuity to seize and utilize the precious idea.

When Peter the Great, in 1700, or thereabouts, commenced a canal between the Wolga and the Don, the Governors and Boyards of the country opposed it earnestly, thinking it impiety to turn rivers out of the channels which Heaven had assigned them.

Manzenares navigable to the Tagus, and that to Lisbon, the Council said, if it had been the will of God that the the smoke house. I took some care that year the Council said, it it had been the will of God that the may be in some cases of imperfect organization,

When BRINLEY, the great Engineer, told a committee of Parliament, to whom Bridgewater's petition was referred, that canals were better than rivers, and would supersede them for the purposes of navigation, the committee were shocked, and asked him, 'And pray, Sir, what were rivers made for.' 'To feed canals,' the answer.

Dr FRANKLIN surveyed the route of the Delaware and C' e-apeake Canal, at his own expense, in 1757.

Baron NAPIER surveyed the route of the Forth and Clyde Canal, at his own expense, in 1761. Both have been accomplished, but after great delay.

Dr ZABDIEL BOYLSTON introduced inoculation for the small pox in Boston in 1721, and tried it first on his son Thomas, and other members of his family. But such was the force of prejudice and unbelief, that the other physicians gave a unanimous opinion against it, and the populace would have torn him to pieces if he had not retired from the city.-Centinel.

NEW ENGLAND FARMER.

BOSTON, FRIDAY, SEPTEMBER 10, 1830.

FREE MARTIN

Is a term signifying a barren heifer, which is a twin with a bull-calf, and partakes in some degree of the nature of a male as well as a female. Many scientific persons have doubted the existence of an animal of this description, but it is now as well established that they are and what they are, as any other fact in animal economy.

' The Boston Medical and Surgical Journal,' for May last, contains an article on this subject, from which we make the following extracts.

'Free Martins. We have been favored with the following account, which will not be found uninteresting to the anatomist, by a gentleman of this city, who is highly distinguished for the intelligence and success with which he has pursued the science of Agriculture.

To the Editor of the Boston Medical and Surgical Journal.

'DEAR SIR-I some years ago had a valuable cow of the English breed, which brought twins, a bull and a heifer calf. As I had heard much of the character of these animals, commonly ealled "Free Martins," and knew that some investigations by ingenious anatomists were taking place in Europe, as to their peculiar construction, I decided at once to raise them for the purpose of minute observation, and ultimately for dissection, if it should be thought advisable.

'At about four years of age, the heifer was slaughtered. Dr Harris, of Milton, being desirous, with some friends, of remarking on any peculiarity of organization in the case, was present, and the result of his particular observations I send you. It was the opinion of the Doctor, that it would be well to give a description of the form, appearance, and habits of the animal, as tending for this intrusion.

'The male took a premium at Brighton, and was, it is believed, as perfectly formed an animal as has been raised in the State. There is much of his stock in very valuable descendants,

'The heifer was of a delicate form and slender figure; decr-like in the neck and limbs. Her habits were rather shy and solitary, though well tempered. No disposition for the male ever appeared. This is the more to be noted, as our farmers have, as to this particular, an opposite idea. They are besides, said, on the same author-When some Dutchmen proposed to make the river ity, to resemble so exactly, that they may well be yoked and worked together. However true this

it must be here observed, that, though similar in liquor generally. The Taunton Squash pear crees and Ordinances of the government afmarks and color, the difference of form was most I am respectfully yours, strongly marked.

JOHN WELLES.

In answer to this, Dr T. WM. HARRIS, gives a scientific description of the several peculiarities of the animal; and observes that Mr John Hunter (Observations on Animal Economy) says it appears almost an established principle, that when a cow brings forth twins, the one a bull and the other a heifer, the latter is unfit for propagation, and appears on dissection, to be an hermaphrodite.' * * *

'As far as I could determine, this heifer had the external organs very small; teats and udder distinet; the former like those of an ox. The external characters appeared to be those of a fine well formed heifer. She was very fat, the intestines loaded with it.'

Dr Hunter, in the treatise referred to above by Dr Harris, gives scientific descriptions, illustrated by cuts, of the appearances on dissection, of several individuals of this kind of animal anomaly; and observes, that 'It is known that they do not breed; they do not show the least inclination for the male, nor does he take the least notice of them. They very much resemble the ox or spayed heifer. From the singularity of the animal, and the account of its production, I was almost tempted to suppose the whole a vulgar error. Yet by the universality of the testimony in its favor, it appearing to have some foundation, I eagerly sought for an opportunity to see and examine them. I have succeeded in this inquiry and have found Onions are sowed to the best advantage in the fall, several.'

Although this production of nature, like other monsters, is of rare occurrence, yet to the student of nature's laws, the anomalies as well as the general rules which govern the operations of Omnipotent Power, are interesting. Moreover, a knowledge of facts of this kind, may lead to results of practical utility, and enable us to direct the tendency of animals and vegetables to increase and multiply, into those channels which promise the greatest benefit to mankind.

Not only Dr Hunter, but others, have been excited to inquiries on this subject; and in the remarks made in this case, it seems Dr Mitchill has described in some journal a like peculiarity. We think that those who are desirous of further information on this subject, may consult this well conducted journal of medical science to advantage. The experiment is an expensive one, and our farmers will not rear an animal which can be of but little value, unless they wish to produce another case for anatomical examination.

There was a want of general knowledge on this subject in our country, and many mistaken notions were entertained. A recurrence to the Medical Journal may furnish whatever is still wanting to elucidate this subject, so far as it is connected with the pursuits of the practical cultivator.

PERRY.

This is a pleasant liquor, and is made from pears, in the same manner that eider is from apples. The pears should, in general, be ripe before they are ground. The pulp or pomace should not remain long after grinding, but should be immediately put into the press. The most crabbed and worst cating pears are said to make the best perry. The fruit may be either large or small.

(cultivated in Massachusetts) produces fruit that is feeting the freedom of the Press, and anticipated held in the highest estimation in England for per- and commenced attacks on the offices of certain ry. It is an early pear, remarkable for the tenderness of its flesh; if it drops ripe from the tree, it bursts from the fall; whence probably its name. The liquor made from it is pale, sweet, remarkably clear, and of strong body, which produces a price in Europe fourfold of common perry. After perry is made, it should be managed in all respects like cider; it must be racked off when moderately clear; and must, if necessary be fined by isinglass. Boiling is said by some to have a good effect on perry, changing it from a white to a flame colored liquor, which grows better by long keeping and bottling. Good perry can scarcely be distinguished from champaign wine; is much lighter, very tri-colored flag. The defeated party retreated to sparkling, lively, has a pleasanter taste; and is evextensive manufacture than it at present receives in New England.

The Baltimore American Farmer, which has been conducted for nearly twelve years with distinguished reputation and success by John S. Skinner, Esq., has been transferred to Messrs I. Irvine Hitchcock and Co., who have engaged Mr Gideon B. Smith as its Editor, a gentleman eminently well qualified to maintain its former reputaion and usefulness.

FALL SOWING OF SEEDS.

Cabbages, Parsnips, Carrots, Spinach, and when it is desirable to get them early the next season, Miller's Gardener's Dictionary says, 'to cultivate parsnips, sow the seeds in autumn, soon after they are ripe; by which means the seed will come early the following spring, and let the plants get strong before the weeds will grow so as to injure them. The young plants never materially suffer through the severity of the season.'

FARMER'S ALMANAC.

by Thomas G. Fessenden, Editor of the New published by J. B. Russell, 52 North Market-street, and Carter & Hendee, corner of School and Washington-streets, in the course of next week, This Almanac, it is thought, will be found to be essentially improved in its usefulness and appearance; being printed in a very neat manner on new type, at the office of I. R. Butts. The astronomical department has undergone a complete revision, by Robert Treat Paine, Esq, the Editor of the astronomical part of the American Almanac. The tides are noticed with great precision-a large drawing, containing two views of the great eclipse of the sun, February 12, 1831-a very full list of national, and of state officers, in New England, and of the provincial government in New Brunswick, Canada, and Nova Scotia, is added: with a memorandum of the most prominent events of the past year-besides the usual agricultural matter for farmers, calendar of courts, miscellaneous matter, &c, &c, by the Editor of the New England Farmer.

IMPORTANT EVENTS IN FRANCE.

Paris Journals to the last of August have been received in this country, and contain details of proceedings of unparalleled interest, which cannot fail to exite and agitate fall people and all Gov-

opposition newspapers, the citizens of Paris assembled in great numbers on the morning of the 27th of July. Collisions took place between the troops of the police aided by gens d'armes and the Parisians, and the former gave orders to fire on the people. The population, headed by scholars of the military schools, attacked the Royal Guards and the troops of the police, and after a protracted and sanguinary contest, obtained a complete victory. The city hall, several military posts, the Tuilleries, the Louvre, and other places, feebly defended by the Swiss and other guards, and troops of the lines were captured and surmounted by the St Cloud, where the King and Royal family had ery way worthy of more attention, and of a more retired. Some accounts state that the streets were deluged with blood for many hours on two days in succession, and that the killed amounted to some thousands.

While these events were occurring, at a 'meeting of Free Frenchmen,' it was decreed that in consequence of alleged violations of the prerogatives of the people, Charles Philip Capet, formerly Count of Artois has ceased of right to be King of France, &c. The Duke of Orleans is Lieutenant General of the Kingdom, and La Payette commander of the National Guards.

These events are of deep, thrilling, and universal interest; and we are happy to perceive in the elevation of La Fayette, and other moderate and judicious measures, that we are justified in the auticipation of the most auspicious results from the preliminary movements in the progress of rational freedom in France.

MASSACHUSETTS HORTICULTURAL SOCIETY. Saturday, September 4, 1830.

Apples .- Summer Russet, by Mr E. M. Rich-ARDS. Porter Apples and Grand Sachem, by Mr WINSHIP, of Brighton, Cream Apples-Lady The New England Farmer's Almanac, for 1831, Haley's Nonsuch, and Sweet Red Crab, from seed of the Siberian Crab, by Mr Manning, of Salem, England Farmer, is now in press, and will be Large Red Apples, very fine, no name, and Siberian Crab Apples, from Mr R. Howe. Large Green Apples, called in Hingham, 'King Apples, by Henry Cushing, Esq. of Hingham. English Codlin and Paris Pippin, by Mr JAMES READ. Kenrick Apples, a seedling from the farm of J. KENRICK.

> Pears .- Andrews Pears from Mr R. Howe. A French Pear, (name unknown,) by Mr R. Man-NING. White Dovenne, or Cox's Julianne, by Mr B. Weld, of Roxbury. Chelmsford, Tyngsboro, or Summer Mogul, of great size, but otherwise of ordinary quality, by Mr E. T. Andrews.

> Peaches .- A fine Seedling Peach, from Z. Cook, Jr. Jaques Peach, Noblesse, and two varieties of seedlings, all very fine, from Mr James Read-Fine specimens of this fruit from Mr Winship, of Brighton. A rich Seedling Peach, of handsome appearance, by Dr S. A. Shurtleff. Monsieur Jean, (Cox, No. 3) an excellent peach from Mr R. Manning, of Salem. Two seedling varieties of good quality, from Mr E. M. RICHARDS. Glosse Mignome, of uncommonly fine appearance and rich flavor, by Mr ELIJAH VOSE.

Plums .- By Mr R. Manning, of Salem, 4 sorts, not named. Canada Plums, the American Red or American Yellow, of Prince's Catalogue, Early The more austere the pears, the better will be the ernments.' In consequence of some Royal De-Coral or Golden Drop, of Bloodgood's Catalogue, and the German Prune. This latter variety is a aluable plum, possessing much of the appearance and many of the qualities of the French Prune. ine Plants and Nectarines, by Mr Hovey, of Weston, of large size and very fine flavor and ap- dish-all warranted of the first quality.

A specimen of large native Grapes, (white) by E. PHINNEY.

On Saturday evening, after the exhibition, a ine box of Plums was received from E. EDWARDS, Eso, of Springfield, Mass, They were taken rom a seedling tree, which was planted about 20 cars since in the garden of Judge Platt, in Vhitesboro, N. V. The stone was brought from msterdam, in Holland. Mr Edwards describes as a great and constant bearer, very hardy, and ot subject to blight. He states that he had on ne end of a very small limb of a tree, that was lanted out a year ago last spring, in the space of 2 inches, 35 full grown, ripe plums. Some of iese trees in Springfield, have produced this year, vo bushels each.

As DANIEL LOMBARD, Esq. of Springfield, was e first person who introduced the tree into that larter from Whitesboro, N. Y., it has been approiately called the Lombard Plum. It will, from s external showy appearance, make an excellent arket fruit; but it is deficient in flavor, comparwith our fine Plums. It can of course be exnded by suckers from the roots, or by planting e stones without grafting. Mr Edwards has ry generously offered to distribute the grafts id suckers to any gentlemen in the proper season r removing them. Some of them would be ry acceptable in this quarter.

A gentleman who had left Westchester, Pa, his tive village when 30 years of age, and had ever revisited it, lately returned unexpectedly, at age of 82, and was recognized by two old ladies different places, who had not seen him since departure. Perhaps when young he had made impression on their hearts which 52 years ild not efface.—Patriot

Hops .- The Concord Gazette states that the p-growers are the greatest sufferers by the gale 26th ult. Hops nearly ready to pick were nich heaten and torn. In Littleton, Boxboro', I Wilmington, great damage has been sustained. fore the gale the growers expected large crops first quality hops, but these are so much injured, t they will hardly now pass for second quality. The stone fruit, apples, corn, &c. were much naged.

In Charlestown, Va. an innumerable swarm of s ascertained that a merchant had a tierce coning 30 or 40 gallons of West India honey in cellar. In three days they carried off the

Bees for Sale.

'ersons in want of prime swarms of Bees, or Beard's ent Hives, can be supplied by Mr Ebenezer Beard of arlestown. Purchasers of swarms are supplied with ard's Patent Ilives, gratis, for their own family use The prices of swarms vary, according to their aght and quality. November and December is control to best time for removing the December is control to best time for removing the December is control to the december in the December in the December is control to the December in the December in the December is control to the December in the December is control to the December in the December in the December is control to the December in the December in the December in the December is control to the December in red the best time for removing the Bees; they can be aged, however, at any time previous. All orders, ser for swarms, or for the Patent Hives only, left with 3. Russell, at his Seed Store, No. 52 North Marketet, Boston, will be faithfully executed.

Sept. 10.

Seeds for Full sowing.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street-

A great variety of vegetable seeds for fall sowing, viz. White Portugal Onion, Prickly or Fall Spinach, (growth Cambridge, and Phuns from Isvac Fiske, Esq. of of 1830.) Parsnips, Carrots, Black Spanish or Winter Ra-Sept. 10.

Culture of Silk.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street

Essays on American Silk, and the best means of rendering it a source of individual and national wealth; with Directions to Farmers for raising Silk Worms -By John D'Homergue, Silk Manufacturer, and Peter S. Du Poncean -Price 622 cents.

Also, Directions for the Rearing of Silk Worms, and the Culture of the White Mulberry Tree. Published by the Pennsylvania Society associated for the Premotion of those objects, (an excellent, plain, practical work.)-Price 25 cents.

New Work on Farriery.

Just received and for sale at the Seed Store connected with the New England Farmer Office, No. 52 North Market Street,

The Veterinary Surgeon; or, Farriery taught on a new and easy plan: being a treatise on all the diseases and accidents to which the Horse is liable; the causes and symptoms of each, and the most improved remedies employed for the cure in every case; with instructions to the Shoeing-Smith, Farrier, and Groom, how to acquire knowledge in the art of Farriery, and the prevention of Diseases. Precoded by a popular description of the animal functions in health, and showing the principles on hielt these are to be restored when disordered. By John Hinds, Veterinary Surgeon. With considerable additions and improvements, particularly adapted to this country, by Thomas M. Smith, Veterinary Surgeon, and Member of the London Veterinary Medical Society. Price \$1,25.

Suxon Sheep.

On Thursday the 234 day of Sentember, at Hartford, (to close a concern) will be sold by Public Anction, an entire flock of superior full blooded Saxon. Sheep, bred with care from the best stock imported by Messrs George & Thos Searle in 1825 and '26; consisting of 14 Rams, 30 Ewes, 11 Ram Lambs, and 10 Ewe Lambs.

Also, the well known full blooded Durham Improved Short Horned Bull Wyr Comer, unquestionably the best Bull in W. WOODBRIDGE, August 30, 1330. HENRY WATSON.

Grass Seeds.

For sale at the Seed Store connected with the New England Farmer, 52 North Market street,

A large assortment of Seeds of the various grasses cultivated in New England, viz:

HERDS GRASS; RED TOP:

ORCHARD GRASS; TALL MEADOW OATS GRASS;

FOWL MEADOW GRASS:

LUCERNE, or FRENCH CLOVER:

RED CLOVER;

WHITE HONEYSUCKLE CLOVER: also

WINTER WHEAT, from Genesee, BUCKWHEAT, FLAX, MILLET, FIELD PEASE. nd 14 varieties of the most esteemed FIELD TURNIP SEED, cultivated in Europe and America, all warranted of the first quality, and at the customary market prices. Aug. 13.

For Sale.

A valuable Form at Lechmere Point; consisting of 30 acres-on the Craigie road, less than three miles from Boston. With a good two story house and barn thereona thriving young orchard and other fruit trees

For terms and other particulars, inquire of Wm. E. Payne, No. 5 Court-street. epto1 Aug. 27.

Bolivar Calves, Saxony Bucks, and Bremen Geese. For sale, 4 Bull Calves, sired by the celebrated imported improved Durham short horned bull Bolivar.

which stock have produced 36 quarts of milk a day. No. 1, dam Grey Brown, half Co lebs and half Galloway. No. 2, dam Juno, three fourths Fill Pail. No. 3, dam Ceres, her sire Colebs, her dam Mr Gray's imported Cow. 4, dam Beauty, half Colebs and half Galloway. The Calves are beautiful, and their dams all great milkers.

Two imported Saxony Bucks, 2 Yearlings, and 2 Lambs. 3 pairs of Bremen Geese. Inquire of Benjamin Shurt-3 pairs of Bremen Geese. Inquire of Bonyaman leff, Jr, Chelsea, or at 52 Hanover Street, Boston.

4f July 9.

Strawberry Plants.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street-direct from the Brighton Nursery,

A large variety of Strawberry Vines, comprising the Pine Apple, Roseberry, Bath Scarlet, Royal Scarlet, Mulberry, Wood, Chili, &c., at \$1 per hundred. Also Wilmot's Superb, Keens' Imperial, and Keens' Seedling, at a reasonable rate.

Wants a Place,

A middle aged man as a gardener. Inquire at the Farmer Sept. 2.

Brighton Market-Monday, Sept. 6,

[Reported for the Chronicle and Patriot.]

At Market this day, 611 Beef Cattle, 953 Stores, 5214 Sheep, and 1002 Swine. The Market was much 'glutted' today; more than 100 Beef Cattle, more than one half the Stores, about 1000 Sheep, and about 2 or 300 Swine, re-

Prices-Beef Cattle-We shall quote the price the same as last week, from \$3.50 a \$4.50, although we think the Market something lower; we noticed some decent Cattle sold for a trifle over \$3.

Stores-Sales dull, too many at market for the season, although there were many buyers who probably intend purchasing tomorrow.

Sheep and Lambs.—From $\$1,12\frac{1}{2}$ to \$1,75; we noticed one lot of 200 for \$1,25, one lot of 80 for \$1,17, one lot for \$1, several lots for \$1,33, and several for \$1,50; also lots at \$1,621 and \$1,71.

Swine .- One lot of 400, mostly old, were taken at 41 a 412; at retail 4 a 5 cents.

MISCELLANIES.

the town.' 'Bless me,' said the inquirer, 'and it is supplied by principles dictated by conscience, he seems just ready to be delivered of another and accompanied by an earnest effort after such

It is stated that 15,000,000 feet of lumber is annually brought from Brunswick and Topsham to Bath, and thence shipped to the South. A large portion of it goes to the West Indies.

McBane was instantly killed by lightning in the one is quicker than a child, to understand a rule vicinity of Fort Covington, N. Y. while sitting wherein itself is concerned, and to notice, too, near a window with one of his children in his the least deviation from it. These occasional arms.

the clouds to the earth, or from the earth to the clouds, as is sometimes the ease, generally follows some conducting substance, such as smoke, the steam from a mow of new made hay, metals, trees, &c. It is therefore prudent during a thunder shower to keep away from fire places, stove pipes, trees, the walls of buildings, and the like. The best remedy for a person struck senseless by lightning is, to dash the body plentifully with cold water. Many lives have been saved by this remedy, and it should be remembered and applied immediately .- Vermont Telegraph.

HINTS TO PARENTS.

'JUST THIS ONCE,' OR, THE RULE BROKEN.

'Just this once,' says the fond mother to herself, as she allows the cake or sweet-meat to slip into the mouth of her darling, in despite of her rules for preserving health. It is but a crumb, and how unkind to refuse the friend that so tenderly offers it; and then, just for once, it can do no harm. 'I must pacify my child this time, at any rate,' says the mother, pressed with the hurry of business, 'I may grant an unhallowed indulgence, in such a case as this, and just for once,' says she to herself. In the confusion, sometimes, occasioned by company, where the mistress does not preserve her calmness and self-possession, her disturbed manner necessarily propagating itself in any other way, never stop to reflect, lest the temthrough the family, down to the youngest child .then, is an urgent case; and the child must be kept quiet, at any price, 'just this once,' says the ence upon the faculties. vielding mother.

A little child is learning to go to bed alone; the point is nearly gained, but something occurs to disturb its habits, and raise a spirit of rebellion. The mother perhaps is called away in the midst, and she directs that it be rocked to sleep this once; and so the whole work is undone; aye more than

The child throws down its hat or gloves; the mother finds them, and does not exert herself to enforce the rule that should send them to their place; 'it is no matter just this once; another time I will talk loud and long.' Sometimes the child (and happy it is, if it is never a young lady) is suddenly called to go abroad; and then the agitation, hurry, and confusion, because the hat, cloak, or gloves, are misplaced! They did not happen to be put in place, 'just this once.'

Rules had better not be made, if there is not firmness enough in the mind that makes them, to resist the least temptation. In none of the ways

of private life, do we more see the want of steady principle, than in the management of little chil-In Berkshire county, lately, a gentleman ob- dren, from the first breath they draw. In some served a very corpulent man passing, and inquired happy exceptions, there is a native firmness of who it was: 'Why, that is Mr _____, father of temper in the parent; or where this is wanting have,' said the quick sighted doctor; 'but has thee ever and accompanied by an earnest effort after such a steady adherence to their principles, as will 'Certainly I do. Now thee 'lisee if thy blister don't do yield to no earthly feeling or solicitation,

There is a way of denying the wishes, and yet of leaving the mind of the child in a pleasant state; and it may be learned and practised by all parents. This firmness of principle does not involve a constant series of denials towards the DEATH BY LIGHTNING .- On the 18th July a Mr | child-for it soon learns what to expect; and no compliances lead to the destruction of all princi-Caution.—The electric fluid in passing from ple; the effect on the parent is enfectling to his own character, and on the child, to foster an uneasy and a disobedient temper, to subject it to the dominion of passion, and to lead on to evil consequences, more numerous than the power of human intellect can compute. LA JEUNE MERE.

Vermont Chronicle.

Management of Children .- In reflecting on the subject, I have been impressed with the idea, that there is room for improvement in the government and management of children. To assist parents in this desirable object, a friend thread. to good and wholesome government would wish a space of the Record, sufficiently large to give a few simple rules, which, if followed, cannot fail to have the effect suggested.

If one parent has refused a child a plaything, sugar plum, or anything else, let the other be sure to interfere, and say, ' poor thing it wants it and ought to be gratified.

It a child be stubborn and wilful, and need chastisement, and one parent attempt to inflict it, let the other by all means interfere, with, 'Poor thing, it sha'nt be banged to death.' In short, let parents never agree in what is best to be done, and the child will soon know what is what, and be fitted for many things.

If a child offend, either by breaking a plate or per should cool; box its ears with a smart blow; a powerful thump on the head has a wonderful influ-

If a child beg for a thing which has been two or three times refused, and at length sets to crying. relent, and let it have the thing cried for, by all and Farmer .- Price \$1,00 per bottle, with directions. means, it will learn him perseverance.

As your daughters grow up, let them run from home in the evening, without knowing with whom or where, for why should parents be too particular! This indulgence will fit them for several things,

A good deal of whipping is by all means recommended; it makes children hardy, and a little shameless, and generally compels them to lie: but this will fit them for the buffetings of life,

Follow these rules, and my word for it, children will never break their parent's hearts; for parents who have hearts to be broken will never follow

Anecdote.-A physician not far from Albany, had an old superstitious lady for a patient. He applied a blistering plaster on the back of her neck, for a disorder in the head. After taking off the dressings from the blister, he threw them earelessly into the fire. 'Why, la, doctor,

why did thee throw them dressings into the fire? thee not know that it would eause my blister to dry up and make it very sore and painful? I always knew that it would ever since I was a child six years old, and have seen it tried fifty times or more.' 'No doubt you seen it have this effect since the large eclipse of the sun just as well as if I had not put the dressings in the fire. Well, I declare, said the lady, 'I am glad the dark day has done some good, for sure I never heard before that the dark day ever had done any good whatever. The blister did well, and the lady thought the doctor truly a learned man, and master of his profession .- N. Y. Medical Inq.

ITEMS FOR HOUSEKEEPERS.

Potato Cheese.-Select good white potatos, boil them, and when cold, peel and reduce them to a pulp with a rasp or mortar; to five pounds of this pulp, add pint of sour milk and the requisite portion of salt; knead the whole well, cover it, and let it remain three or four days, according to the season; then knead it afresh, and place the cheeses in small baskets, where they will part with their superfluous moisture; dry them in the shade, and place them in layers in large pots or kegs, where they may remain a fortnight.

Age improves their quality, and they possess the property of never engendering worms. If kept in a dry, well closed vessel, they may be preserved for many years.

When a decanter stopper becomes tight, a cloth wet with hot water applied to the neck, will cause the glass to expand, so that the stopper may be easily removed.

Glass vessels may be cut in two, by tying around them at the place you wish to divide, a worsted thread dipped in spirits of turpentine, and then setting fire to the

It is unnecessary to tell any who have had experience of the evil, that red ants are like the plagues of Egypt. The following method of destreying them seems to be too simple to be very effective; but I have known it succeed, when a house had been infested with them for years.

These insects are extravagantly fond of shag-barks, or American walnuts: fill a large dish with these nuts, cracked, and they will quit every thing else, to cluster upon it. When the dish is well covered, remove it carefully, and brush them all into the fire; at the same time have a little corrosive sublimate in a cup, to sweep in such as happen to stray from the dish; and touch all the cracks and crevices, from which you have seen them come with a feather, dipped in the same poison. In one week if this be repeated they will all be gone. means leave the cup, or poisoned feather about for an instant.

BSERVATIONS ON THE MAKING, CURING, AND CASK-ING OF BUTTER.

A number of copies of the subjoined having been tely printed in another form at the Courier office rone of our country gentlemen, we think we canot do a more acceptable service to our agricultural ends than to insert it in this place. It was drawn by order of the Agricultural Association, as the sult of inquiries into the practice adopted in Ircnd in the making of butter, and of the experience some extensive curers in the county of Aber-

1st. The milk house or dairy should have no ternal communication with any other building. must be kept free from smoke, well aired, and no tatoes, fish, onions, cheese, or anything likely to ipart a strong or had smell, should be kept therein. short, nothing but the dairy utensils, which mest kept sweet and clean.

2d. The milk when brought in from the covs sould be strained through a fine hair sieve or straier, and, when cool, put into sweet well seasoned cken cogs, kellers, or milk-pans-the latter to be referred. A tin skimmer, with holes in it, is the st for taking off the cream, which should aways be churned while the cream is fresh.

3d. The churns whether pump or barrel, should made of the best well scasoned white oakal, as cleanliness is of the first importance, great tention should be paid to the washing, drying rl airing of the churns immediately after use, otherse they are sure to contract a sour and unwholeare smell, which must injure the quality of the

Ith. The Butter immediately after being churned, luld be thrown into fresh spring water where it luld remain for one hour at least, that it may w firm; and, at the end of the third or fourth shing, some fine salt should be put into the er, which will raise the color of the butter, and ige away any milk that remains among it. Besalting it is very essential that no milk or wabe left, otherwise a strong smell and unpleasant e will be the certain consequence.

th. The Butter thus prepared should be immeely salted. The proportions of salt may be from and one fourth to one and one half ounce of tch Salt for the pound of Butter-or, for the stoved Rock or Bay Salt one ounce for the ind. But when Butter is not intended to be t through the winter and spring, or for any long od, the quantities of Salt above recommended be somewhat reduced, the curer exercising own judgment in doing so.

. B. In Ireland, the use of salt and saltpetre is mmended, in proportions of one ounce of ed Rock or Bay Salt, and one fifth of an onnce altpetre to the Aberdeen pound.

th. It is a very injurious practice to keep a ing of Butter uncured to the next churning, he purpose of mixing the two together. This e invariably injures the flavor of the whole, renders it of too soft a quality ever aftewards et firm.-This applies to curers who are the are. ducers of the Butter-but as the greatest quanof hutter in this country is collected and cured

the practice of throwing the fresh Batter together, or less prevail in the making of Butter throughout and retaining it in that state for days until they have the country-but as a perseverance in such praccollected what they consider a sufficient quantity tices must ultimately have the effect of entirely to commence curing—the Butter treated in that destroying this profitable branch of agricultural manner is invariably found inferior to what is salt- industry, it is hoped the makers of Butter will see ed after churning. be a sufficient quantity collected in one day to fill a Butter of the best quality, and that these mal-pracpackage when cured, the quality of the butter may tices, which are perfectly known, will be disconin great measure be preserved by giving it a partial salting and covering it over with a clean linen eloth lipped in pickle, and placing it in a cool situation. Country Dealers who are in the habit of sending earts through the Districts where they reside, to collect the Butter should endeavor to arrange it so between themselves and the makers of the Butter, that it is churned upon the day it is called for.

7th. When the butter is cured, it should be tramped firm into the firkin with a round, wooden tramp-stick, of sufficient weight and thickness. The firkin should be filled up to the crose, and then covered over with a little of the purest saltsufficient room merely left for the head of the cask, and must be well secured, to exclude air, and to prevent the pickle from getting out.

Sth. The Liverpool stoved Salt, or Portugal St Ubes, or Bay Salt, is from strength and quality, always to be preferred. All Salt must be kept quite dry, and at a distance from fire, to prevent pense of money and time comparatively small, he first imbibing the smell of the smoke. If kept in a cask, a little unslacked lime placed under it will prevent it from drawing moisture from the ground.

9th. The mixing of the salt with the Butter should be done in wooden dishes, after the water and milk are completely expelled, and no time should then be lost in tramping it into the firkin the mechanic, who risks all on a single project, which wll make it draw even and firm.

10. The milk of new calved cows should never be set for Butter until at least 4 days after calving, as a small quantity of beast-milk Butter will injure a whole firkin. The practice of scalding cream in cold weather should also be avoided, as cream thus treated will never make good Butter.

11. Great care should be taken not to steep the firkin in boggy or unwholesome water. Nothing but the purest spring or clear running water should be used for that purpose - and the firkins should be rendered perfectly dry inside after being steeped, either by long dripping, or being rubbed by a smooth towel. Old Butter should never be mixed with new-and the lining of the casks with "inferior sorts, or Grease Butter, is a practice which cannot be too much reprobated.

cak or ash, (the former to be preferred,) and the their industry, in the first instance to fifty acres of brgest size should not exceed 84 lbs. gross, that land, exclusive of the necessary proportion of being the size used in Ireland, and most conven- woodland. Should, however, there not it to be their own interest to produce nothing but tinued. The dealers in the country have it in their power to put a check to them-and it is expected they will do so, by refusing to purchase from those who adopt any artificial means to hasten the making of the butter, or to increase the quantity, while the quality is thereby deteriorated.

SMALL FARMS-COLLECTING MANURES.

The great principles of agriculture may be reduced to these two points: keep small farms and manage them well. What constitutes a small farm, or in what consists good management, are subjects deeply affecting the best interests of society, and have engaged volumes of the most philanthropic writings. The pages of a work, limited in size and devoted to various purposes, can afford but a short review of a subject so comprehensively useful, yet, by entering directly into real matter and avoiding the prolixity of books, much instruction and benefit may be obtained at an ex-

An anxiety to grow rich has done more injury and produced more disappointment to farmers than to any other class of fortune hunters: the merchant, who not only risks his entire capital, but also his utmost credit on a single voyage, may succeed even beyond his calculation, and may, at once, increase his fortune and enlarge his credit: may succeed to riches and its comforts; but the farmer, who enlarges his fields beyond his actual means of cultivating them never succeeds in high design.

Land badly tilled and badly fenced, produces a small crop, which not unfrequently becomes a prey to the inroads of cattle, or suffers for want of hands to secure it in harvest; yet such must be the fate of large farms, that is, farms exceeding the disposable means of the proprietor. No general rule can be laid down to determine the proper size of a farm, as it must be regulated by a whole view of the farmer's means, family, &c. ; but in choosing a farm, it would be a prudent maxim to prefer one even apparently too small, to one that might prove too large; and perhaps the generality of farmers, who look merely to the 12. The casks ought to be made of the best support of a family, might do well to confine But,' says the farmer, who has six or eight childeniable fact, that one hundred acres badly tilled will produce less than fifty acres well managed, and that the labor necessary to the good tillage and management of the small farm, will not be sufficient even for the slovenly management of the large one.

It is unnecessary to describe, how a large farm may be ruined, in the case of a proprietor whose capital is small; every practical farmer can explain, and the most superficial view of hundreds of such farms, to be seen in all directions, will at once convince the doubtful. It only remains to see how the farmer and his family can be supported on a farm of fifty acres.

The skilful farmer will keep his lands in a state of constant productiveness; the most injudicious management or the most apparent neglect can alone cause land to remain for years or even for a season without contributing to the farmer's sustenance; this state, however, seldom fails to attend rooms of the Institute, by Doct. T. Romeyn Beck, large farms. A rotation of crops and a supply a copy of which we have received, and shall ere of manure will secure this constant state of productiveness. Every farmer is a sufficient judge of the managing a rotation of crops, and, in some measure, acts on that principle; but the mind and labor are so divided in the care of large farms, that neither can be brought to act with sufficient judgment or effect. A proper disposition of cattle, added to a judicious collecting of manure, will always produce the means of enriching and invigorating the soil, nor can there ever appear any want of a sufficient supply of manure for every purpose of the farm.

The collecting of compost, or manure, being indispensable to the farmer, it shall be here first attended to. Compost is to be considered, both as to its quantity and its quality. The quantity may be increased by mixing clay, or other unfermented matter with the manure; the entire mass will partake of the salts, and all ferment together. The quality, which seems of more importance than the quantity, may be improved by choosing a proper site for the manure heap. It should not be made in a hole, because the rain water will soon fill the hole and chill the manure; which should, in order to fermentation, preserve a considerable heat: it should not be made on a hill because its juices will run from it: it should not be exposed to rain, because the water passing through it will carry away its most valuable part; nor should it be entirely excluded from the air which is essentially useful to it. With these general observations in view, the farmer will easily contrive a proper plan for collecting a sufficiency of rich compost for all the uses of his farm, which, thus plentifully supplied, will never degenerate into a barren waste. The manure heap should be placed near the farm yard, so that the rotten straw, hedding of the cattle, &c, may be easily removed to it; a sewer or gutter should also be contrived to carry off the urine from the cattle's stalls to a reservoir near the manure; and finally, it should be collected on a flat spot of ground, so hard as to be, if possible, impervious to the juices, which would otherwise sink into the earth and be totally lost .- N. Y. Farmer.

ALBANY HORTICULTURAL FESTIVAL.

The second anniversary of the Albany Mortieultural Society was held at Albany, on Tuesday the 7th inst, in the spacious hall and ante rooms of the Acadamy and Institute. Notwithstanding the unfavorable state of the weather, it was in all respects an elegant and rational festival. The annual address was delivered at 12 in one of the long present to the readers of the New England Farmer. The following account of the exhibition, &c, we have abstracted from the Albany Argus.

The decorations of the hall were chaste and splendid. This room is 80 feet long, 40 broad, and 20 high, and ornamented by twenty Corinthian columns, four upon each angle, exclusive of four at the corners. The whole room was encircled with appropriate festoons, fastened at the top of each shaft, and decorated at these points with twenty large honquets of the richest flowers, two and three feet in height, and partially concealing the capitals. Brilliant bunches of flowers were also displayed over the different entrances, and upon the mantles. A large and beautiful star, composed of the double helianthus, dinmishing to points from a six inch centre, and the ntervals filled with paintings of fruits, was conspicuous opposite the principal door. The upper end of the hall exhibited a bosquet of uncommon size and and produce an hundred fold. singular beauty, eight feet high and six feet broad. in the form of a heart, and surmounted by a splendid floral eagle, peering amid the draper; of the festoons; the whole displaying some thousands of flowers, and of almost every hue and colorthat is pencilled by the prolific hand of nature, studding and encircling clusters of grapes passing in a continuous vine through the centre and in parallel tural and agricultural knowledge. shoots from each side. A large sheet of paintings of fruit, in colors, by a youth, appeared as a pedestal. Above, and near the ceiling, were the initials of the society, in large letters composed of the richest flowers, surrounded by an oval of evergreen, interwoven with roses, &c .- Such were among the floral decorations of the hall, which, were arranged under the general superintendence of Mr Wilson, of the Albany Nursery, assisted by other professional gardeners. The large bouquet phy, gardener to E. C. Delavan, Esq.

Nor were the contributions of Pomona less his fame, splendid and interesting than those of her fair sister. The centre table, extending through the chusetts Horticultural Society. hall, was appropriated to these, and exhibited a were regaled with these rich delicacies of the elevated patriotism of its citizens. MR FESSENDEN-I must beg of you to make garden. In the centre of the fruit tables were The annual election was held in the course of

water grape, and four pots with branches of the peach, plum, apple and quince, literally loaded Having been absent from home and much en, with their natural fruit, and decorated with roses and other flowers by the hands of two fair visiters. The plums, particularly, excited admiration. They comprised about thirty varieties, all of great excellence, many of which are natives of, and almost peculiar to, our city and neighborhood; and others of them seem to have found with us their favorite home. Among the former, we enumerate the prune and Bleecker's gage, two seedlings grown from seeds which came from Germany, the Schuyler gage, Chancellor gage, and the Jefferson and Eleanor plums, the two latter known to be seedlings; beside a large seedling blue gage. We also noticed a dish of green gages, every one of which grew double, labelled with the name of D. B. Slingerland,

We have not room for an enumeration of the different sorts and baskets of fruit. There appears to have been no differing. A branch of filberts was exhibited from the garden of Charles E. Dudley. The nuts when perfectly ripe, are very fine, superior to the imported, and the trees can be easily propagated. They are ornamental and appropriate for hedges.

At half past 3 P. M. about one hundred gentlemen sat down at Cruttendin's. Jesse Buel, Esq. presided, assisted by three Vice Presidents and the Chairman of the Committee of Arrangemonts. Gov. Throop, and several gentlemen, were among the guests. After the cloth was removed, several toasts were drank; we have room but for few of them.

PACKING FRUIT TREES FOR EXPORTA-TION.

SIR-The following is the plan adopted by Mr Prince of New York, in packing fruit trees, and which I can recommend, from experience, to your eaders:-As soon as the tree is taken out of the ground, the roots are dipped in a thick mixture oundles, and dipped in all at once, and a mat is apped over them, to keep the earth round them ogether. They are afterwards placed in a box, and a piece of wood is fixed across the box, over he top part of the roots, to prevent them from noving, as the branches are not lapped up at all. I have had trees packed in this manner, which tave remained in the above condition four months; and, when unpacked, the roots were throwing out new fibres. This occurred last spring; and, although the season was so unfavorable, the trees nade exceedingly fine strong shoots. The plan dopted by Messrs Buel & Wilson, of the Alpany nursery, in packing their fruit trees, is as ollows :- They dip the roots well in a mixture of earth and water; but instead of lapping the oots in a mat, they lay them in the end of the box, and fill in between them with wet moss; so that he lid of the box presses against the moss, and hus prevents the roots from being shaken. 1, lowever, consider the plan of lapping the roots n a mat superior to that of filling in with wet noss, because a dampness proceeds from the moss, which produces a mildew on the branches of the rees so packed. This has been the case with rees that I have received packed in this way; out, after they had been unpacked for a short ime, the mildew disappeared. The trees which I eceived this season, from Messrs Buel & Wilon, are :-

[Here follows the list of the trees. Mr Saul peaks under another date, of these trees, as havver known imported. Editor N. York Farmer. M. SAUL. Lancaster, June 15, 1830.

Fruit Trees (Pears and Apples) were taken out o Madras, in 1793, by Mr Main, in a box of damp noss; the moss was damp when the trees were acked, not touched by the way, and, after a oyage of three months, was found dry, but the rees alive. Some gooseberries and currants, which were packed with them, were dead. The essel sailed from London on Jan. 1, and arrived he beginning of April. The trees came from Mesers Loddiges.

From the New York Evening Post.

Extract of a letter from Henry Perrine, Esq. Consul, &c. dated San Juan Hatista de Tabasco, Mexico, formerly Villa Hermosa, July 29, 1830, to Sammel L. Mitchell.

stingless bees, of which you may dispose as you may think proper.

'As fibrous plants are my favorites, my principal motive for coming from Campeachy to Tabaseo, was to obtain intelligence concerning that variety of the Agave Americana, which produces the very long fibres called Pita. Other plants of this district, such as Vanilla, Sarsaparilla, and others, will engage my attention. Among other specimens sent from Campeachy to New Orleans, is the Dolichos Pruriens or Cow-itch.

The Bees have arrived in a lively condition, and although they were received only yesterday afternoon, (Sept. 1st.) are now making their exvivacity. Their dwelling place is a hollow log, from 1 to 121-2 cts. per piece. Muskmelons, part of a naturally excavated tree, in which from 1 to 8 cts. per piece .- N. Y. Farmer. these little creatures delight to live. The little swarm, after having been released from its imprisonment, came forth, and the members visited the flowers of the contiguous garden .- It was observed, as proof of their neat economy, that of earth and water. The roots are then tied in after having been immured during the voyage. the notable insects came forth loaded with the remains of their deceased associates, or with some excrementitous or foul matter. They thus seemed intent on cleaning their house.

> A hole in the side of the log, about three quarters of an inch in diameter, answers the purpose of the entrance as a common hive,

They are not so large as the common honey bee; but they have a neat aspect for an insect. As they are such harmless little creatures, it would please me very much to get a swarm of them. But I fear the number is so reduced that it will require an apiary-man of more skill than I possess, to take the best care and make the most of them. I wish such a person would present himself, and take the colony under his protection. Something novel and curious, at any rate-perhaps something useful, might arise from it.

An entomological description is desirable, but this must be postponed, on account of its nicety and difficulty, until a future day.

TEMPORAL INSTRUCTION BY CLERGY-MEN.

If Clergymen, in addition to their spiritual duties, would attend a little more to the things of the body, and instruct their hearers in matters of natural science and political economy, as Dr Chalmers does and proposes to others, they would do them much real service. By having their attention exclusively directed to a world to come, they are diverted from their temporal miseries here, and ng arrived in better order than any he had taught to linger on in suffering, as if it were a condition of their existence, and a sort of penance to insure future happiness, instead of exerting themselves to improve their worldly circumstances.

[We fully agree with Mr Loudon, that the usefulness of Clergymen might be greatly extended by considering the works of nature as well as the Bible, to be a revelation.]-N. Y. Farmer.

Average Price of Vegetables sold at Washington Market, New York, for August, 1830. Potatees, from 25 to 44 cts. per bushel. Bush Beans, from 371 to 75 cts. per bushel.

Beans, from 75 ets to 1,00. Sweet Polatoes, 1,00. Cubbages, from 37½ to 75 ets. per doz. Beets, from 2 to 4 cts. per bunch. Carrots, from 2 to 3 cts, per bunch of 7. Parsnips, 4 cts, per bunch Bees without Stings .- 1 send you by Capt. of 6. Turnips, 371 cts. per bushel. Lecks, 6 Powers, of the schooner Washington, a hive of cts. per bunch of 12. Celery, from 6 to 8 cts. per bunch. Cucumbers, from 124 to 374 cts. per hundred. Lettuce, from 151 to 183 cts. per doz. Succory, from 121 to 184 cts. per doz. Tomatocs, from $6\frac{1}{4}$ to $12\frac{1}{2}$ cts. per half peck. Egg Plant, from 2 to 4 cts. per piece. Corn, 25 for 121 cts. Okra, 121 to 25 ets. per hundred. Sorrel, 61 ets per half peck. Water-cress, 123 cts. per half peck. Salsify, from 6 to 8 cts per bunch of 12. Onions, from 50 to 621 cts. bushel. Peppers, from 121 to 25 cts per hundred, Parsley, 3 cts, per bunch. Herbs, of all kinds, from 12 to 18 bunches for 12 1-2 cts. Apples, from 25 to 1,00 per bushel. Pears, from 37 1-2 to 75. Peaches, from 50 cts. to 3,00, Plums, from 50 cts. to 3,00. Grapes, cursions to and from their habitation with great from 8 to 12 1-2 cts. per half peck. Halermelons,

Expense of Ardent Spirits .- A farmer in Connecticut, who has occupied the same farm, on lease, for about thirty years past, was lately complaining that he had been able to lay up nothing, from his thirty years' labor. A neighboring storekeeper offered to explain to him the reason; and proceeded as follows :- 'During the thirty years that you have been on that farm, I have been trading in this store, and the distilled spirits I have sold you, with the interest of the money, would have made you the owner of the farm you hire.' On examination of the books of the storekeeper, his assertion was found correct. The farm was worth about five thousand dollars .- N. Y. Far.

THE HAIR.

In children, keeping the hair short is a circumstance of no little importance-and should not from any light consideration be neglected. Their health, and we conceive in some respect their beauty also, is prejudiced by a contrary practice. Nothing is more common than to see a luxuriant head of hair accompanied in children by peleness of complexion, weak eyes, and frequent complaints of headache. Upon this subject we find the following excellent remarks in a little work entitled ' Advice to young mothers-by a grandmother'we recommend their attentive perusal to every

'The hair on children should be cut short until they are eight or nine years old-as the shorter the hair can be kept, the less danger there is of many maladies peculiar to that part of the body, especially water on the brain .- Besides, there is good reason for believing, that children who have a great quantity of hair, are most liable to eruptions, as scald head, &c ; it is at least certain, that in them eruptions are very difficult to remove. The trouble, also, of keeping long hair sufficiently clean, and the length of time necessary for this purpose, is often a cause of much ill humor and many cross words, between children and their attendants, which it would be better to avoid.

'Mothers whose vanity may be alarmed, lest repeated cutting the hair for so many years should make it coarse, may be assured they have no cause for this apprehension, provided the hair be kept constantly brushed. I have never seen softer, finer hair, than on girls who have had it kept short-like that of school boys-until they were Lima in their tenth year.'-Journal of Health.

FANCY WOODS.

Even at a comparatively early stage of the arts, mankind appear to have made use of the bright or variegated colors of wood, to give beauty both to their dwellings and their furniture. The temple built by King Solomon was overlaid on the inside with boards of cedar:—'all was cedar; there was no stone seen,' and among the most ancient specimens of ornamental furniture that are to be met with, we find that attempts have been made to heighten the effect by the contrast of various kinds of wood. Although, both in the materials and the designs, these are inferior to the productions of modern art, many of the cabinets which are still preserved have much higher claims to notice than their mere antiquity.

In all these works a vencer or thin plate of the fancy wood is laid down in glue, upon a surface of a plainer description. This process is of course cheaper than if the whole work were made of the solid fancy wood. The beauty of fancy wood arises in many sorts from its being crossgrained, or from its presenting the fibres endways or obliquely to the strace. These diferent positions of the fibres, as well as their different colors in grained woods, give a clouded and mottled variety to the surface; and when some of the parts are partially transparent, as is the case with fine mahogany, the surface gives out a play of different tints, as the observer shifts his place, or the light falls upon them, and consequently is reflected at different angles.

In the earlier stages of the art of cabinet making, and before the forests of the tropical regions had been explored for those beautiful woods which have since added so much to the elegance of modern furniture, the veneering and ornamenting were in woods of native growth. None of these have the deep and warm tints of the finest of the foreign, but the figures with which they are marked are often very beautiful. The yew, which, with its other tints, blends a certain trace of pink or rose-color, and when it is gnarled or knotty, has a very rich appearance, was the wood used for the finest and most costly works. The common veneering timber was walnut; but as that has but few of those variegations, which are technically termed curls, the works ornamented with it were rather deficient in beauty. The knotty parts of 'pollard' oaks, and 'pollard' elms, are much better adapted for the purpose of ornament; but as the grain of both is open, and as it is apt to rise, and as the earlier cabinet-makers were not so well acquainted with the art of varnishing, as those of modern times, the beauties of these woods were not turned to the proper account.

Comparative durability of Oak and Chesnut -- In the transactions of the Society of Arts, in England, there is an account which states that posts of oak and others of chesnut were planted in Somersetshire-when they had to undergo repair in 18 years, which is longer than oak posts would last in this country, the oak posts were found to be unserviceable and the chesnut very little worr. The oak posts were renewed, the chesnut remained, and in twentyfive years afterwards they were not so much rotted as the oak. In 1772, a fence was made partly of oak posts and rails, and partly of chesnut posts and rails-the trees made use of were of the same age, and were what may be termed young trees. In nineteen years, the oak posts had so decayed at the surface, as to

need to be strengthened by spurs, while the chesnut required no such support. A gate post of chesnut, on which the gate had swung for fifty years, was found quite sound when taken up, and a barn constructed in chesnut in 1743 was found quite sound in every part in 1782. It should seem therefore, that young chesnut is superior to young.oak, for al! manner of wood work that has to be partly in the ground.

THE INDICATIONS OF LONGEVITY.

Hufeland, in his celebrated work on the means of preserving health, presents the following beau ideal of a frame destined to longevity.

Let me now be permitted to delineate the portrait of an individual destined to long life. He has a well-proportioned stature, without however being too tall; but rather of the middle size, and tolerably thick set, his complexion is not too florid: too much ruddiness, at least in youth, is seldom a sign of longevity. His bair appreaches more to the fair than to the black; his skin is strong but not coarse. His head is not too large -he has prominent veins on the limbs, and his shoulders are rather round than flat. His neck is neither very long nor shorthis stomach does not project-and his hands are large, but not too deeply cleft. His foot is rather thick than long, and his inferior limbs are firm and round. He has a broad arched chest, a strong voice, and the faculty of retaining his breath for a considerable time without inconvenience or difficulty, In general, there is a complete harmony of proportion among all parts of the body. His senses are good, but not too delicate-his pulse is slow and regular.

His stomach is excellent—hisappetite good, and digestion easy. The joys of the table, in moderation, are to him of importance—they increase the vigor of his system, and tune his mind to screnity, while his soul partakes in the pleasure which they communicate. He does not, however, eat merely for the sake of eating—but each meal is an hour of daily festivity—a kind of delight, attended with this advantage, among others, that it rather increases than diminishes his riches. He eats slowly, and has not too much thirst. An instituble thirst is always a sign of rapid self-consumption.

In general he is serene, loquacious, active, susceptible of joy, love, and hope,—but insensible to the impressions of hatred, anger, and avarice. His passions never become too violent. He is fond of employment, particularly calm meditation and agreeable speculations—is an optimist, a friend to nature and domestic felicity—has no unbounded thirst after the honors or riches of the world—and hanishes all unnecessary thought of to morrow.

DIGESTION.

'It is a common enough belief,' says an European medical writer, 'that a dram after meals promotes digestion. But there cannot be a more erroncous opinion. Those, indeed, who have acquired this pernicious habit, may find, that without their usual stimulus, digestion goes tardily on. But this only bespeaks the infirm and diseased state to which the stomach has been reduced. For the digestion of the healthy and unaccustomed, is sure to be interrupted and retarded by a dram. Common observation might satisfy us of this. But the question has been submitted to direct experiment by Dr Beddoes; and he found that the animals to whom spirits had been given along with their food, had digested nearly one half less, than other similar animals from whom this stimulus had been withheld.'-Prof. Hitchcock.

new england parmer.

BOSTON, FRIDAY, SEPTEMBER 17, 1830.

SWINE

Should not be kept in close and filthy pens. Although they are supposed to be naturally filthy animals, they thrive better and enjoy better health when allowed clean and airy lodgings. The late Judge Peters, of Pennsylvania, in an article entitled ' Notices for a Young Farmer,' &c, observed that, 'There is no greater mistake than that of gorging swine, when first penned for fattening. They should, on the contrary, be moderately and frequently led; so that they be kept full, but do not loathe or reject their food; and in the end contract fevers and dangerous maladies, originating in a hot and corrupted mass of blood. In airy and roomy, yet moderately warm pens, paved or boarded, and often cleansed, they are healthy and thriving. They show a disposition to be cleanly, however otherwise it is supposed, and always leave their excrementitious matter in a part of the pen different from that in which they lie down. No animal will thrive unless it be kent

The same writer asserts that fatting hogs should always be supplied with dry rotten wood, which should be kept in their pen, for the animals to eat as their appetites or instincts may direct. It has been supposed, likewise, that swine thrive better when they can obtain fresh earth, which they are often observed to swallow with greediness. Charcoal, it is said by some, will answer as good if not a more valuable purpose; and that if swine can obtain charcoal, they will not only greedily devour a portion of that substance, but will be but little inclined to rooting, and remain much more quiet in their pens than under ordinary treatment.

The modes in which swine are fattened in some of the western parts of the State of New York. are stated to be these. 'About the first of September, begin with boiled potatoes and pumpkins. mashed together with a little Indian meal, ground oats and peas, or other grain, stirred into the mixture after it cools. From two to four weeks before killing time, the food should be dry Indian corn and clean cold water. Mr Yonghans fattens his hogs in a large yard or field, with a shelter in it to which they may retire to sleep. But Elder Turner says hogs should never knew what liberty is; but should be kept close all their lives, and as inactive as possible. That with this method double the quantity of pork can be produced with the same expense of food.'*

Rubbing and currying the hides of hogs while fattening, is said to be of great advantage to them. It is not only very gratifying to the animals, but conducive to their health. It will be well, likewise, in every stye to place a strong post for them to rub against. During the time of their fattening they should have plenty of litter, which will be a double advantage, providing for their comfort, and increasing the quantity of manure.

There is a great advantage in boiling, steaming, or baking, all sorts of food given to swine. The last American edition of the Domestic Encyclopedia, informs that a 'Mr Timothy Kirk, of Yorktown, Penn. fed one pig with boiled potatees, and Indian corn, and another with the same arti-

^{*} Memoirs of the New York Board of Agriculture, vo'. ii. pp. 39, 40.

s unboiled. The two animals were weighed ery week, and the difference between them was 6 to 9. The experiment was continued severweeks, and the animals alternately fed on boiled sing from boiled food,"

Steaming will answer as good a purpose as ling, and with a proper apparatus is more easily

d cheaply effected.

Carrots, according to Arthur Young are better d for swine than potatocs, and some other iters assure us that parsnips are better than her for feeding them. An English writer says, ey fatten all their pork in the island of Jersey, th parsaips. They are more saccharine than rots, and it is well known that nothing fattens gs faster, or makes finer pork than the sugar ne.' Mr Young also asserts that 'the most ofitable method of converting corn of any kind o food for swine, is to grind it into meal, and x this with water in cisterns, in the proportions five bushels of meal to one hundred gallons of ter, stirring it well several times a day, for three eks, in cold weather, or a fortnight in a warmer son, by which time it will have fermented well become acid, till which it is not ready to give. mixture should always be stirred immediately ore feeding, and two or three cisterns should cept fermenting in succession, that no necessity occur of giving it not duly prepared. The Judge Peters, also asserted that 'sour food is t grateful and alimentary to swine. One galof sour wash goes farther than two of sweet." e sentiments, however, which are at least apntly in opposition to the opinion of the above prated agriculturists have been advanced by r writers. An English work, entitled 'Farm-Calendar,' (authors name not given) declares much has been said, and little understood t purposely souring food for hogs. It is not acidity can possibly tend to making fat, but found that pigs will readily fatten upon soil ther acescent food, a sweetish taste and gluas quality succeeding fermentation; and that will do so still more readily upon such as reached the acid state, I know, and have in hundreds of instances.' In order to reele these writers it will only be necessary to it to the different stages of ordinary fermen-, and the products of each stage. The first of fermentation produces sugar, and is called accharine fermentation. The second stage opes alcohol, [spirit of wine] and is called inous fermentation. The third produces ear, and is called the acid fermentation; and mirth and last stage converts the matter ferng into a substance, which is not only offenbut poisonous, and is called the putrid fertion. Thus if you soak wheat or other farias substance in water, of a proper temperawill first become sweet, and begin to sprout etate; it will next afford spirit or alcohol; ue the process the wash turns sour, at first gly, and then more strongly acid; and at last hole becomes putrid. It prohably contains nourishment when it is sweetest, but is valudell very sour, when it is worth little or nothand when the putrid fermentation has comd it is worse than nothing, as food for any s. The wash, then, should be given to the while it is yet sweet, or but beginning to be used for kindling it.

IMPROVED COOKING GRATE.

We have received a pamphlet, lately printed in Philadelphia, entitled ' Specification of a Patent for an Improved Cooking Grate, intended chiefly I unboiled food, with a uniformity of result, for cooking by Means of Inthracite Coal. Granted ich sufficiently showed the very great profit to Thomas Vinton, of Philadelphia, October 31, 1829. With Remarks by the Editor of the Journal of the Franklin Institution.'

After giving a description and drawing of this apparatus, the pamphlet proceeds with the following remarks by the Editor of the Journal,

Experience, the best test of the worth of either persons or things, has so far as it has come to our knowledge, been altogether in favor of the apparatus above described. An intimate friend in Philadelphia, whose family is large, and in whose word and judgment we have entire confidence, has had Mr Vinton's grate in use for some time, and is too well pleased with it to be willing to return to the wood fire for the purpose of cooking, or indeed, to any other mode with which he is acquaintcd. At a very early period this grate achieved a

signal triumph in his family; it not only silenced the opposition made to the trial of it by the occupants of the kitchen, but has converted them into zealous advocates, as they find it answers the purposes intended in a very perfect manner, while it possesses that valuable attribute of an anthracite coal fire, the requiring so little attention to keep it

'Meat baked in the oven, we are assured, cannot be distinguished, by the epicures, from that roasted before the fire; the surface is well browned, and the gravy unburned. Bread, and the various articles of pastry, are baked as well as in a brick oven, the heated air communicating a much more equable temperature to the plates of the oven than a direct fire. We have not, ourselves, seen the grate in operation, or tasted of the savory viands which it sends forth, we should not therefore, have ventured a decided opinion in its favor, had not its character been furnished by those who have no personal interest in bringing it into notice.

'Those grates which have hitherto been put up, have not been furnished with boilers. With the appendages such as bars of wrought iron to place kettles &c. above the fire; a trivet or shelf, in front of the grate, and the fire brick; the cost of them is thirty five dollars. When a boiler is added, this of course will increase the price in proportion to its size, and the material of which it is made, as of tinned copper, or iron. The cost of a sliding blower, and the work in fixing it is not included as not being essential to the use of the grate. The quantity of coal used is said to he about the same as that for an ordinary parlor

The following extracts from Mr Vinton's ' Directions for making a coal Fire, and for using the Cooking Apparatus,' will be serviceable as well for those who do not as those who do use such apparatus, if they have occasion to burn anthraeite coal.

' Anthracite coal, when broken into pieces from the size of a hen's egg to that of a common sized tea-cup, and free from dust, will burn freely, without the aid of a blower, if left to kindle and but a small quantity of coal is added at a time. The fire also, will, in this case be much clearer and stronger. - Dry wood, or charcoal, should be

'The blower will facilitate the kindling of the fruit trees is also extending.

fire in the morning, and at other times when it is low, but it should be used sparingly; for when used but a short time, the heat becomes so intense as to melt the ashes and stony substances found in the coal and form a cement, which prevents the free circulation of the air, and the fire soon becomes dull and sluggish. Whenever this is the ease the whole mass should be broken up, by putting the poker under the basket part of the grate, between the bars, and lifting the coal; or by passing it between the front bars and prying the coal up. The first method is best; as it not only lightens the coal, but frees the grate from ashes. The lower the coal lies in the grate, the brisker will be the fire.

'Should the fire become dull, after the coal is ignited it is a sure indication that it is clogged, with the cement before mentioned, with ashes, or coal dust, or that there is too great a quantity in the grate; in either case instead of running down the blower, which will only increase the difficulty, free the grate in the manner directed in the foregoing section.

'For roasting or baking it is necessary that a large proportion of the heat should be in the basket, or lower part of the grate; keep that part, therefore, free from slaty and stony substances, and from the remains of melted cement, or these will, in a short time, when the coal is very impure, occupy the space which should be filled with pure coal and active heat. The pieces of slate, stone or cement, which are too large to fall through the grate, should be taken out with tongs.

Permitting water to boil over, or to be spilled on the fire bricks will cause them to crumble, and should it reach the cast iron pipe between them, in the back part of the fire place, or the small grate at its end may cause them to warp. Exposing them when heated to the action of cold air, will also have the same effect, and it is therefore necessary that the fire go out gradually, and never be taken all out at once.

'For all the purposes of a common family, it is not necessary to have more coal in the grate than will come to a level with the second bar from the top. A larger quantity is a useless and injurious weight, which presses that below it so closely together, as to prevent a free circulation of air. Putting cooking utensils or other weight on the fire, will also deaden it.

' A small quantity of coal, in pieces about the size of a walnut, put on the top of the fire while baking, will be useful to keep the heat from ascending.

Sprinkling a small quantity of coal dust or ashes, on the fire at night will preserve it until the next morning, when there will be sufficient heat to kindle fresh coal or wood.

'Scrape out the ashes from the ash pit every morning.

One of Mr Vinton's Improved Cooking Grates is in use in this city, and we are informed that it fully answers the purposes for which it was intended.

Grapes.-Considerable attention is now bestowed on the culture, of this wholesome fruit in Nantucket. A correspondent writes us that one gentleman has now a number of bushels of Isabella Grapes on his vines. Three or four years ago not a vine was raised there. The culture of HORTICULTURAL FESTIVAL.

The Second Anniversary of the Massachusetts Horticultural Society was celebrated on Friday the 10th inst. at the Exchange Coffee House in a very splendid manner, notwithstanding the nupropitious state of the weather for several days previous, which, it was feared would prevent so handsome a display of fruits as was made last year. The Dining Hall was very tastefully ornamented with festoons and vases of flowers, and the table loaded with numerous baskets of beautiful peaches, grapes, pears, melons, apples, &c, arranged in a very chaste and appropriate manner. Much eredit is due to the public spirit of E. Edwards, Esq. of Springfield, Ms. a member of the Society, who, in addition to the pleasure his own company gave at the dinner table, enriched it with ten baskets of beautiful peaches, plums, and pears, the produce of his own and his neighbors' gardens. The trellis of grapes, raised in the peaches, including the state of tention. with visiters from 12 to 2.

The Society was favored with an eloquent and interesting Address by Z. Cook, Jr, Esq. of Dorchester, at the Lecture Room at the Atheneum, at II o'clock A. M. which we presume will be published for members of the Society, Among the fruits presented, were baskets of very fine

Esperione and Black Hamburg Grapes, from Wen. Dean, of Salem; from J. W. Treadwell, Salem, Pears, Johonnot; from T. H. Perkins, Grapes, St Peters, Muscat of Alexandria, white Frontignac, black do.; black llamburg, flame colored Tokay, Chasselas or Sweet Water; Peaches and Nectarines, branches of Irish lvy, from plants raised by Col. P. from cuttings taken by himself from Carrisbrook and Warwick castles, England, a beautiful vine and perfectly hardy; from John Lowell, (frapes, black Hamburg, (1 bunch weighing 32 ounces), and white Tokay; Peaches; a plant in flower, of musca Coocinea, has nover been flowered before in this councilia. try; from Rufus F. Phipps, Charlestown, Nectarines, and Andrews Pears; from Dr Webster, Cambridge, flowers, dahlias, &e; from Dr Adams, Boston, magnum bonum Plums; from Thomas Whitmarsh, Brookline, Peaches; from John Heard, Jr, Watertown, Bartiett Pears; Dr S. A. Shurtleff, Boston, St Michael's and Broca's Bergamot Pears, White Muscadine Grapes, open ground; from N. Clapp, Dorchester, Peaches, natural of the 5th and 6th generation, has never deteriorated from the parent fruit; from J. B. Richardson, Boston, Peaches: from E. M. Richards, Dedham, Summer Russet, Red Juneating, and Benoni (a native) Apples, and uncommonly fine natural Peaches; from David Fosdick. Charlestown, White Muscadine Grapes, tastefully arranged upon a trellis; from David Haggerston, Charlestown, black Hamburg Grapes and Flowers; from Elisha Edwards, Springfield, Peaches, natural, very large and beautiful, also large and beautiful Pears and Plums; from John A. W. Lamb, Boston, Peaches; from Nathaniel Seaver, Roxbury, Bartlett Pears and Peaches; from J. & F. Winship, Brighton, flowers; from Messrs Kenrick, Newton, flowers; from Ebenezer Breed, Charles town, Grapes, five clusters black Hamburg, (2 weighing 21 lbs. each, 1 weighing 2 lbs.) white Chasselss and Mus cat, also flowers; from S. Downer, Bartlett Pears, Porter and Ribstone Pippin Apples, Morris' White Peaches, 4 pots Balsamine, and 2 pots Snowberry; from Ezra Dyer, Boston, Plums and Peaches; from John Prince, Roxbu-The state of the s chester, Bartlett Pears, and flowers; from Hector Coffin, Newburyport, bon Cretien Pears; from Enoch Bartlett, Jornels of Peaches, and Bartlett Pears; from Encel Bartlett, Johnson, Charlestown, White Gage and Bolmar's Washington Plums; from R. Toohey, Waltham, by E. W. Payne, Black Hamburg Grapes, Pears, Peaches, and Melons; from Win. Stone, city farm, South Boston, a muskmelon, weighing 19th lbs.; from E. G. Austin, Boston, magning 103 ins. Hom 20 Mushall Boston, magnin bonum white Plains; from Edward Sharp, Dorchester, very fine red roman Nectarines; from Richard Sullivan, Brookhine, Black Hamburg Grapss; from Andrew Brimmer, Boston, White Gage, or Prince's fine white and Hill's native Plums, and a branch of Swan Pears, and a basket of Pears; from H. Draine of Swan rears, and a basset of rears, from G. A. S. Dearborn, Roxbury, great mogil Plnms; from G. W. Pratt, Waltham, large Bouquets of flowers; from Wm. Carter, Botanic Garden, Cambridge, natural Peaches, very large and beautiful, and flowers; from Elias Phinney, native Grapes, and Nectarines; from Chever Newhall, Dorchester, fine natural Peaches; from Nehemiah D. Williams, Roxbury, Porter and other Apples; from O. Pettee, Newton, Caroline Cling Stone Peaches; from S. G. Perkins, a dressed basket of Fruit, Parkss—Charles X. and his 'travelling Cabinet'—the

consisting of black Hamburg, black Cape, and Muscat, of Alexandria Grapes; and the Alberge Admirable, Great Montagne Admirable, Morris White or Pine, and Landreth's Cling Stone Peaches; from E. Vose, of Dorchester, beautiful Grosse Mignonne Peaches, Bartlett Pears, Persian and Pine Apple Melons, and large Watermelons; from Heary A. Breed, of Lynn, Watermelons; from Peter C. Brooks, of Medford, by George Thompson, gardener, large clusters of Black Hamburg Grapes, and fine Spice Apples.

REGULAR TOASTS.

New England-The hills that gave shelter to Liberty are now crowned with the blessings of Ceres.

The Constitution of the U. S -The vigor of the stock will soon correct the saplings that may be engrafted on it.

Liberty-Ilaving completed her Temple-we would entwine the stately columns with the peaceful vine.

Our Scenator in Congress-Himself invulnerable; he furnishes arms for the security of States.

Our Controversies with the parent country-Let them be manly struggles for a more honorable union on reciprocal principles.

Massachusetts Caltivators-May our efforts and success be in an inverse ratio to our climate and soil.

Golden Apples and Golden Fleeces-May they cease to be emblems of discord and disunion.

Nullification-A mode of re-dressing-highly destructive of the black and white sorts. Horticulture and Floriculture-By which all climates

and all soils may be compelled to concentrate their uses and beauties at the pleasure of man.

The practical and scientific Cultivator-A man who makes experiments in farming and in gardening for the benefit of his neighbor.

Diffusion of kinds and of kinduess-Our grapes can never be sour, for they will be within the reach of everybody.

Woman-The industry, science, and taste of man, is improving the soil for a more extended dominion of Flora.

The fruits of the Patriots of France-We would return them renovated and more grateful to the world by American adoption.

The monarchies of Europe-Vicious stocks must go to the wall for improved cultivation.

Cultivation in its two great branches, mental and manual-The latter without the former is an eddy in a stream -always moving, never advancing.

Novelties in cultivation-Nevers adopted without cantion nor rejected without trial-for although everything which is new may not be useful, yet everything useful was once new.

VOLUNTEERS.

By the President, General Dearborn: LAFAYETTE—Without fear and without reproach;' the illustrious Champion of liberty in three Revolutions.

By His Excellency Gov. Lincoln: The Vine, under the shadow of which Freemen dwell securely-May its new growth be protected in that country, where it requires rather training than heading.

By His Honor the Mayor : New England-May every farm become a garden, every garden be adorned with vines—and may it be the boast of our posterity, that their Fathers did not eat sour grapes.

By the Chief Justice : Education-The culture of the mind, which always requites the faithful laborer with the sweetest flowers and the richest fruit.

By Hon. B. W. Crowninshield: The Apple and Plum -May we never eat of the apple of discord, and have plums enough to make smooth the way of life.

SHARPENING SCYTHES, &c.

Mr Fessenden-An improved kind of Rifle setting the edge of the scythe has been introced among the farmers in the country; the provement consists of a water proof glue or cent, on which is spread a coat of fine emery bevery superior to the coat of sand heretofore d. The common glue is not water proof. It lesirable that you should ascertain and publish best mode of making the cement that will be of against damp or rainy weather. In doing ch you will oblige a subscriber, and confer a

or on the mowers who like a keen edge. oudon, N. H. Sept. 13, 1830.

Remarks by the Editor .- We have collected from eral authors the following recipes for water of cements. Perhaps some of them may anr the purpose wished for by our corresponct. We have not however, made trial of any frem and of course cannot youch for their effi-

cement that resists moisture. Melt without er common glue with half its weight of resin, to th add some red othre. This is said to be sul for cementing hones to their frames .- Wils Domestic Encyclopedia,

ement that hardens under water. Mix clay and ales (oxydes) of iron plentifully with oil, the us will harden under water. Mr Gad, Stock-

he following is given as a cement that wil al the action of boiling water or steam.

ake 2 ounces of sal-ammoniac, 1 ounce of er of sulphur, and 16 ounces of cast iron is or borings. Mix all well together by rubthem in a mortar, and keep the powder dry. Then the cement is wanted for use, take one of the above powder and twenty parts of iron borings or filings, and blend them inely by grinding them in a mortar. Wet the bound with water, and when brought to a enient consistence, apply it to the joint with oden or blunt iron spatula.

other cement of the same kind. Take two of flower of sulphur, and one part of saloniac, and mix them together with a little

r into a stiff paste.

peculiar kind of cement is prepared at Mawith which most of the buildings erected in Indian capital are comented. It consists of and lime, with the addition only of a small Lity of water, in which a proportion of coarse has been dissolved. The quick setting of mortar, and the great hardness it acquires as Dr James Anderson has observed, [Reons in Agriculture, volume 1, only be atded to one of these two causes, namely, either gar added, or the quality of the lime-stone Portsmouth, or the subscriber on the premises.

Juae 11. WILLIAM FLAGG.

.1 cement that resists the action of fire and water. Take half a pint of milk and mix it with an equal quantity of vinegar, so as to coagulate the milk. Separate the curd from the whey, and mix the latter with the whites of four or five eggs, after beating them well up. The mixture of these two substances being complete, add quick lime to them, which has passed through a sieve, and make the whole into a thick paste of the consistency of putty. If this mixture is carefully applied to broken bodies, or to fissures of any kind, and dried properly, it is said to resist water and fire,

We are obliged to defer this week the Report of the Committee on Fruits of the Massachusetts Horticultural Society, and the account of the New York Festival, as well as several communications.

Bulbous Roots.

Just received at the Seed store connected with the New England Farmer, 52 North Market-street,

A good assortment of Bulbous Flower Roots, in fine order -a more particular enumeration next week.

Grass Seeds.

For sale at the Seed Store connected with the New England Farmer, 52 North Market street, A large assortment of Seeds of the various grasses cul-

tivated in New England, viz:

HERDS GRASS; RED TOP;

ORCHARD GRASS;

Stores-About 3 or 400 were sold at quite low prices. Sheep and Lambs .- We noticed one lot, more than half old ones taken at 2,08, prices generally from 1,17 to 1,75. We noticed several lots taken at about \$1,00. Swine .- One lot of 98 were taken at 4c; several small

lots at 4 a 44-at retail 4 a 5c. ERRATUM .- The lot of 400 Swine were taken last week at 4c instead of 41 as published.

MISCELLANIES.

THE COURSE OF CULTURE. BY T. G. FESSENDEN, ESQ.

SUNG ON FRIDAY LAST, AT THE SECOND ANNIVERSA-RY OF THE MASSACHUSETTS HORTICULTURAL SO-CIETY, TO THE TUNE- AULD LANG SYNE."

Survey the world, through every zone, From Lima to Japan, In lineaments of light 't is shown That CULTURE makes the man. By manual culture one attains What Industry may claim, Another's mental toil and pains Attenuate his frame.

Some plough and plant the teeming soil, Some cultivate the arts; And some devote a life of toil To tilling heads and hearts. Some train the adolescent mind, While buds of promise blow, And see each pascent twig inclined The way the tree should grow.

The first man, and the first of men, Were tillers of the soil; And that was Mercy's mandate then, Which destined man to moil. Indulgence preludes fell attacks Of merciless disease, And Sloth extends on fiery racks Her listless devotees.

Hail, HORTICULTURE! Heaven-ordained, Of every art the source, Which man has polished, life sustained,

Since Time commenced his course. Where waves thy wonder-working wand What splendid scenes disclose! The blasted heath, the arid strand,

Out-bloom the gorgeous rose!

Even in the SERAPH-SEX is thy Munificence descried: And Milton says in lady's eye Is Heaven identified. A seedling, sprung from Adam's side, A most celestial shoot!

Became of Paradise the pride, And bore a world of fruit.

The Lily, Rose, Carnation, blent By Flora's magic power, And Tulip, feebly represent So elegant a flower.

Then surely, Bachelors, ye ought, In season to transfer

Some sprig of this swect 'TOUCH-ME-NOT,' To grace your own parterre;

And every Gardener should be proud, With tenderness and skill, If haply he may be allowed This precious plaut to till. All that man has, had, hopes, can have, Past, promised, or possessed, Are fruits which CULTURE gives or gave At INDUSTRY's behest.

BEAUTY.

What is the blooming tincture of the skin To peace of mind, to harmony within?

What the bright sparkling of the finest eye To the soft soothing of a calm reply? Can comeliness of form, or shape, or air, With comeliness of words or deeds compare? No those at first the unwary heart may gain, But these, these only can the heart retain. Rowe's Art of Charming.

DEATH BY HYDROPHORIA.

We copy the subjoined account of a death from this dreadful disease, from the last Char-

lottesville (Va.) Advocate:

Died, at his residence, about 8 miles from this place, on Wednesday last, Mr Wm. C. Wren, of Hydropholia We are indebted to the politeness of a friend for the following particulars relative to this terrible disease :- Mr Wren was bitten in two places on the foot, by a strange dog, on the 7th of June last. Both wounds were much lacerated, and one of them penetrated through the tendons on the upper surface of the foot to the bone. He felt no uneasiness about his situation, not supposing the dog to be mad. The wounds continued to heal regularly, and in a short time. were perfectly well. On the 15th inst., more than two months after the wounds were received, he felt some uneasiness in the foot, which gradually extended up the leg until it reached the body. He then had pain in the back, lower part of the abdomen, and some soreness about the throat. These symptoms, which continued with little variation, were ascribed by himself and friends to Rheumatism, or cold brought on by recent exposure to a shower of rain. By family prescription he was bled and took a dose of oil. The bleeding relieved his pains, and he supposed himself nearly well, until on the evening of the 17th inst., while attempting to swallow some water he was immediately seized with spasms. He then for the first time became fully aware of his awful condition, and applied for medical aid. The spasms continued to increase rapidly, and were much aggravated by the approach of any one to the bed side, or any sudden noise. Attempts were made by every means to get him to receive drink and food, but the approach of either, in any manner, immediately threw him into the most violent agitation. In the intervals of the spasms, and even during their continuance, he retained perfect possession of all his mental faculties, until within an hour of his dissolution.

He repeatedly invited his friends to his bed side to shake hands with him, assuring them that he was in full possession of his senses, and felt no disposition to do injury to any one. The spasms continued with increasing violence 21 hours, when death relieved him from the most awful sufferings we have ever witnessed.

The recent events in France have revived the recollection of the dreadful use made of the lantern posts during the old Revolution. If a man were but suspected of heing a royalist, the mob shouted 'a la lanterne,' 'a la lanterne; and the unfortunate victim was hung across the first lautern-rod that presented itself. There was a strange levity mixed with the cruelties of that period. We recollect more than one instance where a witty expression saved a man's life;—as if a pun were an equiva-leut for human existence! The Abbe Maury had fallen in'o the hands of the enraged populace, and as usual, the cry was 'a la lanterne!' Arrived at a convenient place, they made their brief preparations for immediate execution; the Abbe turning round with a smile, said, ' Gentlemen, I am convinced you won't see any better for hanging me there.' The joke was received with acclamations; his lile was saved; and he is now a Cardinal.

Journal and Tribune.

For Sale.

A valuable Farm at Lechmere Point; consisting of 30 aeres-on the Craigie road, less than three miles from Boston. With a good two story house and barn thereona thriving young orchard and other fruit trees.

For terms and other particulars, inquire of Wm. E. Payne, No. 5 Court-street. eptoÍ Aug. 27.

POLEON AND PASSE COLMAR PEARS.

MAS G. FESSENDEN, ESQ .-

EAR SIR-1 presume my last communication been amply satisfactory and conclusive in ving the strong grounds I had for my asserin regard thereto; but Mr Lowell having ished three communications before he had seen cply to one, there are some remarks in the wo rom him dated the 21st and 27th Aug. which to call upon me for a passing notice by way omment and explanation, as well as for a ection of the errors therein contained. The onsness of my reply will render it necessary our convenience in the insertion, to divide it two parts, and I shall consequently adop; that se. On this occasion therefore in pursuance at plan, I will commence by replying to that advanced by Mr Lowell, in which he so gly deprecates and condemns the course of out seeing the fruit' and where he postively s 'neither Duhamel, Miller, nor Knight nor other pomologist ever relied on the wood, at are very similar.' It will be at once per- which exist on the petioles of most peach trees ever relied on these points but 'as aids' being an

The fruit ripens in October and November | Chasselas grape, undistinguishable by the fruit, are | buds so far suffice, how much more fully may we If the tree is handsome, vigorous, and produce distinguishable by the foliage, and the variation de- rely on the wood, growth, foliage, and flowers. s, and may be propagated on both the pear and signated. And again, in speaking of Knight's Will Mr L., then, say that we are not to trust Early Black Cherry, the undistinguishable similar- our senses to distinguish the very peculiar Passe ity of its fruit with that of the Black Tartarian, is Colmar, from the widely different Napoleon, a particularly dwelt on. But as a climax to the in- yellow bark from green, broad leaves from narrow, stabilit reliance on the fruit, I will refer to the and large flowers from small, when these present Brown Beurré pear, which is declared by De la jour peats or checks to enable us to decide with Quintinge, Rozier, and Duhamel, followed by precision, and the fruit offers but one? With Miller and the Pomological Magazine, to present equal force might it be argued that we are not to such variations in the fruit, that those guided know an apple tree from a pear tree, without first thereby had given it several distinct titles, and viewing the fruit, as that we should not distinguish Forsyth, relying on the fruits, has described it un- two varieties of either, possessing such strongly der four distinct heads, and a correct decision could marked distinctions as the Napoleon and Passe redingly productive, and the fruit is at maturity therefore only be obtained by the unvariableness of Colmar, which Mr L. himself agrees are two

fruits have been often confused, and in regard to course of testing accuracies by the wood, growth, which authors agree that the main points of dis- foliage, and flowers, (which, however, I shall herehing the Napoleon and Passe Colmar pears tinction are the indenture of the leaf and the after show is not the fact) it behoved Mr L. to length of the thorns. I could further proceed to first point out some case of evident and acknowquote the Doyenné gris, and Doyenné roux pears, ledged error arising from my having pursued it, and the Alberge Janne, and Rossanne peaches, before he condemned its application; for in my where even Duhamel himself was deceived by re-view it matters not by what course we arrive at lying on the fruit, and where the wood, foliage, and correct conclusions, provided the means are adeflowers alone, caused the error to be corrected. Mil- quate to the ends. Some people do things by intiler himself falls into similar errors and describes ition. But the facts of the case are, that it is the Little Musk pear under two heads, see his this confident reliance on the fruit, subject as it is Gard. Dic. No. 1, and 5, he also describes the to such inconstancy and variation from the cir-Orange Musk pear as two distinct fruits, see No. cumstances of culture, (which Mr L. not only ad-9 and 18; he confuses the Muscat Robert, and vocates, but declares indispensable) and the gross Robine pears, see No. 14 and 20, and he also de-inattention evinced to the other points of distinc-

ers, state that the Red Roman and Newington | The statements which I have quoted from the Nectarines, are most essentially distinguished by Pomological Magazine, Duhamel, Forsyth, and ng to description and to the leaves and wood the smooth leaf of the one and the jagged leaf of other authors, where it is asserted that the fruit the other. He also states that the Peach Apricot, formed no guide, prove conclusively that in these and the Moorpark, are generally thought in Eng- cases they did rely on the wood, leaves, flowers, &c. as land to be the same, and that a minute examina- principals, and that the fruits did not always serve s, flowers, or seeds, for any other purpose but tion of their leaves alone, proves their distinction. even the humble purpose of aids in the discrimination. ds and assistances in discriminating fruits The New Duhamel asserts that even the glands Mr L.'s remarks, therefore, that no Pomologist absolute and unqualified one, is amply controverted by the exceptions here deduced. In concluding this portion of my remarks, I have to thank Mr L. for his compliment to my 'zeal, acquisitions, and ambition to be useful,' but over all these my and clean during the summer. pride for accuracy predominates, which carries with it its own commendation; and great as is his superiority over me in age, talents, and general intelligence, and feeling most sensibly as I do the wide disparity in contending with the 'Duhamel' of our day, I shall still strive not to be surpassed Very respectfully, in that respect.

WM. R. PRINCE.

Linnaan Botanic Garden, } September 18, 1830.

MR FESSENDEN-

DEAR SIR-I shall not continue the FRUITLESS discussion of Mr Prince's error, under any circumstances. When he shall produce to the New York, and Massachusetts Horticultural Societies, ripened specimens of Knight's Napoleon, and the true Passe Colmar, and they shall pronounce them the same fruit, although Mr Prince's precipitancy will still remain proved, yet all will admit, that he made a very lucky conjecture. I fear that a long period will clapse, before he has even this consolation. We hope that our Society, which has the earliest means of examining these fruits, will do it carefully and thoroughly. The New England maxim is by their fruits ye shall know JOHN LOWELL. them.

Roxbury, Sept, 17, 1830.

Mr Fessenden-1 wish through the medium of your paper to make known to all who are interested in the subject, that being engaged in the publication of two works intended to comprise descriptions of every variety of fruit known in our country, I solicit from those possessing varieties of Grapes, Pears, Apples, or any other fruits, which they deem new or peculiar, to transmit me accurate descriptions of them, accompanied by suitable remarks on the growth of the vines, trees, &c, which descriptions will be inserted in the works referred to with due credit to the contributors. Seed of any peculiar native grapes would be very acceptable and particularly of the Vitis riparia, or sweet scented grape of Ohio, and of the Tennessee varieties and those of the other Western and extreme Southern States.

Very respectfully, WM. PRINCE.

Liu. Bot. Garden, N. Y., Sept. 16, 1830.

From the New York Farmer.

A DESCRIPTION OF TREES AND SHRUBS, PRODU-CING A SUCCESSION OF FLOWERS FROM SPRING

By Michael Floy, Vice President of the N. Y. Horticultural Society. Mr Editor-A correspondent in your last number, page 150, under the signature of Phlox, requesting a selection of flowering plants and shrubs to ornament a cottage, and flowering from spring to autumn, observes that he has searched in vain for information in many gardening books -As this gentleman, with many others, may not know what things to plant out for ornamenting their places, I subjoin a list of trees and shrubs necessary for his purpose, all of which may be obtained of the nurserymen here at reasonable ratesthat is, good large flowering trees and shurbs, at from 50 cents to I dollar each, or it may be, by the hundred, at less prices. The mode of culture is

from October to December, or early in March to the middle of April, no danger may be apprehended of their success. They should be kept heed destroy the rest.

Lawns, Climps, or Avenues, are all hardy and beautifully in the spring and during the summer.

cheap, at the rates above stated.

Alianthus gtandulosa, Chinese Heaven tree, a very swift growing tree, remarkable for its long pinnated leaves, and is altogether a straight beautifol and majestic tree, very hardy, although not long known, it is getting to be a favorite, and will probably be universally planted,

.Esculus, or Horse Chesnut. The common European Horse Chesnut is a beautiful tree, particularly when in full bloom; it is, however, best calculated for open places, where it shows itself to the best advantage; there are, bowever, some very handsome species, native of this country, the most remarkable and beautiful of which is the Dwarf long spiked , Esculus macrostachya, The tree seldem exceeds 6 feet in height, and may more properly be termed a shrub; the spikes of flowers are commonly eighteen inches long, white, and very handsome.

Acer, or Maple. The sugar maple is a very clean growing tree, the foliage light, and very handsome-from this tree, quantities of maple sugar is made in the country; the scarlet flowering maple is also very beautiful, and the flowers appear very early.

Acer psuedo platanus, or Sycamore tree, is also a very handsome Enropean tree, the leaves are larger every way than the sagar maple,

Broussenettia or Paper mulberry, makes a good shade; is very hardy, and easily cultivated

Bulsam tree, Balsam Poplar, or Tacmahac, is a remarkably fast growing tree, gives a fine shade, and yields a rich balsamie fragrance, particularly after a shower of rain; the balsam which proceeds from the buds is of a healing nature for cuts or wounds.

Catalna suringæfolia tree, has very large leaves, and is well calculated for a shade, and the large bunches of flowers which it produces, gives it a most splendid appearance.

Cerasus, or double flowering cherry, of which there are two varieties; one is called the French, and the other the English double flowering cherry; some, and when in flower, the honey bees are the English comes into flowering nearly a month | much attracted to its sweet, honey-like perfume after the former kind-when in full flower, makes a very splendid appearance, not unlike large clusters of White Roses. They produce no fruit, culiar mode of growth, very desirable. It makes but the tree is very handsome.

Cuppressus disticha, or Deciduous Cypress, and the C. thyoides the former a native of the Southern States, the latter of the middle States, both, however, are quite hardy, and make a handsome appearance.

Fagus, or Beech: - A few of these in particular situations, have a good effect.

Fraxinus, or Ash. One European and two or three American kinds mixed in, to diversify the scene and give effect, with trees of a different habit and foiliage, is very pleasing.

Gleditschia triacanthos,-Honey locust, or three thorn Acacia. It makes a handsome stately tree, the foliage is handsome, but the dreadful long tripple thorns with which the tree is armed, give it a forbidding aspect. Trees of this kind are often used for hedges, and if planted thick, they soon

some rotten manure, and if planted out at any time beast, but must be kept cut down to 4 or 5 feet every season, or the hedge would soon be spoiled. Some of them would take the lead, and entirely

Larix, or Larch, is a beautiful tree of the Pinus The following trees for outside plantings for kind, yet drops its leaves in winter-they look

Liviodendron, Tulip tree, White wood, by some called Poplar, is a noble and majestic tree, the flowers which it produces in June are much of a nagnolia appearance, to which it seems nearly related. The leaves are very singular as if cut off at the end. The tree is very symmetrical.

Magnolia tripetala, or Umbrella tree, is very majestic, the leaves very large, giving a fine shade, the flowers are also large and white. It should be planted in clumps, or for the back ground of shrubbery.

Magnolia acuminata, or Cucumber tree, has blue flowers, the tree is large, and has much the habit of the liriodendron,

Magnolia glauca, a small sweet scented magnolia, is best calculated for the centre row of the shrabbery, or for clumps. This is a native of our country, from Jersey and Carolina, and is perhaps the prefiest shrub in the world, all things considered. It ought to be planted in every garden and shrubbery. It yields it fragrant blossoms from May to September.

Platanus occidentalis, Button-ball, by some caled Sycamore, is a large and majestic tree, calcuated for avenues or large lawns, or for ornamental plantations. It is, however, too stiff and rigid, saving a degree of formality, and spreads its pranches too much for street planting.

Robinia pseudo acacia, or Locust tree :- The bliage is light, feathery, and of a fine green; the racines of flowers are white, and is one of our most beautiful as well as most useful trees. Unfortunately it is in most places attacked by a borer or worm, which causes the branches to break off. Where it is free from this enemy, it is a most desirable ornamental tree.

Umlas, or Elm, three kinds, the European Elm, the American White Elm, and the American Slippery Elm, are all desirable to form a good landscape for lawns or avenues, &c.

Tilia Americana, the American Lindin, and the Tilia Europea, are both beautiful trees, well calculated for streets or lawns-the trees grow hand-

Salyx Babylonica, or weeping willow, in proper situations, is a most beautiful tree, and from its pe a fine screen shade.

To be continued.

ARCHITECTURE OF THE HIVE BEE.

As the wax-workers secrete only a limited quantity of wax, it is indispensably requisite the as little as possible of it should be consumed, and that none of it should be wasted. Bees, there fore, as M. Reammur well remarks, have to solve this difficult geometrical problem :- A quantity wax being given, to form of it similar and equa cells of a determinate capacity, of but the largest size a proportion to the quantity of matter employed, and in such a manner as to occupy the least possible space in the hive. This problem is solved by bees in all its conditions. The cylindrical form would seem to be best adapted to the shapt of the insect; but had the cells been cylinvery simple, the ground should be well dug with make an impenetrable fence against man and dr.ca, they could not have been applied to care pace between every three contiguous cells. Had ar, they might have been constructed without uninsuitable to the shape of a bee's body. The sixided form of the cells obviates erery objection; and while it fulfils the conditions of the problem, t is equally adapted with a cylinder to the shape of the bec.

M. Reaumur further remarks, that the base of ach cell, instead of forming a plane, is usually omposed of three pieces in the shape of the dianonds on playing cards, and placed in such a nanner as to form a hollow pyramid. This strucure, it may be observed, imparts a greater degree f strength, and, still keeping the solution of the roblem in view, gives a great capacity with the mallest expenditure of material. This has actully, indeed, been ascertained by mathematical easurement and calculation. Maraldi, the invenor of glass hives, determined, by minutely meairing these angles, that the greater were 1090 S', and the smaller, 70° 32'; and M. Reaumur, eing desirous to know why these particular angs are selected, requested M. Konig, a skilful athematician, (without informing him of his degn, or telling him of Maraldi's researches,) to dermine, by calculation, what ought to be the angle a six-sided cell, with a concave pyramidal base, rmed of three similar and equal rhomboid plates, that the least possible matter should enter into construction. By employing what geometrians denominate the infinitesimal calculus, M. Kog found that the angles should be 1090 26' for e greater, and 70° 34' for the smaller, or about o sixtieths of a degree, more or less, than the acal angles made choice of by bees. The equality inclination in the angles has also been said to cilitate the construction of the cells.

M, Huber adds to these remarks, that the cells the first row, by which the whole comb is atched to the roof of a hive, are not like the rest; instead of six sides they have only five, of nich the roof forms one. The base, also, is in ese different, consisting of three pieces on the e of the comb, and on the other side of two: e of these only is diamond shaped, while the ner two are of an irregular four-sided figure.is arrangement, by bringing the greatest numr of points in contact with the interior surface, sures the stability of the comb .- Library of Entaining Knowledge.

Local Attachments.—The 35th number of Silliin's Journal of Science, in an article under the ad of Architecture of the United States,' has following just remarks:

Place in a village a handsome public monument, pillar, or church, and I do not hesitate to say, at all other things beings equal, those villagers Il be bound more to one another, and to their lage, than those of another. Place by another at they will be wiser; that their taverns will be Mag. of Useful and Entertaining Knowledge.

other without leaving a vacant and superfluous less frequented, and that every good feeling will more prevail among them, than would have been burry, N. J. has one hundred and fifty acres of he cells, on the other hand, been square or triangu- the case without. Place in a town or city, a spot ground entirely in peach trees. His fruit is daily with pleasant trees, and pleasant walks between, necessary vacancies; but these forms would a spot which would serve as an agreeable promehave both required more material and been very nade, and the feelings of that people will flow in a kinder and smoother channel; there will be more happiness than there would have been otherwise, It is a delightful amusement to saunter along the French promenades about sunset, and observe the happy groups of all ages that throng them; to watch the rapid sale of bouquets, at the platforms which line the sides; (flowers are only admitted there.) As an American looks at the cheerful scene. he must think with pain of his own cities, where everything seems calculated for dull labor, or lynx-eyed gain. It is doubtless owing, in some degree, to the provision of such places in foreign countries, that their natives resort less to taverns for amusement than with us; and that intoxication consequently is less frequently seen,

'The French have their Boulevards; the Spaniards their Prado ; the Italian their Corso ; all of these have their public gardens; and we-we have our tippling shops, the bane and disgrace of our land, and shall have them, I fear, till we provide more innocent places of resort. All attempts to check this current of feeling are vain; the stream must flow; and if we give it a channel, will refresh and beautify the land it would otherwise have desolated and destroyed.'

Unhealthy Vegetables .- A writer in the Albany Argus, after speaking of the unhealthiness of salads and fruits brought from a distance, and kept on hand some time by the market people, has the following remarks:

And what is the remedy for the evil? In the first place, let us be guided by the law of nature, which teaches, that every district, under suitable culture, will produce the food best adapted to the wants of its population, and that the climate will bring it to maturity at the period when it is best adapted to promote human health and comfort. In the second place, those who are able should cultivate fruits and vegetables for their own tables. In the third place, enable your horticultural society, by a general and liberal patronage to extend the sphere of its usefulness; require them to award premiums to market gardeners, for the best productions of their labor; buy of those who gather their vegetables in the morning of the day in which they are to be consumed, and let these not be sold in the streets after eight o'clock; and finally, let a competent person be authorised to inspect the fruit and vegetable stalls, and to condemn and destroy all which is in an unsound and unhealthy state.'

The effects of Moonlight on the Eyes-The effect of moonlight on the eyes, particularly in warm climates, is extremely injurious, and oftentimes fatal to the sight. Carnes, in his letters from the east, says that he came near losing his sight from neglecting the advice of the natives, to cover his group of trees, with a fountain playing in their eyes when he slept exposed to the moonbeams; dst; have beneath them tasteful seats, and make and a case came within our observation, where a a place to which experienced age and prattling child lost his sight by sleeping exposed to the ancy will go for company or amusement; a spot moon. The other senses of this child became, ere the villagers will assemble in the evening however, as is generally the case with those who cheerful conversation, and I venture to say lose one, extremely acute, insomuch that he could at these people will love their homes more, and at any time distinguish a person who had once nk less of changing; will improve them more; been made known to him, by feeling his hand .-

Large Peach Orchard-Mr Jones, of Shrewsselling in the New York market.

An ox's gall will set any color,-silk, cotton, or woollen. I have seen the colors of calico, which faded at one washing, fixed by it. Where one lives near a slaughter-house, it is worth while to buy cheap fading goods and set them in this way. The gall can be bought for a few cents. Get out all the liquid and cork it up in a large phial. One large spoonful of this in a gallon of warm water is sufficient. This is likewise excellent for taking out spots from bombazine, bombazet, &c. After being washed in this, they look about as well as when new. It must be thoroughly stirred into the water, and not put upon the cloth.-It is used without soap. After being washed in this, cloth which you want to clean should be washed in warm suds, without using soap,-Econ, Housewife.

Fowls and Ducks.—Every man who keeps a pig should keep fowls. Three or four hens and a cock will prove no small addition to a poor man's stock; and a few potatoes and peelings, with the run of the pig's trough, which they will always keep clean, will be all they will require in tho summer; but to make them lay eggs, when eggs are valuable, they must be well fed with oats, barley-meal, or Indian corn; have a dry place to roost in, to shelter them in wet weather; and be kept quite clean. Young pullets, 9 or 10 months old, are the best for laying in winter. Ducks are both useful and profitable; they clear away a deal of unsightly offal, will travel a great distance from home in search of food, require but little at home, and lay a great number of eggs; but they are not good mothers, and seldom rear half their brood, when there are many hedges and ditches in the neighborhood; they likewise very frequently drop their eggs in the water, if not carefully watched and shut up when expected to lay, A hen answers better for a mother to ducklings than their natural one. Not less than a drake and two ducks should be kept.—Loudon.

Gombo-Recipe .- Take an equal quantity of young tender okra, chopped fine, and ripe tomatoes skinned, and add an onion shredded small, and some pepper and salt. Put all in a stew pan. without water, and stew for an hour. This is a favorite West India dish .- Am. Farmer.

Several of the Clergy of this city, on Sunday last, in their sermons, spoke in appropriate terms of the late celebration, and did justice to the memories of the early settlers of New England. We have heard the sermon of Dr Channing, who preached in Federal-street on Sunday for the first time for many weeks, highly commended. This eminent preacher, it is stated, will spend the winter in the Island of Cuba .- Boston Gazettz.

The single track of rail road from Baltimore to Ellicott's mills had been travelled on just 16 weeks, on the 16th inst, and the receipts are nearly \$17,000.

100 stone eutters and stone masons are wanted on the 1st and 2d divisions of the Baltimore and Ohio Rail road.

Two Thompsonian quacks, in Madison county have been bound over, for killing a young man by their system of steam doctoring.

SILK.

We were invited yesterday to view the silk establishment in Pine street, under the direction of Mr D'Homergue. In the rear of the house is the reeling department; this being one of the most igrating from the New England to the Western difficult processes in the whole business, is especially worthy of notice. From the number of reels, we should suppose that a vast quantity of silk might be wound in a day; and heaps of cocoons show that the work is not closed.

In the upper part of the dwelling, M. D'Homergue had fitted up a neat light loom, in which he had placed the white warp for weaving a piece of silk resembling in some degree the Florence. We noticed that the warp had not been throwsted owing to the want of a suitable machine-workmen who understand the business are to be found-yet such is the exellent quality of the American silk, that it had retained its smoothness notwithstanding the boiling which it had all sustained, and the dying process to which a part had been submitted.

We learned from Mr Duponceau, to whose liberality the country is indebted for the establishment, that he was particularly fortunate in securing the services of Messrs Le Duc & Landsberg, dyers, whose colors for silks have all the brilliancy and permanency of those of Italy and France.

Mr D'H. was weaving a large and splendid United States flag, which, when finished, will be a truly gratifying specimen of American manufacture. The smoothness and polish of its texture, and the brilliancy of its colors, are unsurpassed by any silk imported; yet the whole of this ab ova, to speak literally, from the egg, is American .- U. S. Gazette.

From the United States Literary Advertiser.

FARMING.

Those who have strictly investigated the subject, consider large farms comparatively less productive than small ones; while they at the same time impose upon their owners a degree of labor much greater in proportion than would seem to be required by the mere difference of size. The cause, it is thought, lies altogether in the difference of management. A farmer in moderate circumstances, with fifty or sixty acres of land, for instance, will bring every inch of it into a high state of cultivation-the labor employed in preparing his grounds will be more than doubly compensated in his subsequent exemption from toil; while the owner of a wide spread territory of three or four hundred acres, which he has but sparingly supplied with nourishment, must work more sedulously upon every acre during the progress of vegetation, and, after all, reap but a meagre and inadequate harvest. As a single acre of land highly cultivated, can be made to yield a crop equal to three or four acres scantily prepared; it must be obvious, that the extra labor in dressing the former is abundantly more than saved by the diminished labor in attending it. A striking exemplification of this fact may be viewed by any of our farmers, who will take the trouble to visit the grounds attached to the House of Industry at South Boston-there, they may have the theory and the illustration directly before their there actually was not room, upon the surface. where it grew, sufficient for the purpose of ma- body and feet repeat the same motion as before, king the hay. And this was entirely owing as we

are told, to the previous pains taken to enrich the soil by plentiful additions of suitable compost,

Were the same policy pursued by the owners of large farms, there would be little need of emstates; for the very tracts which now under a careless system of culture barely afford sustenance for a single family, might be made to support three or four - and that too, with much less toil and trouble,' in preportion to the quantity cultivated. Many of our farmers grasp at the management of too spacious a territory -- the consequence is, they impose upon themselves a state of slavery: they accumulate nothing, except now and then an additional patch of waste land, which serves only to increase their burthens without augumenting their income. Were they on the contrary to confine their exertions to smaller spots, while their erops could be rendered equally if not more abundant, they would themselves enjoy life better -become more independent, and with their usual share of sagacity and frugality, more wealthy: they would acquire time to institute experiments, and to examine improvements; they would attain what they now scarcely ever possess-leisurewhereby we mean not the privilege of being lazy -but that sort of leisure which poor Richard describes as 'time for doing something useful'time for study, for reflection, for familiar converse, for looking after the education of their youngin short, for realizing the blessings after which they are constantly toiling. We are no practical farmer-but, according to the proverb, a wink from a blind horse' is sometimes serviceable,

BEES

When bees begin to build their hive, they divide themselves into bands, one of which produces materials for the structure; another works upon these, and forms them into a rough sketch of the dimensions and partitions of the cells. All this is completed by the second band, who examine and adjust the angles, remove the superfluous wax, and give the work its necessary perfection; and a third band brings provisions to the laborers, who cannot leave their work. But no distribution of fo d is made to those whose charge, in collecting propolis and pollen, calls them to the field, because it is supposed they will hardly forget themselves; neither is any allowance made to those who begin the architecture of the cells. Their province is very troublesome, because they are obliged to level and extend, as well as cut and adjust the wax to the dimension required; but then they soon obtain a dismission from this labor, and retire to the fields to regale themselves with food, and wear off their fatigue with a more agreeable employment. Those who succeed them, draw their mouth, their feet, and the extremity of their body, several times over all the work, and never desist till the whole is polished and completed; and as they frequently need refreshments, and yet are not permitted to retire, there are waiters always attending, who serve them with provisions when they require them, The laborer who has an appetite, bends down his trunk before the eaterer, to intimate that he has an inclination to eat, upon which the other opens his eyes. Those grounds, it is said, have produced bag of honey, and pours out a few drops; these this season, from three to four tons of hay per may be distinctly seen rolling through the whole aere-which is three or four times the quantity of of his trunk, which insensibly swells in every part ordinary crops. So exuberant was the grass, that the liquor flows through. When this little repast is over, the laborer returns to his work, and his unfavorable. Ground which has not yielded

Lib. of Ent. Knowledge.

MILK PANS.

A writer in Poulson's Daily Advertiser, has the following remarks on the properties of milk pans.

'The pans used in this country are made either of tinned iron, glazed earthen, or stone ware. Tin is perhaps less objectionable than any other species of metal, at least of all such as can be applied to this use; but no metallic vessel whatever should be allowed to enter the walls of a well regulated dairy. A tin pan becomes a galvanic apparatus the moment an acidulated fluid is poured into it; besides which, if the scams are closed with solder, a poison is soon generated by the acid of the milk, and if closed by lapping, the cut edge exposes the iron to the same influence. Tinned vessels soon communicate a disagreeable taste, and even smell to water-distilled water! how unfit then for preserving such a fluid as milk.

The earthenware pans are generally glazed with lead, which renders tin vessels, (improper and dirty as they are and must be) very preferable indeed. Here then we have a direct mineral poison (which, in the very smallest quantities produces sickness) lining the whole of that surface which is in immediate contact with the milk. I would as soon drink vinegar that had been boiled in a copper sancepan as to use batter or eream that has remained twelve hours in a glazed earthen vessel.

'To the stone ware, I can see no possible objection; on the contrary, I am thoroughly convinced from theory, that it alone, is the proper material for milk pans. Consider it as you will, its superior fitness for this purpose is evident. The most highly concentrated acids have no effect upon it; the chemists daily avail themselves of this capital substitute for glass, of which the faces are composed, an absolute vitrification taking place during their baking by means of salt. Stone ware milk pans then, are the proper ones, and I shall hereafter conclusively demonstrate that stone ware or glass is the only proper material for such vessels as are intended to preserve butter and a variety of objects wholesome in themselves, but rendered deleterious by being prepared or being allowed to remain in improper vessels.'

From the New York Evening Post.

TO AGRICULTURISTS

The season has now arrived when the farmers are preparing to sow their winter grain. The writer of this article has experienced the efficacy of slack lime, as a manure on ground that was entirely worn out, producing nothing but five-fingered leaves and weeds. The ground was tilled, and 40 bushels to the acre was spread over it. It was seeded with grain, and timothy and clover were sown at the same time. It yielded me a fine erop. I moved the same five years without adding any manure. The second manuring was still more efficacious, when 60 to 80 bushels was used. Forty bushels is as much as ought to be used the first time. I know of a farm in New Jersey, in a lime stone country, completely worn out, The most that could be obtained for it was fifteen dollars per acre. I presume the purchaser would not now sell it for fifty dollars per acre. It is entirely renewed by lime, and it is a pleasure to look over it

The advantage of using lime is, you insure to vourself a certain erop, unless the season is very wheat for many years now produces fine crops. In one instance, fortyfive bushels per acre has been

rill be at least double, in many instances treble. ave more pasture than you want, plough under lion fraise aux petits pois, &c. our clover-it will mellow and very much curich our ground. The farmer will then reap abunantly, and the old cry of poor crops will be A FARMER. ilenced.

LONGEVITY

The climate of some districts in Yorkshire, f it, a writer in the London Wesleyan Magazine or July states, that out of 300 persons who enterd a benefit society in 1772, some of whom at the ime were upwards of fifty years of age, only welve had deceased in 1794. The same writer lso transcribes the following account of Henry enkins, a native of Yorkshire, which was written va Mrs Anne Saville, and first published in the ear 1752. Jenkins, we believe, is the oldest man n record, who was born since the times of the eluge. He was distinguished for temperance.

When I came first to live at Bolton,' says Mrs aville, 'I was told several particulars of the great re of Henry Jenkins, but I believed little of the ory foy many years, till one day, he coming to g alms, I desired him to tell me truly how old was. He paused a little, and then said, that to e best recollection he was about 162 or 163. 1 ked what kings he remembered. He said, lenry VIII.' I asked what public thing he uld longest remember. He said, 'Floddenfield,' asked whether the king was there. He said, To; he was in France, and the earl of Surrey us general.' I asked him how old he might be ten. He said. 'I believe I might be between ten ed twelve; for I was sent to Northallerton with a Irse load of arrows, but they sent a higger hoy fin thence to the army with them. All this a eed with the history of that time; for hows and a ows were then used. The Earl he named was gieral, and king Henry VIII was then at Tourn. And yet it is observable that this Jenkins cold neither read nor write. There were also ar or five in the same parish that were reputed of them to be 100 years old, or within two or the years of it; and they all said, he was an derly man ever since they knew him, for he was in in another parish, and before any registers e in churches, as it is said. He told me then, that he was butler to Lord Convers, and reinbered the Abbot of Fountain Abbey very well. ore the dissolution of the monasteries.

Henry Jenkins departed this life December, 0, at Ellerton-upon-Swale, in Yorkshire : the le of Floddenfield was fought September 9th, 1; and he was then about twelve years old; that this Heury Jenkins lived 162 years, (sixlonger than old Parr,) and was the oldest man on upon the ruins of this postdiluvian world,

lood ripe fruit, it is said, has superseded pasat the Philadelphia dinner tables. In Boston have ripe fruit and pastry together, in the I sauce, they are very 'nice,' as the Frugal sewife would say.

few Dishes .- The Corsaire, a French paper, Rep. vol. vii. p. 57. One of the outposts of the French army at ers killed two snakes and a lien, which they

reduced this season. Your grain of every kind | day. The carter of this restaurant among other there is danger of their freezing too fast to be got things, contained the following-filet de hou, santé up. If there happen an early snow it will not our pastures will be very abundant -- you may dans sa glace, matilotte de serpens, boa à la tartare, injure them. When they are removed from the ouble and treble your stock of cattle. If you fraise de lion à la poulette, pieds de lion farcis, garden, they should be set out again in a trench

To Preserve dead Game .- The Journal des Connaissances Usuelles states that if the entrails, &c., In a report on Agricultural Experiments by a of the game to be preserved be taken out, the inside filled with wheat, and the bare or bird afterwards placed in a heap of wheat, so as to be completely covered, it will keep fresh for two or three England, is remarkably salubrious, and, as a proof months. The skin or feathers should not be taken

> The Rich not to be enried .- The poor do not have the dyspepsia, the rich do. The healthy poor may consume as much superfine flour as they can get, while the dyspeptic rich are condemned to bran.

HEW ENGLAND PARMER.

BOSTON, FRIDAY, SEPTEMBER 24, 1830

PRESERVING CABBAGES.

Mr M'Mahon, recommends the following method for preserving eabbages, for winter and spring use. Immediately previous to the setting in of hard frost, take up your eabbages and savoys, observing to do it in a dry day, turn their tops downward, and let them remain for a few hours to drain off any water that may be lodged between their leaves; then make choice of a ridge of dry earth, in a well sheltered, warm exposure, and plant them down to their heads therein close to one another, having previously taken off some of their loose hanging leaves. Immediately erect over them a low temporary shed of any kind that will keep them perfectly free from wet, which is to be open at both ends to admit a current of air in mild dry weather. These ends are to be closed with straw when the weather is very severe. In this situation your cabbages will keep in a high state of preservation till spring, for being kept perfeetly free from wet, as well as from the action of the sun, the frost will have little or no effect on them. In such a place the heads may be cut off when wanted, and if they are frozen soak them in spring, well or pump water, for a few hours previous to their being cooked, which will dissolve the frost and extract any disagreeable taste occasioned thereby.'

This writer prefers this mode of preserving cabbages to placing them in the ground with the roots upwards, and says that the application of straw immediately round the heads is a bad practice, as the straw will soon become damp and mouldy, and will of course communicate the disorder to the cabbages.

Mr Derby of Salem, Mass, states his mode of preserving cabbages as follows: 'I have selected one of the most airy situations on the farm, spread a few leaves on the ground to keep them clean, and placed them upside down, close to each other, ne of peach dumplings. If properly done, with and shook in among them leaves sufficient to cover them, leaving part of the root projecting out, then threw on them, just enough sea-weed to prevent the leaves blowing away.' Mass. Agr.

The principal gardener in the Shaker establishment, in New Lebanon, Columbia county, N. Y. the spring. The only advantage of this method to the floating restaurant on the following directed not to pull up cabbages in autumn, till is that in the cellar they may be had when want-

dug in the bottom of a cellar. If the cellar is pretty cool it will be the better.'

Gathering and preserving beets and other roots. Committee of the Mass, Agr. Society, published in the third vol. of the New England Farmer is a statement of certain premium crops, obtained by Messrs Tristram and Henry Little of Newbury, in the County of Essex, Mass. It is stated by those gentlemen that they had tried divers ways of preserving turnips, mangel wurtzel &c, ' by putting them into a barn and covering them with hay, and by putting them into the cellar; the last mode we think the best.' Col. Powel observed that one of his crops of mangel wurtzel was 'piled in a cellar in rows as wood, and covered with sand.' A writer in the English Farmer's Journal observes that be has practised with success the following mode of preserving the mangel wurtzel roots: 'I pack them in long heaps about seven feet wide at the bottom. I begin by forming the outsides with the roots, not stripped of their tops, outward; the internal parts to be filled with roots without leaves; continue one layer over another, until the heap is about six feet high, and about two feet broad at top, which may be covered with straw and earth; the ends of the heap may be covered in the same way; the leaves form an efficient covering against frost.3

Mr M'Mahon's mode, of preserving beets and other roots is as follows :-

' Previous to the commencement of severe frost you should take up, with as little injury as possible, the roots of your turnips, carrots, parsnips, beets, salsify, scorzonera, Hamburg or large rooted parsley, skirrets, Jerusalem artichokes, turnip rooted celery, and a sufficiency of horse radish, for the winter consumption; cut off their tops, and expose the roots a few hours till sufficiently dry, On the surface of a very dry spot of ground, in a well sheltered situation lay a stratum of sand two inches thick, and on this a layer of roots of either sort, covering them with another layer of sand, (the drier the better,) and so continue, layer about of sand and roots, till all are laid in, giving the whole, on every side a roof like slope; then cover this heap or ridge all over with about two inches of sand, over which lay a good coat of drawn straw, up and down, as if thatching a house, in order to carry off wet, and prevent its entering the roots; then dig a wide trench round the hear. and cover the straw with the earth so dug up, with a depth sufficient to preserve the roots effectually from frost. An opening may be made on the south side of this heap, and completely covered with bundles of straw, so as to have access to the roots at all times when wanted either for sale

'Some people lay straw or hay, between the layers of roots, and immediately on the top of them; this I do not approve of, as the straw or hav will become damp and mouldy, and very often occasion the roots to rot, while the sand would preserve them sweet and sound.

'All these roots may be preserved in like manner in a cellar; but in such a place they are subject to vegetate and become stringy earlier in ed, more conveniently during winter than out of the field or garden heaps.

· Note. -- All the above roots will preserve better in sand than in the common earth; but when the former cannot be had, the sandiest earth you can procure must be dispensed with.'

NEW YORK BORTICULTURAL SOCIETY.

The Anniversary Meeting of the New York Horticultural Society was held at their room, Niblo's Garden, on the 7th inst. The Inspecting Committee of the Society, consisting of J. J. Palmer, W. R. Cooke and E. Wade, Jr, have given a report, which our limits will not permit us to insert entire. From this it appears that Dr Hosack, Patron of the Society presented 6 fine Water Melons, one of which weighed 425 lbs. and a ment of Stock, and success of the institution. basket of fine Grapes. Nathanicl Prim, Esq. from his place at Hurlgate, a basket of fine Grapes, composed of some of the best kinds grown under glass, viz. Black Prince, White Hamburg, Frontignac, &c. Procured from the Vinery of Mr Perkins, of Boston, Muscat of Alexandria, Grizley Tokay, White do, Chasselas white, Red do. Hamburg Black, Cape Black, Miss Allen Wyckoff presented some excellent Scuppernong wine, made at the plantation of General Daniel N. Bateman, Tyrrel County, N. Carolina. 'A quantity of very fine fruit was procured from Boston, from Mr Downer, consisting of Bartlett, Andrews, Cushing, Harvard, and St Ghelien Pears, all of superior sorts, and deservedly estecmed.' Timothy Whittemore, Esq. Greenwich-A dish of fine figs, raised in the open air, &c. Dr Pascalis-A branch of the White Mulberry, lately introduced by him from the Horticultural Society at Paris, &c, &c.

The following are some of the Volunteer Toasts.

By the Mayor. The culture of fruits, plants and flowers-May the delightsome task be ever honored by the sons and daughters of the republic.

Mr Bacon, on behalf of the Albany Horticultural Society-We are a scion taken from the parent stock -as the stock thrives so will the scion flourish-May both grow under the genial influence of public favor.

Judge Buel, the President of the Albany Horticultural Society, sent by him. Horticultural improvement - While it asks no monopoly may its rewards be as liberal as its blessings are diffusive.

Richard Hatfield, Esq. Our sister horticultural societies-Sisters of the same family, living without envy, and rejoicing in the number and prosperity of each other's lovers.

Benjamin Poor. The Farmer and Horticulturist of La Grange, who, after assisting our ancestors to defend the Nursery of Freedom, sowed seeds of the same kind in France, which he now lives to see bearing fruit abundantly.

[We regret that want of room obliges us to omit further details of the proceedings on this interesting occasion.]

MERRIMACK CATTLE SHOW,

The, Merrimack N. H. County Agricultural Society are making preparations for an extensive the above notice, must be sent on or before the Cattle Show and Fair and Exhibition of Domestic Manufactures and Agricultural Products, at Canterbury, N. II. on the 13th and 14th days of October. Able Committees are appointed for the examination of the various articles. The agricultural Address will be delivered by the Hon. Phillip by the Trustees, will attend to inspect the Butter, Carrigain; after which the Hon. John Vose, will and to award the premiums, which will be paid their patronage, give promise of an exhibition, that

MONTREAL CATTLE SHOW.

The Montreal (Canada) Agricultural Society took place at St Laurent, on the 9th inst, -- Liberal premiums were awarded on Draft Horses, Neat | be sold at Auction by an auctioneer appointed by Cattle of improved Canadian breed, as well as of the Trustees, and seasonable public notice will be other improved breeds, Sheep, Swine, Cheese, given of such sale. Butter, and Domestic Manufactured articles, The Show of Horses, Neat Cattle, Sheep and Swine was stated to be more numerous than at any former County Cattle Show, from the first institution of the Society; and the manifest improvement in all descriptions of Stock prove how extremely beneficial the exertions of the Society have been to the country; and from the number of Canadian Farmers present, it is quite evident that a great interest is excited amongst them in the improve-

How to destroy Rats .- A friend in Salem, Mass. informs us that rats are easily destroyed by sprinkling a little of the powder of Spanish flies on are fond, and it will soon destroy them.

Remarkable Calf.- Mr William Furness of Medford, Mass, owns a Heifer calf, which was calved the 17th of March last, and weighed on the 20th inst, 465 lbs.

NOTICE

To Dairy Farmers throughout the United States. A first premium of one hundred dollars, A second premium of fifty dollars

Will be paid by The Treasurer of the Mas-

sachusetts Society for Promoting Agriculture, for the best BUTTER, from any State in the Union, exhibited at Boston on the second day of December, 1830.

A sum raised by private subscription has been placed in the hands of the Trustees of said Society by a number of the most respectable citizens of Boston, to pay the above premiums.

The object proposed, by procuring, if practicable, an exhibition at Boston of the best Butter made in any of the States, is to promote improvement, near home, in the process of making and preserving an article of very general consumption.

The country at large will also benefit by so extensive a competition for the prizes.

The quantity offered by any one person for premium, to be not less than three hundred weightput up in new tubs or firkins, with the competitor's name and place of residence marked thereon. Any remarkable attention to nicety in the manner of putting up the Butter will not escape the notice of the examining committee.

As a further encouragement to become competitors, all persons who send Butter will have an opportunity, on the day after the Exhibition, to sell liberal prices may be expected for a large quantity of good Butter, put up for family uso, as there is,

All parcels intended for premium, agreeably to first day of December, to the Agricultural Warehouse, care of Mr John B. Russell, No. 52. North Market Street, Boston, and on Thursday the second day of December at 10 o'clock, A. M., a committee of competent judges, to be appointed deliver an address on the subject of Temperance. on the afternoon of the same day at the same will do honor to the County,

place, by the Treasurer of the Society; and on the following day, all such parcels as have not been previously disposed of at private sale, may

N. B .- Persons intending to be competitors are particularly desired to notify such intention by letter, addressed to Benjamin Guild, Esq., post paid, Boston, several days previous to the exhibition, that arrangements may be made accordingly.

RICHARD SULLIVAN, Committee of JOHN HEARD, Ja. Trustees. GORHAM PARSONS,

Boston, Sept. 1830.

MASSACHUSETTS HORT!CULTURAL SOCIETY. Saturday, September 18, 1830.

FRUITS.

Apples .- From John Prince, Esq. Ribstone some buttered bread, or other food of which rats Pippins, very fine, and deserving more extensive cultivation; from the same, Summer Pearmains, and Early Greenings. From Mr Wells, York Russetts and Wells' Pippin, an apple of high reputation. From Mr Manning, large fruit supposed to be the Alexander, but as it fell unripe, it could not be identified.

> Pears .- From Mr Heath, of Brookline, medium Pear, name unknown. From Mr Richard Ward, of Roxbury, Bartlett Pears, very large and beautiful, from Graft of 1829. From Mr John Green, of Pepperell, Seedling Pears. From J. PRINCE, Esq. Green Catharine, very superior; Andrews Pears, very large; Fulton, Johonnot, Verte Longue, and Green Satin: the two last appeared to be the same. From Mr Manning, a fine Pear, from the garden of Mr Hooper, of Marblehead. The tree was received from Spain several years since, and called 'Golden Beurré,' a most beautiful fruit, and unlike any other known to the Committee, but different from the Beurré D'Or, of pomological

Plums .- From John Derby, Esq. of Salem, Smith's October Plums, unripe; a valuable sort ripening late in October. From Mr MANNING, Plums from the garden of Mr Secomb, of Salem; can be preserved by drying, like the European

Peaches .- From Mr E. M. Richards, two sorts, Natural Clingstones, Freestones, and Old Mixon Freestone Peaches. From Mrs Sigourney, Boston, Natural Freestones, of beautiful appearance, From Mr Manning, Alberge Peaches, Cox No. 11, a good variety.

Nectarines .- From Mr Manning, Vermach Nectarines, Golden Clingstones, very beautiful; see No. 5, Prince's Treatise.

Grapes .- Native Grapes from Rev. G. B. PERRY, it at public auction without expense. The most of Bradford, Dr Williams, of Cambridge Port, and Mr Amos Perry, of Sherburne; the last were superior, and worthy of cultivation. From probably, no market in the Union better than that | Mr Fosbick, of Charlestown, Golden Chasselas Grapes, raised in the open ground.

> Bristol County Cattle Show .- This exhibition for the benefit of agriculture, mechanics, and manufactures, will be on Wednesday, October 6, at Taunton. The attention which is given to these subjects in this County, and the improvements which have been made in the several branches to which this association have extended

ESSEX AGRICULTURAL SOCIETY.

Arrangements for the Exhibition at Andover, (North Parish) on Thursday, Sept. 30, 1830.

All stock, intended for premiums or exhibition, must be entered with the Secretary on or before 9 o'clock, of the morning of the day of Exhibition,

All Animals must be placed in the pensunder the direc-tion of the marshals, at 9 o'clock and must not be removed therefrom until 2 o'clock.

All Manufactured Articles must be entered and deposted, in the Hall in Mrs Parker's dwelling house, near Steven's Tavern, on or before 9 o'clock. Annexed to each crticle must be a written description of the same, with he name of the person offering it for premium.

The Committee will examine the stock at 10 o'clock, when the keepors must be present to give any informa-

ion that may be required.

The ploughing match will commence at 11 o'clock, at Ir Steven's field. All entries for these premiums must e made on or before the Monday, next previous to the ay of Exhibition.

Any persons claiming the premiums offered for hest orking oxen or plough, will give notice thereof to DAN-EL PUTNAM, Esq. Chairman of the Committee on ese subjects; and will prove their claims in such manner the committee may direct.

Gentlemen who have fine animals, not intended to he fered for premiums, will gratify the Society by exhibitg them; and suitable pens will be provided for their acmmodation.

Brighton Market-Monday, Sept. 21. [Reported for the Chronicle and Patriot.]

At Market this day 714 Beef Cettle, 667 Stores, 2840 Sheep, and 1152 Swine. Nearly all the Beef Cattle and Sheep were sold, and about half the Stores and Swine. Market quite spirited.

Prices-Beef Cattle-An advance of 17 a 25c from last week-we quote \$3,50 a \$4,50, (one pair were taken at \$4,75) although a much larger number than usual were taken at 4,50, also at 4,25, and 4; the barrellers have taken hold, though rather light.

Sheep and Lambs .- Sales quick, and prices advanced: we noticed two large cosset wethers taken for about \$7,00 each; three were taken for about \$4 and nine at \$3; one lot of 80 old Sheep, at 2,55, one lot of 50 at \$2, one lot of 80 at 1,80, one lot of 40 at 1,75, several lots at 1,50 a 1,58, several at 1,33 a 1,38, and one lot at 1,17, and one at 1,12½.

Swine .- One lot of 50 old hogs were taken at 4c; one For terms and other particulars, inquire of Wm. E. lot of 20 Shoats at 44c. one of 25 at 44c. one of 40 at 4c. one of 20 at 3c.

MISCELLANIES.

SONG

Whither, ah! whither is my lost love straying— Upon what pleasant land beyond the sea? Oh! ye winds now playing, Like airy spirits round my temples, free,

Fly and tell him this from me.

Tell him, sweet winds, that, in my woman's bosom,
My young love still retains its perfect power,
Or like the summer blossom,

Of fige the summer mosson, Still changing from the bud to the full-grown flower, Grows with every passing hour.

Say, and say gently, that since we two have parted, How little joy—much sorrow I have known, Only not broken hearted, Because I muse upon bright moments gone, And think and dream of him alone.

WAR.

Whene'er contending nations fight
For private pique or public right;
Armies are rais'd, the fleets are mann'd,
They combat both by sea and land.
Then, after many battles pass'd,
Both tired of blows, make peace at last;
What is it, after all, the people get?
Why—widows, orphans, taxes, wooden legs and debt.

EPITAPI

On Thomas Kemp, hanged for Sheep Stealing. Here lies the body of Thomas Kemp, Who lived by wool, but died by hemp; There's nothing would suffice this glutton, But, with the fleece, to steal the mutton; Had he but work'd, and lived uprighter, He'd ne'er been hung for a sheep-biter.

Description of a Cow.—At the sale of a farming stock in Gloucestershire, in England, the auctionour gave the following extempore description of a cow:

Long in her sides, bright in her eyes, Short in her legs, thin in her thighs, Big in her ribs, wide in her pins, Full in her bosom, small in her shins, Long in her face, fine in her tail, And never deficient in filling her pail.

The following toast was given by Judge Fiske, at the late celebration of the anniversary of the Charleston Forensic Club:

The Lawver's Declaration-

Fee simple and a simple fee,
And all the fees in tail,
Are nothing when compared to thee,
Thou best of fees, Fe-male.

This reminds us of an elegant and complimentary tetrastic attributed to the Dector's illustrious poetical namesake, the late R. B. Sheridan, who having on one occasion, staid—not areay, but too long with his fair one, exclaimed at parting—

Too long I've staid—forgive the crime, Like moments flew the hours; How lightly falls the foot of time, Whene'er he treads on flowers.

When Dr Sheridan called one morning on Miss M' Fadan, to take his leave offer for a few days, the young lady asked, in a tone that well expressed more than the words accompanied it, how long he intended to stay away? To which he immediately replied—

You ask how long I'll stay from thee: Suppress those rising fears: If you should reckon time like me, Perhaps ten thousand years.

Bad Singing.—There was something of novelty, it is true, but not less of reason, in the proceedings of a late esteemed minister of New England, who at the close of a very badly sung psalm, read another to the choir, saying, 'you must try again, for it is impossible to preach after such singing.'

DR HAMILTON

Doctor Robert Hamilton, a most profound, clear-headed, and amiable man, frequently became so absorbed in his own reflections as to lose the perception of external things, and almost that of his own identity and existence. In public the man was a shadow. He pulled off his hat to his own wife in the streets, and apologized for not having the pleasure of her acquaintance; went to his classes in the College on the dark mornings, with one of her white stockings on one leg, and one of his own black ones on the other; often spent the whole time of the meeting in moving from the table the hats of the students. which they as constantly returned; sometimes invited them to call on him and then fined them for calling to insult him. He would run against a cow in the road, turn round, beg her pardon, 'Madam,' and hope she was not hurt. At other times he would run against posts and chide them for not getting out of the way; and yet his conversation, at the same time, if anybody happened to be with him, was perfect logic and perfect music. A volume might be filled with anecdotes of this amiable and excellent man, all tending to prove how wide the distinction is between first-rate thought, and that merely animal use of the organs of sense which prevents ungifted mortals from walking into wells .- The fish market in Aberdeen is near the Dce, and h s a stream passing through it that falls into that river. The fish-women expose their wares in large baskets. The doctor one day marched into the place, where he was attracted by a curiously carved stone in a stack of chimneys. Ile advaneed towards it till be was interrupted by one of the benches, from which, however, he tumbled a basket into the stream, and the fish which it contained were speedily borne towards their native element. The visage of the hady was instantly in lightning and her voice in thunder, but the object of her wrath was deaf to the loudest sounds, and blind to the most alarming colours. She stamped, gesticulated, and scolded; brought a crowd that filled the place; but the philosopher turned not from his eager gaze, and his inward meditations on the stone. While the woman's breath held good, she did not seem to heed his indifference, but when that began to fail, and the violence of her acts moved not one muscle of the object, her rage felt no bounds; she seized him by the breast, and yelling in an effort of despair, 'Speak to me or I'll burst,' sank down in a state of complete exhaustion, and before she had recovered, the Doctor's reverie was over and he had taken his departure.

ANECDOTE OF FRANKLIN.

Not long after Benjamin Franklin had commenced editor of a newspaper, he noticed with considerable free-dom the public conduct of one or two influential persons in Philadelphia This circumstance was regarded by some of his patrons with disapprobation, and induced one of them to convey to Franklin the opinion of his friends with regard to it. The Doctor listened with patience to the reproof, and begged the favor of his friend's company at supper, on an evening which he named; at the same time requesting that the other gentlemen who were dis-satisfied with him should attend. The Doctor received his guests cordially,-his editorial conduct was canvassed, and some advice given. Supper was at last announced, and the guests invited to an adjoining room. The table was only supplied with two puddings, and a stone pitcher filled with water. All were helped, none could eat but the Doctor. He partook freely of the pudding, and mrg ed his friends to do the same; but it was out of the ques tion-they tasted and tried in vain. When their host saw the difficulty was unconquerable, he rose and addressed them, 'My friends, any one who can subsist upon saw-dust pudding and water, as I can, needs no man's patronage.' - Watson's Annals of Philadelphia.

A sailor who had been round the world with Capt. Cnok, returned in safety to his native village. Of course, it was supposed that he must know more than anybody else; the whole village gathered round him to ask guestions. He seemed to have little to say for himself, 'till some one asked him, it the world was round? Then with a tone of authority, he exclaimed, 'As to that, I'll tell you what itie; they say the world is round—but I've been all round it, and I'll be — if it an't as flat as this table?

At the time Mr. Peale was exhibiting his beautiful picture of the Court of Death in this city, he sent the late Rev. Dr. Osgood a ticket, on which was inscribed, 'Admit the bearer to the Court of Death;' the old genternan never having beard of the picture, was utterly

confounded—'I expected to go before long,' said he,—
'but I was not prepared for so abrupt a summons.'

The Camel.—It is intended to introduce this useful animal into the South of France. Should it be found possible to naturalize, the advantages would no doubt be great. Its patience, hardy nature, and power of enduring fatigue, are proverbial.

Silk in Sweden.—A company for the production of the prince-royal has made them a grant of land sufficient for tansplanting 2,400 mulberry trees, of from two to four years old, which are placed at the disposal of the society.

110 pigeons were lately taken from Antwerp to London, and released, to see if they would find their way back.—The swittest pigeon flew to Actwerp in 52 hours; distance 186 miles.

There has been a sovere drought in the Southern and Western sections of the United States, while we at the East have been deluged with rain. The Southern papers speak with rapture of a copious rain, but say they want more.

What is Life?—There is eloquence of thought as well as of language in the following paragraph from Arnott's Elements of Physics.

The function, by which the animal body assumes foreign matters from around, and converts them into its own subtrance, is little inviting in some of its details, but taken altogether is one of the most wonderful subjects which can engage the human attention. It points directly to the curious and yet unanswered question-What is LIFE? The student of nature may analyze with all his art those minute portions of matter called seeds and ova, which he knowes to be the rudiments of future creatures, and the links by which endless generations of living creatures hang to existence: but he cannot disentangle and display apart their mysterious LIFE! that something, under the influence of which each little germ in due time swells out, to fill an invisible mould of maturity which determines its forms and proportions. One such substance thus becomes a beauteous rose bush; another a noble oak; a third an eagle, a fourth an elephant-yea, in the same way, out of the rude materials of broken seeds and roots, and leaves of plants, and bits of animal flesh, is built up the human frame itself, whether of the active male, combining gracefulness with strength, or of the gentler woman, with beauty around her as light. How passing strange that such should be the origin of the bright human eye, whose glance pierces as if the invisible soul were shot with it-or the lips which pour forth sweetest eloquence-of the larynx, which by vibrating, fills the surrounding air with music: and more wonderful than all, of that mass shut up within the bony fortress of the scull. whose delicate and curious texture is the abode of the soul, with its reason which contemplates, and its sensibility which delights in these and endless other miracles of creation.

COUNTIEVENCE.

MR FESSENDEN-Among the miseries of the Farmer and the Gardener there are none so prooking, none so injurious to the peace, and the emper, as bad seeds and misnamed fruit trees, Among the causes of the latter, the most promnent is the self-confidence in personal skill, and udgment of fruits by their bark and buds. Let hose who feel this confidence, take warning by he following examples of recent occurrence.

Is it true, as I have understood from high auhority, that pear scions of Mr Knight's last transnission have been mistaken, even at that most courate establishment, the Linnwan Garden at lushing, for apple scions, and inserted as such uring the last year? If this is not so, I shall glad to be undeceived.

It is true that an old, experienced, well educated 5 years old, and the error was never detected till pear shoot started below. It is true, that an curate, cautious, and thoroughly experienced ltivator, after due examination, took an unmarkpear scion for an apple and inserted it as such. iese three facts have come to my notice. If en very careful and observing men have misen two distinct species for each other, how can teel any confidence in those who would haz-I the sending varieties of the same fruit on the be there are no such hold men now, and that race ceased with the pomologist, who, with list in his pocket, scorned to consult it.

on a fight sandy soil, and annually cultivated as a lature seldom above 80 or below 50 degrees of kitchen garden. From the precocity of bearing Fahrenheit. The soil is thin, and incumbent on in this variety, and then abundant bearing, the in-|scoria and other undecomposed volcanic substances; ference may be fairly drawn, that they are not of but naturally exceedingly fertile. For a long long duration, and others ought to be coming on period of time, every part accessible to the plough in succession.

Yours, very respectfully, equally large.

ST MICHAEL.

Plymouth, Sept. 27, 1830.

THE LUPIN.

Mr Fessenden-Inclosed is the seed of the Lupin Bean, used as a manure for the soil in Madeira and the Western Islands. I believe it is not unlike a flower, which is often seen in gardens and redener inserted apple scions on a pear stock of flower pots in this country. The seed I forward to you was received lately from the Western Islands by Mr Smith, of Singsing, N. Y.

It is said by the gentleman from whom they were received, that this bean is extensively used there as a dressing for land, and is much valued. It is sowel in October, and in April, when in the white flower, it is ploughed in. Perhaps in this climate it would not do so well as where the winters are milder.

I do not know that you will be at all interested y fluctuating criteria of bark and buds? We in this plant, but I take the liberty to inclose the seed, and give you a statement of facts.

They were kindly given to me by the above named gentleman, and should any more particular information be desired by yourself or any of your readers, a letter directed to James Smith, Singsing, N. Y. will be cheerfully acknowledged. Ar Smith is interested in the subject of agricultural improvement, and would be happy to spread brough the country in which he resides, or brough New England, any useful information which he may possess.

Remarks by the Editor-Lupin is a genus siderable number of different ages, and almost of plants comprising a great many species, most every size on his farm; and inquiring what of which are cultivated in gardens, on account of heir beautiful flowers.

In November, 1821, S. W. Pomeroy, Esq. adcause, without a more definite knowledge of lressed a letter to John S. Skinner, Esq. of Baltir aspect and situation; whether growing in more, then Editor of the American Farmer, from

been bearers, or have recently become so. 1 . Among the various plants applied as green oduced, is much deteriorated. I regret it the may be had with them, I have forwarded half e from the fear that the promulgation of these a bushel of the seed, which I trust you will cheers (which may arise from local causes) may fully distribute for the beneft of our Soutbern ant acquisition. It is not more than 20 or 25 of the effects of their culture, will, at least serve s since I have witnessed their cultivation here, to convince us that the Earth 'ever subservient to if ple and vigor, and I have never known one it tiable demands, requires from him but a little mebe of one being otherwise than an abundan chanical aid, to enable her still to spread his

make his own deductions. The trees are growing of latitude with Maryland, is subject to a temperhas been in tillage; and, with the exception of I send you herewith, a small sample, that you selected patches, shifted for flay, under alternate may judge, if the fruit has so deteriorated, what it crops of wheat and Indian corn, (the latter being may have been in the 'green tree.' The sample the chief food of the laboring classes.) Such a sent is selected; the whole produce are not system of severe cropping, the sources for manare very limited, and without the advantage of improved implements or modes of culture, caused a visible deterioration of the soil; the crops lessened from year to year; partial importations were resorted to; and the well born of the island be came seriously apprehensive of the most distressing consequences.

Providentially some 15 or 20 years since the White Lupin was introduced from Italy, and though it came by accident to a people strongly bigoted to old practices of husbandry, the cultiva-

tion soon became general.

'The wheat and corn are harvested in August, the land is soon after ploughed, and Lupins sown on the surface, or but slightly covered, at the rate of two bushels per acre. In February they flower, and are then turned in with the wheat, corn or flax in their several rotations. By this management a progressive improvement of the soil has become apparent; there are no longer apprehensions of famine; a very redundant population subsists; and besides supplying 10,000 in the neighboring island of Pico, where scarce anything but the rine is cultivated, a surplus is often sent to other islands, and in some instances to

'Lupins are ranked by gardeners among the hardy annuals, but I am not able to say what degree of frost they will bear. From a single experiment I am led to believe that, owing to the drought to which our climate is subject, not much advantage will be derived by sowing them on summer fallows as a dressing for winter crops. Their application to spring crops in those sections of our country where they can be grown in season for that purpose, will probably become the first object of experiments.'

S. P. HILDRETH, of Marietta, Ohio, was elected an honorary member.

VOTED, That the alterations which have from time to time been made in the Constitution and By-Laws, with a correct list of all the members and standing Committees of the Society, be appended to the Anniversary Address.

The following letter from S. P. HILDRETH, Esq., addressed to the President, was read. It was accompanied with a drawing of a fine Seedling Pear, to which the Society was requested by the writer, to affix a name, and they accordingly gave it that of the Burlingame.

To GENERAL DEARBORN-

DEAR SIR-From your known attachment and devotion to the culture of fine fruits, made knewn to me through the medium of the N. E. Farner, I take the liberty of forwarding to you the drawing and description of a pear, which I think deserves to be preserved among the native fruits of our common country. The drawing was made by myself, but I practise the art so seldom tha it lacks much of the nicety of a good artist, though you may rely on it as correct. The seed from which this pear originated was collected by the wife of Mr C. Burlingame, a daughter of the ate Gen. Rufus Putnam, in New Jersey as early as the year 1790, and saved among other scals from fruits eaten on their journey from Masachusetts to Marietta. These seeds were planted the following winter in a nursery and transplanted in due time into an orchard on the Ohio botton a mile below Marietta. This tree happened to e planted on the base of a poor clayer hill, at the extremity of a row; its growth was tardy audit was not known to be a pear tree until it produced fruit in its 14th or 18th year-since then it has been a regular bearer and free from the bligh, so ruinous to all other pear trees in this part of Ohio. The following is a description of the frut &c, which could be furnished in exchange for so &c. (The drawing is accurate as to size of fruit

Tree pyramidal, with a broad base-Wool strong, light brown inclined to green, sprinkled with numerous light colored, fine dots-Leaves large on the young wood; oval, pointed and nearly

flat, with a finely serrated margin-Petioles, long and strong-leaves numerous about the fruit buds, from two to six on each bud, but smaller than onthe young wood. Fruit medium size; skin when ripe, yellow, with fine green dots and on the tawny side of a rich crimson-surface smooth, with slight longitudinal depressions-Flesh melting, white, very juicy, sugary and delicious; in eating from the middle of July to the last of August, best when ripening on the tree, but very good if gathered when hard and ripened in the house; a great and constant bearer.

This pear is probably of the Bergamot family, impregnated with the golden Beurré or Crassanne. I can find no pear in Coxe's work which answers to this .- If you know a more proper name than the one given by me please suggest it.

Fruits of most kinds, suitable to this climate were early and extensively cultivated. The tree, grew most luxuriantly, and bore fruit when very young. I have seen pears of the variety called pound pear,' weigh 36 or 38 ounces-but most of the trees are either dend or in a perishing condition. The last spring, or early part of summer has been rather the most ruinous to pear trees of any since 1822-many of them died; but latterly the young trees had been quite healthy, I view it as a disease of plethora. The tree becomes from its luxuriant growth too full of sap, and a sudden check to its circulation by cold, or a depression of 30 or 40 degrees of temperature, in the latter part of May or June, when the juice circulate more rapidly, is certain to be followed by what is called 'blight.' Trees planted in a poor hard, clayey or gravelly soil, I have noticed an much more healthy, than those in a rich soil, at especially if highly manured. Doubtless som trees perish by the ravages of the 'Scolytus Pyri but for one by this insect, ten die by blight of plethora, in this vicinity. I have examined many trees for this purpose, but could never find ou whose disease could be attributed to this insec Plums and Nectarines, are tormented by the

puncturing instruments of the little curculio, and in my orchard have as yet set at defiance my plan for their preservation. I have tried paving under the trees extensively, but without benefit. M next trial will be with sulphur and soap s thrown over the leaves and fruit, through the mont of May. It is to be hoped your Horticultural Socie ties, will raise a sufficient bounty to encount some one to give full attention to the matter till remedy is found. I have the stones of a wi plum, whose fruit is the size of a modern peach, brought from near Granville in this su The tree is small, and a regular bearer. If the do well I can furnish you some of the scions, a also some from the Burlg Pear, if you wish them. Being a cultivator and admirer of f flowers, I am anxious to obtain a few seeds the Clarkia Pulchella and Schizanthus pinnal sent to your Society, last spring, from Paris. the plants have ripened their seeds, a few mig he sent in a letter, by mail. We have sever handsome wild flowers, cultivated in my gard from which I could furnish seeds-two or the varieties of Phlox, as many Perennial Delphinia of your exoties, without much trouble.

Wishing you continual health, and abundar satisfaction in your horticultural pursuits, I remi S. P. HILDRETH. your friend.

Marietta, Ohio, Sept. 2, 1830.

The Society was then adjourned to Saturday, the 25th iast.

Of the general principles of rearing, managing and feeding domestic animals.

Immediately after the birth of every animal, even of such as are domesticated, the rudiments of its ducation, as well as its bodily nourishment, are ecessarily given by the mother. For this purpose he latter should, during her pregnancy, have been aily protected against all extremes of temperature rell provided with shade and shelter, and abundntly supplied with food and water. When the cried of gestation arrives, she should, in general, so be separated from the rest of the flock or herd, nd by whatever means the case may demand, kept omfortable and tranquil.

After the birth, the first interference on the part man should be that of supplying the mother ith food of a light and delicate quality, compared that which she had been in the habit of using, id also of administering the same description of od to the offspring, so far as it may by its nature Jersey. able to use it. The gentlest treatment should company these operations; and the opportunity th man, by gently caressing them, or at least, familiar treatment on the part of the attend-

As the animal increases in size and strength, they ould have abundance of air, exercise, and food, cording to their natures; and whatever is atnpted by man in the way of taming or teaching ould be conducted on mild and conciliating prinles, rather than on those of harshness and comsion. Caresses, or familiar treatment, should perally be accompanied by small supplies of food, east at first, as an inducement to render the mal submissive to them: afterwards habit will. n in the inferior creation, render the familiariis of man agreeable to them for their own sake; even then, to keep up these feelings, small poras of select food should frequently be employed a a reward. By contrasting this method with It of taining or teaching animals by fear or comsion, the advantages of the former mode will evident.

nterest is the grand mover of animals, as well nan. In taming by fear, all the interest which animal has, is the avoiding an evil; in taming caresses and food, it is the attainment of ennent. The most extraordinary results are reled as having been obtained by the mild mode almost every species of animal on which it been tried; to this may be advantageously ed, in the more powerful animal, hunger and rms us, at an advanced period of life, not only quered a vicious restive horse, but, without the stance of either grooms or jockies, taught this

plished, was never known; but when he returned from his journey, the horse was as gentle as a lamb and would obey his master's verbal orders on all mals are taught such strict obedience to the command of a superior order, it is in generally supposed to be the effect of fear; but Bakewell never made use of whip or spur. When on horseback he had a strong walking stick in his hand, which he made the most use of when on foot; he always rode with a slack rein, which he frequently let lie upon the horse's neck, and so great was his objectious to spurs, that he never wore them. It was his opinion that all such animals might be conquered by gentle means; and such was his knowledge of animal nature, that he seldom failed in his opinion, whether his attention was directed to the body or the mind.'-Agr. Mem. page 127.

TO DRY PEACHES.

The following mode of drying peaches is adopted by Thomas Belanjec, of Egg Harbor, New

He has a small house with a stove in it, and drawers in the sides of the house, lathed at their ken of familiarizing both parent and offspring bottoms. Each drawer will hold nearly half a hushel of peaches, which should be ripe, and not peeled, but cut in two and laid on the laths with their skins downwards so as to save the juice. On shoving the drawer in they are soon dried by the hot air of the stove, and laid up .- Peaches thus dried cat like raisins. With a paring machine, which may be had for a dollar or two, apples or pears may be pared, and sufficient quantity dried to keep a family in pies, and apple bread and milk, till apples come again. With a paring machine, one person can pare for five or six cut-

LIQUID MANURE.

In Flanders, according to Loudon, 'Urine cisterns are formed in the fields to receive purchased liquid manure: but for that made in the farm yard, generally in the yard, or under the stable, In the latter case, the urine is conducted from each stall to a common grating, through which it descends into the vault; from thence it is taken up by a pump; in the best regulated farmeries there is a partition in the cistern, with a valve to admit the contents of the first space into the second, to be preserved there free from the more recent acquisition, age adding considerable to its efficacy. This species of manure is relied on beyond any other, upon all the light soils throughout Flanders, and even upon the strong lands (originally so rich as to preclude the necessity of gue. 'The breeder Bakewell, surgeon Hund manure) is now coming into great esteem, being considered applicable to most crops, and to all the varieties of soil.'- Encyclopedia of Agriculture.

Remarks by the editor of the N. E. Farmer-With se to obey his verbal orders with as great at regard to age adding considerably to the efficacy ion as the most accomplished animal that was of this sort of manure, we perceive there exists a educated at Astley's school. Bakewell was difference of opinion. Sir Humphrey Davy says istomed to say, that his horse could do every- During the putrefaction of urine the greatest g but speak. The method which he took to part of the soluble animal matter that it contains quer this vicious animal was never told, even to is destroyed; it should consequently be used as own domestics. He ordered his own saddle fresh as possible; but if not mixed with solid bridle to be put on the horse, which at that matter, it should be diluted with water, as when e was thought to be ungovernable, when he pure it contains too large a quantity of animal in Plymouth to 6 months imprisonment for stealprepared for a journey of two or three hun- matter to form a proper fluid nourishment for abi miles; and, that no one might be witness to sorption by the roots of plants, Putrid prine. contest, he led the horse till he was beyond however, continues Sir Humphrey, abounds in reach of observation; how far he walked, or ammonical salts; and though less active than what manner this great business was accom- fresh urine, is a very powerful manure,

His corn land is ploughed in the fall-his bull is from two to five years old, and he works him, occasions. When what are called irrational ani- He seldom lets his work drive him. Has a cooking stove with plenty of pipe to it. The wood lots he possesses are fenced. His sled is housed in summer, and his eart, ploughs and wheelbarrow, winter and summer, when not in use; has as many yoke of good oxen as he has horses-Does not feed his hogs with whole grain-Lights may be seen in his house often before break of day in winter-His hog pen is boarded inside and out -has plenty of weeds and mud in his yard in the fall-All his manure is carried out from his buildings and barn yard twice in the year, and chip dung once a year-His cattle are almost all tied up in the winter-He begins to find out that manure put on land in a green state is the most profitable-Raises three times as many turnips and potatoes for his stock as he does for his family-Has a good ladder raised against the roof of his house-Has more lamps in his house than candlesticks-Has a house on purpose to keep his ashes in, and an iron or tin vessel to take them up-He has a large barn and a small house -seldom has more pigs than cows-adjoining his hog pen he has a hole to put weeds and sods, and makes three loads of best manure from every old hog and two from every pig. A good farmer in this country begins to find out that steaming vegetables can be done at one third the expense of boiling-and that Mangel Wurtzel, Millet, Altringham Carrot, and Rota Baga are things worth thinking of-he fences before he ploughs and manures before he sows-He deals more for cash than on credit.

CATTLE STALLS.

The common cattle stalls of our country are so ill contrived and so straightened in their dimensions, that the cattle are constrained to lie down, in part, in their own dung. This dries and forms a thick coat on their hind quarters, from which they are not relieved till they shed their hair in the spring. They are thus rendered uncomfortable. To be uncomfortable is to suffer some degree of pain; and no one will suppose that animals in pain can thrive, or preserve their plight, with the same food, equally with others perfectly at ease. Even hogs, though prone to wallow in the mire, in warm weather, are always pleased with a dry bed, and thrive best when kept clean .- Col. Pick-

Vegetable Extract. In the north of France an excellent extract of the herbs used in Soups and broths is made by boiling them very slowly with a sufficient quantity of salt, and afterwards evaporating the fluid. A little of this extract, dissolved with gum in water arabic in hot water, is said to make capital Soup.

The Selectmen in Amesbury and Salisbury, have determined not to recommend any one to retail spirits in those towns. The Selectmen of Newhury, have been forbidden, by a vote of the people, to grant any !licenses.

A boy named Perez Wade has been sentenced ing fruit; it was a second offence.

Commerce of Boston .- From the 12th to the 20th of September, 64 vessels were entered at the Custom House in this city, from foreign ports, and will probably pay duties to the amount of \$400,000.

From the New York Farmer

A DESCRIPTION OF TREES AND SHRUBS, PRODU-CING A SUCCESSION OF FLOWERS FROM SPRING TO AUTUMN.

By Michael Floy, Vice President of the N. Y. Horticultural Society. Continued from page 75.

I shall now select a list of hardy flowering shruls calculated for shrubberies, clamps, and ornamental planting. The collection will furnish plantation, and is very hardy. a flowering succession from the early spring, until late in the fall. They are all to be obtained at the museries here, and at prices as stated above.

Amorpha fruticosa-Indigo shrub, with handsome bunches of purple flowers in great quantities. Amygdalus nana, Dwarf double flowering Almond, a very beautiful dwarf shrub, about 3 feet high. Aralia spinosa or Angelica tree, about 10 feet high, flowers in very large hunches, and ing althea frutex, of which there are several values an ative of Europe. The Scotch mountaineers continues a long season. Cylisus Laburnum, or rieties, the double white, double red, and white, Golden chain, a most elegant shrub, with long and striped, are the most showy; they comracemes or bunches of yellow flowers, in the great- mence their flowering late in July, and continue est profusion-there are two kinds, the English, till fall, coming in at a very acceptable time. and the Scotch Laburnum. The Scotch is the largest, forming a pretty large shrub; the English kind is greener, more compact, and by some, being raised quite as well, and are equally hardy, thought to be the handsomest-they ought to be in every gardon. Calycanthus fleridus, Alepice or sweet scented shrub, a native of the Southern States: the flowers are of a very dark chocolate color, and the fragrance very much resembles ripe feetly hardy here. They all flower in the greatstrawberries, easily kept where once introduced est profusion, and continue for a long season. -the shrub generally grows about 5 feet high in They should be planted in the front row. gardens. Ceanothus americanus, Red root, or Jersey Tea tree, worth having a plant or two in the Japan Globe flower; although a native of Japan, collection, as it flowers in profusion, - Cercie sil- like many other Japan flowers, it is perfectly hariquastrum, or Judas tree. The flowers appear very carly, before the leaves come out, and make a fine appearance-as it grows rather tall, it is calculated for the back rew of the shrubbery. Colutea arborescens, or Bindler Senna, having bunches of yellow flowers, which are succeeded Japan. It has long racemes of flowers, succeeded by seeds in a kind of bladder, calculated for the by bladder like fruit, and is worthy of cultivation back or centre row of shrubberies.

Cratagus oxyacanika, the Hawthore. It makes a pretty appearance planted out singly in the back or centre row, the flowers are very fragrant, it is sometimes called the Pride of May; the double white, double scarlet, and single scarlet Hawthorn, are extremely beautiful, and ought to be in every plantation. Hawthorn hedges are much used in England, where they look very handsome when kept clipped, but they do not answer so well in this country, the heat of our summers causing the leaves to fall off early, often in July; on that account they are not much used-we have several things which are better calculated for that pur-

not been in cultivation here for many years. is found to be very hardy, resisting our most seplace in the latter part of the summer. It is every way a desirable shrub. Daphne Mazerium, one of our most early flowering shrubs, often flowering in February, and very sweet scented. It is rather tender in some situations, but will stand our ordinary winters very well in a sheltered situation.

Direa palustris, or Leather wood, a pretty little shrub, growing very regular in shape, and has the for the same purpose. appearance of a large tree in miniature; it is a native of our northern states, the flowers appear sometimes called fringe tree, is a fine shrub, calculour markets with vegetables. The Northampton

leaves.

Gymnocladus canadensis, or Kentucky Coffee tree. The berries have a resemblance to coffee, and are said to be used for this purpose; however are two species of this very ornamental shrub it is a beautiful tree, with handsome feathered from Missouri, introduced by Lewis and Clarke; leaves, and makes a fine contrast with others. It they are quite hardy, and flower in great profusion, should be planted in the back or centre of the

Halesia diptera and iInlesia tetraptera, two winged and four winged Silver bell, or snow dron tree. They are both natives of the Southern States, but in all large collections. perfectly bardy here; our most severe winters do not huit them. The former kind flowers a month This is a very beautiful shrub of the larger size, later than the latter kind, which flowers early in May. They are both elegant shrubs.

Hibiscus syriacus, fl. pleno. The double flower-The single kinds, of which there are many varieties, are scarce worth cultivating, the double ones color, but otherwise much resemble it. These are indispensable in every plantation.

Expericum frutescens, Shrubby Hypericum: shrub, all natives of the Southern States, but per-

Kerria japonica, or Corchorus japonica-yellow dy here. It flowers in the greatest profusion at all times, except in the very dead of winter, and will grow almost in any soil or situation.

Kælreuteria paniculata, - Japan bladder tree, or Kælreterius. This is another hardy shrub from in every good collection.

Ligustrum vulgare, virens. Large European the blue or purple flowering. Privet, a very handsome evergreen shrub, flowerand is well adapted to our climate, and when long time after the common lilac. planted in a hedge row, and kept clipped, it makes a beautiful hedge, and ought to be in more general use.

Philadelphus coronaris, or common syringo, is very ornamental, producing its sweet scented tion might be made of about 50 of the best sorts, flowers early, and in abundance, and also sweet scented Philadelphus inodorous, and P. grandi- be obtained at about 50 cents each under name; Cydonia japonica, or Pyrus japonica, a very florus, Garland syringo, both natives of the South | and generally a fine collection un-named at half beautiful searlet flowering shrab, from Japan, has ern states, but quite hardy here. The flowers are that amount. No good garden or shrubbery can It large, and they keep their flowering for several be without them. months in wreaths or garlands-it is well calcuvere frosts; it is evergreen, flowers very early, and lated for the centre fow, and also to hide unsightly marix Germanica, German tamarix, are two pretty continues a long time. A second flowering takes objects. It has a beautiful effect when mixed with monthly honey-suckle, &c.

> Persica or Amygdalus Persica, fl. rosea pleno-The double flowering Peach is very beautiful in part of the shrubbery. shrubberies. It sometimes bears fruit, but it is cultivated entirely for its beautiful blossoms. A few trees also of the Chinese double flowering apple, Pyrus spectabilis, has also a beautiful effect

Rhus cotinus, Venetian sumach, Aaron's beard,

very early, are yellow, and come out before the lated for the centre of the clump or shrubbery. Its large branches of fringe remaining all summer, give it a curious and striking effect.

Ribes Missouriensis, or Missouri currant; there

Robinia glutinosa, and Robina hispida, the former a pretty large shrub, with large bunches of flowers in great abundance, the other a smaller shrub-they are both of them worthy of a place

Sorbus aucuparia, Moontain ash, or Roan treethe leaves are ornamental, the flowers and fruit which are produced in large bunches, are beautiful; the fruit remains till late in the autumn-it attribute to it, virtues to prevent witchcraft.

Sorbus canadensis. This is a native of our northern frontiers and monutains; it does not grow as large as the former, the berries are smaller and red, the former larger and of an orange

Spartium scoparium and Genisla, two or three species of Broom, with banches of yellow flowers in very great profusion; the Genisla or Spanish there are several species of this small beautiful broom has white flowers, is also very pretty, but not quite so hardy as the former.

Symphoria racemasa, or snow berry, sometimes called snow apple, a pretty little shrub; the bunches of wax-like white berries which it produces during the whole summer, gives it a beautiful appearance.

Syringa vulgaris, or common Lilar is well known to all, and needs no comment. The white variety not quite so common-they are only fit for outside plantings, as they sucker very freely and soon make themselves common.

Syringa persica, or Persian lilac, is a delicate low shrub, the flowers very abundant, and the leaves small and delicate. There are two varieties of the Persian lilac; the white flowering, and

The Chinese cut leaved lilac is very curious ; the ing in great profusion, and succeeded by hunches leaves are finely cut like parsley; the flowers of black round herries. It bears clipping well, growing in longer racemes than the former. Siband is therefore well calculated for hedges, or to erian, or large Persian illac. The bunches of enclose ornamental plantations. It grows quick, flowers are very large, and continue in seasona

> Rosa, or Roses. A pretty numerous variety of them; some reckon five or six bundred kinds. They are accounted the most beautiful of Flora's productions. Perhaps a very handsome collecwhich, by taking said quantity, I suppose might

> Tamarıx Gallica or French tamarix, and the Tashrubs, the leaves and branches are small and slender, producing quantities of beautiful flowers, and form a very striking contrast to the other

To be continued.

Early Frost-On the night of the 18th inst, a severe frost put a stop to many kinds of vegetation, and caused much damage to many industrious cultivators; particularly those who supply

evere frosts have been destructive to garden choice fruit .- Extract from a Letter from England, ineal, or the flower of buckwheat. egetables, and to many fields of Indian corn and from earn. Ice of considerable thi kness was bserved in many places on Saturday morning. The Courier printed at the same place says, Broom Corn, Indian Corn, and Peach Trees, have been njured in this country, it is estimated to the mount of 10 or \$15,000.

Messrs Daskam and Wood, Geneva, N. Y. have btained a patent for the 'Franklin Cracker Mahine,' which rolls, presses, cuts, stamps and nishes ready for the oven, at one operation, ackers, pilot bread, &c. By it, two persons can o as much in one day as ten by the usual mode.

Elder leaves, put around the roots of peach ees, is recommended as a perfect antidote for the jury arising from worms, -N. Y. Farmer,

Signs-An old gentleman presented us with a andful of ripe Strawberrics of the second growth Thursday last, and informed us that they were ite plenty in his neighborhood. He also informus that he had seen onions, beets, carrots, and bbages, which were sown last spring, running to seed, and had no doubt but it was 'a sign something.'-Doubtless it is a sign, but we preme a stopper was put on it last Friday night, on Saturday morning all the vegetables in this ighborhood were completely stiffened by a illing frost.'

The usual variety of mammeth pumpkins, cabtges, squashes, &c, have been noticed by our extemporaries this seasen, but we know of none ore marvellous than a remarkable growth of ins, the product of our own garden. They re planted about the first of June; the vines ri to the usual length, and the pods, which are vy numerous, are front two to two and a half ft in length, containing from 20 to 30 goodsed beans in each. For string beans this kind nequalled, and no other preparation is necessary the to pick and cut them to a proper length. ne of these beans may be seen at our office ;consider them a 'sign' that gardeners who cure the same kind of seed can raise more and ter beans than in any other way now known. Williamstown Advocate.

ENGLISH AGRICULTURE.

The English carry agriculture to great perfec-1. Every spot of ground capable of cultivation improved. Wherever I have been, the fields generally small, enclosed by hedges, and made feetly smooth, by means of cast iron rollers. mereus trees are left to grow around the hedges, scattered over the fields. These are so nicely amed, as to add greatly to the beauty of the coun-

Not a weed is suffered to grow. The crops look well, and are much more productive than s. The cattle and sheep feed on grass up to ir knees, and look, as we should say, fit to kill. The slight enclosures that keep them in their tures, would be but a poor protection against lean, half fed, unruly animals. Here the cattle e no need to break fences. They have food icient within their own domains. I came here ler the impression that the country was bare of

France and England .- The editors of the Bulletin des Sciences state, that the agriculture of is too well known to all who own these noble ani-England is much superior to that of France; and that the former country with an unfavorable climate, and upon a soil not half so extensive as France, possesses 6 millions of sheep and 150,000 horned cattle, more than France. In England the soil belongs exclusively to 30,000 proprietors; in France there are four millions of proprietors .-Some appear to consider the small number of proprietors in England as the principal cause of the agricultural prosperity of that country, but the editors of the Bulletin think the cause may be found in the liberty and industry of the body of the nation, and in the favor and protection bestowed on agriculture, commerce, and manufactures, by the privileged class. Ignorance and prejudice are formidable obstacles to agricultural improvement in France, especially in the southern depart-

Indian Corn and Flax .- M. Hadner of Saxony, attributes the exhaustion of the soil by Indian corn to the roots after the crop is gathered. He therefore placks up the roots with the plant, and remarks that his cornfield is favorably distinguished from those which surround it. The same gentleman once sowed some flax seed that was 12 years old, and to his astonishment it produced the most beautiful flax he ever saw,

Sheep .- The number of sheep in England is estimated at 45 millions, in France 36 millions, in Spain only 14 millions .- Bull. des Sciences.

In Cincinnati, a great number of cows graze on a common where they eat some plant which poisons them. Last year several died, and two persons lost their lives by skinning them. This year, about 50 valuable cows have died, and four persons who skinned some of them.

DUTCH DAIRIES.

For the sake of cleanliness, the tails of the cows are tied to the roof of the cow house with a cord during the time of milking. The cow houses both in Flanders and Holland are kept remarkable clean and warm; so much so that a gentleman 'speke' to Redeliff 'of having drank coffee with a cow keeper in the general stable in winter, without the annovance of cold, dirt, or any offensive smell,'-The Dutch are particularly averse in unfolding the secrets of their dairy management, and notwithstanding the pointed queries of Sir John Sinclair on the subject, no satisfactory idea was given him of their mode of manufacturing butter or cheese .- Loudon.

COW KEEPING.

In Holland the food for one cow in winter for twentyfour hours, is straw, eighteen pounds; turnips, sixty pounds. Some farmers boil the turnips for them; others give them raw, chopping them with the spade; one or other operation is necessary to obviate the risk of the animal being choked, where the turnips, which is usually the case in Flanders, are of too small a size. In lieu of turs. On the contrary, I find it better stocked hips, potatoes, carrots, and grains, are occasionally his respect than the thick settlements of our given; bean straw likewise, and uniformly a

Sazette of the 22d inst, observes that the late nursed with as much care, as though they here been dissolved, and whitened with rye meal, oat

Scratches in Horses. - This disorder or difficulty mals, or deal in them, to need a particular description of it. The remedy is simple, safe, and certain, in all cases which have come to my knowledge, however inveterate. It is only to mix white lead and linseed oil in such proportions as will render the application convenient, and I never have known more than two or three applications necessary, to effect a common cure .- Turf Reg.

Product of the Newport Almshouse Farm, 1829. -30 tons hay; 200 bushels corn; 675 do potatoes; 379 do onions; 2232 bunches do; 58 bushels barley; 75 de oats.

The product of the farm exceeds that of anv other year, and is yearly improving in walls. buildings, &c. About two acres for an orchard have been walled in, in which trees will be set this season. There is at present, 55 acres cultivated; $57\frac{1}{2}$ in meadow.

Several persons have this week been convicted for robbing an orchard in Bridge street, in Salem and have been fined ten dollars for their offence

ndw england farmer.

BOSTON, FRIDAY, OCTOBER 1, 1830.

TO KEEP APPLES FOR WINTER'S USE. . Put them in casks or bins, in layers well covered with dry sand, each layer being covered. This preserves them from the air, from moisture, and from frost, it prevents their perishing by their own perspiration, their moisture being absorbed by the sand; at the same time it preserves the flavor of the apples, and prevents their wilting,-Pippins have been kept in this manner sound and fresh till midsummer; and how much longer they would have kept is not known. Any kind of sand will answer, but it must be perfectly dry.

BREEDING ANIMALS AND VEGETABLES.

Dr Cooper, Editor of the last edition of Dr Willieh's Domestic Encyclopedia, observes, that 'The whole art of breeding unimals and vegetables for particular purposes may be included in this direction: Choose those animals or vegetables to propagate from, that possess the qualities you wish to propagate in the greatest perfection.'

ELDER BERRY SYRUP.

Take of the juice of elder berry one quart; beil to one pint; strain and add two pounds of double refined sugar; again place it over the fire! so soon as it shall have boiled remove it from the fire; and when cold bottle it for use, taking care to have it well corked. Should a less quantity of sugar be used there will be danger of its becoming mouldy. As a gentle purgative this syrup is an excellent medicine of very pleasant taste; and is particularly serviceable to children, who are not inclined to take medicine. The dose for an adult is a wineglass full.

Hints with regard to fattening swine .- If your object is merely profit in fattening your hogs, you must take time for the process, and make them a country. We wantonly destroy trees as if white drink, prepared both for cows and houses, thoroughly fat. A farmer, stating the result of were of no value: here they are planted and and consisting of water in which some cilcake has some experiments in the Bath Society papers, vol. this period they are but little; and almost all they will admit of a great variety of tender plants for ate turned to fat : and that can only be done by giving time.'

The experienced farmer need not be told that fatting logs should have now and then a dose of brimstone or antimony given with their food, in order to preserve their health and increase their the advertisement, in this week's paper, of the appetite. But there may be some, who never sale of Mr Hall's stock in New York. Besides From Coleman Sellars, Esq. Philadelphia, knew, or have forgotten that rotten wood, thrown one of the finest collections of Horaed Cattle, to them occasionally, will be eagerly devoured, and some valuable Horses will be offered, among them serve as an absorber of those acrid juices, which might otherwise occasion a disorder. It is like- known in the racing calendar, several of her colts, wise said that to throw them now and then a few the imported mare Alarm, and colt by Eclipse, pieces of charcoal will answer the same purpose.

From the Gardener's Magazine.

On preserving tender Plants in Winter by means of the Temperature of Spring Water. By Mr A. Goanie, F. H. S.

Sta-There is a curious coincidence between the annual mean temperature in the open air, and the annual mean temperature of water in a deep spring well at the same place. In a spring well of that description at Annat Gardens, I find the temperature of the water to indicate from 460 to 470 in the winter months, unaffected in the least by atmosphere temperature, however low that may be. As spring wells are frequently to be met with, and are always desirable appendages to a farm-stead or cottage, it occured to me that many plants, useful to the cottager, or amusing to the farmer's wife or daughters might, be easily preserved in the winter months, in the coldest regions of Scotland, by that class of people whose finances would not enable them to erect more costly structures for the purpose. To ascertain how far this theory was correct, I placed a small frame over the well on a floor of deal two inches wide by one inch thick, and one half and an inch between tise, No. 129. Mr Edwards, Springfield, Pomme from the water. Knowing that glass could not be purchased by that class, whose advantage I had in view, I covered the sash with cotton wrapper at 4d. per yard, and in the same frame I placed pots of cauliflower, lettuce, pelargoniums of sinensis, &c. The circumambient air is generally, as might be supposed nearly saturated with moisplants continue fresh, and the Pelargonium odorato prevent the descent of what meteorologists hope for a continuation. call frigorific pulsation, a winter conservatory might be easily constructed on one spring for the Semianna Plums. use of a whole village. As the rill brings a con-

MIDDLESEX CATTLE SHOW, EXHIBITION OF MANU-FACTURES, AND PLOUGHING MATCH, AT CONCORD, Остовея 7, 1830.

The Committee of arrangments for the approaching Cattle Show give notice that:

Proper pens will be made for the exhibition of all Animals offered for premium, and assistance furnished in confining and arranging them. All entries of animals for the pens are to be made with Mr PHINEAS How, by 9 o'clock. A. M. on the day of the Exhibition.

Such Manufactures and Fabrics, Improvements in Machinery, all Implements of Husbandry offered for premium, must be entered at the Court-house by 10 o'clock, A. M. on the day of exhibition, where directions and aid will be given. Persons in the immediate vicinity are requested to forward their articles. for exhibition at the Court-house, at as early an hour in the morning as possible.

The Trustees have appointed a Committee to award premiums on the best specimens of Apples, Pears, Peaches, Plums and Grapes, it being understood that such as are offered will be used at the Dinner of the Society.

The Ploughing Match will take place at 9 o'clock A. M. precisely, and those who wish to contend for the prizes, must leave their names with John Stact. secretary of the Society, by 8 o'clock, A. M. on the day of exhibition.

A procession of officers and members of the Society will be formed at half past 10 o'clock, A. M. at Shepherd's Hotel, and proceed to the Meetinghouse, where an Address will be delivered by ELIAS PHIN-NEY, Esq.

After the ceremonies at the Meetinghouse, the several Committees will immediately proceed to the discharge of their duties.

The Trial of Strength and Discipline of Working Oxen, will take place immediately after the services in the meetinghouse. Entries of the same to be made with the Secretary by 9 o'clock.

A Dinner will be in readiness at 2 o'clock, at Shepherd's Hotel. Tickets to be had at the Bar.

At 4 o'clock, P. M. premiums will be publicly declared at the Court room, in the Courthouse; after which the choice of Officers will take place.

JOHN KEYES, DANIEL SHATTUCK. SILAS P. TARBELL, ABRAHAM CONANT. NAHUM HARDY,

New England Farmers' . Almanac, for 1831. Just published, and for sale by J. B. RUSSELL, at his Just published, and for sale by J. B. Russell, at his Seed Store, No. 52 North Market Street, the New England Farmer's Almanac, for 1831. By Phomas G. Fessenden, Editor of the New England Carmer. The Astronomical Calculations, by the Editor

of the astronomical part of the American Almanac. Our object in this and in the former numbers of our ittle annual, has been, and continues to be, to give to the usy part of mankind the greatest quantity of useful inormation in the least convenient number of words. o not wish our readers, like the gold hunters of North arolina, should be obliged to silt and examine huge rasses of useless matter, for the sake of selecting now

nd then a grain worth preserving.

Together with the calculations customary in diaries of ne kind, we have under the head, ' Farmers' Calendar,' iven some brief intimations of what may be denominat-I the usual current occupations of the correct cultivator. I this we merely assume the humble part of prompter, minding those, who may have occasion to glance at our dumps, when and how certain operations are generally ist performed. It is better for an agriculturist to consult Almanac for hints relative to some of the most impornt rural labors, than to undertake to obtain any inforation from erratic guesses about the weather; which e no better guides to a Farmer than would be a jack th a lantern to a traveller. But we ask our readers to always aware that circumstances vary cases, and that nen we take the liberty to advise, we have not the asrance to dictate. Our hints are necessarily concise, beuse our limits are narrow, and we hope to be useful ther by furnishing materials for thought, than absolute d invariable rules for action. 'Calendars,' according a celebrated agricultural writer, 'should only be concred as remembrancers, never as directories.

This Almanac contains the usual miscellaneous and ricultural articles-a list of the civil officers of the nited States, with the Governors, Lieut. Governors, and dges of the United States, and the Governors of the litish Colonies-a chronicle of the most remarkable ents between August, 1829, and Sept. 1830-a comte Calendar for each State in New England, including 1: Probate Courts for New England-the Sun's declinaa, &c. The tides are particularly calculated. Among agricultural articles, are a description of Mr Phinney proved roller, with a drawing; and a drawing and deiption of an Improved Harrow, used on Capt. Daniel andler's Farm in Lexington.

Price \$6,00 per groce-62½ cts. per dozen. Oct. 1. Bulbous Roots.

fust received at the Seed store connected with the New gland Farmer, 52 North Market-street,

Grape Vines.

The subscriber has for sale at his garden in Dorchester, the choicest variety of Grape Vines ever offered for sale in this vicinity. Many of them are now in fruit, and purchasers are invited to call and make a selection. The following compose a part of the variety.

Black Hamburg, Black Cape, White Muscadine, Golden Muscat, Gore's, (a beautiful Black Grape)

Napoleon. White Chasselas, Golden Chasselas, Red Chasselas, Black Constantia. Bland. Ferrol.

8 varieties of superior fruit from Xeres and Malaga, 400 two years old Isanellas. 1400 one

200 CATAWBA, or what has heretofore been considered the BLAND. It is now satisfactorily ascertained that the Bland grape will not ripen in this climate, in the open

Orders by mail, addressed to the Subscriber, or personal application at his office, No. 72 Congress-street, for any number of Vines from one to one hundred or more, will meet with prompt attention. Application may also be made to Patrick Kennedy, at the garden. Boston, Sept. 27, 1830. 5t ZEBE

ZEBEDEE COOK.

To Farmers, Graziers, &c.

The Subscriber will offer for sale at public Auction, at his residence at Harlem, in the 12th Ward of the city of New York, on Monday, October 11, 1830-his valauble stock of Blood Horses, Brood Mares and Colts, short horoed Durham Cattle, Bakewell Sheep, &c, comprising the most extensive selection of thorough bred animals in the United States, and well worthy the attention of those who desire to improve the breed in this country

For further particulars, or catalogues, apply to the subscriber, at No. 4, Wall-street Court, or at Harlem.
CHARLES HENRY HALL

New York, Sept. 25, 1830.

Brighton Cattle Show, October 20.

All persons are desired to take notice, that in consequence of the change by the Trustees of the Massachusetts Society for Promoting Agriculture, of the day of the Brighton Cattle Show, from Wednesday the 13th, to Wednesday the 20th of October next, all the offers of Premiums, and all the Rules and Regulations, must be understood as for Wednesday the 20th, instead of Wednesday the 13th. Per order of the Trustees. Oct. 2.

To the Public.

The Proprietors of the Linnæan Botanic Garden and Nurseries have increased the Establishment in all its departments and have an

immense stock of Trues, Flowering Shrubs, and Plants, comprising all the most interesting and valuable productions of the Globe, and being fully sensible that the establishment of Nurseries in every part of our country would be a great national advantage, they now offer all the facilities in their power to advance that

object.

They will furnish all articles required in quantities for Nurseries, at a liberal discount from the usual prices, and where secure, a credit will be allowed to accord with the convenience of the purchaser.

All orders will receive the greatest attention and despatch. Lin. Bot. Garden, N. Y. WM. PRINCE & SONS.

Massachusetts Horticultural Society.

Members of the above Society are informed that Diplomas are ready for delivery on the payment of the Annual

Sept. 24, 1930. No. 36 Broad Street.

Bees for Sale.

Persons in want of prime swarms of Bees, or Beard's Patent Hives, can be supplied by Mr Ebenezer Beard of Charlestown. Purchasers of swarms are supplied with Beard's Patent Hives, gratis, for their own family use only. The prices of swarms vary, according to their weight and quality. November and December is considered the best time for removing the Bees; they can be engaged, however, at any time previous. All orders, either for swarms, or for the Patent Hives only, left with J. B. Russell, at his Seed Store, No. 52 North Marketstreet, Boston, will be faithfully executed.

Sepl. 10.

Agricultural Notice.

The members of the Worcester Agricultural Society are hereby notified, that a semi-annual meeting of said Society, will be held at Thomas' Hall, in Worcester, on Thursday, the 7th day of October next, at eleven o'clock, before noon, for the admission of members and the transaction of other business, at which place they are requested punctually to attend.

WILLIAM D. WHEELER, Rec. Sec'y.

Worcester, Sept. 18, 1830.

BRIGHTON MARKET-Monday, Sept. 27.

[Reported for the Chronicle and Patriot.]

At Market this day 896 Beef Cattle, 1115 Stores, 2064 Sheep, and 957 Swine. About one third the Stores and one third the Swine remain unsold.

Prices-Beef Cattle-About the same as last Monday, from \$3,25 to \$4.50; a few choice extra Cattle were taken for something more than \$4,50.

Stores .- Sales rather higher, though purchasers appear to hang back.

Sheep and Lambs .- Sales quick; as many more would have been sold readily; we noticed one lot of 90 taken at \$1,50, one of 100 at 1,75, and several lots at \$2.

Swine.-Trade not very brisk; we noticed only three or four lots sold, at from 31 to 4c.

N. B. We shall not be able probably through the following season, to particularize Beef Cattle from the Stores. We shall also report Sheep instead of Sheep and Lambs, and shall have three heads only, viz: Cattle, Sheep, and Swine.

MISCELLANIES.

As the season is approaching when militia trainings will be frequent, we call the attention of our readers to the following judicious and pertinent re. marks. The subject demands attentive considera-

THOUGHTS ON THE MILITIA.

- 1. It is not strange that provision was made for arming and training the great body of citizens, on the first organization of the national and state governments. The number of people was then small; the remembrance of the honors and dangers of war was vivid; our young nation was like a lamb among ravening wolves; and we knew no other method of being 'prepared for war in time of peace,' having discarded 'standing armies,'
- 2. Our situation is extremely different now. There is little danger of war; if it should occur, not one tenth of the able-hodied citizens would be needed for service; the martial spirit, from various causes, has almost entirely subsided, and the character of our population is eminently pacific.
- and patriotism of the people, when danger comes; knowledge when acquired,
- 4. The knowledge of military tactics obtained by our militia, is not worth one dollar as a preparation for actual war; except what is gained by a few select companies. So testify revolutionary soldiers and all competent judges, with one voice.
- system is enormous; and if it is not necessary to | The temperance enterprise has indeed effected a the public welfare, it must be deemed oppressive.
- the people, that its continuance can be justified only by a most evident and high necessity.
- 7. Successive Legislatures have had the 'amendment of the militia laws' a standing topic for forty years, at a great expense of the public time and money; and the only point yet settled is, that the whole system is radically defective,
- 8. By the constitution of the Union, however, we must have a militia, organized and armed, and annually inspected.
- 9. If the present Legislature should abolish all trainings, except one in a year for the inspection of arms, they would proclaim a jubilee to their constituents, and secure the grateful remembrance of posterity.
- 10. If the Legislature should abolish trainings, and provide for the military instruction of a few officers, the State would soon be better prepared for war than it aow is,
- 11. If the present expenses were saved by such an alteration, and the same sum devoted to internal improvement, the State might construct a Rail Road to Providence in one year, or to Albany in five years, and not incur a debt of one cent. Millions for Public Improvement; not a cent for useless Drudgery .- Boston Recorder.

Extract from the Report of the New-Hampshire Temperance Society.

The extent of the temperance reformation may be seen at our stores and taverns. Formerly in every village the store and the tavern was the resort of the idle and dissipated. Here they spent a great proportion of their time and money : but few stores in the state now mix liquors, or sell them in glasses and gills. To an attentive observer, the change in the character of our stores has King's Arms, at Bushy, every morning at eight been such as to excite admiration. Not being able o'clock .- London paper.

to procure their drams the idle and dissipated have left them; and althoug's some of them may have resorted to the tayern instead, yet this effect is not so great as might have been expected. Pub. lic sentiment has so much changed, that it is not common to see even drunkards around taverns. Taverners are ashamed of them, and do not in many places encourage their attendance. The consequence is, that public drinking, even of those who continue to drink, is much less than formerly. Many traders in this State, and some few taverners, do not keep the article of spirits for sale - induced to abandon the traffic from a conviction of its pernicious and immoral effects. Your committee wish the number of such was greater, or that they knew the true number of such traders and taverners, that they might give their names to the world, as patriots and philanthropists, whose conduct does honor to themselves and their country, and affords such conclusive evidence of the beneficial influence of temperance societies.

Your committee have ascertained that the number of intemperate persons in this State, who have 3. Sufficient reliance may be placed on the valor become reformed men since the institution of temperance societies is about one hundred. This is and three weeks' drilling would prepare them, to the philanthropists one of the most pleasing when pursued daily, with a prospect of using the effect of the doctrine of total abstinence from spiritnous liquors. Who will refuse to rejoice that one hundred persons in this State, who were not only useless to themselves but pests to society, are reclaimed, and restored to usefulness and responsibility? After this, let us not hear from a member of the New Hampshire Legislature, that the 5. The direct expense of the present militia only way to cure a drunkard is to cut off his head. reformation not only from the moderate but from England Farmer, 52 North Market-street-6. The system is so injurious to the morals of the immoderate use of spirits. One thousand and five hundred persons in the United States are ascertained to have experienced this reform, and bear testimony that abstinence is better medicine than decapitation.

AGRICULTURAL SOCIETIES.

Agricultural societies are increasing in this state, and are exciting a spirit of improvement among our farmers which must be productive of the happiest result. We hope to be able, shortly, to publish accounts of the organization and proceedings of several, in the neighboring counties. In the Western Reserve we notice the formation of a num-dish-all warranted of the first quality. ber of new societies, and we hope that all the western states will follow the example of Ohio, in making these establishments in all their counties which are sufficiently populous to enable them to act with vigor. The resources of the west are developing with a rapidity unequalled in any country, and we trust that her weight will hereafter be felt in our national councils, and that the general prosperity will be promoted by the exercise of that influence to which we are fairly entitled, and which a just estimate of the true policy of the nation by our representatives, will give us.

In compliance with the request of several of our subscribers we republish the constitution of the Hamilton County Agricultural Society in our present number, - Western Tiller.

New Coach.-A new coach, loyally named after our excellent Queen, has begun to run, of which the announcement is very whimsical; being as follows : -The Queen Adelaide ! starts from the

Petersburg Rail Road .- Donald McKenzie is chosen President of the Corporation, and has been instructed to visit the Rail Roads in the United States, and to consult engineers, &c.

Among the valuable spoils taken at Algiers, there are vases of rock crystal, oriental agate, jasper, and jaile, of the largest size, the mounting of Florentine enamel and Venetian gold, seemingly of the 16th century. There is also a great deal of Spanish and Moorish armor, said to be of exquisite workmanship.

College in New South Wales .- A college has been founded at Sydney, in New South Wates. The first stone was laid on the 26th of January last.

Imprisonment for Debt -The Boston Manufacturer says that, all the Judges of the Supreme Court of Massuchusetts have expressed a decided belief that the law authorizing imprisonment for debt is unconstitutional.-Damel Webster has offered his servic s gratuitously, to plead against its constitutionality, whenever any respectable body of citizens shall request them.

- On the 20th inst. Charles Carroll of Carrollton completed his 94th year.
- A Mr Holmes, of Lancaster, N. II. attempted to cross the Connecticut River in a state of intoxication, and was upset and drowned.
- C. Ivin Edson, the Living Skeleton, has engaged himself for a two years' exhibition in Europe for \$40,000, conditioned that for every pound of flesh be gains \$500 is to be deducted.

For Sale,

A valuable Farm at Lechmere Point; consisting of 30 acres-on the Craigie road, less than three miles from Boston. With a good two story house and barn thereoaa thriving young orchard and other fruit trees.

For terms and other particulars, inquire of Wm. E Payne, No. 5 Court-street. eptol Aug. 27.

Culture of Silk.

For sale at the Seed Store connected with the New

Essays on American Silk, and the best means of ren dering it a source of individual and national wealth; with Directions to Farmers for raising Silk Worms -By John D'Homergue, Silk Manufacturer, and Peter S. Du Pon ceau -Price 621 cents.

Also, Directions for the Rearing of Silk Worms, the Culture of the White Mulberry Tree. Published by the Pennsylvania Society associated for the Promotion of those objects, (an excellent, plain, practical work.)-Price 25 cents.

Seeds for Fall sowing.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street-A great variety of vegetable seeds for fall sowing, viz. White Portugal Onion, Priekly or Fall Spinach, (growth of 1830.) Parsnips, Carrots, Black Spanish or Winter R Sept. 10.

Chloride of Soda.

For sale at the Seed Store connected with the N.E Farmer, 52 North Market-street-A few dozen bottles Chloride of Soda, for preserving meat, removing offensive smells, neutralizing pestilential exhalations, and destroj ing contagion; prepared by the New England chemics company for Lowe and Reed. This valuable articles particularly described, page 390 of this week's New Engand Farmer.—Price \$1,00 per bottle, with directions.

COMMUNICA TIONS.

FRUITS.

HOMAS G. FESSENDEN, ESQ. DEAR SIR-I intend sending you a list of pears om the old Catalogue which I have selected om 117 sorts. They are arranged according to e time of their ripening, and are accompanied ith some remarks suitable to the character of the spective fruits. If, in your opinion such a list ill be of any service to the public, who take an terest in the cultivation of these fruits, you can ablish it; if you think that it is not required, u can suppress it,

I am aware that the taste of horticulturists ns at present altogether on the new varieties, nich have been raised in Europe, or found here wildings. But I doubt if any of these will be and to equal many of the old fruits which have en so long and su deservedly celebrated throught Christendom.

It is true that many of the best of the old urs are liable to blast and crack, when raised in open country; but this is not the case in k settled towns, where these fruits may still cultivated with great advantage. The St Mie.el, Brown Beurre, Crassanne, St Germain, Vire deuse, and Chaumontel may all be brought to as at perfection in Philadelphia, New York, Hart-I, Boston, Salem, and many less populous nons, both on the sea coast and in the Western emed among the most valuable productions of garden. These fruits, when properly cultied, and well matured, are unequalled by any of th new species that I have as yet seen; and I ect the prejudice that is raised against them ing cultivators in this country, because I fear it will not be many years before they are eny cradicated from the American soil,

s regards the new sorts of pears, raised in Eu-, we have yet to learn how many of these will ingly better and more profitable. our harsh climate when raised in the open couna view to their preservation, before they are ly condemned.

he manner in which we plant Fruit Trees in country is perhaps one reason why they do

Bearre accommodates itself to all sorts of soil in sent to the old world have produced fruit, and are which it is placed .- The Virgonleuse, alike in- there acknowledged to belong to us. different to all soils, will, however, if exposed too much to the burning rays of the sun, crack or split open; whereas, the Chaumontel, to make it a melting and fine fruit, requires a free, but strong loan, while it is indifferent as to it exposition.

In France, where these fruits are raised in greater perfection than elsewhere, attention is paid to hese circumstances, so that each kind of fruit gets the soil and exposition which it requires to advance its growth, and perfect its maturity .- Such fruits as require a wall to effect this object, are planted and trained against the houses, or walls surrounding them in the country, as well as in the towns; or raised in sheltered gardens, but not set ou in the open fields or orchards, exposed to the heavy and chilling blasts which often visit that fine country as well as our own .- These trees are carefully pruned with a view to give them the best fruit; while they are made to produce a sufficient quantity.-No more fruit is allowed to remain on the tree than it can nourish with ease, and bear this present with gratitude, and immediately conwithout injury.

The operation of thinning fruit, is one at which we rejuct more, perhaps, than any other which we are called upon to perform in the cultivation of our gardens-but this is an avarice which recoils on ourselves ;- for in the first place the nourishment which the tree affords, is divided among the superabundant quantity which it bears, and which is of course stinted in its growth; and in the seentry, as they are in France, where they are cond place, the weight on the limbs of the tree, when operated on by strong winds, tend, not only to destroy the branches, but to bruise and materially injure the fruit that remains. Whereas, by a judicious thinning out when the fruit is small, that which remains becomes of much finer quality and larger size; and its weight would not burden the tree, nor be so liable to injury from the autumnal storms to which we are so subject to this country. Its product in this latter case is accord-

By the foregoing observations I by no means Until this is ascertained, it will, it seems to me, intend to disparage the new fruits that have been be est to preserve some of the valuable kinds above introduced from Europe within the last eight or in tioned, that further experiments may be made, ten years; nor those that are supposed by many to be wildings of this country. I have caten of both kinds, and have found them well worth cultivation. I hope, however, we shall not be too hasty in declaring fruits wildings of our own soil, no succeed so well here as in France. Here no before the fact is well established, as there is ard is paid to the kind of soil, or to the exposi- nothing which exposes Societies, or individuals, so in which any particular species of fruit is much to ridicule, as assuming facts without proof. ed. The Crassanne and the St Michael, the Little as I know myself, on this subject, I know ermain and the Brown Beurré; the Virgou-enough to satisfy my mind that not unfrequently lets and the Chaumontel are all planted in the those who pretend to know must, are essentially san soil, and exposed to the same aspect, with-deficient in the knowledge they profess.-Let us, ou nquiring whether there be any congeniality therefore, wait until the new varieties found in New be een the plants and the soil and situation in England are tested in Europe, and particularly in Moutagne de St-Martin-De-Pauvre, while it is placed .- A Crassanne, which would be France and England before we decide, without te fruit in a moist loam would be good for reserve, that these fruits originated here. - Great nding in a dry, gravelly soil, which suits the St praise is doubtless due to one of your society, for Mael. A St Germain, which is comparatively a his persevering and great industry in hunting up po and stony fruit in a dry and northern aspect, those supposed new fruits, but before they are s of the best, if not the very best, winter officially adopted by the Horticultural Society as Pa that is known, if planted in a good moist unknown to Europe, and as evidence of this coun- Pestablissement de Lithoglyptique de M. Vollin. low with a southern exposition; while the Brown try, let us wait until the scions which have been

A LOOKER ON.

Brookline, Oct. 4th, 1830.

Proceedings of the Massachusotts Horticultural Society, at a meeting held in the Hall of the Society on the 2d of October, 1830.

The President read the following letter from Vicomte Hericourt D'Thury.

{ Horticultural Society, Paris, May 24, 1830.

MR PRESIDENT-I have received with your letter of the 31st of January, the scions which you were so kind as to send me, consisting of

10 varieties of Pear,

of Apples,

..

of Cherry, of Grape Vines, and among others 3 that called Isabella, which was accompanied by a particular account of its culture.

In conformity to your intentions, the whole were placed before the society, which has received fided the grafts to able cultivators, who will render an account of the results which they may obtain. The vines have been placed with the numerous collection, which the society already pos-

I sincerely regret, that the season is so much advanced, as not to be able to offer you in return for your precious donation, some of the productions of our soil; but our society will esteem itself happy if, at the favorable epoch, you will make a special requisition, which shall be promptly complied with.

I am particularly happy, Mr President, to embrace this occasion to express to you the interest which I take in the labors of your society, and the satisfaction I experience in being the interinclined of the exchanges and communications of the two Associations, which have but one common object, the advancement of the perfection of Horticultural Science.

You will receive with this letter, a complete collection of the Annals of the Society, and I have given orders, that the numbers of this work be transmitted to you as often as they are published

I have the honor to offer you, Mr President, the assurance of my high consideration,

VICOMTE HERICOURT D'THURY, President of the Horticultural

Mr Dransors, President of } the Mass. Hort. Society.

Besides the liberal present of the Annals of the Horticultural Society of Paris, the President, Vicomte Hericourt D'Phury, has forwarded for our library, the following copies of his own works,

THE WANDERER-NO. 11.

SILK AND HONEY.

Mr Fessenden-In a late paper the benefits which Attention and Industry had advantageously associated with certain kindred objects in the pursuits of Agriculture were mentioned-The Bee and the Silk Worm. The first named, by what would seem a wise design, is carried by the early and most lucrative staple in this country, hardly settler into the forest and may be seen in scores. of multiplied hives around his new establishment and the value of its capital. The enterprise of resident at Bussorah, was in a situation, and in in successful operation.

But it is said that as cultivation progresses it effort without doubt !! becomes necessary to decrease in the number of he Hives, and in our old settled towns it is hold,

I am yours,

THE BUSSORAH ARABIAN.

A friend has sent us the following pedigree and history of the Bussorah Arabian, waich we take much pleasure in making public at this time, as it speaks of his get, and names, among others, the horse Sportsman, of which we made favorable mention a short time since. SPORTSMAN will be neighborhood of this city and Worcester county. We recommend our friends, who are breeders, to examine this Horse; as we are satisfied they will to be totally unaware how much depends upon are also informed, be exhibited at Brighton.

This remarkable Horse was imported into New York from Bombay, in the year 1819, by Abraham Ogden, Esq. in his ship Horatio. Mr Gallway, the agent of Mr Ogden, finding this horse at Bombay, determined on sending him out to the marks that information is much wanted as to the United States, with the view of improvement to reeling and various other processes in the man-the race of horses here, having investigated the ufacture of Silk; and from his patriotic exertions purity of his blood, and an undoubted account of his breeding. To give a correct view of his pur-Still I infer that if a single village can thus ad- chase, it is thought best to give Mr Gallway's own

Owing to the conversation between us, I dethe intricacies of the whole process are unfolded, termined on sending out to you an Arab of the Truly here is present advantage to the farmer and first rate and highest cast. Many Arab stallions an excellent prospect for the future—we need not; were examined, their prices obtained, which in fear to overstock the market, for we are told that general were high, (from 1500 to 2500 rupees) in silks to over the amount of ten millions of dollars the hands of dealers; many of them were year fine, but none, I thought, equal to one owned by It is observed in a late Pennsylvanian Journal a Mr Prendergast, which he had obtained to send that cocoons are much wanted-that Reelers are to Eugland. Mr Guy Lennox Prendergast, the learning the art successfully, and some beautiful owner, first member in the council of the East silk has been already manufactured-the atmost India Company, and one in a station that would phere, waters, &c, appear to be well adapted to not deviate from a price be might fix; I consequently submitted to a high one, on being satisson will prove by actual results, of which the publified the Arab I send is not only a beautiful horse, lie will judge-that silk may be rendered a new but of pure blood, and of the Germaanny breed, a east held in the highest esteem by the Arabs, Doctor Colquboun, for many years the Company's this great state is deeply engaged in this promising intercourse with the Arabs, that enabled him to obtain colts of the best blood, and among them Our climate, too, is well adapted to the culture was the one in question, sent to Mr Prendergast

ames, not deeming the same necessary, after the atements made above, from under the hands of dividuals of such high standing.

(Signed) HENRY GALLWAY?

Thus much has been given relative to the orse in question, from Arabia and from Bombay, hence he came to this country, to show the puv of his blood and general estimation.

On being landed at New York from the ship pratio, this Arabian was universally admired, d Mr Van Ranst, a well-known judge and rearof blood Horses, purchased him of Mr Ogden, a high price, (\$4,000.)

Having thus introduced this Horse, it may not improper to give the opinion formed by the mmittee of the Agricultural Society of the city I county of New York, (composed of men of wn taste and judgment,) as well as a detail of produce obtained from the few real good od mares sent to this Arab H. rse.

The following is an extract from the report of committee on Horses, the autumn of 1820, awarding the society's premium to this stallion.

We have not only at different times before. subsequent to our appointment, examined the authorities within our reach, as to the chareristic points and properties of the Arabian se; and, from the whole of our investigations, are of opinion, that the Bussorah is of the cast of Arabian Horses. That his form and on are very perfect, and that he will, in our nion, add greatly to the value of our stock of B'scs.'

If the produce, much might be said, as among t colts of the Bussorah Arabian there are specias that equal these from any other Horse new ane United States,

following list will show a limited number of ills of his get, that are held in high estimation.

ady Mary, a bay, 15 hands one inch high, of it speed and hottom, and allowed to be now finest mare in the city of New York, \$500 been offered for her and refused.

foon Shine, a sorrel, bred by General Coles, an Hent four mile runner, and has proved hima very valuable stallion. Valued at \$2,000. furad Bey, a bay, 16 hands high, the property Ir P. Hall, has proved himself to be a most able foal getter, and he is deemed to be one he finest Horses of the present day. His val-\$ \$2,000.

oortsman, a bay, 151 hands high, out of Sportsress by Hickory, a first rate runner, and winof the 3 mile purse on the Union Course and r races, now a stallion in Massachusetts, and eat favorite. His value is \$2,000.

ost Boy, a sorrel, 16 hands high, a very fine e, and proved himself to be a fast runner on Union Course. At 3 years old, he beat Mr agston's Eclipse colt out of an imported mare, match of \$1,000 aside. He is dead.

ed Jacket, out of a brown Highlander mare, a on of promise, and bought at 3 years old for \$40, but died young.

Selah, a dapple grey, sold at \$900, a very fine

Own Brother to Selah, 164 hands high, a young igh bred horse of the Germaanny breed, a cast stallion of great promise in the western part of

Comet, a bay, 153 hands high, own brother to 'I do not send a pedigree of fanciful Arab Lady Mary, a beautiful horse. Valued at \$1000. Sir Harry, a chestnut, 151 hands high, own brother to Comet and Lady Mary, a very fine stallion. Valued at \$1500,

Ivanhoe, a bay, 16 hands high, owned by Mr Van Rensselaer, a fine horse. Died at 5 years. Valued at \$1500.

Brother to Ivanhoe, a hay, 16 hands high, owned by Mr Le Roy, valued at \$1000, and doing more in the western country, than any other horse.

Ranger, of a beautiful brown color, without white, saving on one heel, and a small star, now only 2 years old, 151 hands high. In regard to fine form, large bone, and general beauty, not to be equalled in this State. He was out of the imported mare Alarm.

Dutchess Bussorah, a fine colt, 4 years old, 16 hands high, out of a brown Highlander mare, a fine young horse; ran second to Malton, on the Poughkeepsie Course.

Besides the above, there are of this stallion's get, a vast many more of equal value, and as is usual with Arabian horses, on being imported into England and this country, they are of remarkably good size, and many of them very large, as will be noticed by the detail given above.

This horse is now the property of Cornelius W. Van Raust, Esq. of New York, and stands the present season at Kinderhook, New York.

Cattle Show .- Our farmers do not need to be reminded by us, that their annual holiday is at hand, and that but few days remain to prepare for it. For the information of such of our distant friends as may wish to attend, we may inform that it will take place on Wednesday the 13th of October, one fortnight from this day. The usual arrangements have been made by the officers, and the several comminces are a pointed. An Address will be delivered by Ira Barton, Esq. of Oxford, and a public dinner will be provided. Several teams are already entered for the Ploughing Match, and a number of animals for premium, We have not had opportunity to be informed what the relative prospect of the exhibition is, in comparison with those of former years. We confidently trust, however, that the spirit of improvement, which has heretofore made it excel any other show in the county, has not abated; and that, with the stimulus afforded by the brightening prospects of the farmer, in the generally good crops of the present season and improving prices, a disposition will prevail to satisfy the expectation of the num-rousstrangers who will be drawn hither by the reputation our show has already acquired. If so we may safely hid defiance to competition in any other section of New England.

We would particularly express the hope that the exhibition of female skill and ingenuity may at least equal that of any former occasion, in the quantity and variety of the articles presented. Let it be remembered, that, to many, this is the most interesting part of the exhibition, and that, the last year, a considerable number of premiums were not awarded, because there were no competitors for them. - Woreester Spy.

A company of Italian gentlemen at New York have celebrated the lat e revolution in France. They consider it the precursor of a change in Italy.

The number of settlers who have arrived at Quebec the present season from Europe is 23,586; tast year 12.346.

From the New York Farmer.

DESCRIPTION OF TREES AND SHRUBS, PRODU-CING A SUCCESSION OF FLOWERS FROM SPRING TO AUTUMN.

By Michael Floy, Vice President of the N. Y. Horticultural Society. Concluded from page 85.

Fiburnum opulus, or Guelder rose, otherwise called Snow-ball, is a very showy shrub, with large balls of snow white flowers in the greatest profusion; and is indispensably necessary to every shrubbery.

Vitex agnus castus, or Chaste tree, a pretty and singular shrub, flowering the most part of the sum-

In enumerating the above list, I have omitted all such kinds of shrubs as were dear and scaree, There are some more kinds of an inferior nature not mentioned: the above list are all to be obtained at the prices mentioned, and the cultivation of them is in the power of any person though but little acquainted with gardening. I shall now subjoin a list of a few Vines and Creepers, either to train on fences or trellisses, or to run up the trees. These have an effect beautiful and natural.

Bignonia radicans, or Trumpet erecper, with bunches of red trumpet flowers, large and showy.

Bignonia grandiflora, much like the former in habit and appearance, but the flowers are much larger-It is said to be a native of China, and the former a native of this country. They are both perfectly hardy, and will climb up brick work or wooden fences without any assistance.

Clematis, or Virgin's bower. There are several species, some of them tender, or not sufficiently hardy for our severe winters without protection, The Clematis virginica, Viorna, Viticella, and Vitalba, are perfectly hardy. Glycine sinensis or Wistaria sinensis, is a handsome China creeper of recent introduction from China, and is not yet common in our nurseries. It is a beautiful vine, running to a great height, and loaded with long racemes of purple flowers, and is highly spoken of in the Gardener's Magazine.

Glycine frutescens, or Wistaria frutescens. This beautiful brother of the Chinese kind, is a native of our Southern States, grows much in the same way as the other, and perhaps not inferior. Although this fine creeper had been long known in England, we have not heard much about it by English writers; the conclusion seems to be that it does not flower well in England. In fact, none of our Southern plants do well in England, while those from China do very well-here, however, it is quite the reverse. I have the Chinese Wistaria from 15 to 20 feet long, and the American Wistaria about the same height. The Chinese does not look so vigorous and green as his American brother-The American Wistaria should be planted in every garden with other ercepers, or run up the trees in shrubberies, according to its natural disposition.

Lonicera, comprehending all the fine sweet scented honeysuckles; of the Italian kinds, the monthly honeysnekle is decidedly superior, continning to flower all through the summer, until late in the fall, and very fragrant. Some of the other European kinds may be occasionally introduced in large shrubberies-two or three American kinds deserve particular notice.

Lonicera sempervirens, or Coral trumpet monthly honeysuckle, is extremely beautiful, flowering from a hay stack as to send him to Loudon's Enduring the whole of the summer, with its thou- eyelopedia of Plants. It might by some he

every other particular, except color, this being a bright vellow.

Lonicera pubescens, or Caprifolium pubescens, a large and beautiful honeysuckle from the Northwest coast; the flowers are larger and of a bright copper color, inclining to orange, they are all perfeetly hardy.

introduction, it is perfectly hardy, withstanding our most severe frosts without the least injury; it is a very sweet scented honeysuckle, grows rapid, and to an immense height. It flowers in pairs and threes all up the branches, covering the whole plant completely with flowers. It blossoms spring and fall, and is a very valuable acquisition to our gardens and shrubberies.

Lonicera ignonica, or Japan honeysuckle. This bears flowers in great profusion, which are white, afterwards becoming of a light yellow. This is not so hardy as the former, and requires a little pretection in winter,

I shall only add to the above the running kinds of roses, although there are many other things which might be mentioned.

Rosa multiflora, from China is pretty well known, producing thousands of small double red roses in bunches. It require a sheltered situation from some of our keen North-westers, R. multiflora alba, from the same country, is of late importation, but as it increases readily, may be obtained at about the same price as the former; the bunches of flowers are white. Rosa Grevillii, a running rose also from China, the flowers of various colors. Rosa rubifolia, Ruspberry leaved rose, from our northern frontiers, and extending over the western country; although a single flowering rose, it produces large bunches of flowers, which are different colored, on the same bunch, exactly like the former China kind, and is another instance of the similarity of plants, natives of China and our country.

Rosa canina, fl. pleno. English double Dog rose, is a very pretty little double rose, and will run to a great height. Rosa Banksii, Lady Banks' double white China running rose. It runs up, and spreads much-it may be easily known from others of the running roses, by its being entirely destitute of prickles. Rosa noisette, and Champney's, are said to have been raised from China seeds in Carolina-they are not strictly running roses, but as they grow up tall, are fine ornaments for the shrubbery, flowering during the whole of the summer and fall in large clusters. The Maderra rose, or double white Cluster Musk-It also flowers all through the summer and fall months, and is therefore well adapted for the shrubbery. Rosa Cherokensis, called the non-descript, or Georgia rose-the flowers are very large and white, the centre yellow. This is a running rose, growing very high around trees, &c.

Rosa rubiginosa, or sweet briar, is too well known to need description.

I did not intend to have extended my remarks so far, but as your correspondent observes that he does not know where to select from, I was led into greater lengths from a desire to comply with his

You might as well direct him to pick needles

tute of seent. Lonicera frascri, also an Ameri- shrubs, but if any description at all were given. can; the flowers are like the other kind in almost we might as well commence with common kinds. as they may not be common with every body, but the shrubs and trees described, are altogether a pretty good collection to begin with, and they all may be obtained (good flowering plants) at moderate prices. In the list of trees I have omitted all the oaks, hickories, and walnuts. Our ever-green trees, Firs, Spruces, and Pines, ought now and Lonicera flexuosa; Chinese honeysuckle of late then to show themselves in every collection, where there is room. The Balm of Gilead Fir is extremely beautiful, but they will not thrive well usless raised two or three years in a nursery. When brought from the mountains, and planted out at once, they seldom succeed.

I am, Sir, respecfully. Your obedient servant. MICHAEL FLOY.

New York, August 12th, 1830.

P. S. At another opportunity, (if it would be acceptable,) I may give you a list of hardy percunial plants, and a further description of shrubs.

DESCRIPTION AND MORBID EFFECTS OF SPURRED RYE.

Causes of the Spur in Rye .- One of the most poisonous substances which has ever been undesignedly mixed up with aliment, and caten, is spurred rye, or ergot, (sceale cornutum,) the mutterkorn or rogenmutter of the Germans. It is the grain, of rye altered by disease, which occurs most frequently in damp seasons, and in moist clay soils, particularly those recently redeemed from waste lands in the neighborhood of forests. Of all the places where the spur has been hitherto observed, none combines these conditions so perfectly, and none has been so much infected with the disease as the district of Sologne, situated between the rivers Loire and Cher in France. It has been ascertained that the rye of this district, after being threshed, contained on an average, about a fortyeighth, part of ergot, even in good seasons; but in had seasons, and taking into account a considerable proportion which is shaken out of the ears and sheaves before they reach the barn, the proportion of ergot in the whole crop has been estimated so high as a fourth, or even a third .- According to Willdenow, it may be produced at any time, by sowing the rye in a rich damp soil, and watering the plants exuberantly in warm weather. The spur does not extend itself by contagion, The immediate causes of the disease are not clearly known .- Some believe that the spur is formed by a diseased process from the juices of the plant: others, that it is a fungus vegetating at the expense of the germen; and others, and the most numerous, assert, that it is the work of an insect, a species of butterfly; and, in support of that doctrine, Fontana, Read, Tillet, and others, aver, that they have found the ova and larvæ of the insect on the spur. Confirmatory of this statement are the observations of General Martin Field in our own country.

Description of the Spur. - The spur varies in length from a few lines to two inches, and is from two to four lines in thickness. The substance of the spur is of a dull whitish or grayish tint: and it is covered with a bluish, black, or violet husk, having two, sometimes three streaks of dotted gray. It swims in water, while the rye sinks in it, so that they are easily separated from each other. The powdered spuris disposed to attract moistsands of scarlet bunches. It is, however, desti-thought a superfluous labor to describe common ure, and has a disagreeable heavy smell, and a nauis, slightly acid taste. It imparts its taste and mins it is defective in firmness, liable to bee moist, and cracks and crumbles soon after g taken from the oven.

OCTOBER.

judicious farmer will always so cultivate I as to improve its productive powers. He No immediate profit will ever tempt him etice injurious to the fertility of his soil.

ertain periods, and under certain circumhe may very properly have recourse to ensive method of summer-fallowing. The n nature of some soils imperiously demands perever the roots of quitch-grass abound, no means more certain to destroy them. pring, our lands are never sufficiently dry naterially benefited by ploughing; indeed infrequently happens, that in order to pro-

are compelled with the plough and harrow to in-Il both to water and alcohol. Bread which jure the productive qualities of clay or loanny soils. In this country, where land is plenty and chean, and labor comparatively high, it may be good farming to summer-fallow such land every sixth or seventh year, and not oftener, if you will observe a proper rotation of crops. In this you should be directed by local circumstances, and the market demand for the several kinds of grain.

Free the surface of your land from every impediment to good tillage, and let your crops sueceed each other in the following order:-Beginuing with a complete summer-fallow, to be sown to wheat or rye; as soon after harvest as possible, plough in the stubble; in the spring of the third year, cross-plough, and plant to Indian corn; this longer period, has obtained the name of must be succeeded the fourth year, with barley or oats, and stocked down with clover, 15lbs, to the nere. The grass may be mowed, or pastured two or three years, and again have recourse to summer-fallow.

A practice of this kind will improve your land without the expense of manure; but it would be well if you could afford a coat of stable manure, once, at least, in this course; and let that be put on just previous to the corn or barley, and immediately covered with the furrow.

In cultivating your garden, keep the same prinbr cases, in the intervals between the fits, the ciples in view; but here a naked summer-fallow is never necessary. The crops in your garden are taken off at so many different periods, and some of them so early in the season, that opportunity is always gained for working the ground in the completest manner.

> It is a mistaken idea, that land ever requires absolute rest. Let the tillage be well performed; let its productions be judiciously varied; let suitable manure be properly applied; and your soil will every year improve.

> Good tillage is indispensable, upon farm or garden; and here you will have exercise for observation and judgment. The same depth and number of ploughings which would be proper upon some land, you will find quite insufficient, or improper upon others. All clay or loamy soils are greatly benefited by fall ploughing. The winter frost will more effectually pulverize such land than all the labor you can bestow; besides, there is no practice more destructive of grub-worms, nor can land be made fit for spring grain in any other way so cheap.

A sandy soil may be wrought in a different manner. Here spring ploughing can be performed without injury, nor does this kind of soil require the aid of frost to make it fine and light. A skilful agriculturist is fully satisfied of these truths, and directs his business accordingly.

POTATOES, BEETS, AND CARROTS,

should now be raised from the ground .-- Choose a nure, plough and sow, with that object in dry time for this business, and let the roots intended for family consumption, he stored away with neatness. A proportion for winter use, should be put into the cellar, and completely covered with dry sand. This will greatly protect them from frost, if the cellar should be cold, and retard their vegetating, if warm. Besides, all these roots lose much of their excellence, if exposed only a few days to the air, in any temperature.

The residue of your crop may be buried upon the surface of a dry spot of ground; pile them re season a seed bed for our spring crops we a roof-like slope; then cover this heap with dry three parts. This should be prepared at least a

sand, an inch or two deep, over which lay a good coat of drawn straw, up and down, as if thatching a house, in order to carry off the water; then dig a trench around the heap, and cover the straw with the eart h so dug up, in a depth sufficient to secure the roots from frost.

N. B. Better make this covering unnecessarily deep, than one inch too shallow; for the least frost will entirely spoil this kind of sauce for table

PARSNIPS.

'In the management, or rather neglect of one of our finest vegetables, than which our gardens produce no richer, we see the tyranny of custom.

'From time immemorial, our fathers in the country have raised the parsnip only as a rarity, to be sought for a few days in the spring. And few farmers think it possible to deviate from this ancient rule, and by digging that vegetable in the fall, provide their tables with a very pleasant and useful winter variety. By taking it up in the fall, we not only gain a long use of the plant, but we have it in greater perfection; for rarely can it be taken up in the spring, before it has sprouted, and the inside become ligneous. Indeed all roots should be dug in the fall, and if packed in a box, with earth from the beds from which they were taken, that the same moisture may be preserved, they can be kept until quite the beginning of summer, possessing all their richness of juice, and nutritious qualities.'

COMPOST MANURE.

The skilful gardener is always distinguished by the preparation and application of his manure-He never earts out this powerful substance, and throws it at random about his garden; for he knows full well, that instead of a blessing, in the hands of the ignorant, it frequently becomes a misfortune, and the immediate purent of sterility.

Your various plants will not all require the same kind and quantity of manure. Stable manure, in its recent state, for potatoes, turnips, &c, is as good, if not better than any other. But for a large proportion of garden vegetables, the first summer, it will do more hurt than benefit. For these, you should annually make ready a composition, and apply it when and where it may be wanted. Now, for this purpose, clean out your log-sty and hen-roost, and every other depository of animal excrements. If these do not furnish a supply, the barn-yard must contribute the deficiency. With this, when carted out, mix an equal quantity of alluvial earth, or turf-parings, taken from an old pasture, or highway, and in some convenient spot in the garden, make a heap three feet high, four feet wide, and as long as you please. Upon every load of this mixture, spread a bushel or two of lime, or house ashes.

Let the top of this pile be flat or a little dishing, that the rain may wet it through, and to prevent loss by evaporation, cover the whole a few inches deep with mould from the garden.

From a compost of this kind, most of your tender plants will derive an early supply of food, and start with strong appetites and vigorous habits.

For cucumbers and melons, however, the following is to be preferred:

Take rotten cow-dung, or the remains of old hot-beds, one part; coarse sand, two parts; and with regularity, and give the whole on every side, new vegetable mould, from decayed tree leaves frequently turned over, and thoroughly mixed,

If your soil and tillage are good, and the succession of your crops judicious, a small dressing every year from heaps like these, will accomplish much, and render your plants strong and healthy throughout the season. But when large quantities of manure of any kind are given at once, the drought and heat of our summers frequently make it destructive to your favorite nurslings. Their short and feeble roots can find no moisture; of course the whole plant droops and sickens in the sun. and is absolutely starved in the midst of plenty.

SWEET POTATOES.

We have been presented by Mr AREL HOUGH-TON, Jr. of Lynn, with a quantity of Sweet Potatoes, of a shape, size, and quality that will vie with any brought from the Southern States. Mr II. has given us the following account of his mode of cultivating this delicions vegetable. 'The specimen of Sweet Potatoes that I send you are a part of eight bushels (after rejecting the small ones) that I have raised this season from six quarts of the slips procured from Mr J. B. Russell's Seed Store last spring. The slips were started in a hot bed, as they are very apt to rot in the ground otherwise, and not vegetate. They were planted in hills: in each hill was previously put half a bushel of sand, and half a bushel of loam mixed, with no manure; and otherwise were cultivated like common potatoes; I consider the culture of sweet potatoes, when well understood, as of less trouble in New England than the common potato. and more profitable to raise even for swine and stock. Their flavor, when raised in proper soil, is equal to any brought from the Southern States, as the accompanying specimen will prove. I am satisfied that the slips you sold last spring, and procured from Mr Darnell at the suggestion of Mr Lowell, were the true sort, and decidedly superior to any ever before offered for sale in Boston.'

We have also received a box of sweet potatoes from E. Edwards, Esq. of Springfield, who raised six bushels from four quarts of slips-his method of culture is essentially similar to that of Mr Houghton, and was pursued with an equally satisfactory result.

FRUIT STEALING.

A fellow, who has lately broken into Mr Ponp's garden at Cambridgeport, twice in one Sunday evening, and carried off about half a bushel of peaches, and did some damage to grape vines, was lately arrested at Lowell, and rather than be brought to Cambridge and stand trial, paid fifty dollars to be released, as far as Mr Pond was concein d. The Commonwealth have not yet settled the matter in their behalf. We shall next week publish the statute law on this subject, which is very severe as well as salutary.-We are happy to state that several gentlemen in the neighboring towns who have suffered severely, are determined to prosecute all trespassers of the above sort, to the utmost extent of the law .- Many a person, who has begun his career of vice by stealing from an orchard, has ended it with a halter about his

PAWTUXET FAIR.

Island Society for the Encouragement of Domestic | East Greenwich,

year before it is used, and like other composts, be Industry was holden at Pawtuxet, on the 29th Sept. The exhibition of stock and household manufactures evinced a gratifying improvement, There were some shop articles of considerable merit, among which we noticed plated silver barness; some large files; a handsome telescope, by Mr

We also observed a pretty general assortment of of Warwick, trees, shrubbery and flowers, from the garden of the Messrs Dyers, in Cranston. This establishment promises much utility to cultivators in this part of the State, and, we trust, will meet a commensurate patronage. The trees and plants apneared healthy and vigorous.

We mention, with pleasure, the fact, that the liberal offers of the Society, last year, to induce the cultivation of the Mulberry, have not been committee recommend that a premium be awarded without success. Messrs Dyers have already a to William Thurber, of Providence, for sever nursery of ten thousand scedlings, from 2 to 3 feet Cows, by him presented, of in height. These were sown on the 17th of April last. Mr Spink, of North Kingstown, has 4,500 was said to have averaged during the months scedlings, which were sown the 28th or 29th of July and August, 27 quarts a day, April, and are now vigorous and thrifty. Other plantations of this tree, on a less extensive scale, have been commenced, in different parts of the ly, the committee recommend a premium of \$5 State; and we doubt not that the establishment of a filiature, with a regular price for cocoons, would insure the production at no distant period, of silk in considerable quantities. There was only one small lot of cocoons exhibited at the awarded to John Jenckes, of Smithfield Fair. These were made on the farm of Mr Ives, in Warwick.

While on this subject, it may not be improper to inform those interested, that it has been asserted on good authority, that silk worms will feed on the leaf of the common low bramble, or blackberry bush, so called, as greedily as on the mulberry; and that the substitution of this new food has not been found to change perceptibly, the quality of the silk. If such be the fact, we hope that those who can vouch for it from personal experience, will give particular and circumstantial details of what they have seen; that people may be prepared to turn the discovery to good advantage, another year.

OFFICIAL REPORTS

Of the Rhode Island Cattle Show and Fair, for 1830. The following reports, made by the respective Committees, on Wednesday the 29th of September, were severally accepted by the Standing Committee, and the premiums directed to be paid as therein awarded.

NEAT STOCK, EXCEPT WORKING CATTLE.

The Committees on Neat Stock, have had no hesitation in awarding the first premium on Bulls, to James D'Wolf, of Bristol, for a full blood short horn, sired by a noted Bull (and to whom he is no discredit) imported by George D'Wolf, out of an imported Dam-premium \$12

They were equally unanimous in awarding the second premium on Bulls, to J. J. Paine, of good flavor, name unknown to the committee Smithfield, for a Bull 16 months old- \$10

the third premium on Bulls, to James Douglas, of fruit of his fine large Baking Pear, name unknow Portsmouth, 88

miuin is awarded to Sam. Baker of Warwick, \$5 Pear, of very large size and fine appearance, sor For the second best Bull Calf, 4 months old, weighing 8 oz. each. The annual Cattle Show and Fair of the Rhode the premium is awarded to Carr Harrington, of Apples.—From Gorham Parsons, Esq. fruit

The third premium on Bull Calves is awarde to William Beverly, of Providence, for a Calf I

Fourth premium on Bull Calves, to Sion 2 Rhodes, of Cranston For the best Cows, not less than two in nur

weeks old

her, the premium awarded to Thos. R. Green In thirty days these Cows yielded 2131 lbs. milk; one of them averaging 32 lbs, and the oth

39 lbs. a day. There were other fine Cows, but no certificat having been presented, the committee, by the re ulations, were precluded from awarding the reular premium, but as this was an omission, unit tentional, perhaps, on the part of the owners, th To John Pettis, of Johnston, for a Cow which

To Christopher Sheldon, of Cranston for a Co having yielded for two months, 32 lbs, of milk da

To William Robertson of Smithfield, for th best Yearling Heifer, sired by George Smith's but 12 months old the first of May, a premium of \$4

Also about 200 varieties of the most ornamental hardy trees and shrubs, including the Double Silver Fir and Double Spruce, Horse Chestnuts, Mountain Ash, Gum Acacia, Three Thorned Acacia, Butternuts, Ailanthus or Tree of Heaven, Elms, Sugar Maples, Flowering Catalpas, Weeping Willows, Napoleon, do do. Honeysuckles, and a superh variety of hardy Roses, &c, &c. Many of the above sorts of trees of extra sizes.

WHITE MULBERRY TREES by the 100 or 1000-for plantations.

INABELLA GRAPE VINES, either singly or by the 100. at reduced prices.

Written orders addressed to John or William Kex-RICK, NEWTON, and transmitted by the daily mail, or otherwise, or if more convenient, left at the office of the New England Farmer, where catalogues may be obtained gratis, will be promptly attended to.

But purchasers are invited when convenient, to call and examine the trees, &c. for themselves, and make their

own selections.

Trees, &c. will be delivered in Boston free of expense for transportation, when ordered; and when particularly desired, they will be packed in matts with either clay or moss for sea or land transportation. eptD Oct. 8

Grape Vines.

The subscriber has for sale at his garden in Dorchester, the choicest variety of Grape Vines ever offered for sale in this vicinity. Many of them are now in fruit, and purchasers are invited to call and make a selection. The following compose a part of the variety.

Napoleon,

Bland,

White Chasselas,

Golden Chasselas.

Black Constantia.

Red Chasselas.

Black Hamburg, Black Cape, White Muscadine, Golden Museat, Gore's, (a beautiful Black Grape) Caroline.

Ferrol. 8 varieties of superior fruit from Xores and Malaga, 400 two years old ISABELLAS. 1400 one " "

200 CATAWBA, or what has heretofore been considered the BLAND. It is now satisfactorily ascertained that the Bland grape will not ripen in this climate, in the open ground.

Orders by mail, addressed to the Subscriber, or personal application at his office, No. 71 Congress-street, for any number of Vines from one to one hundred or more, will meet with prompt attention. Application may also be made to Patrick Kennedy, at the garden.

ZEBEDEE COOK. Boston, Sept. 27, 1830. 5t

Treatise on Becs.

Just received and for sale at the Seed Store connected with the New England Farmer, 52 North Market-street, A further supply of a Practical Treatise on the Management of Boes; and the Establishment of Apiaries, with the best method of destroying and preventing the depre-dations of the Bee Moth. By James Thacher, M. D. Price 75 cents.

To Farmers, Graziers, &c.

The Subscriber will offer for sale at public Auction, at his residence at Harlem, in the 12th Ward of the city of New York, on Monday, October 11, 1831-his valauble stock of Bloud Horses, Brood Mares and Colts, short horned Durham Cattle, Bakewell Sheep, &c, comprising the most extensive selection of thorough bred animals in the United States, and well worthy the attention of those who desire to improve the breed in this country For further particulars, or catalogues, apply to the sub-

scriber, at No. 4, Wall-street Court, or at Harlem.
CHARLES HENRY HALL.

New York, Sept. 25, 1830.

Brighton Cattle Show, October 20.

All persons are desired to take notice, that in consequence of the change by the Trustees of the Massachusetts Society for Promoting Agriculture, of the day of the Brighton Cattle Show, from Wednesday the 13th, to Wednesday the 20th of October next, all the offers of Premiums, and all the Rules and Regulations, must be understood as for Wednesday the 20th, instead of Wednesday the 13th. Per order of the Trustees. Oct. 2. Bolivar Calves, Saxony Bucks, and Bremen Geese.

For sale, 4 Bull Calves, sired by the celebrated imported improved Durham short horned hull Belivan, which stock have produced 36 quarts of milk a day. No. 1, dam Grey Brown, half Codebs and half Galloway. No. 2, dam Juno, three foorths Fill Pail. No. 3, dam Ceres, her sire Cœlebs, her dani Mr Gray's imported Cow. 4, dam Beauty, half Cœlebs and half Galloway. The

Calves are beautiful, and their dams all great milkers. Two imported Saxony Bucks, 2 Vearlings, and 2 Lambs. 3 pairs of Bremen Geese. Inquire of Benjamin Shurtleff, Jr, Chelsea, or at 52 Hanover Street, Boston.

New England Formers' Almanac, for 1831. Just published, and for sale by J. B Russell, at his Seed Store, No 52 North Market Street, the New ENGLAND FARMER'S ALMANAC, FOR 1831. By THOMAS G. FESSENDEN, Editor of the New England Farmer. The Astronomical Calculations, by the Editor of the astronomical part of the American Almanac.

This Almanae contains the usual miscellaneous and agricultural articles—a list of the civil officers of the United States, with the Governors, Lieut. Governors, and Judges of the United States, and the Governors of the British Colonies—a chronicle of the most remarkable events between August, 1829, and Sept. 1830—a com-plete Calendar for each State in New England, including the Probate Courts for New England-the Sun's declination, &c. The tides are particularly calculated. Among the agricultural articles, are a description of Mr Phinney's Improved roller, with a drawing; and a drawing and description of an Improved Harrow, used on Capt. Daniel Chandler's Farm in Lexington. Price \$6,00 per groce-62½ cts. per dozen. Oct. 1.

Bulbous Roots.

Just received at the Seed store connected with the New England Farmer, 52 North Market-street,

A good collection of Lily Roots, viz.—the Tiger, (spotted) Martagon, (spotted) Orange, and White Lilies. These make a fine appearance in the horders of gardens. They are hardy and durable. These plants have bulbous roots, and should be planted in rich soil, four inches deep, measuring from the top of the bulb. The small roots be-low the bulb, are perennial. Martagon Lilies grow from five to seven feet high, and produce from fifteen to twentyfive very delicate flowers on a stalk. The White Lily grows to the height of three to four feet, and produces large, white, fragrant flowers. The whole are easily cultivated, and are well calculated to beautify a border.

BRIGHTON MARKET-Monday, Oct. 4.

At Market this day 2500 Cattle, probably 1600 to 1800 were Beef Cattle; 5035 Sheep, and 630 Swine.

The market today was quite lively, the barrelers commenced purchasing early, which never fails to give 'life and energy' to business, although their prices today were not quite so high as last Monday.

Prices—Beef Cattle—Mess, \$359 a 367, No. 1, \$3a

3 17; Market Cattle from \$3 to 450-very few brought as high as 450.

Sheep .- Sales quick. We noticed one lot of 300 thin, taken at \$1 33; several lots at \$1 50 a 1 62½; several at \$1 75; one lot of 175 at \$2; one lot of 30 Wethers at about \$3.

Swine .- We noticed one lot of 60 Barrows, old, taken at 3c; 1 of 20 Sows at 31 cts; 1 of 175 Shoats at 34 cts; one of 92 Shoats at 21 cts-retail price 4 cts for Sows, 41 for Barrows .- Patriot.

MISCELLANIES.

(From the Token for 1831.)

THE MIDNIGHT MAIL.

BY MISS H. F. GOULD.

'Tis midnight-all is peace profound! But lo! upon the murmuring ground, The lonely, swelling, burrying sound Of distant wheels is heard; They come-they pause a moment-when, Their charge resigned, they start, and then Are gone, and all is hushed again

As not a leaf had stirred.

Hast thou a parent far away-A beauteous child to be thy stay In life's decline-or sisters, they

Who shared thine infant glee? A brother on a foreign shore ? Is he whose breast thy token bore, Or are thy treasures wandering o'er A wide tumultuous sea ?

If aught like these, then thou must feel The rattling of that reckless wheel, That brings the bright, or boding seal,

On every trembling thread That strings thy heart, till morn appears To crown thy hopes, or end thy fears-To light the smile, or draw thy tears, As line on line is read.

Perhaps thy treasure's in the deep-Thy lover in a dreamless sleep-Thy brother where thou canst not weep Upon his distant grave!

Thy parent's hoary head no more May shed a silver lustre o'er His children grouped-nor death restore Thy son from out the wave!

Thy prattler's tongue perhaps is stilled, Thy sister's lip is pale and chilled, Thy blooming bride, perchance, has filled Her corner of the tomb. May be, the home where all thy sweet And tender recollections meet, Has shown its flaming winding sheet, In midn'ght's awful gloom !

And while alternate, o'er my soul, Those cold, or burning wheels will roll Their light or shade, beyond control, Till morn shall bring relief, Father in heaven, whate'er may be The cup which thou hast sent for me, I know 'tis good, prepared by Thee, Though filled with joy or grief!

A notorious toper used to mourn about not having a regular pair of eyes; one being black and the other light hazel: 'It is very lucky for you,' replied his friend; 'for if your eyes had been matches your nose would have set them on fire long ago."

Filial Piety .- Ouang-Ouei-Yuen, having lost his mother, who was extremely dear to him, passed three years of mourning in a hut, and employed himself, in his retirement, in composing verses in honor of her memory, which are quoted as models of sentiment and tenderness.

The three years of his mourning having classed, he returned to his former residence, but did not therefore forget his filial affection. His mother had ever expressed great apprehensions of thunder; and when it thundered, always requested her son not to leave her. Therefore, as soon as he heard a storm coming on, he hastened to his mother's grave, saying softly to her, as though she could hear--"1 am here, mother"! Customs of China. Customs of China.

Wealth of the Merchants of Antwerp in former times. -The city of Antwerp is nearly a semicircle, of about seven miles round. It was defended by the citadel, built storms .- Lavater.

by the Duke of Alva, to overawe the inhabitants. The whole appearance of its public buildings, streets, and houses, affords the most incontestible evidence of its former splendor. Many instances of the immense wealth of its merchants are recorded: among others, it is said that when Charles V. once dined with one of the chief magistrates, his host, immediately after dinner, threw into the fire a bond for two millions of ducats, which he had received as security for a loan to that monarch, saying that he was more than repaid by the honor of being permitted to entertain his sovereign .- Dr. Lardner's Cabinet Cyclopædia.

OIL OF SUNFLOWER.

I was much pleased at the late exhibition of the Franklin Institute, with the apove beautiful vegetable oil, presented by Mr. George W. Carpenter, who has appended the following remarks to the sample exhibited, and as the article is new and valuable, any information on the subject is interesting:

'This article is yet but little known, but promises to be of great importance, and from its value and usefulness, the consequent demand will no doubt be an object for the attention of our agriculturists. It answers threefold purposes: the cold expressed, for table and physician's use, and the hot-pressed for painter's and ordinary purposes: it is an extremely bland oil, and is preferable to sweet oil for liniment and surgical uses, and is adapted for all the purposes which the fine olive oil is used. The sunflower requires little care or attention in the cultivation, and will grow readily in almost any variety of soil. product of seed is very considerable, a bushel of which will yield about three quarts of oil. From the experiments which have already been made, it can be obtained at a less cost than the best olive oil-it can no doubt be made much lower when it is extensively cultivated. But few experiments have yet been made in its application. I gave a sample of it to one of our experienced artists in this city, who informed me it answered his purpose better than the poppy or nut oil, and thought it a valuable acquisition. I have no doubt it will be found to answer many other useful purposes on further experiments with

In addition to Mr. Carpenter's remarks, I would add, that it is a valuable substitute for the spermaceti: it burns brilliant with little smoke, and when extensively cultivated, will no doubt compete in price and use with that article. It certainly descrives full investigation.

A FRIEND TO IMPROVEMENT.

Eruption of Mount Ætna. The Journal of Commerce gives the following translation from a Bordeaux paper, describing a terrible eruption of Mount Ætna. which occurred in the month of May :-

"The terrible explosion which opened seven craters of the volcano at once, has destroyed eight villages in the neighborhood of the mountain, to which neither the lava nor the fire ever extended before. All the buildings have disappeared under the heaps of ealcined stones and burning cinders, which were thrown from the new openings of Ætna. Notwithstanding the frightful detonations which announced beforehand the approach of the catastrophe, the inhabitants of these villages remained quietly in their dwellings, considering themselves safe on account of the distance, which had preserved them in all preceeding cruptions, however vi-olent. In the destruction of these villages and the neighboring hamlets, perished a great many vietims, both men and animals. On the 24th of May the consumed edifices were still smoking, and these unhappy places were inaccessible on account of the heat which was given out from the cinders, stones and lava, with which they are covered. It was not until the eighth day after the disaster, that it was possible to approach for the purpose of affording any succor. But the search was entirely useless. Never was calamity more terrible, more unexpected, or more general. The shores of Calabria, and some ports of Italy, lying in the current of the wind which blew on that disastrous night, were covered with the same kind of ashes under which the places in the vicinity of Ætna were buried. Sicily will long remember this disaster, which has devastated the richest and most fertile country in the world

Commerce of Boston .- From the 12th to the 20th of September, 64 vessels were entered at the Custom House in this city, from foreign ports, and will probably pay duties to the amount of \$400,000.

The creditor, whose appearance gladdens the heart of a debtor, may hold his head in sunbeams and his foot on THE BEGINNINGS OF EVIL.

Young men, for the most part, are but lit aware of the danger which attends the beginning of evil. No one becomes suddenly abandoned a profligate. There is always a gradual progre He begins in slight, occasional departures fre rectitude, and goes from one degree of guilt another, till conscience becomes seared, the cious propensity strong, the habit of indulger fixed, and the character ruined.

Nothing is more obvious than this connexion I tween the beginning and the consummation evil; and yet, hardly anything is more diffici than to convince the young of its reality. In a tering upon wrong courses they have not the le expectation or fear of the dreadful issue. The mean not to proceed beyond the point of safe and they have no doubt, they can easily effect escape, whenever danger appears; but ere tl are aware, they are arrested by the iron grasp habit, and ruined forever.

Take for example, a young man, who occasi ally drinks to excess in the social circle; he d not dream that he is entering upon a course wh will probably end in confirmed intemperance. means no harm; he says of the sin, is it no little one? there can be no danger of this. soon his bands are made strong, and he becor the slave of a sottish vice.

Thus it is with all vicious practices. Howe slight at first, they tend, by a strong and necess impulse, to the point of utter depravity of pri ple, and ruin of character. There is no safety in guarding against the first approaches of To step upon forbidden ground is to throw o self into the power of the destroyer; and if ! interpose not to deliver, ruin is inevitable. It a wise saying among the ancients, that the wa vice lies down hill. If you take but a few st the motion soon becomes so impetuous and vio that it is impossible for you to resist it.

An enterprising mechanic and farmer in V cester, said exultingly a few days ago, 'I have year earried on my farm without the use of a of ardent spirit, and never was my work be done, or better health enjoyed by my men. year I laid in twenty gallons of rum for the and it was all consumed. In my old age, av derful revolution is going on. We are awal from our sleep, which had well nigh been the s of death.

Seeds for Fall sowing.

For sale at the Seed Store connected with the England Farmer, 52 North Market-street-

A great variety of vegetable seeds for fall sowing, White Portugal Onion, Prickly or Fall Spinach, (gh of 1830,) Parsnips, Carrots, Black Spanish or Winte dish-all warranted of the first quality. Sept. 1

PUBLISHED BY J. B. RUSSELL, AT NO. 52 NORTH MARKET STREET, (AT THE AGRICULTURAL WARRHOUSE.)-T. G. FESSENDEN, EDITOR.

VOL IX.

BOSTON, FRIDAY, OCTOBER 15, 1830.

No. 13.

AGBITTE TTRE.

MASSACHUSETTS AGRICULTURAL SOCIETY.

The Trustees of the Massachusetts Society for the Promotion of Agriculture, encouraged by the patronage of the Legislature of this State, intend to offer in premiums, not only the sum granted by the Government sor that purpose, but also the whole amount of the income of their own funds. They therefore announce to the public their iotention to have a cattle show and exhibition of minufactures, &c, at Brighton, on Wednesday, the 20th of October, 1830. The whole business to be transacted it one day. The following premiums are offered :-

For Stock.

For the best Bull, above one year old, \$30. For the next best do, \$20. For the next best do, \$10.

For the best Bull Calf, from five to twelve months old, \$15. For the next best do, \$10. For the next best do, 85.

For the best Cow, not less than three years old, \$30. For the next best do, \$20. For the jext best do, \$15.

For the best Heifer [having had a calf] \$15. For the next best do, \$10.

The Bulls, Cows, and Milch Heifers for which promiims are awarded, to be kept, at least, one year thereafter vithin the State.

For the next best Heifer [not having lad a hushels, \$20. alf] \$12. For the next best do, \$10. For the jext best, \$8. For the next best, \$6.

For the best Ox, fitted for slaughter, regard to e had to, and a particular statement to be given f, the mode and expense of fatting \$25. For

he next best do, \$20. For the next best, \$10. For the best pair of Working Oxen, \$25. or the next best do, \$20. For the next best lo, 15. For the next best do, \$12. For the rext 600 bushels, \$20. est \$8.

No exen to be admitted to trial as working exen, under ur years old.

For the best Caramanian or Camlet Wool am, \$40. For the best do, do, Ewe, 40.

For the best Dishley Ram, 30. For the best . Ewe, \$30.

For the best South Down Ram, \$30. For the est do. Ewe. \$30.

The above premiums will be awarded on Shee cither ported or raised in the State; but the persons receiving e premiums are to enter into obligation to kep the me within the State for Breeding.

For the best fat Wethers of extraorinary nality, not less than six in number, \$20

For the best Boar, not exceeding twoyears 1, \$12. For the next best do, do, \$8. Fr the xt best, \$5

For the best Sow, \$12. For the next bet do,

, \$8. For the next best, \$5. To be kept one year thereafter for breeding, y the

rsons receiving the premiums. For the best Pigs, not less than two in umr, nor less than four months old, nornore an eight \$10. For the next best do, \$5.

None of the above animals, except Sheep, asbove cified, will be entitled to premiums, unless thy are olly bred in the State of Massachusetts.

Any of the above Stock, when raised and still wned the time of the exhibition by the person who ised im, will entitle the claimant to an allowance of n per at. in addition.

No animal, for which to any owner one premium shall quantity of dry Peas on an acre, not less than have been awarded, shall be considered a subject for any future premium of the Society, except it be for an en-tirely distinct premium, and for qualities different from those for which the former premium was awarded. Any animal which shall have obtained a premium as a Milch 30 bushels, \$20. Heifer shall not afterwards be entered for premium as a

For Grain and Vegetable Crops.

To the person who shall raise the greatest quantity of Indian Corn on an acre, not less than 100 bushels, \$20.

To the person who shall raise the greatest quantity of vegetables, [grain, peas, and beans excepted] for winter consumption, of the stock of his own farm, and not for sale, in proportion to the size of the farm, the stock kept, having regard to the respective value of said vegetables as food, stating the expense of raising the same, and the best mode of preserving the same throughout the winter, \$30.

To the person who shall raise the greatest lars; quantity of Winter Wheat on an acre, not less than 30 bushels, \$20.

To the person who shall raise the greatest quantity of Barley on an acre, not less than 45 bushels, \$20.

To the person who shall raise the greatest quantity of Rye on an acer, not less than 30

To the person who shall raise the greatest crop of Millet on an acre, cut and cured for hay, not less than three tons, the claimant giving evidence of the time of sowing, the quantity of seed sown, and the quantity of hay produced,

To the person who shall raise the greatest quantity of Carrots on an acre, not less than

To the person who shall raise the greatest quantity of Potatoes on an acre, not less than 509 bushels, \$20.

To the person who shall raise the greatest quantity of common Beets on an acre, not less | \$100. than 600 bushels, \$20.

quantity of Sugar Beets on an acre, not less than 600 bushels, \$20.

To the person who shall raise the greatest quantity of Parsnips on an acre, not less than 400 bushels, \$20.

To the person who shall raise the greatest quantity of Mangel Wurtzel on an acre, not less than 600 bushels, \$20.

quantity of Ruta Baga on an acre, not less than and cheapness, giving a particular account of 600 bushels, \$20.

To the person who shall raise the greatest quantity of Turnips on an acre, not less than 600 bushels, \$20.

To the person who shall raise the greatest quantity of Onions on an acre, not less than 600 bushels, \$20.

To the person who shall raise the greatest quantity of Cabbages on an acre, not less than 25 tons' weight, free from earth when weighed,

30 bushels, \$20.

To the person who shall raise the greatest quantity of dry Beans on an acre, not less than

To the person who shall raise the greatest quantity of Mustard Seed not less than 20 bushels, \$20.

To the person who shall give proof of having produced the largest quantity of dressed Flax, and not less than 500 pounds on an aore,

To the person who shall raise the greatest quantity and best quality of Hemp on an acre,

To entitle himself to either of the premiums for Grain or Vegetable crops, the person claiming, must cultivate a tract of at least one acre, in one piece, with the plant or production for which he claims a premium, and must state in writing under oath of himself, and one other person, faccompanied by a certificate of the measurement of the land by some sworn surveyor,] the following particu-

1. The state of the land in the spring of 1830.

2. The product and general state of cultivation and quality of manure employed on it the year preceding. 3. The quantity of manure used the present season.

4. The quantity of seed used, and if Potatoes, the sort. 5. The time and manner of sowing, weeding, and harvesting the crop and the amount of the product, aseertained by actual measurement, after the whole produce, for which a premium is claimed, is harvested, and the entire expense of cultivation.

6. In regard to Indian Corn, the entire crop of the acre offered for premium, if shelled, must be measured between the 18th Nov. and 1st December. If not shelled, the whole must be weighed within the same dates-and the Trustees have determined to consider 75 pounds of Corn and Cob as equivalent to one bushet of shelled Corn.

And in relation to all vegetables, [except Potatoes, Onions, and ecomon Turnips] at least 40 bushels must be weighed, and 56 pounds will be considered as equal to one bushel, free from dirt.

For Experiments and Discoveries.

For a mode of extirpating the worm that attacks the Locust Tree, which shall appear to the satisfaction of the Trustees to be effectual,

an 600 bushels, \$20.

To the person who shall raise the greatest the Borer that attacks the Apple Tree, which shall appear to the satisfaction of the Trustees to be effectual and cheaper than any mode now in use, \$50.

For an effectual and satisfactory mode of destroying the Bee Moth, or of preventing its ravages, \$20.

To the person who shall make the experiment of turning in green crops as a manure, on a To the person who shall raise the greatsst tract not less than one acre, and prove its utility

the process and its result, \$20. To the person who shall use the Drill Plough or Machine and apply it most successfully to the cultivation of any small grains or seeds, on a scale of not less than one acre, \$20.

To the person who shall prove to the satisfaction of the Trustees, that his mode of rearing, feeding, and fattening neat cattle, is best, \$20.

To the person who shall prove to the satisfaction of the Trustees, the utility and comparative To the person who shall raise the greatest value of the cobs of Indian Corn, when used

with or without the grain itself ground or broken, \$20.

Claims under the two last heads, together with the proper evidences, must be delivered, free of expense, to Benjamin Guild, Esq. [in Boston] Assistan: Recording Secretary of this Society, on or before the 1st day of December next. The Trustees will decide upon said claims at their meeting on the second Saturday of said month.

For Butter, Cheese, and Cider.

For the hest Cheese, not less than one year old, and not less in quantity than one hundred pounds, \$10. For the next best do, do, \$5. For the best Cheese, less than one year old, \$10. For the next best do, do, \$5.

For the best Butter, not less than fifty pounds, \$15. For the next best do, do, \$10. For the next best, do, do, \$7. For the next best, do, do,

For the greatest quantity of Butter and Cheese, made between the 15th of May and the 1st of October, from not less than four Cows, the quantity of Butter and Cheese, and the number of Cows, to be taken into consideration, and specimens to be exhibited at the Show, of not less than 20 pounds of each, and the mode of feeding, if anything besides pasture was used, \$20.

For the best specimens of Cider, not less than one barrel, made in 1829, manufactured by the person who shall exhibit the same, and from apples grown on his own farm, \$15. For the next best barrel, \$10.

The person obtaining the first premium shall be entitled to a further sum of \$5, as a compensation for the premium barrel of Cider, which will be retained and used at the Show

[These premiums will be continued in future years. Persons claiming them must state, in writing, their process of making and managing their cider, and the kind of

Besides the above premiums for Butter, the Trustees will award two, as follows, in the month of December next.

For the best lot of Butter, in tabs or firkins, (not less than three hundred pounds) \$100.

For the second best, \$50.

The butter offered for these two premiums must be deposited at the Agricultural Warehouse, No. 52, North Market street, Boston, care of Mr John B. Russell, on or before the 1st day of December, and a claim in writing be addressed to Benj. Guild, Esq. (in Boston) Assistant Recording Secretary, (post paid) on or before said day.

Farmers in other States are invited to compete for these two premiums. Competitors are offered the further inducement of a ready market, and high prices for good butter. An auctioneer will be employed by the Trustees to sell at public auction all the butter presented, without charge to the owners, unless the owners should prefer to dispose of it at private sale.

For Inventions.

To the person who shall invent the best machine for pulverizing and grinding plaster to the fineness of 25 bushels per ton, and which shall require no more power than a pair of oxen or a horse, to turn out two tens per day, and so portable that it can be moved from one farm to another without inconvenience, \$30.

To the person who shall produce at the Show any other agricultural implement of his own invention, which shall, in the opinion of the Trustees, deserve a reward, a premium not exceedthe article exhibited.

in all cases, proof must be given of the work done by the machine, before it is exhibited;—and of its having been used and approved by some practical farmer.

Persons who have taken out patents for their inventions are not thereby excluded from claiming any of the above

No claimant will be entitled to a premium, unless, in me opinion of the Committee, the machine or implement presented by him shall be superior to any designed for the same use, and which shall have heretotore gained a

For raising Trees and Hedges.

To the person who, on or before the 1st December, 1832, shall have raised the largest plantation of the White Mulberry Tree, not less than 2000 plants, nor less than three years old,

same time, the greatest quantity of raw or unmanufactured silk, not less than ten pounds, of his own raising, \$20.

For the best plantation of White Oak Trees, not less than one acre, nor fewer than 1000 trees per acre, to be raised from the acorn, not less than three years old-and which trees shall be in the most thriving state on the 1st of September, 1830, \$100.

For the best plantation of White Ash, Larch, or Yellow Locust Trees, each of not less than one acre, nor fewer than 1000 trees per acre, to be raised from the seeds, and which trees, not less Dinner, in order that he may have the credit of than three years old, shall be in the most thriving state, on the 1st September, 1831, \$50.

For the best Live Hedge, made either of White or Cockspur Thorn, planted after 1820, not less than 100 rods, and which shall be in the most thriving state in 1831, \$50.

For the best Buckthorn Hedge, not less than 100 rods, and which shall be in the most thriving state in 1830, \$50.

To the person who shall have planted out on his farm since the spring of 1820, the best Apple Orchard, of not less than 100 trees, and who shall exhibit to the Trustees at the Show in 1830, satisfactory evidence of his having managed the same with care and skill, \$50.

For Domestie Manufactures.

For the best 10 Woollen Blankets, not less than ten pairs, \$50.

For the best Worsted Camlet or Bombazett, not less than sixty yards, \$40.

For the best Linen Sheeting, not less than fifty yards, \$30.

For the best Linen Shirting, not less than fifty yards, \$30.

For the best Sewing Silk, not less than ten pounds, \$30.

All the above must be manufactured within the state of Massachusetts. And all manufactures, when presented, must have a private mark, and any public or known mark must be completely concealed, so as not to be seen or known by the Committee, nor must the proprietors be present when they are examined-in default of either of these requisitions, the articles will not be deemed entitled if thy deem it expedient. to consideration or premium.

Gratuities will be given, as in former years, for specimens of useful and ornamental manufactures, of extraor-I dinary quality, presented at the half for exhibition.

For the best cultivated Farms.

For the best cultivated Farm, \$100. For the next best cultivated Farm, \$75.

The farm to consist of not less than seventy ing twenty dollars-according to the value of acres, exclusive of woodland. The owner or tenant, to entitle himself to either of the premiums, must state in writing the nature and quality of the soil; the proportions suitable for tillage, mowing, and pasturing, respectively, and especially the quantity of irrigated meadew or low land which is never tilled or ploughed.

The number of acres planted the present

The number sowed with winter and spring grains, and other vegetables, specifying the several kinds, and the number of acres planted or sown with each.

The quantity and kind of manure used for each crop, and the times and manner of apply-

The quantity and quality of each crop.

The number of acres moved the present year. To the person who shall exhibit within the specifying the proportion of irrigated, meadow, or lev land, and the proportion which had been ploughed or tilled, and the kind of grass and quartity of hay on each.

Nanner of irrigating the lands, and dressing and manuring meadow or low land, and irrigated ipland, if any, and laying down tilled land

The kinds of grass seed sown, the quantity of eacl, the time of year, and whether sown with oats barley, or other grain, or alone.

The number of acres of pasture, the part, if any, that had previously been ploughed; when this part was laid down, and the kinds and quantities of grass seed sown per acre.

The number of apple trees on the farm; the proportion grafted; whether planted in orehards or partly by the fences against the road; the quantity of winter apples gathered and eider mide; treatment of the trees, and manner of making eider.

The form and dimensions of barns, sheds, and barn-yards, and manner of collecting and making manure.

The number of oxen, cows, and young stock, hoises, and sheep, kept on the farm through the year, and the quantity of butter and cheese made distinguishing the new milk from the othercheese, and the breed of cows, whether foreign, mixed, or native.

The number of swine and quantity of pork made

The labor employed in carrying on the farm, and the quantity of ardent spirits consumed.

Asit is deemed important to ascertain the best rotation of crops, it is expected that the appliants for these premiums will state the kind of cap, it not able to state the quantity, raised on the several and respective pieces of tillage, mowng, and pasture land described in their statments, for two years next preceding the presnt one.

Te whole statement to be sworn to by the appeant. The Trustees to be at liberty, in all ases, before they award the premium, to visit by a committee, or such other persons as theyshall appoint, the farms of the applicants,

A B. Claims to be addressed to Benjamin Gud, Esq. in Boston, (nost paid) before the 20th dayf October.

Ploughing Match.

On the 20th day of October, premiums will be given to the owners and Ploughmen of the three Ploughs, drawn by two yoke of oxen, and to the owners and ploughmen of three ploughs drawn by one yoke of oxen, which shall be adjudged by a competent committee, to have performed the best work with the least expense of labor, not exceeding half an acre to each plough. Entries may be made of the names of competitors until the morning of the 20th. Preference will be given to those who enter first-but if, on calling the list at the hour appointed, precisely, those first named do not appear, the next in order will be preferred. There will be two committees, of three eachone to be judges of the ploughing by double teams, the other of the ploughing by single teams;-the latter to have assigned to them a part of the field distinct from that of the double

Premiums as follows, being the same for the double and single teams:-

> First Plough, \$15, Ploughman, 8, Driver, 4. Second Plough, \$10, Ploughman, 5, Driver, 3. Third Plough, \$6, Ploughman, 3, Driver, 2.

In each case, if there be no driver, both sums to be awarded to the ploughman.

Those who intend to contend for these prizes, must give notice in writing to the person who shall be appointed for that purpose in Bighton, whose name will be seasonably published. The competitors will be considered be prescribed by the committees. The ploughs to be ready to start at 9 o'clock, A. M.

Rules and Regulations.

Animals may be offered for a premium at Brighton, notwithstanding they may have received a premium from a County Agricultural Society.

All manufactures and implements, also Butter, Cheese, Cider, &c, must be brought to the Hall, and entered on Monday the 18th, to be examined on Tuesday the 19th.

All entries of animals for the pens, or as working cattle, must be made before Tuesday the 19th.

The Ploughing Matches will commence on Wednesday morning, at half past nine o'clock precisely.

Trial of Working Oxen at eleven o'clock precisely.

The public sales of Manufactures and Animals at twelve o'clock.

The applicants will be held to a rigid compliance with the rule relative to entries, as well Olney Williams, Cranston, as the other rules prescribed.

Besides such animals as may have been offered for premiums, any others that are considered as possessing fine qualities will be admitted for sale. And for all animals or manufactures.

that are intended to be sold, notice must be John Foster, given to the Secretary, before ten c'clock of the 20th. Auctioneers will be provided by the Trustees.

It is understood, that whenever, metely from Samuel Budlong, of Crauston,

want of competition, any of the claimants may be considered entitled to the premium, under a literal construction; -yet if, in the opinion of of I dollar, to John II. Arnold, of Warwick. the judges, the object so offered is not deserving of any reward, the judges shall have a right to reject such claims. Persons to whom premiums shall be awarded, may, at their option. have an article of plate with suitable inscriptions, in lieu of money.

In cases where pecuniary premiums are offered, the Trustees may, having regard to the circumstances of the competitors, award either the Society's gold or silver medals in lieu of tion as the present. the pecuniary premium annexed to the several

That if any competitor for any of the Society's premiums shall be discovered to have used any disingenous measures, by which the objects of the Society have been defeated, such person shall not only forfeit the premium which may have been awarded to him, but be rendered incapable of being ever after a competitor for any of the Society's premiums.

Time of Paying Premuims.—The Treasurer will attend at the Hall at 5 o'clock, P. M. on the day of the Show, and on the next day from 9, A. M. till 12, M. to pay all premiums awarded.

All premiums not demanded within six months after they shall have been awarded, shall be deemed to have been generously given to aid ton, the funds of the Society.

By order of the Trustees, R. SULLIVAN, G. PARSONS, E. H. DERBY, Committee. J. HEARD, Jr. January, 1830.

SIGNS OF A GOOD FARMER.

His corn land is ploughed in the fall. He seldom lets his work drive him. Has a cooking stove with plenty of pipe to it. The wood lots he possesses are fenced. His sled is housed in summer, and his cart, ploughs and wheelbarrow, winter and summer, when not in use; has as many yoke of good oxen as he has horses-Does not feed his logs with whole grain-Lights may be seen in his house often before break of day in winter-His hog pen is boarded inside and out -has plenty of weeds and mud in his yard in the fall-All his manure is carried out from his buildings and barn yard twice in the year, and chip dung once a year-His cattle are almost all tied up in the winter-He begins to find out that manure put on land in a green state is the most profitable-Raises three times as many turnips and potatoes for his stock as he does for his family-Has a good ladder raised against the roof of his house-Has more lamps in his house than candlesticks-Has a house on purpose to keep his ashes in, and an iron or tin vessel to take them np-He has a large barn and a small house -seldom has more pigs than cows-adjoining his hog pen he has a hole to put weeds and sods, and makes three loads of best manure from every old hog and two from every pig. A good farmer in this country begins to find out that steaming vegetables can be done at one third the expense of boiling-and that Mangel Wurtzel, Millet, Carrot, and Ruta Baga root crops are things worth thinking of-he fences before he ploughs and manures before he sows-He deals more for

COMMUNICATION :.

NAPOLEON AND PASSE COLMAR PEARS. THOMAS G. FESSENDEN, Esq.

DEAR SIR-In your paper of Sept. 24th, the Hon. John Lowell states that he shall not continue the discussion which has existed 'under any circumstances.' Believing that such was really the intent of Mr L., and being willing at all times to pursue a conciliatory course, I had concluded to suppress nearly four columns of matter prepared about two weeks since. It is therefore to be regretted that the first article, in your very next paper, should be a renewal of the attack by Mr Lowell, under the anonymous title of 'Agricola,' I forbear all comment, but the widely altered style of this last communication might have concealed from one unskilled as myself the real author of it, were it not that I have no recollection of having ever imparted to any one the circumstances to which it alfades save Mr L. himself. That circumstance (although I do not acknowledge the justice of the call.) I will now explain, and, for the sake of harmony, it is perhaps to be regretted that he has noticed a circumstance so conclusive against himself. In the summer of 1829, I paid a visit to Boston, and in one of my letters addressed to Long Island, I stated that I should soon send Red Baldwin, and other choice apples of that viliberality which so particularly distinguishes him, and to which no one pays more homage than myself, presented me with scions of several of his newest pears, the whole being carefully enveloped and numerically labelled. In the haste of the moment I transmitted the scions to Flushing without remark, myself stopping at Rhode Island, where I was spending the summer. The person to whose hands they were consigned, expecting to receive only apple grafts, and having ro advice from me to guide him, still thought (although the scious had not a leaf on them) that THEIR APPEAR-ANCE WAS THAT OF PEARS, and he consequently took the precaution to inoculate kalf of each parcel on pears, and half on apples, thus proving that the bark alone had even with him a most powerful influence, and was the only means which led to a correct judgment. Last spring, in writing stated, as an apology for trespassing on him again, the circumstance that part of the previous parcel particular detail, he appears to have misunderstood the facts.

I could here quote a humorous case where Mr L. himself, told a gentleman that he could distinguish some apple and pear grafts which Mr L. the present.

In my first communication in relation to the Napoleon pear, no idea was entertained of censuring Mr L., for I never doubted his intentions to preserve the utmost accuracy, and to mistakes we are all liable. My object was simply to explain more or less widely disseminated. The existence of that error has been fully proved by the presentation to the Mass. Hort. Society, at their meetmologist who presented it, (and whose superior and dwelt together in harmony.

we may vainly look for in our country) declares, that although he has twice obtained scions called perously until last Friday, when, as the hive was in Napoleon, he has not yet a genuine tree in his possession.

owners can easily correct the error by the foliage, wood, and growth, without waiting for either flowers or fruit, and my first object is therefore an-

In conclusion, I have to state, that in no part of my communications, have I censured Mr Knight, or even referred to him, and I shall always endeavor to equal Mr Lowell in discussing all differences with good humor and free from prejudice and ill-will. Very Respectfully,

WM. ROBERT PRINCE.

Linnman Botanic Garden,) October 4, 1830.

BEES.

MR Editor-A singular circumstance has taken place in two swarms of bees, which I think will be interesting to those who have studied the economy of this interesting and useful insect.

You must know that I am quite a young bee master, having commenced last spring with two as to cause her to forsake her winter store at this hives, from which I have had three middling and two small swarms; all, excepting the first, I hived myself without any difficulty. The two small a quantity of scions of the Hubbardston Nonsuch, swarms which are the occasion of this communication, swarmed on the 5th and 7th of June. cinity. In the mean time, Mr Lowell, with that The first lit upon a small peach tree in the corner of my garden. After they were hived they were placed about twelve feet from the ground on the beams of my wood shed adjoining my house, where the other three swarms had previously been placed. The bees remained in the hive for three or four days, until I was fearful they would starve. I examined all the books I had, to planting trees. find a similar case without success. I thought at first they had lost their Queen, but I found if they had they would be in confusion, and would probably return to the place where they first lit in search of her, instead of which they remained quietly and peaceably in a clump in one corner of the hive. I then thought they disliked the situation of the hive and had it removed near the place where they had lit, and had the satisfaction to find that they commenced working immediately.

to Mr Lowell, for a renewal of some scions, I placed on top of this other hive with a view to unite the two swarms; the two hives were connected by a small hole in the top of the bottom had been budded on apples, and not entering into hive; they also had each of them an external communication, so that the bees would go in and out of their respective hives without interfering with each other. I examined the upper hive several times in the course of three or four days, and found they had formed a piece of comb about had presented to him, by the bark, but I omit it for 4 inches by 6 in a corner of their hive, and that they appeared peaceably disposed towards each other. I then closed the external entrance of the top hive so as to compel all the bees in it to doscend through the bottom hive to get out. 1 watched them to see if this would occasion fighting or commotion in the hive, but everything apthe existence of an error, which may have been peared peaceable. After a day or two I examined the upper hive to see if they continued to work separately or had united, and found the combin it the same as it was before I had closed the entrance. ing of the 25th Sept. of the fruit from a tree ob. It was now a question whether the bees in the tained as the Napoleon which was pronounced by upper hive had deserted both hives, or one of the all to be Passe Colmar-and the distinguished Po- queens had been sacrificed, or if they had united

Everything appeared however to go on prosa very exposed situation with but a slight and temporary covering, I directed my man to remove the Where other trees are similarly situated, the hive in the evening and place it on the beam in the shed, where it had originally been placed. Not thinking the bees would desert their winter store, I gave myself no trouble about them. But on Sunday evening, about sunset, he told me the bees had left the hive and gone back to the old place. I immediately went there, and found about a good quart of bees lianging under the bench upon which the hive had stood. I examined the hive and found only a part of the bees had left it. I then placed the hive in which they had been hived with the piece of comb in it as they had left it on the bench where the other hive had stood, and on Monday morning found they had taken possession of it and had commenced working. The question now is, is this a new swarm at this late season, 24 Sept., or is it the original swarm, and have the two queens dwelt together in harmony in the same hive all summer. If they have, is it not a very singular circumstance that this queen's antipathy to the place should be so great JACOB TIDD. season of the year?

Roxbury, Oct. 4.

TRANSPLANTING TREES.

Ma Fessenden-Much difference of opinion has existed as to the advantages of spring and fall planting of trees, &c. Spring being the season when our feelings are the most awakened to pleasurable sensations and when we take the most satisfaction in making our rural improvements, it has from that circumstance probably arisen that it is generally selected as the season for trans-

Experience however has proved that plantations formed in autumn, are far the most successful, and in all climates where the excessive cold or the delicacy of the trees are not insurmountable objection, the fall planting is to be preferred. It allows a sufficient period for the ground to become settled and compact about the roots, and the latter become prepared during the same space of time, to throw out the small fibrous roots whose vegetation commences at the first return of The other swarm was hived and the hive spring, uninterrupted by any retardment which a spring removal is calculated to produce. Their growth in such case seems unaffected by the transition, and the settled state of the earth which allows the young roots to extend themselves promptly, forms a powerful protection against the effects of drought, whereas when they are removed in the spring, the looseness of the earth for a considerable period, retards the advance of vegetation, and renders them liable to much injury, thereby causing many trees to entirely fail unless they are nourished by frequent waterings. Cherry rees, of which a large proportion perish in the spring, are generally transplanted with success in the Autumn, but notwithstanding my father has for nore than thirty years stated these facts in public communications, still many omit to pursue the course advised, and great annual losses result to the public. With regard however to those fruits that have

been originally brought from warmer climatessuch as the peach, apricot, nectarine, and almond, which are natives of Persia, Armenia, &c,-it is necessary for us to consult the operations of climate also, and from a consideration of the attendcircumstances, I have come to the following I prefer the one first referred to. There is another the penaltics shall have accrued, and not afterclusion :- In localities south of New York, the season is preferable for transplanting all trees orth of New York, the fall is preferable only the apple, pear, plum, cherry, quince, and all r trees of northern latitudes; whereas the ng is to be preferred for the peach, apricot, arine, and almond, which, for the reasons ber. Many gentlemen, however, of excellent ment, make their plantations in the fall even e more delicate fruit trees, which only serves ove, that even in the most intelligent minds a sity of opinion exists.

Very respectfully.

WM. ROBERT PRINCE.

liode Island, Oct. 5, 1830.

S. Capt. Jacob Smith, of this place, has this ent called in and presented me with an ge quince weighing 17 ozs .- it is the largest e ever seen, and is rather more plainly groovom the head to the base than is usually the He accompanied it by a splendid cluster of Thite Muscadine grape, of which he has a crop; the mildew, fogs, and humid atmosof this Island yielding readily to the all w-ful influence of sulphur and lime.

CULTURE OF THE PLUM.

AS G. FESSENDEN, ESQ. 1:AR Sia-I have remarked that erroneous ssions appear to exist in regard to the acter of this tree, among persons not converwith the subject .- Many people residing in older latitudes, suppose that it is equally te with the Peach, Apricot, and Nectarine. secause their climate is unsuitable for these, rikewise reject the culture of the Plam: but et is the latter not only possesses a much hardy character, but is often found to proruit most abundantly in lattitudes too far for the Peach to be cultivated successfully. vicinity of Albany, and in the most westd northern sections of the State of New the Plum trees produce abundantly, and in ighborhood of Montreal, and other parts of Canada their crops are also very great .-:Islands of the St Lawrence, near Montreal, myself rambled through groves of Plum the natural growth of the soil, and loaded ed and yellow fruit .- It is doubtless true me varieties are more tender than others. nat a judicious selection should be made; conceive the number is very limited of such es as will not support the winter of the coldattndes of our country, and those which riginated among us may certainly be selecth little doubt of success. In no case howhen removed to a cold climate, should the e budded on the peach stock, as the root then perish, although the plum growth otherwise have succeeded. And indeed eks invariably to be preferred are such as s the most hardy character, and perhaps s more suitable than the yellow variety of runus americana. In England the Muscle

e Pear Plum are principally used for stocks.

point to be considered in forming plantations of wards. plum trees, and which forms with some persons a great objection to their culture. This is, their being subject to injury from an insect that stings the branches and causes large protuberances to form on them, which if not removed, produce a canker that in time destroys the tree. This ob stated, might, during severe winters, suffer jection may however be readily remedied by a judithe intensity of the frosts. Still I do not not assert, that trees of these kiads are cerble number of varieties, which are very little sub-to be injured by the winter, as in very many ject to the attacks of this insect, and some which ons they are not in the least affected, but they are not at all so. Among those least subject to exposed to vicissitudes which may or may not be attacked, may be enumerated the Yellow and Red Chickasaw, American Cherry, American Red and Yellow, Yellow Egg, Washington, Huling's Superb, Tomlinson's Charlotte, Imperial Violet, White gage, Smith's Orlean, Italian Prune, Elfrey, Violet Empress, Miller's Spanish, Lewistown egg, Coe's golden drop, the large Red, Violet, and White Dame Aubert, Imperial Milan, Imperial Ottoman, and a number of others. But even when trees are stung by these insects, if proper attention is paid at an early stage, and every branch carefully cut off in February or March below where any appearance of the canker extends, and these branche, in which at that period the eggs of the insects sare deposited, are immediately burned, such attention will in a short period, totally eradicate them.

Very respectfully.

WM ROBERT PRINCE.

Linnean Botanic Garden, Oct. 7, 1830.

TRESPASSERS IN ORCHARDS.

The following is an abstract of the Statute 1818. Chap. 3d, for the prevention of trespasses in Orchards, and Gardens, &c.

Sec. 1. If any person enter upon any grassland, orchard, or garden, without permission, with intent to cut, destroy, take, or carry away, any grass, hav, fruit, or vegetables, with intent to injure or defraud the owner; such person shall, on conviction, before a justice of the peace, forfeit and pay, for every such offence, a sum not less than two, ner more than ten dollars; and be also liable in damages to the party injured.

Sec. 2. If any person, having entered as aforesaid, shall take, without permission, and with intent to injure and defraud the owner, any grass, hay, fruit, vegetable, or shrub, cultivated for ornament or use; such person shall, on conviction, by indictment or information before any court of Common Pleas, forfeit and pay a sum not less than five, nor more than fifty dollars, for each offence, and be farther liable to the party injured, in damages, equal to three times the value of the grass, bay, fruit, vegetable, or shrub carried away.

Sec. 3. If any person, having entered, as aforesaid, shall, without permission of the owner, and with intent to injure him, break, bruise, cut, mutilate, injure, or destroy any fruit-tree, tree for ornament or shade, or shrub cultivated for ornament or use, such person, on conviction as in sec. 2. shall forfeit and pay a sum not less than ten. nor more then one hundred dollars.

Sec. 4. If any person shall commit any of the above mentioned trespasses on the Lord's day, or in the night time (that is between sunsetting and snarising) he shall be liable to pay double the above ney, and a copy of his Address was requested for penalties. And all prosecutions for breaches of the press, which request, we are happy to learn, nce, the St Julien is preferred for that pur- this act, shall be commenced within one year but although I have them all under culture, from the time the offence shall be committed, or

LARGE FRUIT.

MR Editor-The papers mention that six apples of the Pomroyal species, gathered from a tree of Col. J. Goodman of Springfield, averaged more than a pound each, and one of them weighed nineteen ounces. I now send for your inspection five apples from my orchard, known as the Quince apple, which, when taken from the tree, weighed together five pounds and three ounces; the largest weighs one pound and five ounces; and measures one foot and two and an half inches in circumference. The fruit for cooking especially, is as fine as the apples are large. The tree is a good bearer. I will, with pleasure, give scions, in the proper season, to such gentlemen as may desire L. LINCOLN.

Sept. 27, 1830.

Mass. Spy.

HEW ENGLAND FARMER.

BOSTON, FRIDAY, OCTOBER 15, 1830.

MIDDLESEX CATTLE SHOW.

The 'Middlesex Society of Husbandmen,' held their annual exhibition at Concord, on Thursday, the 7th inst. The assemblage of spectators was numerous and respectable, and the different branches of the displays and proceedings of the day were appropriate and well conducted.

The Ploughing Match was well contested, and indicated much dexterity in the most important part of the art of husbandry. Five double teams and nine single teams were entered. Of the double teams, Abiel II. Wheeler, of Concord, ob tained the first premium; Samuel Hoar, 2d of Lincoln, the 2d do ; Maj. Ephraim Flint, of do, the third. Of the single teams, Silas Conaut, of Concord, obtained the first premium; Nathan Brooks of Acton, the second, and James B. Brown. the third.

Seventeen yokes of cattle contested in the trial of strength. The first premium was awarded to Present Barrett, of Westford; second to Isaac Brooks, of Lincoln; third to Edward Wetherbee, of Acton; and fourth to Silas Conant, of Cou-

The premiums on farms were awarded to Abner Wheeler, of Framingham, first premium; Dea. Thomas Hubbard, of Concord, second do; Francis Richardson, of Billerica, 3d do.

An able and very useful Address was delivered by Elias Phinney, Esq. of Charlestown and Lexington. This was plain, practical, and replete with useful information relative to some of the most important topics of agriculture. It gave directions for subduing and cultivating peat and hoggy lands; stated the kinds of crops, which theory and practice concurred in proving to be best adapted to such soils; shewed that the plough, although the most important and indispensable implement in agriculture, may, by its injudicious use, deteriorate, instead of improving the soil. The address, was scientific as well as practical, and, what added to its value, mostly founded on actual experiments, made under the superintendence, or within the observation of the Orator. A vote of thanks was presented to Mr Phinwill be complied with.

After the Address, the Society again formed in

procession, escorted by the Brigade Band, marched to Shepherd's Coffee House, where an excellent Free Stone Peaches, from Mr R. Manning, of Sadinner was partaken of by more than 200 persons. A number of regular and eccentric toasts exhilirated the mind, while the body was feasted, and excellent music served to complete the entertainment.

The Song, given on the last page of this day's paper, written expressly for the occasion, was sung with marked approbation, by Mr J. W. Newell, of Charlestown.

Berkshire Cattle Show .- The twentieth Anniversary Meeting of the Berkshire Agricultural Society was holden on the 6th and 7th inst. An address was delivered by Theodore Sedgwick, Esq. of Stockbridge.

Remarkable Calf .- William Furness, Esq. of Medford, Massachusetts, owns a Heifer Calf which was calved 17th of March last, and weighed on the 20th of September, 465 lbs. Its Sire, we understand, belongs to Nathan Adams, Esq. of the same place.

VERMONT PRODUCTIONS.

Ma Russell-From the twelve seeds you gave me, of what is called the Valparaiso squash, I succeeded in raising nine plants, (the bugs having destroyed the other three,) which have produced a large quantity of squashes-some of the branches run to a very great length. I procured a carpenter to measure one of the Vines-the greatest extremity from east to west 92 feet; the whole branches from one plant 348 feet. We have cooked one of these squashes, which I think superior to any I have ever raised. The shell or rind is very hard, and when boiled, the inside is scraped from Mr Watts Turner, of Medford. President three round holes an inch in diameter, which from the shell with very little trouble.

I have also a Pumpkin Vine; the produce of the pumpkins from a single vine when weighed was

If you wish, I will send you one of the squashes which weighs 46 lbs.

Yours, truly, WIGHT CHAPMAN. Middlebury, Vt. Oct, 4, 1830.

MASSACHUSETTS HORTICULTURAL SOCIETY Saturday, October 9, 1830.

The display of fruits, today, was unusually great. Our Horticultural friends, on this, as well as upon former occasions, have manifested a zeal for the dissemination of a knowledge of their best varieties, which is highly commendable in them and gratifying to the lovers of good fruits. those gentlemen living at a distance, particularly Col. Gibbs, of Brooklyn, N. Y., Mr Stephen H. Smith, of Providence, R. I., and Mr E. Edwards, ing. I trust they will give satisfaction. of Springfield, for the trouble they have taken, in forwarding fine specimens of fruits, the Committee feel greatly obliged.

Pears. From Mr Tooliey, no name. Napoleon and Passe Colmar, from Mr S. Downer. Very large and fine St Michaels, some of them weighing 9 oz., from Mr E. Edwards, of Springfield. A splendid specimen of St Michaels, for exhibition, A splendid specimen of St Michaels, for exhibition, Violet, from France; Royal; Blue Pearmain; Docfrom Dr Shurtleff, of Boston. Seckel Pears, from tor, or Dewitt (says W. R. Prince); Red flesh; Car-Mr Paine. Capsheaf, (supposed to be the Doyenné ter—English; Pomme Neige, or Snow; Calville Gris) Wilkinson, and a very superior Seedling rouge and Calville blanc, from France; Nonpareil, Pear, from Mr Stephen H. Smith. of Providence. Pear, from Mr Stephen H. Smith, of Providence,

Peaches.—Congress Clingstone and Washington lem. Fine Seedling Peaches, from Mr Davenport, of Milton. Handsome Heath Clingstones, from Mr E. M. Richards, of Dedham, 12 very large and handsome Clingstone peaches, the three largest weighing 13 lb. and measuring from 10 to 103 inches each in circumference, from Mr E, Edwards, of Springfield.

Grapes.-Fine specimens of Black Cluster, Black Hamburg, and Sweet Water, from Mr A. T. Penniman, of Boston. Very large Catawba, (the vine having been girdled) and Schuylkill Muscadel, from E. Phinney. Very handsome specimens of Black Hamburg, Barcelona, Oval Malaga, Catawba, Schuylkill Muscadel, Isabella, White Muscat, Red Chasselas, and some other varieties, names not known, all of out door growth, from Mr Z. Cook, Jr, of Dorchester. Part of a cluster of large purple grapes, imported from Gibraltar, weighing, it was stated, when the cluster was entire, and when taken from the vine, 11 pounds, by Capt. Urann, of Dorchester. Chasselas grapes, raised in open ground, from Mr Cheever Newhall, of Dorchester. A basket of Grapes, of very fine flavor, names not known to the committee, from Col. Gibbs, of Brooklyn, N. Y. Fine Esperion, Black and White Corinth, Black Cape, Black Hamburg, and a foreign Grape, (vines from M. Loubat) all out door culture, from Mr D. Haggerston, of the Charlestown Vineyard. Also, two very beautiful boxes of Pine Strawberries, from Mr Haggerston.

Apples .- A beautiful apple, name unknown, from Mr Pickering Dodge, Jr, of Salem. A Spice Apple, weighing 18 oz .- circumference 14 inches, apples, from R. Manning, Salem. Pomme D'Api, or Lady Apple, and two fine apples name unknown, from Mr Thos. Whitmarsh, Apples, from Benj. Weld, of Roxbury.

Specimens of 55 varieties of apples, were exhibited by John Prince, Esq. of Roxbury. These were all from the grounds of Mr Prince, were all of excellent quality, and bear honorable testimony to his enterprise and horticultural skill, in the selection and propagation of the choicest fruits, The names are contained in a subjoined letter from Mr Prince to the Committee.

Per Order,

E. PHINNEY, Chairman.

JAMAICA PLAINS, Oct. 8, 1830. To the Committee on Fruits-

Gentlemen-I send you a sample of fiftyfive sorts of Apples, the produce of my own farm. Many kinds, (nearly twenty) have already passed by, this season, and I have also many sorts not yet in bear-

> I am very truly yours, JOHN PRINCE.

Pomme D'Api, or Lady apple; Newtown Pippin; Ribstone Pippin; Bellflower, from a graft of May, 1830; Old Pearmain-produced full crops; Baldwin; R. I. Greening; Roxbury Russet; Buckman's Pear-main; Seaver's Sweeting, (uncertain); Esopus Spitzenberg; Golden Pippin; Sweeting, from Hamburgh; R. I.: of the latter variety, the committee would resembles the last; St Crispin, natural in Weston; be pleased to know more of its origin and history, Marigold; Flat Pippin, from Maryland—superior; Marigold; Flat Pippin, the Call of the latter variety of the latt Hubbardston Nonsuch; Gardner's Sweeting; Cat-imported from that country. They were mo

head, or York Russet; Swaar-celebrated in Ph delphia; Golden Russet; Fenouillet, from Fran Ducassade, from do; Wareham Russet—Englan Garden, from Salem; Spice Pippin; Chataignier, fr France; Court pendu gris, from do; Reinette Canada, from do; Fall Greening; Pippin, fin Fran Imperial Table Apple from Holland; Marean French Russet-and eight varieties of Engli French and American Apples, to which the tall are lost.

Among the fruits exhibited last week, was following, a description of which was accidents omitted. The Colmar Souvrain, one of V Mons' new Seedlings, was brought to Hall by Wm. R. Prince, 25th Sept., then net eating, but since ripened; has been tasted a proves an excellent pear. In size, it will comp with the Brown Beurré, not so round and full, tapering more towards the stem and eve-cel yellowish russet; the eye and stem set in a sm cavity; flesh, melting, juicy, and fine flavore not quite so high flavored as a superior Brown Beurré. It may be considered a good acquisiti to our list of Fruits,

From the Centinel.

Bees .- The attention of the public has been late often called to the culture of Bees. My o experience and what I believe to be import improvements in their management and in t construction of their hives, have been such as enable me to make statements which have gain some regard from intelligent keepers of apiar which may deserve still more than they have ceived. I have practised the making of hives inches square by 7 deep; the top perforated to be placed over each other in order to reme the top hive without disturbing or distroying

The present year I had swarms from six his One came out on the 5th of June; I put it into ah over which I placed another; and at the sa time put an empty hive upon that from which! swarm had issued. On the 31st of July I tt off my top hives: that from the before mention swarm contained thirtyone pounds of good hop and that which had been put upon the old b twentytwo pounds; making fiftythree pounds pure honey, and my six hives yielded one hund and eightynine pounds.

I added an empty hive to each, leaving a st cient quantity of honey in them severally for ! winter, and still, without impairing their win supply. When these top hives are removed t fall, they will be found to contain much how EBENEZER WITHINGTON

Dorchester, August 14, 1830.

Grape Vines .- Efforts have been made at i ferent times in this vicinity, to introduce the co vation of the vine : nearly, if not all, have failed have been only partially successful. Twe ye ago, Mr Loubat, a gentleman from the seuth France, commenced the undertaking on a mu moro extensive plan than had heretofore be done. For that purpose he purchased a farm Long-Island, fronting on the harbor, and ab five miles from Brooklyn, where he has laid do upwards of sixty thousand vines, in a viney of nearly fifty acres. The vines embrace ery description known in France, and were

103

down two years ago last spring. r they took root well, and were not injured by weather. In the spring following, they were ssed, and quite a number of plants produced pes. The season of trial was considered to be following winter; but the last spring the roots eared to be in a healthy state-they were in trimmed, in the same manner that they are France, and have flourished in a most inxuriant mer. A large portion of them are now in essful bearing-many of them have from ten ifteen bunches on one stock, of the largest and

t delicious flavor. Mr L, is now sending

large investment and great labor. Mr L. states his vines have come forward more rapidly, on the third year produce more fruit, than in nce. He has, thus far, experienced no injury the inclemency of the weather, although his s have not been protected in the least. No age or inconvenience has been experienced insects, nor has there been any mildew. Mr ays that the experiment has exceeded his sanguine expectation, and has no doubt in year more he will be able to furnish the tables ie citizens with a supply of all kinds known

v as possible. - N. Y. D. Adv. CORRESPONDENTS—We regret the necessity of ring till next week, the remarks of 'A CULTIVATOR' regard to the discussion respecting the Napoleon 'asse Colmar Pears, and many other articles.

· Pomological Manual. BY WILLIAM PRINCE.

To obviate the difficulties which those who are strangers to the qualities of the different truits often realize in endeavering to make their selections, is the object of this orblication. A descriptive work by which every possessor of Fruit Trees can himself test their identi-

ty, carries with it a guarantee for the correctness of Nursery Establishments, at the same time that it nullifies the cavillings of the ignerant, who often complain without possessing sufficient intelligence to understand the respective distinctions.

n to market, and will begin to realize this sea-'THEPOMOLOGICAL MANUAL' will comprise descripbeing only the third summer, some return for tions in detail of the various Garden Fruits, viz. Apples, Pears, Peaches, Plums, Cherries, Apricots, Nectarines, Almonds, Walnuts, Chesnuts, Mulberries, Quinces, Filberts, Gooseberries, Raspberries, Strawberries, &c. &c. The number of varieties therein described will be very great, and will embrace all those comprised in the new edition of Duhamel, a work for which the first cost at Paris is over \$400; and also, the most important of those centained in the Pomological Magazine and other works of the highest note,-the object being to concentrate at a cheap rate all the pomelogical information necessary and requisite towards making a judicious selection from the great variety of Fruits, of such kinds as are best calculated to suit the wishes and purposes of cultivators.

This work will be published in two parts of about 200 ectavo pages, each part of which will be complete in itself, and persons can subscribe for one or both as they think proper. The terms will be \$1 for each part, which can proper. The terms will be \$1 for each part, which can be remitted in advance. The first part will be ready for delivery in October.

Also was recently published, A Short Treatise on Horticulture, by Wm. Prince, price 75 cts.

A Treatise on the Vine, by Wm. Robert Prince, 350 pages, octavo, price \$1,50.

The most convenient and least expensive mode by which persons in the interior can receive these works, is by ascertaining from their local bookseller, the address of the house they deal with in New York, on transmitting which to the author, the books desired can be deposited with them to be forwarded.

WM. PRINCE & SONS.

Mr J. B. Russell will receive subscriptions for the Pomological Manual, and has the other works now for sale. October 15.

Splendid Bulbous Roots.

Just received at the New England Farmer Seed Store, No. 52 North Market-street, direct from Van Eeden & Co. Harlem, Helland, and a large assortment of Bulbeus Flower Roots, comprising the finest varieties of

HYACINTHS -(double and single) dark blue, porcelain blue, red and rosy colored pure white with yellow eye, white with rosy eye, and yellow with various eyes; from 12 cts. to \$1 00 each.

TULIPS-splendid variegated, red, yellow and mixed, 12 cts, each \$1 00 per dozen, (our importation of fine tulips is very large, and we are enabled to put some sorts as low as \$5 per 100-an object to these who wish to form a superb tulip bed.)

CROWN IMPERIALS-assorted, of the most splendid colours, and showy flowers, large roots, 25 to 38 cts.

JONQUILLES-sweet scented, finest roots 12 cts.

POLYANTHUS NARCISSUS-fragrant, white with

sized roots, 25 cts. each.

DOUBLE NARCISSUS—fragrant, of all colours, 12

cts. each—per dezen. \$1,00

SPRING CROCUS—of all colours, 6 cts. each—50

The above roots are from the same house from which we received our supply last season, and which gave such universal satisfaction; some of the double Hyaclaths

having produced bells I inch and 8-10ths'in diameter. Purchasers are requested to notice that the above roots are not purchased at auction, and are all remarkable for their size, and for the beauty and delicacy of tint of their

Also, a further supply of Bulbous Roots, comprising Large White fragrant Lilies, 12 cts. each, I dollar per dozen, Tiger (spotted) Lilies, same price, Martagon or Turk's Caps Lilies, same price.

RICK, NEWTON, and transmitted by the daily mail, or otherwise, or if more convenient, left at the office of the New England Farmer, where catalogues may be obtained gratis, will be promptly attended to.

But purchasers are invited when convenient, to call and examine the trees, &c, for themselves, and make their own selections. Trees, &c, will be delivered in Boston free of expense

for transportation, when ordered; and when particularly desired, they will be packed in matts with either clay or moss for sea or land transportation. eptD Oct 8

Grape Vines.

The subscriber has for sale at his garden in Dorchester, The subscriber has he sale at the gauge in Dokument, the choicest variety of Grape Vines ever offered for sale in this vicinity. Many of them are now in fruit, and purchasers are invited to call and make a selection. The following compose a part of the variety.

Black Hamburg, Black Cape, White Muscadine. Golden Muscat, Gore's, (a beautiful Black Grape) Caroline.

White Chasselas, Gelden Chasselas, Red Chasselas, Black Censtantia, Bland. Ferrol.

Napoleon,

8 varieties of superior fruit from Xeres and Malaga. 400 two years old Isabellas. 1400 one " "

200 CATAWBA, or what has heretofore been considered the BLAND. It is now satisfactorily ascertained that the Bland grape will not ripen in this climate, in the open ground.

Orders by mail, addressed to the Subscriber, or personal application at his office, No. 71 Congress-street, for any number of Vines from one to one hundred or more, will meet with prampt attention. Application may also be made to Patrick Kennedy, at the garden.

Boston, Sept. 27, 1830. 5t ZEBEDEE COOK, Jr.

Pomace Shovels.

For sale at the Agricultural Warehouse, 52, North Market-street, a few very superior pomace shovels. Also a few of Willis' improved Apple and Quince pearing Machines.

BRIGHTON MARKET-Monday, Oct. 11. [Reported for the Chronicle and Patriot.]

A STATE OF THE WAY AND ADDRESS OF THE PARTY OF THE PARTY

At Market this day 2265 Cattle, probably from 1800 to 1900 for beef: 5683 Sheep, and 1422 Swine.

Prices—Beef Cattle—From \$3 to 4,50, about 25 a 30 cattle brought 4,50. We noticed one pair taken at 4,67; we also noticed four beautiful cattle fed by Samuel Sweetser, Esq. Athol, and driven to market by him, taken at 5,50; one pair purchased by Mr A. Ward, of Newton, the best pieces of which are engaged to Messrs. Sargeant and Murdock, for the table of the Agricultural Society, on 'Cattle Fair Day :' the other pair was purchased by Mr C. Bracket, and will probably be displayed upon his stall in Merchants Hall Market.

Stall in Mercuanis fran Market.

Barrelling *Cattle.—Mess 3,50 a 3,67, No. 1, 3 a 3,25.

Sheep.—Sales quick. from \$1,50 a 2,42. We noticed lots taken at \$1,50, 1,62\frac{1}{2}, 1,75, 1,88, 2, 2,12\frac{1}{2}, 2,25, and

Swine .- Brisk sales-we noticed one lot of 100 weighing each 250, taken at 4c; one entire lot of 75, part old and part Shoats, taken at 31c; one lot 100 selected Shoats, Barrows, at 42 c.; Sows at 4 c.; one lot of 60 Sows and Barrows, at 32; retail price 44 for Barrows, 4 for Sows.

THE CONCORD CATTLE SHOW.

A 8 0 N G

Written by the Editor of the New England Farmer, and sung by Mr J. W. NEWELL, of Charlestown, at the entertainment at the Concord, [Mass.] Agricultural Exhibition, &c, on the 8th inst.

SINCE Time in the Primer first sharpened his scythe, And the sands in his glass were beginning to flow, There never was spectacle bonny and blithe,

Which came fairly up to our GRAND CATTLE SHOW. Derry down, down down, derry down.

Here's Bulls, Hogs, and Horses, and Sheep not a few, Respectable animals, worthy a prize, Like good go-to-meeting folks, each in his pew, All sober as deacons-if not quite so wise.

Master Pig is the Chorister, just twist his tail,
And he'll give you altissime trills in high style, The fine diatonics which ran through the scale Of his exquisite gamut will ring for a mile.

Our Roots have run down to gravity's centre, Some went on to China, and thieves pulled them thro'-But that's a tough story, and I should nt venture, In a high court of Justice to swear it is true.

And here we have oxen, stout animals, which Might well go to Congress, representing their race, Round gravity's centre just give them a hitch, And I guess they would twitch the whole world out of

The match of our Ploughmen was ne'er matched before, Save when a lorn lover is matched to his Fair; They turned the earth over as flat as this floor, Such chaps the great globe, like an apple can pare.

In troth, all the world's nothing more than a show Of animals, shut up, or running at large, You meet with queer creatures wherever you go. And pity their keepers, who have them in charge.

A calf sent to College comes out a great bore, An odd metamorphosis that, it is true, But one which has taken place over and o'er ;-New I do not mean you, Sir, nor you, Sir, nor you.

I hate personalities, therefure won't say, How a jackass conducts when made just ass of Peace. Such animals now and then come in my way But I never shear hogs for the sake of their fleece.

A vile pettifogger, all quibble and jaw, Is 99,000 times worse than a brute, In a sunbeam he'll pick an indictable flaw. And against his own shadow show cause for a suit.

Here's health to our Orator, one who can boast That he practises well what he preaches about; But gentlemen please not to butter my toast, For we like him so well we can take him without.

Here's 'MIDDLESEX HUSBANDMEN,' doing more good Than all the political clubs ever known, Unless a man's head is the essence of wood, He ranks them above any king on his throne. Derry down, down down, derry down.

CANNIBALISM.

Captain Cook having one day gone ashere in Queen Charlotte's Sound accompanied by Mr Banks, Dr Solander, Tupia, and other persons belonging to the ship, they found a family of the natives employed in dressing some provisions. 'The body of a dog,' says Cook, 'was at this time buried in their oven, and many provision baskets stood near it. Having east our eyes carelessly into one of these as we passed it, we saw two hones pretty cleanly picked, which did not seem to be the bones of a dog, and which, upon a nearer examination, we discovered to be those of a human body. At this sight we were struck with

this coast. As we could have no doubt but the bones were human, neither could we have any doubt that the flesh which covered them had been eaten. They were found in a provision-basket; the flesh that remained appeared manifestly to have been dressed by fire, and in the gristles at the end were the marks of the teeth which had gnawed them. To put an end, however, to conjecture founded upon circumstances and appearanecs, we directed Tupia to ask what bones they were; and the Indians, without the least hesitation, answered the bones of a man. They were then asked what was become of the flesh, and they replied that they had eaten it; but, said Tupia, why did you not eat the body of the woman which we saw floating upon the water : 300,000 !! And this, without counting capital The woman, said they, died of disease; besides, she was our relation, and we cat only the bodies of our enemies who are killed in battle. Upon inquiry who the man was whose bones we had found, they told us that, about five days before, a hoat belonging to their enemies came into the bay, with many persons on board, and that this man was one of seven whom they had killed, Though stronger evidence of this horrid practice prevailing among the inhabitants of this coast will scarcely be required, we have still stronger to fourteen years by the subscriber, containing about 2 give. One of us asked if they had any human bones with the flesh remaining upon them; and upon their answering us, that all had been eaten, we affected to disbelieve that the bones were human, and said that they were the bones of a dog; upon which one of the Indians, with some eagerness, took hold of his own fore-arm, and thrusting it towards us, said that the bone which Mr Banks held in his hand had belonged to that part of a human body; at the same time, to convince us that the flesh had been eaten, he took hold of his own arm with his teeth, and made show of eating. der it, with boilers set to make soap, brew, and cooks He also bit and gnawed the bone which Mr Banks had taken, drawing it through his mouth, and showing by signs that it had afforded a delicious repast.' Some others of them, in a conversation with Tupia next day, confirmed all this in the fullest manner; and they were afterwards in the habit of bringing human bones, the flesh of which they had eaten, and offering them to the English and a half miles from the village of Dover, which affect for sale.

V'hen Cook was at the same place in November, 1773, in the course of his second voyage, he obtained still stronger evidence of what he expressly calls their great liking for this kind of food'-his former account of their indulgence in which had been discredited, he tells us, by many. Some of the officers of the ship having gone one afternoon on shere, observed the head and bowels of a youth, who had been lately killed, lying on the beach; and one of them, having purchased the head, brought it on board. A piece of the flesh having then been broiled and given to one of the natives, he ate it immediately in the presence of all the officers and most of the men. Nothing is said of any aversion he seemed to Nothing is said of any aversion he seemed to a seemed to the shocking repast. Nay, when, upon Cook's return on board, (for he had been at this Printed for J. B. Russell, by I. R. Butts—by when Cook's return on board, (for he had been at this was broiled and brought to the quarter-deck, that Russell, at the Agricultural Warolouse, No. 52 No. time absent on shore,) another piece of the flesh he also might be an eye-witness of what his officers had already seen, one of the New Zealanders, he tells us, 'ate it with surprising avidity.' 'This, he adds, had such an effect on some of our where it now is .- Lib. of Entertaining Knowledge. Montreal, L. C.-A. BOWMAN, Bookseller.

ERRATA.

The number of letters in each copy of t Chronicle will not vary much from 100,06 There are then, 100,000 places where errors im be committed. Any letter of the alphabet is I ble to get into either of these places. The nur ber of letters besides that which should be set, 25; so that each of the 100,000 places is expose to either of 25 different errors, and the who number of errors which must be guarded again in every paper, is, 2,500,000! Or rather, th would be the number if we used but one fount type. But we use four, which raises the numb of wrong types, liable to get into a particular plac to 103, and the number of possible errors to 10 points, figures, &c-so that the chances again perfect accuracy, to be guarded against by the skill and care of the printer, are more than 10 300,000 to one. From these premises we infe I. That compositors and proof-readers ough to be very careful; and 2, That readers ought m to be surprised, if they find an error now an then .- Vermont Chronicle.

For Sale.

The well known FARM in Dover, occupied for the la acres, well located in a square, bounded on the southb Cochecho river, and on the east by Fresh creek, on which is a tide mill, with an apparatus for pounding and griadin plaster. The Buildings consist of a large two story Bric House, of 46 feet by 38, with a wing of 20 by 16, all we finished, adjoined to which is a shed 34 feet by 14, cor necting the eider house 27 by 37, two stories, with on plastered room, where all the spinning and weaving done for the family; two Barns, one of which is 100 te by 42, with two wings of about 40 fect each, one employ ed as a stable, the other for a sheepfold, with a good yar well walled in; the other is a Store Barn of 45 feet square of 16 feet post, and will contain 60 tons of hay; a pigery of 50 feet by 30, with a cellar of 18 feet square in swine. The fields are divided by permanent stone wall and consist of one of 40 acres in front of the house, or of 17 on the East, one of 10 acres on the North, (princi pally orchard,) one of 15 Northeast, and one of 30 acre West of the house, with three pastures of 20 to 25 acre each.

The Farm has been gradually improving for the la ten years, and the two last has cut each year one hun dred tons of hay, and 20 to 25 tons of thatch. It is to a good market. There has been planted some hundred of Fruit Trees, principally Apple, many of which m grafted—with Pears, Cherry, Plum, Peach and Quint trees, and many in bearing, with a small nursery.

The terms of sale may be known by applying to Market Market Pience, of Dover, Mr Samuel Lord, and Postsmouth of the subscriptor of the prescipency.

Portsmouth, or the subscriber on the premises.

COMMUNICA TIONS.

FOR THE NEW ENGLAND FARMER.

APOLEON AND PASSE COLMAR PEARS. HOMAS G. FESSENDEN, Esq.

SIR-I have read the discussions between Mr owell and Mr Prince, in your papers, relative to e Pear called the 'Napoleon,' and it seems to e there has been too much haste manifested in serting that the 'Pear Trees cultivated in Bosn under the name of · Napoleon,' 'are wrong,' that the 'Passe Colmar,' has been baptized by generally by that name .- That this may be the se in some instances is very probable, as all culators are more or less liable to mistakes of this nd, whether propagating new or old fruits; I none more so than men who like Mr Prince, placed at the head of great Nurseries.

From the hurry and confusion that usually exin Nurseries in grafting and building seasons: mixing of scions by the men who are performthe duty of budders or graftsmen; the mises in tallying trees; the ignorance or careless. s of those who supply them; the perseverance rror not unfrequently found among those who e once committed it, all combine to make 'conon worse confounded;' and when errors of kind have taken root, it is not easy to eradicate n altogether. I do not think that private culors are equally liable to make these mistakes, use they have fewer objects to attend to, and rally give their personal attendance to the tion and tallying of buds and grafts in their grounds. There is another reason which has eight. Nursery men like Mr Prince, who ar large quantities of trees from Enrope at -are liable to all the mistakes which are mitted by their confreres abroad; while gouen, like Mr Lowell, who receive their trees as nts from such men as Mr Knight, and the on Horticultural Society, are less liable to imon or error.

is true that Mr Knight and the gardeners of Iorticultural Society of London, may make kes like other people,-but we think they ss subject to do it than those who depend e contingencies that attach themselves to Nurseries.

Prince has been too broad in his declaration, o positive in his manner of treating the t for one who is himself open to the attacks ny who have purchased trees from his Nuror years past; and if it were true that Mr I had, through mistake, in some instances the 'Passe Colmar,' for the 'Napoleon,' it your paper, respecting St Michael Pear Trees. xeuse for Mr Prince, to assume the tone of

ames so far as be knew them,

is reply he marked the fruit which I re-

marked as such. This shows that he agreed with the oldest trees is 35 or 40 years. The extremthose from whom I received the fruits. Again, ities of their branches are decaying and the whole Mr Lowell was good enough to give me a graft appearance of the trees indicates a disease which of the pear he calls the 'Napoleon;' it has never will finally destroy them unless something can be borne fruit, but the leaves of this tree differ essen- done to stop its progress. tially from the tree which I have under the name (Nozember) and that which he called the Passe might hinder in the least the cultivation of this

I have never seen the London Pomological Magazire, nor do I pretend to know anything about answered with pleasure by these fruits, or much about any others-but I can harlly believe that Mr Knight could have mistaken one of these fruits for the other; and as he sent the trees to Mr L. as a present, I must, until I lave further evidence to the contrary, believe that the trees sent him for the Napoleon are such in fact. My Passe Colmar, has been transferred to the garden of Mr John Prince, of Roxbury, a gentleman well known for his accuracy and extensive knowledge in horticulture; and particularly so in the pomological department. This gentleman has no doubt, as I understand, that the pear he received from me as the ' Passe Colmar,' is such in fact.

Mr William Robert Prince of Long Island, had not seen all the trees cultivated in the vicinity of Bos on under the names of the 'Passe Colmar,' "A Napoleon,' when he wrote his article of the 30th of July, and he of course was liable to mistake facts when he made his 'strong remark,' in regard to the ignorance of the Boston Cultivators,

I do not, however, see that the subject requires scions, deserves to be arraigned in the manner in which it has been done by Mr Prince. If we are all to be called to a severe account for our errors of this nature, I have doubtless much to answer for, in common with others; and even Mr Prince, whose 'Pride for accuracy,' in these matters, 'predominates over his zeal, acquisitions, and ambition to be useful,' is not exempt from the lot of

A CULTIVATOR.

DECAYING PEAR TREES.

MR FESSENDEN-1 noticed in the 11th No. of your paper a communication in answer to some inquiries, which I made through the medium of

Your correspondent says it is difficult even to ion that he does in his replies to that gen-conjecture the cause without a more definite To show that Mr Lowell is well acquaint- knowledge of their aspect, situation, &c. The h the two fruits in question, I will state a trees to which I had reference in my inquiries have the appearance of old trees, worn out with ed by R. M. Field, Esq. November, I sent to Mr Lowell six or eight age and bearing; although some of them have outside, and requesting him to give me have also a considerable number of young trees by Mr Ely. which are not of sufficient growth to yield fruit, and which have the same sickly appearance as in fine condition, and gave additional evidence of erved from France as the 'Napoleon,' he or 20 years as a kitchen garden. The age of Esq. Destination, Elizabethtown, N. J.

The fruit does not come to maturity before it is of the 'Passe Colmar.', The fruit recognized by blasted to such a degree that it is not worth pre-Mr Lowell, as the 'Napoleon,' was then ripe, serving. I would not wish to say anything which Colmar,' was not ripe until December, and valuable fruit wherever it is practicable. If your correspondent have any questions to propose respecting the trees I have mentioned, they will be

A SUBSCRIBER.

GREAT SALE OF STOCK,

The following is from a friend of ours who attended the sale of valuable Horses, Cattle, and Sheep, on the 11th ult. at the residence of Charles II. Hall, Esq. Harlem, N. Y.

No. 1. Lady Lightfoot, a noted running mare, 4 colts from her having sold at an average price of \$1000 each was sold for \$1475,00. Destination, Chenango County, N. Y.

No. 2. Alarm, bred by Lord Grovesner, foaled in 1820, now in foal by the imported Horse Barefoot, \$650,00.

No. 3. Gazelle, bred by Mr Hall, (one eye imperfect) with her colt, No. 10, sold for \$380,00.

No. 4. Knott, a sorrel mare, 6 years old; by Bellfounder out of Cinnamon; in foal by Bald Eagle, son of Americau Eclipse, (one knee defect. ive,) \$110.

No. 5. Lady Mary - A bay mare, with a star and one white hind foot, 10 years old; a beautiful so much discussion, or that the mistake, if there animal, purchased by A. Dey, Esq. 8425,00. was one on the part of Mr Lowell, in giving Destination, his farm at Newark, N. J. for a Brood mare.

> No. 6. A brown colt, 6 months old; out of Lady Lightfoot, by American Eclipse; purchased by Charles Green, Esq. \$850,00. Destination, his farm on the Kennebec, Maine.

No. 7. Lightning, a brown filly, one year old last May, out of Alarm, by American Eclipse, \$400. Purchased by Mr Stevens, the owner of Eclipse.

No. S. A brown filly, 6 months old, by Eclipse Lightfoot, out of Alarm. Purchased by A. Dey, Esq. \$200. Destination, his farm at Newark, N. J.

No. 9. A Dark Bay, 2 years old, a fine Stallion. by Bussorah Arabian, out of Alarm, \$500,00. Purchased by J. Ford, Esq.

No. 10. Sold with her Dam, No. 3.

No. 11. A sorrel filly, out of Knot, by Eclipse Lightfoot, 4 months old, \$60. Purchased by Mr Suydam, N. J.

No. 12. Constellation, 5 years old, a fine Stallion, color dark sorrel, get by American Eclipse, out of Olivia, a Virginia mare, \$675,00. Purchas-

No. 13. Bald Eagle, 5 years old, by American each wrapped in a blank paper, numbered not been bearers more than six or eight years. I Eclipse, out of Hyacinth, \$500,00. Purchased

The Durham Cattle, about 30 in number, were from the London Horticultural Society for the older ones. They are situated on a rich light their natural quiet dispositions. Request, an imported size Colmar, by that name; and the fruit that soil, which has been improved for the last 15 Bull, 8 years old, sold for \$300, to S. P. Britton, Favorite, out of Princess; was purchased by David eaten with avidity by the silk worms and that the Austin, Esq. for \$210. Destination, his farm, at silk which they form, is of the first quality. Throggs Neck.

Several Cows, sold at \$250, each. The stock will be very much scattered. One fine Bull was purchased by Benjamin Poor, Esq. which will be sent to Indian Hill Farm, near Newburyport. Dr Hosack, purchased for his Farm, at Hyde Park; not only easy, but proper, to give him, at this and on the whole the sale may be said to have gone off well, and satisfied buyers, and sellers, The best Leicester sheep sold at an average of \$95 will contribute so much to the prosperity of each.

FOR THE NEW ENGLAND FARMER.

MR FESSENDEN .- I have made several extracts from the June number of the Annales D'Horticulture, which has been recently received, on Manures, the Chinese Mulberry, a Hindoo mode of grafting, and the use of salt for accelerating vegetation, which please to insert in the New England Farmer.

With great esteem.

Your most obedient servant.

H. A. S. DEARBORN.

Brinley Place, Roxbury, } October 15, 1830.

EXTRACT NO. XXI.

' From the Annales de la Societe D'Horticulture De Paris. Extract of a report on Manures, made by M. PAYEN.

Four different things are often confounded under the name of manures, which it is important to distinguish.

1st. The debris of organic matter, or of vegetables and animals, to which alone this denomination belongs, and amorg these, the more azotic the matter, the greater is the beneficial effect of the manure in the nourishment of plants; thus he kept fresh, in the hollow of a large leaf with a we should place in the first rank muscular flesh, little water in it, he operated on the stock to be blood, horn, and gelatine. All these substances, dried and pulverised, act more or less promptly, according to their degree of changability, nuder the diverse influences of the atmosphere.

2d. The soluble salts, are only excitants of the vegetable energies, and do not contribute to their organization, properly so called; their actual value, as applicable to agriculture, is less than

that of manures.

3d. Insoluble salts, and the oxids, form, what is commonly designated under the name of earths. They can only be considered as capable of ameliorating the soil, of which they form a part. These are the true amendments, which are obtained, at a low price, in the vicinity of waste places.

4th, Carbon, whose useful action appears to consist in absorbing the calorific rays of the atmosphere, and thus warms the soil. Perhaps it may be admitted that a portion of earbon is imbibed support of such a theory.

EXTRACT NO. XXII.

Note on the Perrotet Mulberry (Morus Multicaulis,) or Chinese Mulberry.

By the information which we receive from all quarters, it appears that this nulberry is destined to replace the common white mulberry, everywhere, for nourishing silk worms; its property of continuing low and bushy, so that the leaves can always be gathered without a ladder, and the

Prince, 4 years old, got in England, by Fitz has been sufficiently ascertained, that they are

This mulberry has not suffered in the least, from the rigors of the last severe winter.

The zealous traveller, who has given to France, America, and Africa, this precious plant, has aequired a just right to public gratitude, and it is time a proof of it, by affixing his name to the tree, which has given him celebrity, and wrich French industry,

We will set the example, and continue to call it the Perrotet mulberry, every time we speak of it.

EXTRACT NO. XXIII.

Mode of grafting in the East Indies, described in the Extracts from the Transactions of the Agricultural Society of India; by M. SOULANGE BODIN.

Mr Leycester learned from the nabob of Mollaghun, that he had a gardener, who was slufful in various modes of grafting, and that he practised one common in the upper provinces, but which Mr Leveester had never found described in anybook. and gives the following account of the process.

At the season of the year when the birk is easily separated from the wood, having cut off the end of a shoot, about a quarter of an inch above a bud, the Indian gardener makes an annular incision through the bark, half an inch below the bud, and then, with a piece of cloth in his hand, he carefully removes this ring of bark, so as not to injure the bud contained in it, after which he proceeds in the same manner with the bud below.

Having thus collected a number of buds, which grafted, by first cutting off the head, at the point where it appeared to be of the proper size,-that is to say, of a diameter a little less than the ring of bark, which he intended to place on it; he then cut the bark in longitudinal strips, which were pealed down sufficiently low, to allow the ring containing the bud to slip down and exactly fit the end of the stock. After this, the little strips of bark were raised up over the bark ring, and tied to the upper end of the stalk, when the whole was covered with a little moist clay, care being taken, that no injury was done to the bud by this application.

This mode of grafting very much resembles that which is described in the 'Cours de Culture et de Naturalisation des Vegetoux d'Andre Thouin,' under the name of Graffe des fauncs, (tome ii. page 463, et figuree planche 56 de l'Atlas BBbb,); but what is most remarkable, Mr by the plants, but there are no positive facts, in Leycester states that he was convinced after particular inquiries, the method was not taught by any European, but that it had been transmitted from 38, butts 33, total 103 lbs. generation to generation, from time immemorial; he thinks it unites so much simplicity, and facility, that it would be one of the first, which would rationally present itself to the mind of original 6 lbs, whole, 94 lbs. cultivators.

EXTRACT NO. XXIV.

Saline Manures.

Gardeners and all those who endeavor to obarge size, abundance and tenderness of the leaves, tain early legumes or fruits, may profit by the cannot fail to give it a decided preference. It following experiment, which confirms an es-l Agricultural Society took place in Taunton,

tablished fact, that plants in a soil prepared with common sait, rarely suffer from the cold and the sudden changes of the weather.

The half of a bed of early Peas raised in a garden of Worcestershire was dressed with sait, and the other half with common manure: upon the part which had been prepared with salt and in the proportion of about twenty bushels to the acre, the Peas were fit to pick three weeks before the others, and the vines yielded five or six times as many.

GREAT PRODUCE OF POTATOES.

Mr Fessenden-The following remarkable produce ought to be read by every New England Farmer, Mr Antipas Maynard, of Waltham, Mass bought of Capt. Tombs, in Boston Market house 2 Chenango potatoes this last spring, which he cut into seventyfour or five pieces, and planted them in a drill. He dug from the same two bush els and one peck, or a flour barrel full. This car be relied on. Who can beat this?

Weston, Oct 15, 1830. J. WARREN.

EXPERIMENTS IN PLANTING POTATOES

MR Fessenden-The following experiment with regard to the expediency of planting Pote toes, cut or whole, were made by B. Nason, Est of Augusta, Maine, a very intelligent, practica farmer. They are at your disposal, for insertio in the New England Farmer, if you think prope

Yours, &c,

Keene, N. H. Oct. 19, 1830.

60 small long red La Plata Petatoes, weigh

A single potato, planted last spring in one l in Halifax, Vt. produced half a bushel of potat and 70 lbs. of vines.

BRISTOL COUNTY CATTLE SHOW.

The annual exhibition of the Bristol Coul

the 6th inst. The Columbian Reporter states that one advantage has been gained by fixing an earlier day for Show than had been customary before the last year. The weather is milder and spectators witnessed the exhibition with more gratification no doubt than they would while shivering, as has sometimes been the case, in their great coats. The day of the show in this town the present season, was one of the most bland and attractive of October, in New England, and brought together a large number of farmers, manufacturers and others from different parts of the viamos

At the Ploughing Match 'sixteen ploughs, which was the greatest number ever entered, started in the contest, and executed their work in good time, and with no lack of skill, and animation. Two teams only had drivers-one being a yoke of steers and a horse, and the other, two voke of steers. All the single teams were required this year, for the first time to be driven by the ploughman. The experiment was completely successful. The work may not have been quite is perfect as it was last year, (which exceeded previous exhibition) but it was equal or superior o the work at several of the matches in past

'At the trial of the working oxen in drawng, twenty voke engaged in the competition, The manner of their drawing as well as the great reight of the loads, showed them to be well ained as well as to possess great strength.'

After speaking somewhat diminutively of the whibition of manufactures, the Editor proceeds A larger quantity of Butter and Cheese was resented for exhibition this year than usual, and or the most part of excellent quality,

'The show of Cattle was larger, probably, than has been at any former exhibition of the Soety. All the pens were filled, without furnishg room for the whole; a considerable number ad some of the finest animals exhibited, were cluded. The show of fat cattle was conceded t all hands, we believe, to surpass in quality as ell as numbers, that of any former year. on the whole, the Society and its friends (Bris-I County Agricultural Society) under whose rection and patronage the Show was held, ve good reason to be satisfied, and highly grated and encouraged by the exhibition the present ar. The fruits of these Shows, are becoming ery season more and more apparent, and we ist the time is not distant when the most scepal will cease to question their beneficial influces.

The Society marched in procession preceded the Taunton band of music, from Rev. Mr milton's meeting house to the Taunton Hotel. unroe's) where a bountiful and excellent dinner s provided; a longer table than we have seen any former Exhibition was spread, and few if seats were unoccupied. Several Toasts were en at the call of the President of the Society o presided also at the table. We are not able present the whole, and will not at present, there-, publish the portion of them which are reected.

Soon after dinner the members of the Society assembled at the meeting house for the transacof the business of the annual meeting. This supied several hours.

One new standing committee was added, viz.

The sum to be awarded for the best farm or farms will be fixed by the Trustees at their meeting in March next. The other committees and officers were mostly reelected, with the exception of Chairmen of some of the committees. The time of the committee is so much occupied on the day of exhibition in their examination necessary for deciding upon the awards to be made by them. that little opportunity is left for drawing up their reports. To aid them in this part of their duties, gentlemen have for a year or two past been placed at the head of some of the committees who were not practical agriculturists or manufacturers, This principle of selection, as we understand it, has been again and to somewhat larger extent adopted the present year.'

Stout Squashes .- Two beautiful crook necked squashes grew on one vine, this season, on the farm of Mr William Mercer, Lincoln, one of which weighed 47 lbs. the other 33. The smallest girted 20 inches round the neck, and the largest, which straightened out would have been nearly five feet long, girted 19 round the neck.

Five squashes were raised by Capt T. G. Banks and A. H. Stickney, of this village, from three them weighed 125 pounds.—Dunstable (N. H.)

These squashes were not, probably of the crook necked species.

Mr Wm. Gault, of Concord, N. H. raised two 'large white Turkey,' eucumbers this season, one of which weighs 9 lbs, 6 oz, is 201 inches round, is 194 inches long and 154 round.

The editor of the Palladium has been presented with a dozen apples from a friend in Bedford, one of which is 14 inches round. The tree from which it was taken is supposed to contain 20 bushels of the same species, which average from 11 to 12 inches each. The tree has borne fruit for about ten years, is 12 or 15 feet in height, and

Mr Comfort, in Bucks co. Pa, has gathered this season an apple 15 inches round, and weighing twentusix onnees.

Mr Aaron Hewitt, of Utica, N. Y. has a pig a little over a year old, which girts 7 feet, and is near 8 feet long. It is intended to make him weigh 1000 lbs. or more, Feb. 22, when he is to be slaughtered.

Grapes .- The Isabella grapes have been plentiful and very fine the present season; and we have seen none of any other kind equal to them. The French vines generally fail entirely, or bear but a few sickly bunches, and it is doubtful whether they will ever become naturalized. Almost every yard and garden in Brooklyn has an excellent vine. and we have abundant reason to remember and respect Miss Isabella Gibbs, who first introduced this excellent fruit among us .- Brooklyn Star.

Mr Delany of New York has a vine in a small yard, that has borne 2000 bunches of grapes in one season.

Remedy for Stings and Bruises .- In the trials, of mmittee for viewing farms and mulberry trees. many years, in our family, we have never found -1b.

Olive Oil, or common Sweet Oil, to fail of giving immediate relief, and effecting a complete cure of poisonous stings, if gently rubbed on immediately, and continued for a short time. And for a bruise, the application of water as hot as it can be borne, either by a wet cloth, or by immersing the part, we have always found effectual. It may be necessary to continue the application of water, and to renew the heat, for a considerable time, and to rub the swellen parts softly .- Pennsylvania Exam-

TEMPERANCE.

We have heard the following facts recently stated, The first occurred in our state; the second relates to a town in Maine

Last fall, in cold weather, just as the flakes of show began to descend, a miserable man, scantily covered with rags, presented himself to a farmer and wanted work. He had no particular employment for him, and besides, his appearance was against him; he did not want him. The poor fellow begged hard to stay till he could earn a pair of shoes, and pointed to his bare feet to strengthen his cause. The farmer pitied him, and agreed to take him-but he must drink no rum. This was a hard condition; but cold and bunger seeds: they weighed 352 lbs. and the largest of compelled him to assent, and he began his work; though for the first two or three days ' he thought he should die.' By the time he had earned his shoes, he found out that he was better off without rum: he lived with the temperance man through the winter, and in the spring went home to his wife, his father and his friends, decently clothed, and to all appearance a reformed man,

In one town, of 3000 inhabitants, where, a year and 16% in length; the other weighs 8 lbs. 4 oz. or two ago, they used to spend \$14,000 a year, for strong drink, last year they spent only 1000. The same people used to raise \$1000 for their schools, with great difficulty; but this year they voted cheerfully to raise \$1500. So much does the temperance of the fathers tend to the intelligence of the children .- Portsmouth Journal.

Sage is said to be as much of an article of luxury in China as tea is with us; and there extends nearly 75 feet. So heavily laden are its can be no doubt but if sage, catnip, pennyroyal, branches, that many of them rest upon the ground, and pepperbush were cured in the same way and brought from as great distance as tea, they would be as much admired and bear as high a price.

> Census of Boston .- The population of Boston is 61.381, of whom 59,506 are whites, and 1875 free blacks. The number of aliens is 3448.

> By the Census of 1820 the whole population of Boston was 43,298; increase in 10 years 18,083, which is equal to 413 per cent. The number of colored persons in 1820 was 1690; increase 165.

> In making toys, the Chinese are exceedingly expert.-Out of a solid hall of ivory, with a hole in it, not larger than half an inch in diameter, they will cut from nine to fifteen distinct bollow globes, one within another, all loose, and capable of being turned round in every direction, and each of them carved full of the same kind of open work that appears on the fans. A very small sum of money is the price of one of these difficult trifles.

Commerce of Boston .- From the 12th to the 20th of September, 64 vessels were entered at the Custom House in this city, from foreign ports, and will probably pay duties to the amount of \$400,000.

The whale ship Awashonks, of 340 tons, built of live oak and coppered, lately launched at Woods' Hole, was built without the use or abuse of ardent spirits.

Those have a short Lent who owe money to be paid at Easter .- Franklin. What maintains one vice would bring up two children.

PAWTUXET FAIR. [Coucluded from page 99.]

HOUSEHOLD MANUFACTURES, &c.

The committee on Butter, Cheese and Household Manufactures, beg leave, respectfully to report: That they have proceeded to the discharge of the arduous duties assigned them, with a deep conviction of the importance of extending to the branches of Industry, embraced by their appointment, every encouragement within the means of the committee recommend for the premiums set the Society, not inconsistent with what may be against them, respectively, the following articles.

those exhibited on previous occasions; and the committee are persuaded, that the money, heretofore paid out in premiums on similar articles, has been a truly profitable expenditure. They have awarded for the article of Butter, exhibited at this

considered as due to other branches. The vari-

ous articles, entered for premium at the present

Show, evince, on the whole, an improvement on

To CLARISSA WEBSTER, of Johnston, for the best box, containing forty pounds, the first premi-\$10

present Show, the following Premiums:-

To Joseph S. Budlong, of Warwick, for the next best lot, the second premium,

To Silas Spink, of Cranston, the third premi-

To Welcome Alverson, Johnston, the fourth premium,

To Abigail Spencer, of Warwick, the fifth premium.

To Thomas R. Greene, of Warwick, for one firkin, weight 50 lbs. the first premium on firkin

To Hannah Dawley, of Warwick, for one firkin of fifty pounds, the second premium.

The committee regret to have to state, that some firkin butter was entered for premium which proved on examination, to have been plated; the under layers, being found to consist of butter of a quality very inferior to that presented on the surface. Several parcels of the box butter were so scarf, nearly alike, that the committee found it difficult to decide between them.

For the best lot of Cheese, one hundred pounds, made by Benjamin Greene of Warwick, they award the first premium on that article,

For the second best lot, of 100 lbs. the second premium, to Nicholas S. Frey.

There was very little competition in this article; but the two lots on which the premium are awarded were found to be of excellent quality.

On Household Manufactures, by females, they have awarded the following premiums.

To Mrs. Rosanna Greene, of Warwick, for the best piece of Carpeting, being of excellent quality, the first premium,

To James W. Gorton, of Coventry, for the second premium,

To Hannah Anthony, of Warwick, for the third

To Mary L. Greene, Warwick, for the best lot of woollen hose, the Society's first premium, be-

To M. E. Stafford, Warwick, for the best flaxen hose,

To S. F. Stafford, of Warwick, for worsted hose. To Mary L. Greene, of Warwick, for the best

piece woollen Flannel, 32 yards, the Society's first spread,

This Flannel was, in the opinion of the Committee, the best ever presented for premium.

To Hannah Anthony, of Warwick, for the second best blue broadcloth, the Society's premi-

To Eliza Thomson, of Apponaug, for the best woollen blanket, 8-4 wide,

In addition to the preceding regular premiums,

To Almira Greene, for a piece of cotton and

To Rosanna Greene, for damask diaper, To Ann M'Kay, Providence, for a rug, 1 To Eliza M' Kay, of do, for To Esther R. Cleaveland, for rug and

To Lydia Bowen, Coventry, for linen

To Julia Ann Battey for a hearth rug, To Ruth M. Waterman, Coventry, for a yarn coverlet,

To Olive Waterman, Coventry, for 2 do, To Henry Carpenter, of Fiskeville for a

beautiful piece of silver mixed satinett, To Mary S. Fiske, Providence, for a lace collar.

To do, for a lace veil,

To Mrs J. Tourtellott, Gloucester, for linen diaper,

To Misses Grant, for a wrought hearth

3

1

To Mary Parker, for sundries,

stool covers,

To Eliza Sarle, Cranston, for a lace veil, To M. R. Greene, for lamp mats,

To Octavia Greene, Warwick, feather fire screens, To Sarah C. Peck, for card racks,

To Phebe Shaldon, for a rug, To Mrs Rhodes, Pawtuxet, for a lace

To Miss E. Deane, Providence, for wrought lace caps,

To Miss Mary E. Willard, for imitation Chinese boxes,

To Eliza S. Chase, for handsome silk buttons,

To Miss Sophia Parkinson, for a coun-

To M. S. Levalley, Warwick, velvet Paintings.

To Abbot and Miller, Coventry, for white knitting cotton yarn,

To Nancy A. Philips, white spread To Barney Merry, two pieces striped

jean, excellent. To same, for two packages table cloths,

To Lydia Collins, patch work spread, To Sarah Ann Crooker, black face veil, To same, one wrought cape,

To Eliza Lawton, one white wrought gown,

To Eliza Stevens, one white lace veil, To M. D. Cooke, Providence, I sampler, 0.50

To the Dorcas Society, Newport, for one box of sundries, containing more than 180 pieces.

To Altha Richmond, Bristol, patchwork

To II. M. H. Grieve, for five pair cloth

To Mary Harris, for the best piece blue broad- premiums be offered for wrought buttons of silk cloth 3-4 wide, 22 yards long, the Society's first and worsted; and for wrought mitts, in quantities; and that, hereafter, all fancy and ornamental articles, presented for premium or sale, at the exbibition of this Society, must be made of American materials, if such can be obtained. All which is respectfully submitted, by

WILLIAM E. RICHMOND, For the Committee.

RAW SILK AND MULBERRY TREES,

[A report of too great length for this paper, was made by the Committee, embracing some facts and statements, believed to be useful in reference to this important branch of industry. In conclusion the Report says]

The Committee regret to have to state, that there is a great falling off this year, compared with the last, in the exhibition of raw and sewing silk. At the same time they notice with satisfaction, an increased attention to the cultivation o the Mulberry Tree in this state. This is the foundation of the silk business, and the rearing of worms will follow, as a matter of course, the cultivation of the tree. Most of those who presented specimens last year, are ready to continue and extend the experiments, as soon as they can find a market for the material produced. In silk there was but one specimen offered

this year, a very fine sample, remarkably well handled. The quantity was small, being 21 lbs. of raw silk, for which the Committee award.

To Miss Maria S. Levalley, of Warwick, \$5 To the same, for small samples of sewing silk

and cocoons. To Charles Dyer, on certificate of the rearing of more than 10,000 mulberry trees, from seed

planted the 17th of last April, at the Mulberry Grove Nursery, in Cranston. The first premium,

Elisha S. Johnson, of Wickford, for 4000 Mulberry Trees, from seed this season, sowed the last of April,

Lemuel Burge, of Wickford, for over 4000 Mulberry Trees, raised this season, 3

Benjamin F. Spink, of Wickford, for 4500 trees, sowed the 1st of May, 3

Rhodes Budlong, of Warwick, for 1700 Trees accidently raised from seed in manure, taken from the fowl yard,

Which is respectfully submitted by BENJAMIN F. HALLETT.

For the Committee.

HORTICULTURAL SOCIETY.

The Pennsylvania Horticultural Society held a special meeting on Wednesday evening last, at the Washington Hall, for the purpose of exhibiting to the members and their friends the Fruits of the season, the growth of our city and vicinity. The notice was short, but the collection brought to the room was extensive, and gave great satisfaction.

Charles Chauncey, Esq. sent several Lemons, of a very large size and flavor, raised by himself; Pound Pears, very large Apples, and the beautiful Lady Apples (pomme d'api).

The collection of Peaches was truly grand. Mr Bates, of Camden, New Jersey, the well known extensive and successful cultivator of fruit.

sent a quantity of his fine white free-stone Peaches (seedling,) in high order, tender and luscious; and Rodman's Cling. Heath Peaches, from Mr George Pepper. Do, for preserving, by Mr M'Arano, The Committee beg leave to recommend that | Several other parcels from different persons, not

known. Mr Fred. Fox, of Kensington, and Mr Jacob Pierce, of Philadelphia, sent parcels of their field, N. J., fair and free from knots. seedling free-stone Peaches, which were much the garden of the Friends' School, south Fourth-

Pears. - Doycune Gris, from Mr Maupay. The favorite Seckle Pear, from Mr M'Arann, Mr Pepper, and from several others. The Petre Pear, by Mr Carr: the original tree bearing this delightful fruit was sent to the late John Bartram by the eighth Lord Petre, who died in 1742; the tree still lives in a thrifty state, and the fruit preserves he high character it has hitherto obtained. Mr Carr also sent a pleasant tasted seedling Pear.

Grapes .- Several sorts raised by Jacob S. Waln, Esq. from foreign stocks. Isabella Grape, from Feorge Vaux, Esq. all in high perfection. The

thers, names not known.

The variety of Apples was great and the speies excellent. The monstrous Cat-heads, a vaety of the fall Pippin, attracted particular attenon, from their great size; several of them weighl a pound each. The genuine fall Pippins were early as large and very beautiful: these were nt by several persons; those of Dr Spence ere particularly noticed. The Bell-flowers of at excellent fruit,-The Ashmore Apple, from vet dies rich ! mes E. Miffin, nurseryman, Wrightsville, York unty, Pa., was greatly praised: they came from

Broad Creek, Hartford county, Maryland: lor, deep lively red, streaked; taste, slightly but asantly acid; flesh, tender; above the common e: besides being a very excellent dessert and inary Apple, it is valuable for drying, and keepuntil mid-winter. Numerous and excellent he varieties of our Apples are, the Ashmore ple premises to be a valuable addition to the sk, combining a beautiful exterior and excel-: quality.

The Yellow Egg Plum of Mr M. Lawrence, of Fin township, which were first shown at the piceding regular meeting of the Society, were a in produced : they were large and brilliantly ow, and would have done credit to Albany. Mease sent blue Pruen Plums, of good flavor, Mr Smith excellent Butter Pears.

Ir Copia, of Pine street, sent Quinces, Butter Prs, and late Pears, the growth of the same r -a Quince. The Butter Pears weighed nily a pound; last year they weighed 1 lb. 6 oz. in e presence of several persons.

'uliuary Vegetables .- By Mr Engleman-ima selv large hard head Cabbages, strings of large Onions, very fine red and white Celery, Salsify, a foot or more long. By Mr Barlo -Egg Plants, which were weighed and found to alance 9 lbs. 2 oz. Do, by Mrs M'Mahon; weighed II lbs. 2 oz. Several more were acily of the same bulk.

elons .- Water and Nutmegs, from Mr Bates, Fillent, and of a brilliant red color. They append to be of a new sort, being very tender and

liarly sweet.

With ractical gardeners present.

Quinces were sent by Mr Cellins, of Haddon-

The tables were ornamented with a variety of and deservedly admired. The last were raised in elegant trees and shrubs, in pots and tubs, and with a tasteful display of cut flowers, among which the superb Dahlias of Professor Gibson were conspicious. Mr Carr also exhibited specimens of that singular flower, the Aristolochia Labiosa, from Brazil.

From the Oxford, N. C., Examiner.

FARMERS' ARITHMETIC,

Profits of Agriculture-If the great Franklin had ever lived in the country, his observing eye would have noticed, and his discriminating judgment have solved the following difficult problems:

1. Farmers are more imposed on than any other class of the community; they pay nearly the Bland Grape, Alexander or Tasker Grapes, from whole expense of the State Government; are sometimes oppressed by onerous measures of the General Government, and by the commercial regulations of foreign nations; never have much money, yet every industrious, prudent farmer grows rich l

2. The mechanic receives his 75 cents or a dollar a day, yet remains poor; the farmer earns his seventeen cents a day, and grows rich!

3. Merchants, Physicians, Lawyers, and others, r Carr were also large and fine. The Hay's receive their thousands per annum, and die poor, pples, from Mr M'Arann, were a good sample of while the Farmer scarcely receives as many tens,

How are these strange results produced? All calculation in dollars and cents fail to account for original tree on the farm of Mr John Ashmore, it .- Those who are determined to bring every thing to the standard of dollars and cents, pronounce agriculture to be wholly unprofitable, when the fact that nearly all the wealth of the country has been obtained by agriculture, stares them in the face. In the opinion of these calculators, agriculture is the proper pursuit of such only as have not sense enough to pursue any-

The mischief which such calculations are doing in our country, first induced me to call the public attention to the Farmer's Arithmetic. But having been more accustomed to handling the plough than the pen, I am altogether unable to do justice to the subject. If some abler hand would take it up, dispel the mist now resting on the subject, and show us clearly the whole truth of the matter, it would be sufficiently good to compensate the labors of the ablest patriot.

When the mechanic lays down his tools, and the professional man is idle, they are sinking, because their expenses are going on and their profits are suspended. Not so the farmer: while he sleeps, his crop grows and his stock continues to increaso, and when he spends a social evening with his neighbor, everything continues to advance. The Farmer's Arithmetic shows that the farmer grows rich by saving while others continue poor by spending. Others have first to make money and then give it for meat, drink, and raiment, while the farmer obtains all these at home. If he wants a fat lamb or pig, he has it without losing a day amden, N. J. The Water Melons were truly or two in trying to buy one. If he wants a new hours all observers, and call forth the praises of comparing his money with that of others, who only by must give it all for things which he has without

buying! Surely a farmer may without a sigh resign to others the gaudy fabrics of foreign artists, while he is clothed by the labor of the hand that sooths his cares and strews with pleasure his journey through life. When I see a farmer appear in company genteelly dressed in homespun l think of Solomon's description of a good wifeher husband is known in the gates when he sitteth among the elders,' and most cordially do I congratulate the possessors of such a prize.

JACK PLANTER.

SPERM OIL.

Few people are aware to what extent the adulteration of this important article of comfort is carried by some of those who offer it for sale. There is a kind of oil known by the name of Whale, worth about 30 cents per gallon, which may readily be made to resemble the Spermaceti in color, smell and general appearance, but is by no means suitable to the purposes to which the latter is applied. These two species of oil will easily amalgamate, and the mongrel article so composed is daily presented to the public under the name and at the price of good Sperm Oil. There is abundant reason to believe that more than three fourths of the oil sold in this city and vicinity is of this description. Indeed, there is no place in the Union where this disgraceful practice abounds so extensively as in this, and our correct traders are frequently made to feel how much the character of trade has suffered abroad in consequence of it. But the present year far transcends all former ones in the amount of this business. Numerous establishments have been formed where Whale Oil is refined and mixed with Sperm to an extent bitherto unthought of. To form a faint idea of the amount of money filched in this way from the pockets of the community, let us suppose the average sales of Whale Oil per week to be 50,000 gallons, which is an exceedingly moderate calculation. If the cost of this be 30 cents, and the price at which it is sold 75 cents, we find an excess of more than \$20,000 paid weekly by the consumers of the article-for what? For the benefit solely of those by whom the community is defrauded. Such imposition deserves exposure and demands the unqualified reprehension of every honest citizen.

It may be that in these times of severe retrenchment, the oil thus adulterated may burn sufficiently well for those who are willing to sacrifice a pertion of their convenience for the purpose of reducing their expenses .- Oil of this character may likewise suit those retailers whose customers are satisfied with an inferior article at a proportionate price. But wherefore should such individuals submit to the inconvenience of the practice, and yield the advantage of it to others? Why not procure the Sperm and the Whale themselves and mix them to their own satisfaction? Both may be had pure, by due precaution on the part of purchasers, and every man may supply himself with both or either, and mix or use them separately at his own discretion. Some people there are who would prefer a genuine article, and if such excoat, the industry of his wife supplies it. In peet to gratify their choice, they will find a pecushort, he wants but few, very few things which he liar necessity at the present time of looking well cannot obtain on his own farm. Why, then, into the pretensions of those of whom they purpeet Polatoes, from different persons. Those should the farmer repine because he has not the chase. For many of these my lecture will perof r Bates were so large and handsome as to money to buy abroad? or measure his wealth by haps be in vain, and they will at last be taught EXPERIENCE.

N. Y. Mercantile Advertiser.

NEW ENGLAND FARMER.

BOSTON, FRIDAY, OCTOBER 22, 1830.

From the Gardener's Magazine.

On the Birch Rind of the American Indians, and the uses to which it might be applied in gardening. In a Letter from Mr Hav-Thorn, of the Honorable Hudson's Bay Company, to Mr Baillie of Dropmore Gardens ; with a Note by Mr Baillie.

Str-llaving some time ago spoken to you on the subject of birch rind, and suggested its application in horticultural practice, I venture in a simple manner to relate what I have witnessed with regard to the usefulness of this rind, and in my humble opinion the many ways in which it might be applied to our gardens.

The settlements of the Hudson's Bay Company are supplied with this rind by the Indians. The Europeans never venture to peel it from the tree, for in this process much skill and ingenuity must be displayed, otherwise the trees soon become weak, and in a few years perish.

It is part of the Indian's study, particularly of the inland tribes to watch with care the growth of this beautiful tree, the height of which may be judged by the circumference, as the first-rate trees measure from 18 to 20 feet round. The rind on an average is half an inch thick, and this is reduced in a most scientific and easy manner by a people whom we are accustomed to call savages. They begin by separating the outside, rough and knotty parts from the more delicate, which, when prepared, they use for tentings or tent covering, small and large baskets and various other utensils. The rind next the outer bark is principally used for large and small canees; the latter will carry 20 cwt. They also construct measures of it, which will hold from one to two bushels, and are exceedingly light and durable. But as that part which is used for tenting appears to me of most importance to the horticulturist, I will endeavor to explain how the tenting is formed, and its use among the Indians, and leave it to the decision of the amateur and gardener how far it might be useful in our gardens. I have frequently seen the Indian, his wife and children, forming this covering, which generally consists of four lengths, each length 12 feet, and the width 4 feet. The making is simple, but no European was ever known to me that could finish off one to answer the purposes with the readiness and nicety of the natives. The women sew the lengths together with roots which the children procure in the woods: these undergo the process of barking, cleaning, and dividing. The men frame each separate length at both ends, so that any convenient length or breadth might be obtained. The utility of the rind tents is acknowledged by the hunter and traveller of North America. They are used throughout the year; but during the hot months of June, July and August they are found particularly comfortable, and are easily removed from place to place. The rain may descend in torrents, but all beneath are safe from

I have seen an Indian tent forming a circle of 60 feet, and 10 feet high, covered in the short space of half an hour; so that flower beds, containing choice roots or plants might thus be defended from frost and heavy rains, particularly the latter, which do so much injury to our half hardy shrubs and trees. There are many other purposes in gardening to which this rind might be ap-

plied that will readily suggest themselves to practical men.

My motive in bringing this article into notice is to serve the public, trusting that it will one day or other become a national benefit.

I am, sir, &c.

HAMLET HALSAY HAWTHORN.

Ma Baillie, Dropmore Gardens.

The following is an extract from Mr Baillie's

Str-Having mentioned this article to several of my friends and acquaintances, they, as well as myself, were of opinion that the rind might be usefully employed in horticultural practice, and applied with advantage in a great many ways not enumerated in the above communication. From many that suggest themselves the following are abstracted:

Ist. As a durable substitute for the pertable marquees in use in the pleasure grounds of British gardens; the materials of which, as at present constructed, being inadequate to the purpose to which they are applied, to repel heavy rains and intense sunshine. These tentings may also demand the particular attention of the florist, as affording in my opinion excellent material for protecting tulip beds from heavy rains in winter, by rolling them up and down, as circumstances might require. To stages of carnations, auriculas, &c, they might be applied with advantage either for shade or shelter.

2dly. Ranges of pine, and melon pits and frames might be safely defended from rain and frost by a roll of this kind, as also pots of alpine and other plants that suffer more from wet than cold during our winter months.

Portable copings for garden walls might also be constructed of this article, which would defend peach and apricot blossoms from rain and spring frost. This rind might also prove a good substitute for the wicker protections now in use for half hardy trees and shrubs. In the kitchen ble in everything else. The committee were no garden its utility is also apparent. Beds of such vegetables as are readily injured by frost, by being previously arranged, and planted so as to admit of two rolls of this kind, of 4 feet wide and of any given length, being run along a few hazel or rods, arched across them; rows of early peas and beans; beds of cauliflowers, broccoli, lettuce, potatoes, &c, might be readily and securely protected in this way; and a few square yards of this rind, placed in a favorable quarter of the kitchen garden would assist in ripening abundance of tomatoes for a large family and obviate the pernicious practice of planting them near fruit trees, &c.

Another warning to Fruit Stealers .- A fellow of the name of Foster, was committed to jail in Roxbury the week before last, for stealing fruit from the orchard of Mr Aaron D. Williams. He was detected shaking the trees, regularly, on the Sabbath, was arrested in behalf of the commonwealth, and for want of bail has been committed to prison, where it is not unlikely he will remain for some time. The business of stealing fruit from orchards has been carried on so largely of late, by a few worthless vagabonds, that the marketmen think they have generally more fruit stolen on the Sabbath, than they sell during the week.

Cure for the Cholera Morbus or Bowel Complaint. -One ounce of cinnamon water, one grain of pale red, and transparent.

ipecacuanha, 35 drops of tincture of opium, one drop spirits of lavender, and two drops tincture of rhubarb, to be taken at once, and the complaint will be instantly relieved .- Long Island Star.

MASSACHUSETTS HORTICULTURAL SOCIETY. Saturday, October 16, 1830.

FRUITS.

Some very fine specimens of fruit, were this day exhibited, although the display did not quite equal in its variety, the very extensive exhibition of the Saturday preceding.

Pears.—From John Prince, Esq. were received specimens of Passe Colmar, true, and in eating, (prematurely); Winter Auchan, from Flushing, a very long green pear, not in eating; Oliver's, a large pear, supposed to be the Spanish Bon Chretien, not in cating; 'Dr Hunt's,' 'Connecticut,' (unnamed,) and the Beurrée du Roi, a pear of good flavor. From John C, Gray, Esq. a pear called in the American Gardener, at p. 132, a 'striped variety of the Moorfowl Egg,' called by others the Striped Dean, and the Culotte de Suisse, and Verte Longue Panachée, of some other authors. From Mr Manning, a pear cultivated in Salem, as the Capolette or Muscat Vert; (doubtful.) From M. Downer, Capiaumont Pears. From Hon. Benj Crowninshield, of Danvers, specimens of a large round pear, very good, name unknown. From S G. Perkins, Esq. Duchesse d'Angouleme, 1emarka bly large and beautiful, but not in eating. (Thi is probably the first specimen produced in Ameri ca.) The form and appearance of this fruit agre well with the figures in the Transactions of the London Horticultural Society and Pomelogica Magazine. For a more particular account of thi pear, see Mr Perkins' note subjoined; also a fin pear received by him from England, under the name of Charles d'Antriche; in size and forr like a St Michael. We have seen three varietie of pears, each bearing alike the name of Charle d'Autriche, and as unlike to each other as poss prepared at the moment to decide confidently a to the correctness of the name of this fruit, bu it seemed, however, to be the impression with a least one of them, that this specimen was rightly named. From Mr R. F. Phipps, of Charlestown specimens of the Andrews Pear. Peaches .- Late Clingstone, very fine, from Joh

Prince, Esq.; this appears to be the same variet called the Hyslop.

Apples .- By Mr Jonas Monroe, of very larg size, from the garden of Mr James Vila, of Bec ford; tree produced 20 bushels. From Mr F Weston, Jr, of Duxbury, apples from a scedlin tree, nearly 100 years old, which has borne in single year, 76 bushels of sound ripe fruit: nam unknown. From Mr R. F. Phipps, Russet an Baldwin Apples, both from a limb of a Baldwil tree. Some of these were in their appearance an intermediate grade between the Russet an Baldwin,

Grapes.-Lombardy Grapes, from Mr R. F. Phipps. Catawba Grapes, from Mr N. Seaver, c Isabella, from Mr D. Fosdick, C Roxbury. Charlestown; and from Mr Downer, four varie ties, namely, Isabella, Schuylkill, Muscadel, Ell senburg, or Elsenborough, free from pulp, one o two seeds in a berry, and of good flavor; and sample of true Bland Grape, free from pulp, on and two seeds in a berry, and good flavored, colc

Strawberries .- Fine specimens were exhibited by Mr Haggerston, of the Pinc Strawberry.

Mr Downer also presented samples of fine large Sharbarks, taken from scions set in the spring of 1826, in a pig or common nut tree, and samples of good nuts, from a tree planted 24 years since, from a very large nut from Ohio; has been in bearing 4 years.

Mr Samuel Stillman, of Roxbury, forwarded to the Society, specimens of the grub producing the Canker Worm; these insects were found in motion, 15th Oct. 1830, but in 1829, they did not commence their movements till the 24th.

WM. KENRICK.

NOTE REFERRED TO ABOVE. To the Committee on Fruits, Horticultural Hall.

'Mr S. G. Perkins sends to the Committee on Fruits, two Pears, taken from trees sent him from Europe. The large Pear came to Mr Perkins from France, under the name of " Duchesse d'An-

'The small Pcar came from England, under the

goulenie."

name of the 'Charles D'Autriche.

' Mr P. will thank the committee to inform bim whether these fruits are correctly named. Mr P. sends a description of the large Pear, taken from Pirolle, p. 70.

'ANGOULEME PEAR.'- Fruit, larger than the Dovenne, nearly the same form. Skin, yellowish, ed next the sun. Flesh, melting, very fine texare, and sprightly; the flavor more delicate and romatic than the Crassanne.'

'This precious pear, which keeps until Decemer, was found a few years since, by Madame maillé, in a hedge near Angers. The tree is a eat bearer.' [Noisette, 1823,]

The specimen sent, measures eleven and three nths inches, as it is the only one that grew on e tree.'

BRIGHTON CATTLE SHOW,

The annual exhibition of Cattle, Ploughing atch, &c, was held at Brighton on Wednesday it. The day was uncommonly fine, the collectn of people very large, and the show, particurly of fine cattle, about equal to that of most mer occasions.

We have time and room this week for but a etch of the proceedings. The pens were all ed with LIVE STOCK of the first quality and learance; among which we noticed 17 Cattle, lutiful heifers, calves, &c. of the Holderness, nton and Admiral stock, belonging to the Hon. in Welles, of Boston, a fine roan heifer, five this Durham stock, belonging to John Prince, 17., a fat ox from D. Farr of Southborough, ighing 2477 lbs., 2 fat oxen, from S. Billings, Hatfield, one weighing 234 lbs, the other 32 lbs. 3 fine cattle from J. W. Watson, of nceton, a fine Bull, by Coelebs, dam Flora, an borted Durham Short Horn, from T. Williams Noddle's Island, also 2 fine heifers, by Mr Illiams, one by Bolivar, the other by Coelebseifer by B. P. Phillips, of Lynn, a heifer calf fin Wm. Furness of Medford, weighing when nonths and 3 days old, 518 lb., a fine Milch r from John Ballard of Framingham, a beifer by S. Conant of Stow, two heifers, from J. Isham of Westborough, one weighing 1085 lbs. other 951, a beifer from J. Birt of Camblge, a large cow from Jeremiah Fitch, of Bos-8 years old, weighing 1633 lbs., a heifer from Dudley of Brighton, 2 heifers from N. Brown of Itham, a heifer and calf from S. Higginson of we are obliged to defer till next week.

Cambridge, a Milch cow and yearling from S. Wyman of Shrewsbury, from A. Washburn, 2d of has at length been received here. We have not Bridgewater, 1 Bull 2 years and 7 months old, yet had time to examine it, but have no doubt it weighing 1494 lbs., a bull from S. Morse of Roxbury, one fourth Admiral stock, a fine Bull calf from L. Baker of Bloton, a Bull calf 6 months old, from N. Johnson of Medford, weighing 641 lbs. a Bull from J. W. Watson of Princeton, 1 year and 5 months old, weighing 989 lbs, from J. Estabrooks of Reyalston, 2 fat oxen, 6 years old, one weighing 2233 lbs., the other 2291 lbs.a fine heifer from Seth Davis of Newton-a heifer from J. Stone of Newton-a heifer from A. S. Jackson of Newton-a heifer from S. Fiske of Saugus-a cow and yearling from R. Sanborn of Charlestown-a cow, two heifers and a bull calf from Mr I. Bemis of Waltham-a beautiful pair of twin steers from Wm. P. Endicott of Danvers-a cow from Asa Wyman of Roxburya cow 7 years old from N.Saunderson of Waltham -a heifer from Luke Fiske of Waltham-from Joel Adams of Newton a heifer-from T. Taylor a fine cow and two calves-a beautiful beifer from Rev. II. Colman of Salem-a fine cow by Coelebs from A. Aspinwall of Brookline-from S. Bowen of Adams 2 fat cattle-from Leander Hosmer of Bedford a milch cow-from John Perry of Sherburne 2 Bulls, 2 yearlings, and 2 fine calves-a fine Bull from C. Sanger of Sherburne, 3 pigs from E. Smith, Jr-from A Rice of Worchester 1 Bull 2 years and 5 months old, weighing 1469 lbs-from B. Page of Shirley 1 Bull 18 months old weighing 1160 lbs-from S. Conant of Stow, 1 Ox 2 years and 6 months old, weighing 1456 lbs-from S. Ward of Charlton, 2 fat Oxen, one weighing 2312, the other 2278 lbsfrom P. P. Pierce of Lexington 7 native fat wethers-from E. Silsby of Boston 1 fine Dishley Ram and 3 Ewes of pure blood, all imported from Europe-from Eliab W. Metcalf of Cambridge one milch cow-from Asa Rice of Worcester, a fat ox 7 years old weighing 2380 lbs. a heifer from J. Smith of Newton-a fine heifer, and some superlative swine from John Mackay of Boston, viz. 2 Boars, 2 very fat pigs, 2 store pigs, and 1 sow and 6 pigs that we think were as sleek and plump and as fine an exhibition of the sort as a connoisseur ever examined—from J. Robbins of Watertown 1 sow and 2 store pigs-from A. T. French of Milton, 6 fat native wethers-from T. Williams of Noddle's Island, 2 Dishley Ewes and 2 yearling Rams got by Col. Jaques' imported Dishley Ram-from S. Jaques, I Dishley Ram, a fine imported animal that received the Society's premium of \$30, last year—from J. Prince 1 fine Ram and 2 Ewes from imported Dishley stockfrom F. Winchester of Southborough an uncommonly large and fair colt, two years old, which weighed 1055 lbs .- from E. Sherman, of East Sudbury a 4 years' old gelding-a cow and calf from II. J. Kelly-Sir Isaac Coffin's Cleaveland Bays, a present to the Society, were exhibited.

Hearth Rugs were exhibited that were manufactured by Miss Jane T. Robinson, Miss Susan W. Lovett, of Beverly, and Miss Eliza Vinton, of West Cambridge, a very beautiful Diamond Flat by Miss Aurelia White, of New Braintree, also fine Palm Leaf Hats, Capes, flannels, painted carpets, manufactures in leather, for, and fancy articles from various sources.

Further details with regard to the Ploughing Match, premiums, address, toasts at the dinner,&c.

Mr Prince's long expected Treatise on the Vine will satisfy public expectation.

Large Squashes.—We have received from E. EDWARDS, Esq. of Springfield, three Valparaiso winter Squashes, one weighing 45 lbs., the other two rather smaller-they are a part of the produce of two seeds, which yielded 36 squashes, of the average weight of 22 lbs,-the whole weighed 792 lbs. They will be exhibited at the Horticultural Hall tomorrow, and the seeds distributed among the members of the Society, at the request of Mr Edwards.

To Correspondents.—Several valuable communications are deferred till next week.

Ornamental Shrubs.

Just received at the New England Seed Store, No. 52 North Market Street, a small collection of choice Ornamental Shrubs, faithfully packed in moss for transportation, at the following reduced prices:-Mezereon, (filled with flower buds: will blossom in

50 March in the open air.) Venetian Sumach, (extra size) 1.00 Snow Balls. 50 Kalmia latifolia, (very beautiful) 50 Scarlet Trumpet Honeysuckle, monthly flowering, 50 Italian Fragrant Honeysnekle, 50 Persian Lilac, (purple fragrant)

Corchorrus Japonicus, (very showy yellow blossoms) Syringa, (white fragrant) Fig Trees,

Double Flowering Almonds, (beoutiful, extra sized, vigorous plants.) Roses-Velvet Rose,

Damask Rose, English Double Red Rose, (beautiful) Striped Rose, red and white, Royal Rose, (very large) Dark Marbled Rose, (very double, beautiful.)

Burgundy Double Rose, Blush, Cabbage, or 100 leafed Rose, Four Seasons Rose, (beautiful, double,)

Scotch Single, (white, with a little red, early, small and singular,) Pennsylvania semi-double autumnal Flowering Rose,

(white, with delicate blush) Yellow Single Rose, (very beautiful,) China Primroses. Tradescantia virginica. African Blue Lily,

Indian Shot, (canna indica.) The above are all extra sized, vigorous plants, and will blossom the next season, if properly managed-they are labelled, and faithfully packed in moss for transportation to any distance. Autumn is the best season for transplanting

them, to insure a vigorous growth, and blossoms the ensuing season.

BRIGHTON MARKET-Monday, Oct. 18. [Reported for the Chronicle and Patriot.]

At Market this day 3579 Cattle, 6323 Sheep, and 1117 Swine. The severe storm which commenced about 10 o'clock, probably prevented much business being done. From 1500 to 2000 Cattle, 800 to 1000 Sheep, and several hundred Swine, remained unsold at the close of the day.

We shall expect quite a market day tomorrow, Tuesday. Prices-Beef Cattle-From \$3,25 to a 4,50; probably about 20 were taken at 4,50; one yoke of Mr Sweetser's prime Cattle were purchased by Mr T. W. Bennett, at 5,50. The barrellers did not pay so high as last Monday; they appeared to fix the price for Mess. \$3,50, No. 1, 3, No. 2, 2,75.

Sheep .- We noticed about 100 prime wethers, ('on drift') which cost about \$3,75-4 was offered for them. We also noticed one lot taken at 2,25; also lots at 2, 1,75, 1,50, 1,42, 1,33, and 1,25,

Swine .- We noticed one entire lot of nearly 500 taken at 3½c; one lot of 50 Barrows, old, at 4c; one lot of 30 Sows, old, at 34c; one lot of 30 selected Shoats, Sows & Barrows, at 4c; one lot of 70 Shoats, Sows and Barrows, at 34c-retail price 34 a 4c for Sows, 44 a 5c for Barrows.

AUTUMN WOODS.

BY BRYANT.

Ere, in the northern gale, The summer tresses of the trees are gone, The woods of Autumn, all around our vale, Have put their glory on.

The mountains that infold In their wide sweep, the colored landscape round, Seem groups of giant kings in purple and in gold, That guard the enchanted ground.

I roam the woods that crown The upland, where the mingled splendors glow, Where the gay company of trees look down On the green fields below.

My steps are not alone In these bright walks; the sweet southwest at play, Flies, rustling, where the painted leaves are strown Along the winding way.

And far in heaven, the while, The sun, that sends that gale to wander here, Pours out on the fair earth his quiet smile,-The sweetest of the year.

Where now the solemn shade, Verdure and gloom where many branches meet; So grateful when the noon of summer made The valleys sick with heat?

Let in through all the trees Come the strange rays; the forest depths are bright; Their sunny colored foliage in the breeze Twinkles like beams of light.

The rivulet, late unscen. When bickering through the shrubs its waters run, Shines with the image of its golden screen, And glimmerings of the sun.

But, 'neath you crimson tree, Lover to listening maid might breathe his flame, Nor mark within its reseate canopy, Her blush of maiden shame.

Oh, Autumn! why so soon Depart the bues that make thy forests glad: Thy gentle wind and thy fair sunny noon, And leave the wild and sad.

Ah, 'twere a lot too blest Forever in thy colored shades to stray; Amidst the kisses of the soft south-west To rove and dream for aye.

And leave the vain low strife That makes men mad--the tug for wealth and power, The passions and the cares that wither life, And waste its fittle hour.

NEW ZEALAND.

The fifth volume of the Library of Entertaining Knowledge contains a very interesting account of these islands; from which we extract the follow-Journal and Tribune.

Of all the people constituting the great Polynesian family, the New Zealandershave, at least of late years, attracted the largest portion of public atten-tion. Their character exhibits, with remarkable boldness of relief, many both of the vices and virtues of the savage state. They present a striking contrast to the timid and luxurious Otaheitans, and the miserable outcasts of Australia. The masculine independence they at once manifested in their encounters with us, and the startling resistance they offered to our proud pre-eminence, served to stimulate the feelings of curiosity with which we are now accustomed to regard them. The interest which they thus excite, is probably created, in a great degree, by the prevailing dispositions of our minds to regard with anxious attention any display of human power. The new Zealanders are not a feeble or timid people. From the days of their first intercourse with Europeans they gave blow for blow .-They did not stand still to be slaughtered, like the

They have destroyed, sometimes treacherously, always cruefly, the people of many European vessels, from the days of their first discovery to our own times ;-but it would be difficult to say that they had no justification in our aggressions, whether immediate or recollected—or at any rate that they did not strongly feel the necessity for self-defence on all commonest arts-their clothing is rude, their agriculture imperfect, they have no knowledge of metals, writing is unknown to them :- and yet they exhibit the keenest sense of the value of those acquirments which render Europeans so greatly their superiors. Many of the natives have voluntarily undertaken a voyage to England, that they might see the wonders of civilization :- and when they have looked upon our fertile fields, our machines for the abridgment of human labor, our manufactories, they have begged to be sent back to their own country, with the means of imitating what their own progress passion is war; and they carry on that excitement in the most terrific way that the fierceness of man has ever devised ;-they devour their slaughtered enemies. And yet they feel that this rude warfare may be assisted by the arts of destruction which civilized men employ; and they come to us for the musket and the sword, to invade, or to repel the invader. All these, and many more features of their character, shew an intellectual vigor, which is the root of ultimate civilization. They are not insensible to the arts of civilized life, as the New Hollander is ;-or wholly bound in the chain of superstitions which control the efforts of the docile Hindoo, and hold his mind in thraldom. They are neither apathetic as the Turk, who believes that nothing can change the destiny of himself or his nation: nor self-satisfied as the poor Tartar, who said, 'Were I to boast, it would be of that wisdom I have received from God; for, as on the one hand, I yield to none in the conduct of war, mamma? Her countenance, on such occasions, to so on the other I have my talent in writing, inferior sumed the appearance of the deepest melancho perhaps only to them who inhabit the great cities of Persia or India. Of other nations, unknown to me, I do not speak. The New Zealander knows his own power as a savage; but he also knows that the people of European communities have a much more extensive and durable power, which he is desirous to share. He has his instruments of bone, but he asks for instruments of iron; he has his club, but he comes to us for a musket. Baubles he despises. He possesses the rude arts of savage nations in an eminent then laying it upon the paper. degree: he can carve elegantly in wood, and he is tattooed with a graceful minuteness which is not devoid of symmetrical elegance. Yet he is not insensible to the value of the imitative arts of Europeans, and he takes delight in our sculpture and our paintings. His own social habits are refined—his cookery is coarse—his articles of furniture are rude. Yet he adapts himself at once to the usages of the best English society, and displays that case and self-confidence which are the peculiar marks of individual refinement. He exhibits little contradiction between his original condition of a cannibal at home, and his assumed one of a gentleman here. Add to all this, that he is as capable of friendship as of enmity,-and we shall have no difficulty in perceiving that the New Zealander possesses a character which, at no distant period, may become an example of the rapidity with which the barbarian may be wholly refined, when brought into contact with a nation which neither insults nor oppresses him, and which exhibits to him the influence of a benevolent religion in connexion with the force of practical knowledge.' The sight of European improvements in contrast Market Street.

with their own ignorance, affects them deeply. On such occasions they will burst into tears, and say, ' New Zealand no good.'

It is customary with this singular people to go through the same ceremony upon meeting their friends, as they do in parting with them. They join They did not stand still to be slaughtered, like the Peruvians by the Spaniards; but they tried the half an hour; during which time, they sob and how

strength of the club against the flash of the musket. in a most doleful manner. Even the sternest chief will weep so bitterly, that the mats they wear wi be soaked with tears. Yet this people, so passion ately attached to their friends, eat the flesh of their enemies, and consider it more delicious than an other food.

The captain of the ship Boyd in the year 180. flogged the son of a New Zealand chief; in conse such occasions. They are ignorant of some of the quence of which the whole crew were murdered, ex cept a woman, two children, and a cabin-boy. Thes were afterwards conveyed to England by Mr Berry of the ship Edinburgh, who found them out, an saved them at the risk of his own life.

'The last he recovered was a girl of two or thre years of age, the daughter of a Mr Broughton, Port Jackson, whose mother perished. This chil was found to be in the possession of one of the chief and although promised, was not brought to him ti after a considerable delay. 'This delay,' says A Berry, 'I afterwards had reason to believe proceed ed from the endeavors of the natives to deliver enabled them to comprehend were blessings. Their up in as decent a manner as possible. It was to erably clean, with its hair dressed and ornamente with white feathers, in the fashion of New Zealan Its only clothing, however, consisted of a linen ship which, from the marks upon it, had belonged to tl captain. The poor child was greatly emaciated as its skin exceriated all over. When brought to tl boat, it cried out in a feeble and complaining tor 'Mamina, my mamma!' This child was carried Lima in the City of Edinburgh, ship; and it was n till more than two years after leaving New Zealar that she was restored to her father in New Sou Wales. Although of so tender an age when t destruction of the Boyd took place, she was four while in South America, to recollect well the drea ful scenes of which she had been witness. 'I ha more than once been present,' says Mr Bern when the cruel but interesting question was put her, if she recollected what the Zealanders did to ! sumed the appearance of the deepest melancho and, without uttering a word, she used to draw l. hand across her throat. On further questions, s would say, with every appearance of the most pa ful feeling, that they afterwards cut her up, a cooked and ate her like victuals.'

Instead of signing their name to treaties, gran &c. they make an exact copy of the tattooing up their faces. This is better than the ancient Russi custom of daubing the whole hand with ink, a

When well treated they are a very kind and he pitable people. Several Englishmen, who have a cidentally been thrown among them, have been to toed, intermarried with them, and learned to hi their mode of life extremely.

Treatise on Bees.

Just received and for sale at the Seed Store connect with the New England Farmer, 52 North Market-stree A further supply of a Practical Treatise on the Manag ment of Bees; and the Establishment of Apiaries, wi the best method of destroying and preventing the depr dations of the Bee Moth. buttered and fine flavored; there is

COMMUNICAL ARONS.

FOR THE NEW ENGLISH FARMER.

LIST OF VALUABLE FRUITS.

Mr Fessenben-Agreeably to my promise, I send you a list of Pears selected from the old catalogue of Duhamel, arranged in the order in which they ripen. I should have sent this list to you before had not other avocations prevented my making it up. However I apprehend, from some observations which have come to my ears, that the connoisseurs will find it but a meagre lish to be presented at the present day to the public.—The letter F design rates these trees that are very good bearers. A LOOKER ON.

Brookline, Oct. 18, 1830.

end of June. Amiré Joannet, Petit Muscat, July.

Muscat Robert, middle July, this is a better pear than the preceding.

Citron des Carmes 1st August, this is the Green Chissel, or Made-

Cuisse Madame August, this is erroneously called Jargonnelle Epargne one of the best and largest pears of the season.

Blanquet (long stalk) this, with the Petit Blanquet, are good fruit.

Salviati highly musked and excellent,-rots soon. Orange rouge, 46

a good fruit for the season. Gracioli, 1st Sept. this fruit is not so subject as the ' Sum-

mer Good Christian Musquee' to crack. small, but excellent in light soil. Rousselet de Reinis. Fondante de Brest, delicate, but breaking, rather than

melting. Bergamotte rouge, middle Sept. should be gathered before it is entirely ripe; is excellent-but soon de-

Terte longue Mouille Bouche 1st Excellent fruit-adheres slightly to

Sept, to the branch. Beurré (brown) October, this most excellent pear is liable to

> erack in the open country, but in cities, and where it can be sheltered, it becomes by far the best autumn pear that is known-Old trees furnish the best fruit,-all soils suit it.

Doyenné St Michael Beurré blanc, this excellent fruit should be gather-October. ed before it is ripe and kept in the house till yellow; in our climate it requires shelter; in towns and back in the country, it is less liable to crack or blast than it is in the open country

on the sea board. ezi de Martigny, 1st October, melting, musked, and handsome

ezi de la Motte, Oet, and Nov'r melting good fruit.

ergamotte Suisse October, should be gathered before it is quite ripe, is melting and sweet, requires a shady situation.

ergamotte d'Automne Oct, and

crè Vert,

Nov, excellent fruit,

essire Jean Oct, this is the extreme of the breaking pears, the fruit is much estcemed by many; when raised on old trees it

becomes pale yellow and is excellast Oct, fruit is small, always green, flesh tender, agreeable and very sweet:

mseline November, small fruit, but very excellent. asanne Bergamotte this pear is subject to crack unless it be sheltered, it requires a good moist

a new variety of this fruit called the 'Poire d'Austrasié' or donble Crasanne which is not liable to crack and is an excellent fruit. Bezi de Cuissoy or ? tender, buttery flesh; when planted in November

Russette d'Anjou, a soil that is congenial the fruit is very fine flavored, a good fresh and

rather strong loam suits it best. Doyenné Gris, November, better than the St Michael, which it

resembles in form, it is however a distinct variety, juice richer, and more sugared, skin russet.

November, this fruit is excellent if planted in a F Merveille d'Hiver. good, dry soil and good exposition.

Nov. and Dcc. large melting, sweet and musked. F Marquis, F Eschassery, Nov. Dec. and Jan. small, but very good fruit, Ambrette, Nov. to Feb. middling size, but excellent fruit in

good seasons. Bezi de Chaumontel or & Dec. and this fruit is very superior and melting,

Winter Beurre January, in good stong moist loam, but woody

and hard in poor gravelly soil; it is in cating when it turns yellowish; this fruit should be culled out when it as-

sumes this appearance. Nov. to March. when this fruit is raised in cities or is F St Germain,

otherwise sheltered, or where it is in a suitable climate, it is the best winter pear known taking all its propertics into view; it requires a good moist loam.

Virgouleuse

Nov. to Jan. in cities, where this fruit may be raised with ease, it is one of the best, as well as one of the handsomest fruits that decorate the table in the winter season

Dec. to Feb. 7. this fruit resembles the German Mus-Royale d'hiver,

eat-is an excellent fruit, quite large and handsome. It requires a warm light soil. Muscat l'Alleman, March to May, this fruit resembles the preceding so

much in its appearance that it is often mistaken for it by the gardeners, the flesh is melting, buttered and musked

Dec. to March, for baking, Pound Pear. ditto. Tresor, Amour

this is one of the largest, if not the very largest pears that is known, and is preferable to the pound pear or the Catillac for baking; they weigh from 16 or 26 ounces.

Bergamette de Pâques, Jan. to Mar. a very good pear for the season. Colmar,

Jan, to April, this is an excellent and valuable fruit but it requires shelter, in our cities it might be raised with great advantage; when in perfection its flavor is very fine and the flesh is buttered and melting; we think it better suited to

the Philadelphia than the New England climate. Bergainotte de Soulers, Feb. & Mar. handsome and good pear.

Bergamotte d'Holland or ¿ fin. Ap. large fine pear, highly esteemed and Bergamotte d'Alenc Sarazin, keeps the year round

to Jun. well worth cultivating. is very good fruit when ripe both for table and baking.

BRIGHTON AGRICULTURAL REPORTS.

PLOUGHING MATCH-TWO YOKE OF OXEN.

The committee on the Ploughing Match with two yoke of oxen, Report-

That eleven ploughs were duly returned for this match, (a greater number than were ever before entered at Brighton,) that on calling the list at 9 o'clock, thirteen ploughs were offered for competition, but as only 11 lots were assigned, the two last on the list were under the necessity of retiring from the contest,

After a most careful examination, the committee unanimously awarded the first premium to Abiel Wheeler, of Concord,

as ploughman, Do. Jacob Jepson, driver,

2d premium, Samuel Hoar, 2d, of Lincoln, Do, as ploughman, Franklin Wheeler, driver,

3d premium, G. M. Barrett, of Concord, Do, as ploughman, Ira Fisher, driver,

The shortest time occupied by any team was do, 30 minutes; longest time do, 41書 do. Greatest number of furrows to any lot was 21, do. Fewest. do, do, the rest from the shape of the field, required to be little wider, and 23 furrows were made—the size of the lots were 20 rods long and 20 feet

wide, making about 24 rods to cach. Every plough used was of Cast Iron, and were chiefly of Tice's make (all that obtained preminm were of his patent;) the whole work was excellently well performed, and much difficulty was experienced in selecting for the three preminms: the committee would gladly have had it in their power to have awarded eleven,

It seems necessary to give their reasons for deciding as they did, and the rules they established-which were, that Cattle should not be hurried, as goodness of work was the object, to be ploughed not less than 51 inches deep, and the furrow slice to be cut narrow, and laid as flat in it as was possible-the reason of the committee was this, that in this part of our country very little land is cultivated in winter grain, and the object of fall ploughing, is to have the sward rotted for spring cultivation, and which they think best effected by this mode; as if laid on edge, and so left till spring, much grass comes up in rows in the hollow of the furrows-and on the flat method it is all equally covered, and no grass grows.

The committee well know that in England, (and probably in our own country, where winter grain is cultivated on sward land) they adopt the ridge furrow slice, as by this means, in broadcasting their seed, it naturally falls into the lowest part of furrows, and then by harrowing, the seed is deeper covered, and comes up in rows as they wish, giving a better chance for a free circulation of air in its after growth, and to clean, by hoeing if they wish, and also probably some saving of seed-having nearly the same effect as sowing by drill machine.

The first ploughing match planned in the United States, was at Brighton, in Oct. 1817. At that match, not one cast iron moved board plough was in This shows in the clearest possible view, the im- and lively; bones fine and small, pelts thin; wool by observing that not only from the impor-

ticularly the ploughing matches, have produced in this most important Agricultural Implement,

Respectfully submitted by JOHN PRINCE,

EBEN, HEATH, Committee. JOHN NORTHEND,

SHEEP AND SWINE,

The committee, who were appointed to award premiums upon sheep and swine, have attended the duty assigned them, and request leave to He REPORT-

That they proceeded to the discharge of their duty by first visiting the pens in which the swine were, and they found them well filled; and after a careful and thorough examination of their several points, qualities and properties, they awarded

To John Mackay for the best boar,

To John Mackay for the next best do, To John Mackay for the best sow,

6

2

2

To John Mackay for the next best do, To Isaac Robbins for the next best do,

To John Mackay for the best pigs, not less than two in number, nor less than four months old, nor more than eight,

To Isaac Robbins for the next best

They then visited the sheep pens, and were except the lot No 1, being about a rod shorter than much gratified to find in them several lots of Dishley or New Leicester breed of sheep. One fine ram and three ewes belonging to Enoch Silshy of Boston of pure blood, imported from England.

> Prince of Roxbury from the superior Dishley ram After great deliberation, they award as follow of Col. S. Jaques, and two ewe lambs 61 months old from imported stock.

Two Dishley ewes and two yearling rams belonging to Thomas Williams of Noddle's island. They were from the imported ram of Col. S. Jaques, who obtained the Society's premium the last year, and was presented this year for exhibition, aged 17, The committee were not insensible of the responsible and delicate situation in which some of its members were placed to discharge their duty satisfactorily, but after a minute and close examination of the sheep, their form, shape, size, and other peculiar properties they unanimouly award

To Enoch Silsby for the best Dishley ram, \$30 To Enoch Silsby for the best Dishley ewe, \$30

And it is with great pleasure the Committee observe the attention of gentlemen turned in favor of the Dishley slicep. They consider them an important and valuable acquisition to the country, and among the farmers' best stock. They will yield more profit than other sheep from the fleece, and their carcass is remarkably well calculated for the market.

There were two pens filled with native wethers. One lot was owned by E. T. French of Milton; and the other by P. P. Peirce of Lexington. Some of those, that were offered by Mr Peirce were large and in good condition, but there were not a sufficient number of such extraordinary quality as to justify the committee to award the premiums

> JOHN HEARD, Jr. SAMUEL JAQUES. Committee. THOMAS WILLIAMS,

Specific character of the Dishley or New Leiour vicinity, if in the State-and at the present cester breed of sheep. Heads clean, straight, and grade in the improvement of stock. show none but of cast iron was in our match. broad; bodies round, or barrel shaped; eyes fine

mense improvement that our cattle shows, and par- long and fine, well calculated for combing, an weighing upon an average eight pounds per fleece when killed at two years old. Fatten kindl and early, well calculated for market, thriving i pastures that will searcely keep other sheep, an requiring less food than others. Tolerably hard and vigorous.

> The committee consisting of E. Hersey Derby Daniel Adams, and Timothy Corey, to whom wa assigned the ploughing match with one yoke of ca

> That the land to be ploughed was divided int. lots of about 24 rods each.

There were cleven competitors for the prem ums-the ploughs generally of the improve kinds, and four of them were without drivers.

As the principal object of the ploughing mate was to show good work, and skill in the plougl men, they were particularly directed not to hurn their cattle,-shortness of time being no obje in comparison with good work-that attention would also be paid to the appearance, and docilit of the cattle, and the management of the driver-The ploughing to be not less than five inches dee and that narrow furrows, laid lapping on eac other would be preferred to wide and flat ones.

Under these regulations the first lot was plong ed in 33, and the last in 46 minutes.

The committee state with great pleasure, th the work in every instance was of a superi order, that that there was so little difference most of it, they found it extremely difficult to d A buck lamb, six months old belonging to John cide to whom they should award the premiums

1st premium, to Moses Whitney, of Stow, \$ G. P. Meriam as ploughman. Moses Whitney, as driver,

\$27,

2d, premium to Otis Meriam of Concord,

Same as ploughman, Abel Meriam, aged 11, as driver

\$18.

3d premium, to John Tilden, Jun. of N. Brie

Edwin Dunbar, aged 18, as ploughman, Same as driver,

\$11. E. HERSEY DERBY, Chairman, Brighton, 20th Oct. 1830.

COWS, HEIFERS, BULLS AND BULL CALVES.

The committee on Bulls, and Bull calves, Co and Heifers, were gratified to perceive the i provement in the value and appearance of t stock exhibited this year at the Brighton Cat Show. The number of fine animals with t spirit manifested by the great assemblage of ag culturists are pleasing indications of the i provement which exchement and honorable co petition will effect.

True it is that imported animals of great nat do not call crowds round a pen as was once t

ease-nor are fine animals so rare as in years pa But your committee think that our discerni farmers will be gratified to notice the advanc-

They will be pleased and led to useful pract

breads of cattle is an obvious benefit derivedbut their Report will shew a judicious selection of native stock is moving forward in equal pro- premium. gress, and to like advantage.

which seemed due to the occasion, your committee proceed to announce the premiums which they average of 18 quarts, and from her week's milk award as follows.

The committee award the first premium, on bulls to Mr G. W. Watson, of Princeton for his young Bull 1 year and 5 days old,

This was a cross from the Imported breed, and a beautiful animal, weighing 987 lbs. It will be seen that he but little exceeded the age proposed premium, for Bull calves.

But the committee were governed by the letter of the rules, and hope the distinguishing proportions of this animal may be retained as his figure enlarges.

The second premium they award to Mr Peter W. Page, of Shirley, \$20, for his Bull 19 months old, weighing 1160 lbs, partly of the short horned and partly of what is called the Westminster breed, so remarkable for the fleshy bind quarter, and said originally to have been of foreign deriration. This animal was of good size, figure and proportion, and may be exported to reward Mr Page's attention to stock.

To Mr Asa Rice, of Worcester, the third premum, \$10, for a fine Bull 2 years and five months old, a cross of Holderness or native stock. The leautiful color and hair of Holderness with many pproved qualities is remarkable in his descendants.

The committee recommend a gratuity often dollars o Mr Abraham Washburn, of Bridgewater, for is fine white Bull 2 years and 7 months old, veighing 1498. This animal was of large growth, good figure and well tempered, with many marks of imported blood.

He was a cross from that fine animal Denton. Vith the opinions of dislike held by our countrynen, it is to be regretted that the short horned tock so often incline to this color.

Having been driven in a short time to the show his animal appeared to less advantage.

There were several Bulls exhibited for premium eserving of commendation.

Mr George Merse, of Roxbury, exhibited one rhich excited the attention of the committee. G. vas a cross from Admiral and a valuable ani-

* 1.

For exhibition the show was indebted to Mr homas Williams, of Noddle's Island for a view of is full blood bull Cicero, 22 months old, of fine gure and promise. Col. Sanger of Sherburne sent fine animal of this description.

The show was in like manner indebted to Mr oh 1 Perry, of Sherburne, for a view of many of is high bred stock,

BULL CALVES.

To Noah Johnson, for his Bull calf 61 months ld, weighing 644 lbs. of foreign cross and good ppearance, \$15.

There were no other Bull calves that were thought deserve a premium. There was a Bull calf of enuted excellent breed for milk and of the same tock with Mr Saunderson's cow to which was warded the first premium.

But though fair to view your committee did not sel authorised to award a premium. This he may erhaps merit hereafter.

ON MILCH COWS

This cow was in her origin of imported blood Craving indulgence for these observations though not well explained, 6 years old, and had given 20 quarts of milk, and for some months an 11 lbs, of Butter had been made.

To Leander Hosmer, of Bedford, the second premium, This cow's milk made 14 lbs. of Butter a week.

and satisfactory evidence was given of her being a very productive animal; of native stock.

To John Ballard, of Framingham, the third

This was a well formed animal, and of valuable milch qualities. She had for several months yielded over 12 lbs, of Butter a week. Her stock was mainly native.

Other fine stock was exhibited for premium- a cow of Mr Aspinwall, of Brookline, was much admired and deservedly so-Her figure was beautiful, and her product might perhaps have equalled that of any other animal exhibited at the show : but an excessive feed on apples reduced her milk soon after calving. For some days she gave at the rate of 13 lbs. of Butter a week. She is said also to be in milk nearly all the time, and the committee doubt not that under other circumstances this animal may hereafter receive a high try is fully capable of being independent of the premium.

Mr Saunderson, Jun. of Waltham, Col. Metcalf of Cambridge, Mr Wyman, of Shrewsbury, Mr Adams, of Newton, Col. Taylor, of Quincy, Mr Bemis, of Waltham, and Mr Sanborn, of Charlestown, either for premium or Exhibition added to the merits of the show.

HEIFERS IN MILK.

The 1st premium to the Rev. Henry Colman of Salem.

This extraordinary Heifer was o native stock. She calved 2d of Sept, last, and had given at. some time when measured 16 quarts in a day, But it would seem the quality of her milk must be superior, for in ten and a half days there was had therefrom 181 lbs. of Butter and at other times on trial, 14 lbs. of Butter a week. Most of place. this appears by the certificate of her former owner Mr L. Hazelton, Jr, of Haverhill.

The second premium to Seth Davis, of Newton, or a native Heifer, 28 months old of great product and promise.

HEIFERS NOT IN MILK.

The 1st premium to Samuel Fisk of Saugus for a be autiful heifer out of Bolivar, \$12; her age was 8 months 5 days, weighing 584 lbs. and of fine

The second premium to Mr William Furness of Medford, for his native Heifer, \$10. Its age was 7 months and 3 days—Its weight 519 lbs. This four knots of woollen yarn, of a superior quality. Such animal did justice to the care taken of it and women were our mothers! How many of the younger promised to reward it.

To John Prince, Esq. of Roxbury, the 3d premium, for his Heifer, \$8. This handsome Heifer was of the short horn breed principally, with somewhat of the Bakewell and Aldergey blood.

To Mr Thomas Williams, for his Heifer from Coelebs called Isabella, the 4th premium, \$6. This was a high bred Heifer and wholly of imported Blood.

There were many Heifers that were ornamental to the pens both for premium and exhibition.

son, Esq. of Cambridge, Mr N. Brown of Waltham, To Nathan Saunderson, of Waltham, the first Capt. Mackay of Weston, Mr Watson of Prince-\$30 ton, Mr Bemis of Waltham, Mr Dudley of Brighton, Mr May of Roxbury, Mr Phillips of Lynn, Mr Swift of Newton, and Mr Williams, of Noddle's Island, (in a fine Heifer from Bolivar,) with others, gave many good instances of the improved condition of our stock.

> The productiveness of the Milch animals in fact appeared to your Committee to exceed what has formerly been exhibited. Of the improvement in the handsome show of Heifers mention has been made-Of the Bull there were some fine specimens; of Calves there were few and 1 premium only was awarded. This is not so much to be regretted as these animals are generally so loaded with fat as to make it difficult atso early an age to decide on form or properties.

All which is submitted.

JOHN WELLES. GEORGE SMITH, Committee. NATHAN ADAMS, Jr.

Silk .- A beautiful specimen of sewing silk was exhibited at the Fair of the American Institute, in N. Y., which was raised from the silk worms, and manufactured by Miss Louisa Hewlett, daughter of John V. Hewlett of Oyster Bay. These evidences of skill and industry prove that our counold world for this branch of manufacture.

To remove water spots from black crape veils.— If a drop of water fall upon black, transparent crape, it immediately turns it white, leaving a disfiguring mark. To remove this, spread the veil on the table, laying smoothly under the stain, a piece of old black silk. Then dip a camel's hair pencil into some good writing ink, and wet the white spot with it. Immediately, (and before the ink has time to dry) wipe it off with an old piece of canton crape or some thing of similar soft texture, taking care to rub it crosswise of the crape. This process will cause the water stain entirely to disappear, and unless the ink is allowed to dry before it is wiped off, no mark will be seen on the

Canal Tolls .- The Albany Argus, states that the tolls collected on the State Canals up to the 1st of September, amount to \$514,000 being about \$:100,000 more than were collected in the same period last year.

Worcester cattle show, took place on the 13th inst .-The following is from the Report on Manufacturers. A bed-spread made by Miss Caroline Henshaw of Leicester, when three years of age, came in close competition with a bed quilt, made by Mrs Sarah Dunsmoor of West Bolston at the age of \$4. Either of them would do great credit to persons in the meridian of life.

A good day's Work .- At Shutesbury, on Wednesday, Sept. 29, Mrs Bogue on the anniversary of her birth day, at the completion of her ninety fifth year, spun tifty portion of their descendants at the present day can equal this performance ?- Worcester Spy.

Corn and Cob .- A western paper says that it has been ascertained that 13 bushels of ears of corn ground will afford as much nourishment to hogs and cattle, as 9 bushels of shelled corn.

American Cotton goods are now exported to Calcutt with great profit, and materials for our manufactures are received here from there. The Raleigh Register says-In a letter written by the Rev. Mr. Dwight from Constantinople, to a friend in Utica, New York, he states that our Cotton goods are in good reputation at that place
—so much so, that the English actually put American Hon. Luke Fiske of Waltham, Stephen Higgin-stamps on their goods, to soll them to better advantage.

BERKSHIRE COUNTY AGRICULTURAL. EXHIBITION.

The Pittsfield Argus, of October 14th, contains Fair, lately held at that place.

'The remarks fellowing, with the accompanying reports, were furnished us by the Committee

of publication of the Society.

"The twentieth anniversary of the Berkshire Agricultural Society was held at Pittsfield during the past week. At no former anniversary has there been so splendid an Exhibition, or one so well calculated to strengthen the heart of the patriot, or cheer the feelings of the philanthropist. The man who beheld the first anniversary twenty years ago, and witnessed the late one, must rejoice at the rapid advancement of the Berkshire farmers in agricultural knowledge, prosperity and improvement; and who during the lapse of he these years, has marked upon these occasions the progressive improvement of public manners and morals, must indeed rejoice. It was calculated by those who are accustomed to large assimblages, who are used to count the drops of the wave of the multitude,' that near sir thousand p rsons were present. During both days there was no fighting, no disturbance of good order and instances of intemperance were extremely rare,

'The exhibition was honored with the presence of many gentlemen of distinction from abroad, particularly from the neighboring state of New York. The exhibition of animals was superior in number and quality to any ever before exhibited. The highly improved stock of Cattle exhibited by Col Dwight, attracted general notice. As there was no premium announced for a steck of Cattle the spirit which induced him to bring them forward is praise worthy. The exhibition of manufactures, although not so large as would be destrable, evinced an improvement in the excellency of their fabric.'

'The public exercises were held in the old Church on the second day. It is cause of regret that so many were excluded for want of room. The religious duties were performed by Rev. Dr Shepard. It is great praise to say that he maintained his well established reputation for piety and talents-the devout aspirations, the fervent supplications, which fell so eloquently from his lips seemed to alight on the hearts of his hearers. The address by Theodore Sedgwick, Esq was worthy of him, and honorable to the the Exchange flotel. A number of appropriate Society. He did not confine himself to minute details of small things, the speeks of farming, but he advanced his standard, he recurred to first principles—practical principles of action, conduct. She is and Take-May it be permanently establishand economy, well calculated to extend the presperity, to improve the condition, and promote the general happiness of the community. As the Address is to be published, it is not necessary to enlarge so much as inclination prompts. It was received by the audience with attention, and when concluded they testified their approbation by cheers, long, loud and hearty.

 The singing, led by Mr Billings, was excellent, particularly the beautiful Ode by W. C. Buy-

ANT, the Berkshire Bard.

'The performances of both days were enlivenod by a fine band of music, led by Major Hanson. Much praise is due Col. Nelson Strong, and the Assistant Marshals, for the preservation of good order, and carrying the arrangements into effect. to us for both her Senators in Congress, and many

Messrs Russell on the first day of the Fair three of the four of our own supreme Judicia was served up in their usual elegant and beautiful Tribunal, the Secretary of the Commonwealth style. On the second day, the Society dired at the Attorney and Solicitor Generals, the District the following notices of the Cattle Show and the new house of Mr John Pomeron, and were Judge, and last not least, the Mayor of Boston pleutifully regaled with the good things of the sprang from among us. He would therefore -cason, uniting of gance with variety.'

WORCESTER CATTLE SHOW.

Was held on the 13th inst. The day was cloudy in the ferencen and rainy in the afternoon, but notwithstanding these untoward circumstances, the collection of people was nearly on an average with the former similar exhibitious.

The number of teams which engaged in the Ploughing Match was twentyone, a greater numher than on the former occasion. And it was observed by the Committee that at no other time has the work been so well done. The President of the Society, Gov. Lancous made a brief and valuable exposition of the present state of the Society. A blassing on the proceedings of the daywas inyoked by the Rev. Mc Hiller. An address was delivered by Ina Barron, Us a of Oxford. This is commended as sound, practical and replete with good sense, cluthed in chaste and appropriate

kin Is was two he adred and fiftyeight animals, exclusive of the teams engaged in the Ploughing Match, of which one hundred and ninetyfour were neat cattle, and the remainder were the various descriptions of sheep and swine. This is a larger number than has been exhibited on any former occasion, with exception of the year 1828.

The exhibition of Butter and Chesse is highly commended. Of Choese there were lots from 44 different dairies, each lot weighing from 100 to 150 lbs. the aggregate of the whole being about 5000 lbs.

TALL RIVER CATTLE SHOW.

The last Fall River Monitor gives a detailed account of the Cattle Fnow and Fair which took place in that village on Tuesday of last week. The exhibition of manufactured articles was particularly gratifying, and the speciarcus of calico from Mr A, Robeson's manufactory and from the Taunton printworks might, it is said, vie in beauty with any of the English patterns. At the sale in the afternoon, a carpet containing ten yards was sold for \$16 to a gentleman of this town.

About 100 gentlemen partook of a dinner at toasts were given on the occasion among which

were the following.

By James Ford, Esa .- The Fill River Cattle ed. Iderally encouraged, and the fondest expectations of its projectors fully realized.

Dy Hon, James L. Hodges,-Oar Forms and --Owned and culavated by collightened freemen-may they never be subjected to the despotism of weeds, ignorance or indolence.

Hon, Russell Freeman, on being called inton remarked-that

'As this was an occasion for local exhibition, it might not be ill-timed, to include in a little local pride and boasting. Not to name the illustrious characters, natives of the Old Colony, who had. in times past, occupied the high places of the state and nation, our sister state of Maine, bone of our bone and flesh of our flesh, is now indebted The Dinner at the old established house of of her high judicial and other functionaries; and

propose--

The Old Colony-at the head of the Commonwealth in mental exhibition; not secondary in mere animal, vegetable or artificial productions.

By M. H. Ruggles, Esq. Vice President-The Farmers of Somerset and the citizens of Fall River-The latter may toil and spin, but their fields are not arrayed like one of these .- Providence paper.

Brooklyn Productions .- We have before stated that the Isabella grapes have been abundant and excellent throughout Brooklyn. We have seen e single Isabella grape from Mr Leavit's garder which measured two inches and eleven sixteenths in circumference, and perfectly round.

Figs have come to good maturity. We have seen a dozen perfectly ripe and very fine from

the garden of Mr Birch.

The Lima Cocoa Nut Squash has grown twenty two inches in length, in the gardens of J. Seamar and A. Spooner. At maturity they are pronounce The whole number of entries of stock of all ed good.—Brooklyn Star.

DOMESTIC COTTONS.

A writer in the Daily 'Advertiser, states that within the last three months, some thousands of tons of merchandise have been imported in our ships from Calcutta, three fourths of the bulk o which consists of raw materials for the use of our manufactories in this vicinity, and upon which the ship owners have a freight of twentyfive of thirty dollars per ton, and the importers twenty to forty per cent, profit-and that, what is more to be noted and wondered at, a part of these very cargies have been paid for by our cotton manufac tures, sold in Calcutta at a profit 15 to 25 pc. cent. The instances of profitable shipments o our coarse cottons to India, he adds, are not one or two, but many. The intrinsic superiority of our 'domesties' to the 'India cottons' is now almost as well understood and appreciated by the natives of Hindostan as by these of New Eugland.

Upon the same subject, the Salem Gazette says- It is but a few years since this action [carrying Cotton to Calcutta] would have been dectard no less absurd than that expressed by the corresponding phrase of "carrying Coal to Newcasile;" vet it hids fair to be soon one of frequent occurrence. The ship Rome, of this port, belonging to P. Dodge, Esq. on the outward voyage from which she has just returned, carried about 300 bales of American cotton cloths, which it is well understood, paid a high profit in Calcutta. Those whose memory extends to the very recent period when the trashy cottons of India, with their uncouth nomenclature, filled our market, will hardly be able to realize that the natives of Bengal are now dependent upon foreign countries for the cotton with which they are clothed; but it is true. American cottons find a ready market in the island of Madagascar, where they are a favorite article. Many bales have been sent to that quarter by our Salem merchants, who have found their account in it.'- Boston Palladium.

We have before us a letter from a highly respectable physician of this city, to a distinguished philanthropist, in which is given the distressing details of a case of Mania a potu, in a young

man about 20 years of age. The cause of the disease of the youth, is referred, by the physician, to the habit of the mother, who administered to the patient, when he was an infant, small quantities of ardent spirits, with a view of correcting internal weakness; and this early sip of the poison, infused into his nutriment, produced a fondness for it that was never conquered, and which will probably be indulged until the powers of physical resistance are destroyed, and the poor wretch dies a drunkard,

NEW ENGLAND FARMER. BOSTON, FRIDAY, OCTOBER 29, 1830.

BRIGHTON CATTLE SHOW.

The Agricultural Exhibition at Brighton on the 0th inst. though not equal in some particulars, to ormer exhibitions of the kind at the same place, et was, on the whole very respectable, and in ome things superior to what has been before preinted on similar occasions. There was no imorted stock, which has, heretofore added much to e Show; and to a casual inexperienced obserr there was an appearance of some diminution that particular. But there was a great show of reign stock, which constitutes one of the great anches of rural economy for which Agricultu-I Societies were instituted. There was, it is id, searcely one of the pure native breed of cat-, sheep or swine. Nor were there many of any ss, remarkable for size. But there were many lications of that real improvement, which conts in utility. We were formerly pleased with crything which was great, as if its goodness s in proportion to its size, but we have discovd our error, and now judge of the goodness of animal, not by its size, but other more valuaand essential properties. And to that discovwe are much indebted to scientific and intelent gentlemen, who were formerly styled Book mers, or Theoretical Farmers. But the film of indice against cultivators of that description is appearing from the eye of our candid and custened Yeomanry, and they begin to realize benefits of experiments and improvements, With regard to manufactures, it was not exted that the exhibition would be splendid. The istees, believing that our manufactures were in cessful operation, and that a better and more ensive exhibition could and would be made at public sales than at a Cattle Show, and the pretms offered would not produce great competi-, discontinued their premiums for cloths, &c. limited those and gratuitous rewards to articles home manufacture of taste and ingenuity. In ition to those on which the Committee passed r judgment, and awarded gratuities there e several articles, which would have been ened to particular notice for their beauty and exence if they had been presented in season for mination. The following are among the num-

STRACTURES RECEIVED OUT OF SEASON FOR RX-AMINATION.

Irs Dorothy Wheeler, Concord, 1 Black Lace ter, Ox, 6 years old, cwt. 2477,

Lyrus B. Thayer, Watertown, 3 Half Reams lestown, cwt. 2312. ss paper, an improvement on the sand paper Merly in use.

Mary H. Brammet, Boiton, 1 White Lace Veil. very good

Harriet Brummet, do. I Black Lace Veil, do. Sarah Heath, Roxbury, 1 Black Lace Veil and I Rug, imitation Wilton.

Eloisa Beals, Boston, 1 Woollen Hearth Rug. Harriet F Tenny, Boston, 5 specimens of Rug

Work, very beautiful.

Jonathan and R. E. Warren, Grafton, 12 waxed calf skins, prime quality.

Sarah R. Pierce, Roxbury, 1 Lace Cap, rich. Theodore Richmond, Dighton, 8 Lots assorted sewing Silks, containing 3550 skeins, weight 7 to

8 lbs. I Let Black Silk twist, 130 sticks.

Do 1 Pair worsted Stockings, and one skein floss silk do, beautiful ar-

Dolly B. Cotting, Marlhorough, 1 cotton counterpane, I sheet and I pair pillow cases, (worked edges.)

John P. Webber, Beverly, I box, of 12 whole and IS half canisters of mustard, (best quality,)

Jane T. Robbinson, Boston, 1 woollen rug. Lucy E. Heard, Chelsea, 1 black lace veil.

Ladies' Benevolent Society, Danvers, 1 box ir own cattle, improved on the most approved fancy articles, viz. couches, needle-books, butterflies, fish, bracelets, &c, the most beautiful of their kind. Were offered at auction by request, but no bids made.

George Mansfield, Boston, I Vandyke or Cape for a lady's use, cut and wrought by himself. He was 3 years on board the United States Sloop of war Falmouth, and is now lame, occasioned by a fall from the mast head yard; an elegant article deserving of notice, as he never saw one cut or made before.

Harriet Clapp, Boston, 1 large cape, 1 muff, 5 neck tippets, 1 pelleriene do, Abonnet, all of down from geese.

Mary De Luce, South Boston, 2 wrought and painted pictures.

Mary W. Davis, Newton, 2 blank maps, or 2 emispheres for the use of Lyceum: Sophia A. Perry, N. Bridgewater, 4 yards white

lace, beautiful. Julia A Perry black lace veil,

beautiful. William Sheppard, Watertown, 2 pieces black

broad cloth. Jonas Hastings, Weston, 3 pair half boots,

Sherman U. Houghton, Bolton, I whip stock,

Martha A. Hayden, Marlborough, 1 black lace

Lucinda Goddard, Roxbury, 1 black lace veil, specimens of painted carpeting.

Among the fat cattle were a pair of young oxen sent by Theodore Lyman, Esq. for exhibition only, which were beautiful and very superior ani-

The following is an abstract of the premiums awarded.

FAT 'OXEN.

cwt. 2380.

The first premium was awarded to Col. Dexter Fay, of Southborough, in the County of Worces-\$25.

Second premium to Mr Simon Ward of Char-20 Third premium to Mr Asa Rice, of Princeton,

Working Oxen.

The first premium was awarded to Benjamin Woodbury, of Sutton, cattle 4 years old. 294 The second premium was awarded to Leonard

Woodbury, of Sutton, cattle 4 years old. 20 The third premium was awarded to Luther Whiting, of Sutton, cattle 4 years old.

The fourth premium was awarded to George M. Barrett, of Concord, cattle 4 years old. The fifth premium was awarded to Henry Barrett, of Concord, cattle 4 years old.

PLOUGHING-Two yoke of Oxen. The first premium was awarded to Wheeler,

Abiel Wheeler, ploughman. Jacob Jepson; driver. The second premium was awarded to Samuel

Hoar, 2d, Samuel Hoar, 2d, ploughmaa. 5 Franklin Wheeler, driver.

The third premium was awarded to George M. Barrett. George M. Barrett, ploughman, Asa Fisher, driver, 2

PLOUGHING WITH ONE YOKE OF OXEN. The first premium was awarded to Moses Whitney of Stow. 1.5

T. P. Meriam, ploughman. 8 Moses Whitney, driver. The second premium was awarded to Otis Meriam, of Concord, aged 17 years.

10 Otis Meriam, ploughman 5 Abel II. Meriam, aged 11 years, driver. 3 The third premium to John Tilden, of North

Edwin Dunbar, 18 years old, ploughman. 3 Same, driver.

MILCH COWS. The first premium was awarded to Nathan Sanderson, Jr.

The second premium was awarded to Leander Hosmer. The third do, to Mr Bullard,

HEIFERS IN MILK. The first premium was awarded to Rev. Mr

Coleman. 1.5 The second do, to Seth Davis, HEIFERS NOT HAVING HAD A CALF.

The first premium was awarded to Samuel Fiske, 19

The second do. to Mr Furness, 10 The third do, to John Prince. 8

The fourth do. to Thomas Williams. BULLS. The first premium was awarded to J. W. Wat-

son, of Princeton, The second do, to Peter Payson, The third do. to Asa Rice,

BELL CALVES. The first premium was awarded to Noah John

The first premium for the best Dishley Ram

was awarded to Enoch Silsby, The first do. for the best Dishley Ewe, same, 30

The first premium for the best Boar, was awarded to John Mackay,

The second do. for the next best, to same, The first premium for the best Sow, was awarded to John Mackay,

The second premium for the next best, to same, 8

Robbins,

John Mackay,

Robbins.

Wetness, of extraordinary quality not less than 5 in number.

There was a lot offered by Mr Pelatiah P. Pierce, some of them were very good, but there was not a sufficient number of such quality as to authorise the committee to award a premium.

BUTTER, CHEESE, AND CIDER.

The first premium for the best butter, was awarded to Michael Crosby,

The second premium for the next best, to Nathan Hardy,

The third premium for the next best, to Luther Chamberlain,

The fourth premium for the next best to Adam

awarded to Elisha Matthews,

The second premium for the next best, to Job

The first premium for the best new Cheese to Hooper Holland.

The second premium for the next best to Samnel Denny,

INVENTIONS.

A premium was awarded to Horace M. Pool, for a set of Geometrical Protracters.

MANUFACTURES.

A gratuity was allowed to Mary Fairbrother for the best specimen of Brown linen thread, | \$2

table cloths, and 2 pair of socks, to Jonas More, for linen diaper, Do.

Do. to Aurelia White, for a straw bonnet, 2 Do. to John Hunter, for rose blankets.

to Catherine E. Cook, aged 12 years, De, white lace veil,

to Sophia W. Farland, aged 12 years, Do, white lace veil,

" to Louisa W. Chamberlain, black face veil, 2

6 to Adeline Marsh, for woollen socks,

The show dinner prepared by Messrs Sargeant and Mardock, and in which it was intended to display the best specimens of provisions of every lodds in the mouths of Political Economists. kind, which the season affords, was judged by connoisseurs to have been the best public dinner, in the New World, and a distinguished afficer in the and the best served, which has been given for many Old. United to this country by birth, affection, and a years in this neighborhood. There was a great generous spirit, his benefactions to us are enduring variety of fine apples and fine peaches, which for and diffusive. May his name endure also, and be beauty and flavor were as remarkable as any the season has produced. There were also some levity. specimens of good pears from John Prince, Esq. And specimens of nine kinds of grapes, from Zeb- held in honor for his munificent gift to this Coun-EDEE COOK, Esq. of Dorchester, in excellent con- try. He has presented us a draft,* for millions. dition, and very creditable to the skill of that gentleman, who is deservedly eminent as an Horticulturist. There were also several varieties of Grapes | were drank, from the vinery of the Ilon. T. II. PERKINS, in great perfection. In addition to these there was z liberal contribution of peaches, grapes, apples, ertions to promote the best interests of our Counand pears, from individuals of the Board of Trustees | try to be in constant requisition. of the Massachusetts Agricultural Society which

5 having been displaced. But we may say in a Schools are endowed, and the Mariner is instruct The first premium for the best storepigs, to word that the dessert was a very fair representa-10 tion of the present state of Horticulture in this The third premium for the next best, to Isaac vicinity, and such as we have reason to be proud 5 of.

> The style of this dinner was peculiarly appropriate. Large surloins and rumps of beef from mutton, &c, were served up in a handsome manner, ularity and order.

The Society dined in the lower hall of that spa-

cions and elegant building the Cattle Fair Hotel, which was erected by the liberality and public spirit of several gentlemen in Boston and its neighborhood, and a number of the inhabitants of Brighton. Such a building has been wanted for a ful, well written, and well delivered. We ar long time to accommodate our friends from the happy to announce that we shall be permitted t country, who attend the Cattle Fair every Monday. It appears to be all that they can desire, and will well deserve a large share of their patronage. The first premium for the best old Cheese, was Although the Hall was unfinished, it was very beatifully decorated with flags and appropriate banners, tastefully arranged, surrounded by the graceful pine and larch, and the posts entwined with evergreens, under the direction of John Green. At the head of the Hall was the portrait of Sir Isaac Corfin, a great patron of the Society, and to whom they are indebted for many invaluable presents. The portrait was by Mr Rand, a painter of great promise. It gives great satisfac-15 lion to the friends of Sir Isaac, and shows the hand of a master.

The following were the Regular Toasts.

1. Cattle Shows. They present a field of honto Mrs Samuel Denny for two linen orable competition to the most numerous class of productive laborers. Figures cannot compass the gain from this apparently humble instrument of improvement. May the County Shows still continue to be cherished under a full sense of their importance.

2. Ploughing Matches-Matches to kindle Ambition. Though Bank Bills make a good tinder. honorable ambition is a better.

3. Horticulture-The Farmer who has as yet denied himself the pleasures and benefits of a gurden has not enjoyed hulf the advantages of his condition as a Cultivator. The garden may be made to yield everything and cost nothing.

4. Those who farm, those who truffic - and those who manufacture. A mutually dependent and harmonious brotherhood, -- And yet the words agriculture, commerce and manufactures, are ever at

5. Admiral Sir Isaac Coffin, a Philanthrophist heard with a blessing on every farm to the latest pos-

6. General John Coffin .- May be be forever

The following are a few of the Volunteer Toasts -we have not been able to procure all which

By the President. The Farmers, the Merchants and the Manufacturers. Let each consider his ex-

The third premium for the next best, to Isaac cannot be enumerated on account of the labels By his munificence Agriculture is encouraged ed in nautical Science; he is an honor and is honored by his native state.

> By Judge Story. New England - Let those have liberty to reproach her, who first excel her it morals, in public spirit, and in productive industry

By T. G. Fessenden, Esq. Gentlemen Farmers the best fatted oxen, large legs of excellent cosset | Men who make expensive experiments in Agricul ture for the benefit of the community. May we and the tables were well attended, with great reg-tacknowledge with gratitude the favors which we receive gratis.

> Some other very good toasts were given, which with additional particulars relative to this exhibi tion, we hope to present in our next, as want o room this week renders it necessary to defer them

The Address of J. C. Gray, Esq. was able, use give it entire-a part of it will appear in our next

* Gen. Coffin presented to the Mass. Agr. Soc. som years ago, a draught Horse of great power, and esteeme a valuable acquisition to the Stock of the Country.

Large Cauliflower .- Mr Otis Pettee of Newton Mass, exhibited to the Horticultural Society, an afterwards presented to us a Cauliflower, which when divested of leaves, weighed 93 lbs. It was a delicious vegetable, and much superior in siz to anything of the kind we have ever seen, hear or read of.

Edinburgh Review .- Wells and Lilly, have ju published No. CH. of this valuable and interestir journal, which contains elaborate articles on tl following subjects.

The Law of Population-The Life of Bentley-Niebuhr's History of Rome-Life of Sir Stamfor Raffles-History of the Commerce of Holland-Women as they are, or manners of the day-New Version of Homer-Remarks on a bill for establishing courts of a local jurisdiction-Worl of Thomas Jefferson-Library of Useful Knov ledge; Farmer's Series-Origin and Affinit of the principal Languages of Europe-Stat of parties in England-Quarterly List of Nev Publications, Index-Price \$5 per annum.

One of Mr Mackay's Hogs, 16 months ok exhibited at Brighton, last week, measured 5 fee 10 inches long, 6 feet, 2 inches round.

Dr Rogens' experiment for preventing the ray ages of the canker worm is now in operation i Roxbury, Gentlemen interested in Agriculture pursuits, are respectfully invited to call and see i Roxbury, October 29.

Encouraging to Cultivators of Fruits.-Mr Sam nel R. Johnson of Charlestown, Mass, has receiv ed \$51,36, for the produce of a single plum tre in his garden, this season, besides giving awa; considerable of the fruit to his friends,-The tre produces the Bolmer's Washington Plum, and ha yielded but a little short of \$50 per annum, for the last three years,-St Michael pears of the fines appearance, have been sold in our market thi week for \$1,50 per dozen.

MASSACHUSETTS HORTICULTURAL SOCIETY Saturday October 23, 1830.

FRUITS.

Pears .- From Mr Joy, St Germain, very fair, with no appearance of blight; one of them weighed 12. oz. From Mr Manning, St Michael, from the garder By Gen. H. A. S. Dearborn.—Sir Isaac Coffin. of Rev. Mr Ellingwood, Bath, Me. of medium size-

never blight-Holland Green, Holland Table Pear' (Cex. No. 26,) not suitable for our climate. From Mr Stearns, of Salem. Chaumontelle, of large size, (Cox. No. 46.) From Mr A. Young, of Boston, a remarkably fine specimen of his Baking Pear, weighing 23 oz. From Mrs Chaplin, of Cambridge Port, pears of good flavor, from a tree imported from France; a good bearer, name unknown. From Mr A. D. Williams, of Roxbury, pears from a tree imported from Scotland, name unknown; appears to be the same kind as the last mentioned. From Mr R. Tooliey, of Waltham, Monsieur John, (Cox, No. 33) a good breaking pear. From E. M. Richards, Rushmore's Bon Cretien, an inferior fruit, and Monseiur John.

Peaches.—From Mr Otis Pettee, of Newton, Hyslop Clingstone, a very fine and prolific variety; also some of the same sort, prepared in the following manner. 'Eight peaches, weighing 2 lbs., brushed dean, and put into a dish with 3 oz. best brown sugar, and set into a steam kettle; the steam kept up intil the fruit was soft. I have practised the above nethod through the Peach season, varying the quanity of sugar according to the taste or quality of the ruit.' A pleasant but not rich preparation—will teep 5 or 6 days. From E. M. Richards, Heath lingstone, (Cox, No. 13) The season has been very infavorable for the maturity of this sort.

Apples.-From Mr E. Bartlett, of Roxbury, Montrous Pippin, (Cox, No. 27) one of them weighed 8 oz., Pearmain, Winter Pearmain, (Cox, No. 47) Vewton Pippin, very large, Golden Pippin, (Cox, No. 4) Spitzenburg, and one variety, name unknown. rom Mr G. W. Porter, of Medford, a handsome reen apple, weighing I lb., not in eating, name unnown. From Mr Manning, remarkably fine fruit om a French dwarf tree, name unknown, and a sperior variety, origin not known.

Grapes .- From J. Prince, Esq. of Roxbury, White cuppernong, of good appearance; not mature ; raised 1 open ground.

O THE FRUIT COMMITTEE.

With the box of Catawba Grapes sent to the Horcultural Society by John Adlum, Esq. from the ineyard near Georgetown, I also send you an exact from his letter under date of 20th Sept. 1830, rected to the subscriber. "The grapes I send you e not so good as usual, the best and earliest are one; they ripened about the 15th of this monthose you will receive ripened in the shade; of ourse not so high flavored, the bunches not full and rge, caused first by a hail storm when in blossom, nd secondly by a drought when ripening. The land Grapes ripened this season at the same time e Catawba did, usually a few days later."

Dorchester, October 21, 1330. S. DOWNER. The fine vinous Catawba Grapes, from Maj. Adlum. Georgetown, (D. C.) Mr Nathaniel Seaver's, of oxbury, and E. Phinney, Esq. of Lexington, are onounced identically the same by the committee Fruits. From Mr D. Fosdick, of Charlestown, ne bunches of White Muscadine, raised in the open bound. From Mr Sharp, of Dorchester, Seedling rapes, raised in the open ground, resembling the weet Water, good for the season.

E. M. RICHARDS.

VEGETABLES.

Mr Otis Pettee, exhibited a fine large Cauliflower, eighing !i lbs. when divested of its leaves.

E. Edwards, Esq. of Springfield, forwarded three alparaiso Squashes, of extraordinary size, which ere particularly described last week.

Dr P. G. Robbins, of Roxbury, exhibited 6 of the e Squash, twentytwo of which grew on a piece of ound less than two rods square, twelve of them aighed 401 lbs. averaging 334 lbs. each.

Hon. JOHN DAVIS, of Boston, was admitted a subscripa member of the Society, at the last meeting.

To Correspondents.—Several communications are hand. The history of the Ambrette Pear, which was st noticed in France, in 169'), and of the Echassery, will | they are all from the garden of Mr Seaver, who raised on appear.

Grape Vines, Fruit Trees, &c.

4000 Isabella Grape Vines, 1 year

old, at \$25 per 100. and very strong, \$314 per 100. 800 Catawba, strong, 2 years old, at \$35 per 100.

2000 Alexander's, at \$25 per 100and other Grape Vines, as per Catalogue.

Penr Trees of large size and exceedingly vigerous growth, of a great variety of kinds-

Also, the finest new varieties originated in Europe, of sizes in proportion to the period of their introduction, some of them 2, 3, and 4 years, from the inoculation. Among these is the genuine Colmar Souverain, of Van Mons, of from 2 to 3 years' growth, one of the most splendid fruits yet introduced.

The Sylvanche vert d'hyver, Colmar d'hyver, Napoleon, Passe Colmar, Foxley, Benrie d'Albeeg, Prince printemps, Colmar blanc, Downton, Marie Louise, Merveille de Charnenx, Garnestone, Burghill, Wormsley Grange, Beurre Bose, Rouselench, Lowell, La belle Ma linoise, Beurre Spence, all of which are excellent trees, for the period since introduced, having been ingrafted 4 to 5 fect from the ground, on young thrifty stocks.

The Plum trees form a collection of more than 20,000. and are almost wholly on the fine new stock, and generally 3 years' growth from the inoculation, and very vigorous-some few very new kinds are however but I and 2 years' growth.

All the other species of Fruits, such as Apples, Peaches, Nectarines, &c, are of fine size.

The Proprietors are thus particular in calling the publie attention, because their great attention and extension of the Establishment to above 40 acres, compactly filled, has caused the trees now offered to be greatly superior to all former periods, and they tender them as unrivalled in size and accuracy. A supplement Catalogue, containing the new varieties of fruits, has been published, and may be obtained of Mr J. B. Russell, and of the proprietors. Among the Ornamental Trees, the Silver leaved Abele stands conspicuous for its great beauty and rapid growth, and several thousand are now offered of large size. The collection of the Camellia Japonica, contains several thousand plants, and they are reduced to very low prices in the new Greenhouse Catalogue, of 1830-and the other species are also proportionably reduced.

WM. PRINCE, & SONS. Prince's Treatise on the Vine.

Just received at the New England Seed Store, No. 52

North Market Street,
A Treatise on the Vine; embracing its History from the earliest ages to the present day, with descriptions of above two hundred Foreign, and eighty American varieties; together with a complete dissertation on the Establishment, Culture, and Management of Vineyards.

' The Vine, too, here her curling tendrils shoots, Hangs out her clusters glowing to the south, And scarcely wishes for a warmer sky.?

By WM. ROBERT PRINCE, aided by WM. PRINCE, Propriefor of the Linnwan Botanic Garden. 1 vol. octavo, 355 pages. Price \$1,50. Oct. 29.

Catawba Grape Vines.

THE GENUINE SORT.

For sale at the New England Seed Store, No. 52 North Market-street-

50 Vines of the true Catawba Grape, one year old, price 75 ets. each. This is one of the best native, table, or wine Grapes cultivated; the bunches large, with shoulders, very thickly set, with large berries of a pale red or lilac color, and in some situations covered with a beautiful bloom, giving them a blueish purple appearance. They have a slight musky taste, and delicate flavor. They have a thin skin, very little pulp, are perfectly hardy, and surpass most of the native grapes that have been exhibited at the Hall of the Massachusetts Horticultural Society, the two past seasons. The pulp diminishes and almost disappears when they are left on the vine till they attain to perfect maturity. The vines are great bearers: one vine in Mrs Schell's garden, in Clarksburg, Maryland, has produced eight bushels of grapes in one season -and cleven younger vines in the garden of Joshua Johnson, Esq. of the same State, have produced in one season thirty bushels of fruit. A particular history and description of this fine grape will be found in Prince's new Treatise on the Vine, just published. There can be no mistake with regard to the identity of the above vines, as . lpples.

Gentlemen in want of fine Baldwin or Greening Apples, of extra quality and fairness, raised from a young orchard in this vicinity, can have them delivered at any place in Boston, at \$1,58 per barrel, by leaving their orders at Mr Russell's Seed Store, No. 52 North Warket Street, where specimens of the fruit may be seen.

Pear Seedlings.

For sale at the New England Seed Store, No. 52 North Market Street—

20,000 Pear Seedlings, in fine order for Nurseriesraised within six miles of Boston-at from 5 to \$10 per thousand, according to their size, &c. They will be suitably packed, as wanted, for transportation to any distance

Durham Short Horns.

For sale, several of the pure breed, descendants of the celebrated animals presented by Admiral Sir Isaac COFFIN, to the Massachusetts Society for the Promotion of Agriculture. The pedigice of these animals can be given as far back as *Hubbach*, who was calved in 1777, and is reputed the foundation of this much admired stock. Also, several Heifers bred from the same, of various grades, from half up to seven eighths blooded animals. For particulars, inquire of E. Hersey Derby, Salem. Salem, October, 1830.

Wanted

In a Book and Job Printing Office, in Boston, two Apprentices. Those from the country would be preferred. Apply to Mr J. B. Russell, at the New England Seed Store, No. 52 North Market Street. Oct. 29.

NOTICE. The Library Committee of the Massachusetts Horticultural Society, in pursuance of a vote passed at the meeting on Saturday, the 23d inst., request all persons having in their possession, any books or pamphlets be-longing to the Library, to return them to the Librarian at the Hall immediately, that the committee may be enabled to form a Catalogue of the same, for publication.

Z. COOK, JR. Oct. 29. In behalf of the Library Committee. Grave Vines.

The subscriber has for sale at his garden in Dorchester, the choicest variety of Grape Vines ever offered for sale in this vicinity. Many of them are now in fruit, and purchasers are invited to call and make a selection. The following compose a part of the variety. Black Hamburg, Napoleon,

Black Cape, White Chasselas, White Muscadine, Golden Chasselas, Red Chasselas. Golden Muscat, Gore's, (a beautiful Black Grape) Black Constantia. Caroline. Bland. Ferral.

8 varieties of superior fruit from Xeres and Malaga. 400 two years old ISABELLAS. 1400 one " "

200 CATAWBA, or what has heretofore been considered the Bland. It is now satisfactorily ascertained that the Bland grape will not ripen in this climate, in the open ground.

Orders by mail, addressed to the Subscriber, or personal application at his office, No. 72 Congress-street, for any number of Vines from one to one hundred or more, will meet with prompt attention. Application may also be made to Patrick Kennedy, at the garden.

Boston, Sept. 27, 1830. 5t ZEBEDEE COOK, Jr.

BRIGHTON MARKET-Monday, Oct. 25.

[Reported for the Chronicle and Patriot.]

At Market this day 3154 Cattle, 6430 Sheep, and 720 Swine, a large proportion of which were sold.

Prices-Beef Cattle-From \$3,25 to 4,50; a few extra only brought 4,50. We noticed however one yoke taken at 5,00. The premium cattle were taken last week at \$6 a 7. Barrelling Cattle—for Mess. \$3,50, a 3,58; No. I, 3, a 3,08; No. 2, 2,67, a 2,75.

Sheep .- Sales brisk, considering the number at market. We noticed four prime Cosset Wethers, taken at \$19, as follows: one for 8, two for 8, and one for 3. We noticed also another lot of about 25 Wethers taken at \$3 each; a lot of 30 at 2,50; also a lot of more than 200, part with ers, for 2,12; and lots at the following prices: 2,25 2, 1,75, 1,58, 1,50, 1,37\frac{1}{2}, and 1,25—those last mentioned

were probably purchased for the pelts only. Swine .- Considerable doing; we noticed one entire lot of 250 taken 34c; one lot of 53 selected Barrows, at 44c. one of 60 Sows and Barrows, at 4c; and one of 60 4tc; also, one remnant, to close, at 34c. At retail, selected,

the first Catawba Grapes ever exhibited in Massachusetts. 4c for Sows, and 5c for Barrows.

MISCELLANIES.

THE DYING CHILD.

Ah, look thy last, fond mother-On the beauty of that brow, For death's cold hand is passing o'er Its marble stillness now; Those silken eyelids weighing down Upon the glazed eye, Are telling to thy breaking heart,

Yes, mother of the dying one, The beautiful must go; The pallid cheek, and fading eye, And trembling lip of snow, Are signets from the hand of Death, When unseen angels come To bear the young and beautiful To their own happy home.

The lovely one must die.

That soft white hand within thy own. May never more entwine Its arms around the mother's neck, Like tendrils of the vine-Those still, cold fingers never more Along thy forchead fair, Shall dally with the raven curls That cluster thickly there,

The flashes of its speaking eye-The music of its mirth-Shall hever more make glad the hearts Around the parent's hearth; Then look thy last, fond mother-For the earth shall be above. And curtains up that sleeping one, The first boin of thy love.

But let thy burning thoughts go forth-And pray that thou may'st meet That sinless one, where worlds shall bow Before the judgment seat; And pray, that when the wing of death Is shadowed on thy brow, Thy soul may be beside the one That sleepeth near thee now.

N. E. Review.

A HINT TO MOTHERS.

When we contemplate what great things depend on what, to a superficial observer, is of small moment, we wish to speak a word of caution. Our subject is that of the common, every day conversation of mothers to their children.

When giving to your children commands, bei careful that you speak with a becoming dignity, is if, not only the right, but the wisdom also to comand was with you. Be careful not to discover a jealousy that your injunctions may not be attended to, for if the child sees that you have doubts, they will lead the child to doubt too! Be cautious never to give your commands in a loud voice, nor in haste. If you must speak loudly in order to be sheyed, when it is not convenient to raise your voice, you must expect to be disobeyed; and if it be convenient for you to speak loudly, you must remember that it is inconvenient for others to hear it.

But with regard to manner, be careful to speak in a soft, tender, kind, and loving way. Even when you have occasion to rebuke, be careful to do it with manifest kindness. The effects will be incalculably better. When you are obliged to deny the request that your child may make, do the very greatest among the chiefs. The more not allow yourself to do this with severity.

they may think they want, without being nearly small square patch of tattooing over the right eye knocked down with a sharp voice ringing in their

ly punish in anger, you will find your children marks of a similar nature which our own sailors will imbibe your spirit and manners. First, you will find they will treat each other as you treat troducing gunpowder under the skin .- Library them; and after they arrive to a little age, they of Entertaining Knowledge. will treat you with unbecoming replies. But if you are wise and treat your little ones with tenderness, you will fix the image of love in their a young country girl to abandon her rustic state minds, and they will love you and each other, and in their conversation will imitate the conversation which they have heard from the tenderest friend which children have on earth.

TATIOUING.

The operation of tattooing is one of a still more severe and sanguinary description in New Zealand, than it would seem to be in any of the other islands of the South Sca; for it is performed here, not merely by means of a sort of fine comb, which merely pricks the skin, and draws from it a little serum slightly tinged with blood, but, also by an instrument of the nature of a chisel, which at every application, makes an incision into the flesh, and causes the blood to start forth in gushes. This chisel is sometimes nearly a quarter of an inch broad, although, for the more minute parts of the figure, a smaller instrument is used. 'The stick with which the chisel is struck, is occasionally formed into a broad blade at one end, which is applied to wipe away the blood. The tincture a particular tree.

Some are tattooed at eight or ten years of age; but a young man is accounted very effeminate, who reaches his twentieth year without having undergone the operation. Mr Marsden told one he must not tattoo his nephew Racow, who was a very fine looking youth, with a dignified, open, and placid countenance, remarking that it would quite disfigure his face; but he laughed at my advice,' says Mr Marsden, 'and said he must be tattooed, as it would give him a noble, masculine, and warlike appearance; that he would not be fit for his successsor with a smooth face; the New Zealanders would look on him merely as a weman, if he was not tattooed.' Mr Savage says, that a small spiral figure on each side of the chin, a semicircular figure over each eyebrow, and two, or sometimes three lines on each lip, are all the tattooing the New Zealand women are required te submit to. Rutherford's account is, that they have a figure tattooed on the chin, resembling a crown turned upside down; that the inside of their lips is also tattooed, the figures here appearing of a blue color; and that they have also a mark on each side of the mouth resembling a candlestick, as well as two stripes about an inch long on the forehead, and one on each side of the nose. Their decorations of this description, as well as those of the other sex, are no doubt differ ent in different parts of the country.

Rutherford states, that in the part of the country where he was, the men were commonly tattooed on their face, hips, and body, and some as low as the knee. None were allowed to be tattooed on the forehead, chin, and upper lip, except the very greatest among the chiefs. The more they are hon-they are tattoocd, he adds, the more they are hon-donlers, L. C.—A. Bowman, Bookseller.

is enough for our little ones to be denied of what ored. The priests Mr Savage says, have only a

These stains, although their brilliancy may perhaps decay with time, being thus fixed in the flesh If you practise severity, speak harshly, frequent- are of course indelible-just as much as the frequently make on their arms and breasts, by in-

> THE CONTENTED LEMALE, -A nobleman soliciting and reside in a populous city, she replied, 'Ah!my Lord, the farther we remove from ourselves, the greater is our distance from happiness !'-They who leave their homes, uncalled by Providence, ir search of happiness, generally find they are only farther from it.

> REQUISITES .- There are five requisites for a professed drunkard :-- A face of brass-nerves of steel-lungs of leather-heart of stone and an incombustible liver.

> Pretty Women, -- Of all other views, a mar may, in time, grow tired; but in the countenance of women there is a variety which sets weariness at defiance.'-The divine right of beauty, say! Junius, is the only divine right an Englishmar can acknowledge, and a pretty woman the only tyrant he is not authorized to resist.

Idleness .- Lord Chatham writes to his nephew at Cambridge - Vitanda est improba Siren, Desida, I desire may be affixed to the curtains of your is said to be sometimes obtained from the juice of bed, and to the walls of your chambers. If you do not rise early, you can never make any progress worth anything. If you do not set apar your hours of reading; if you suffer yourself, or any one else, to break in upon them, your days will slip through your hands, unprofitable and of the chiefs, Kiug George, as he was called, that frivolous, unpraised by all you wish to please, and really unenjoyed by yourself?

New Work on Farriery.

Just received and for sale at the Seed Store connected with the New England Farmer Office, No. 52 North Market Street.

The Veterinary Surgeon; or, Farriery taught on a new and casy plan: being a treatise on all the diseases and accidents to which the Horse is liable; the causes and symptoms of each, and the most improved remedies emloyed for the cure in every case; with instructions to the Shoring-Smith, Farrier, and Groom, how to acquire knowledge in the art of Farriery, and the prevention of Preceded by a popular description of the animal functions in health, and showing the principles on which these are to be restored when disordered. By John Hinds, Veterinary Surgeon. With considerable additions and improvements, particularly adapted to this country, by Thomas M. Smith, Veterinary Surgeon, and Member of the London Veterinary Medical Society. Price \$1,25

Published every Friday, at \$3 per annum, payable at the and of the year--but those who pay within sixty days from the ane of subscribing, are entitled to a deduction of fifty cents. No paper will be sent to a distance without payment

being made in advance.

NEW ENGLAND FARMER

PUBLISHED BY J. B. RUSSELL, AT NO. 52 NORTH MARKET STREET, (AT THE AGRICULTURAL WAREHOUSE.)-T. G. FESSENDEN, EDITOR.

FOL. IX.

BOSTON, FRIDAY, NOVEMBER 5, 1830.

NO. 16.

Delivered before the Massachusetts Society for the Promotion of Agriculture, October 20th, 1833.

By J. C. GRAY, Esq.

It is with great dithidence, my friends, that I now address you. This duty has hitherto been discharged by men distinguished at once as theoretical and as practical furmers, able not only to display in impressive language the immense importance of unsuted to the narrow limits of this occasion, and Agriculture, but to convey to their audience much valuable practical information. I cannot pretend to follow in their footsteps. My experience in Agriculture is comparatively recent, and my preensions to the name of an accomplished farmer extremely moderate. But I trust that I yield to none in my zeal for the best interests of this great rt, and having been requested by my associates o make some remarks on topics connected with he business of this day, I have not felt at liberty to efuse so to do, though I can offer you nothing beter than a few general and desultory observations. You well know, my friends, that Agriculture is

ie most ancient of Arts, unless perhaps we should onsider the mechanic arts as coeval with it. ou are equally aware, that in our country at ast, it has ever been considered one of the most spectable of human avocations. It has always imbered among its votaries many of our most stinguished citizens. It has formed either the tief business or the favorite recreation of all, or most all, those whom the people of this nation ve elevated to the highest office in their gift, and stance within our own commonwealth of the al, the steadiness, and ability, with which this suit has been followed, amidst the successive Chair of State. But it is only within a short iod, that Agriculture has held the rank in pubestimation, and engrossed the share of public ntion, due to its immense importance. While great interests of Commerce and Manufactures, 3 and thoughts of our National and State Leators, the improvement of our Agriculture was for a long time to the detached efforts of induals. The Massachusetts Agricultural Society founded as early as the year 1792, but for ral years it stood alone in the Commonwealth : ceived no patronage from our Legislature, and han in later times. Notwithstanding the num-

or wholly of maritime towns.

I need not say how great are the improvements, ment, though great, was less urgent and manifest tween the Agriculture of Massachusetts as it now is, and as it was previous to our last war, would be indeed a most interesting task, but it would be is worthy far abler hands than mine, I shall therefore merely state a very few facts, in relation to obvous to the general observer; I mean the changes which have taken place in our Domestic Animals. The most striking of these, is the entire revolution which has been effected in our Swine. A few years ago our state was disgraced by a tall raw boned ace of these animals, who seemed formed as has been observed by a great poet, of some of the eath. This breed bears a great resemblance to the Gloucestershire breed of Great Britain, which is supposed by the best English writers on Agriculture to have once prevailed throughout that Island, and we may therefore infer, that the two breds are in fact derived from the same source. The most unprofitable description of stock is almest expelled from the commonwealth, and we trist will soon be numbered with the things that were. Its place is supplied by animals of a far Merent kind, whose superiority is obvious at the ur minds will naturally revert to a distinguished very first view. But though we all know that a traterial change has taken place, few of us may be equally aware of the profit which it has produced to our commonwealth. This was estimated by I pressing avocations of the Bar, the Bench and the most competent judges several years ago, at no less than one hundred thousand dollars per as the change at that time was much less entire appear to be of far greater consequence, especially importance of our woollen manufactures. The whole number of sheep in New England is in all probability not less than 3,600,000, of which nearly the whole are either of the foreign or mixand respectability of those who composed it, above mentioned races, may be safely estimated may safely estimate the value of the horned cattle a public association. It was not till nearly Consequently New England has gained in the in-dollars. When we consider in addition, the imyears after, that a second society was incordereased value of this staple nearly twelve hundred mense importance of the products of our dairies, The honor of introducing into this thousand dollars per annum, which to avoid all it must be acknowledged, that too much consethose important engines of Agricultural im- danger of exaggeration, I put down at a million, quence cannot easily be attached to the improvement, Cattle Shows-and a high honor it is A million of dollars added in a few years to the ment to a still higher degree of our breed of ngs to the County of Berkshire, where the first annual revenue of New England, by the improve-cattle, nor too much praise awarded to those, who e Show was held in the year 1814. The first ment of only one branch of her Agriculture! have so faithfully, and thus far so successfully, doe Show held at this place was in October, The improvements which have lately taken place voted their attention to this object. There is one At present, there is not a County in the in our horned cattle, may be less striking than improvement in this description of animals, without its Agricultural Society, and its those which I have already stated. In the first which I notice more particularly, because I believe Show, with the exception of the County of place, as these are animals of much slower growth it to be peculiar to New England, and consider it as olk, and of the four Counties of Suffolk, Barn- than sheep or swine, a longer course of years is one of her chief glories—I mean that which has Dukes and Nantucket, which consist, princi-|required to render any improvements extensive or taken place in her working oxen, whether employ-

which, since the establishment of these societies in this case, than in those mentioned above. Our and shows, have taken place in every branch of native breed of cattle, commonly so called, is supour Agriculture. To give a complete history of posed to be derived from the Devonshire stock, those improvements, to draw an exact parallel be- which is held evon now in high estimation. The individuals of this species of animals brought over by our forefathers, were probably among the best then existing in Great Britian. The first settlers of Massachusetts Bay, were in many instances men of large property, as well as great intelligence. I find in a history of New England writone lescription of improvements, which while they ten as early as the year 1652, a statement of the are among the most important, are also the most expenses incurred by those settlers, for the transportation of themselves and their effects, up to that period. From this it appears that the transportation only (exclusive of the price) of their domestic animals, cost them twelve thousand pounds sterling. It does not seem probable, that when called upon to incur so great an expense for the mere freight of animals, they should have neglected to our own species, merely to consume the fruits of select those of a good quality, inasmuch as any others could hardly be worth the carriage. However this fact may be, it is certain that we have long possessed in this state a race of cattle highly respectable, containing many individuals which would compare advantageously with the finest animals of this description in any country. Still I am warranted by the opinions of the best judges in asserting, that a marked and important improvement has taken place in this, as well as in other descriptions of our domestic animals, since the introduction of agricultural societies and shows. I shall not agrace the much disputed question. whether this result be owing in any degree to the introduction of fine cattle from abroad. It is enough for my purpose, that the result itself is unquestionable, and that it is the effect of an increased care in the selection of animals for breedanum, and is now probably considerably larger, ing. Now let it be recollected, that a considerable part of Massachusetts is essentially and unchangothan at present. The improvements which have ably a grazing country—that beef cattle constitute been produced of late years in our Sheep, by the the great staple of most of our interior districts, e occupied at different periods, much of the introduction of the Spanish and Saxon races, will and form a large portion of the remittances made by the country to the sea coast, in exchange for when we consider the immense and increasing the articles of use and of luxury which are drawn from thence. It appears by a statement in the New England Farmer in 1828, that the value of cattle sold at Brighton, principally or wholly for slaughter, in a little more than two months. ed breed. It is believed by our most intelligent amounted to about \$540,000. These two mouths fforts were far less conspicuous, and less effect- and experienced dealers in wool, that the value were it is true, the busiest in the year, but after all added to this product, by the introduction of the proper allowance for this circumstance, I think we as in every sense of the word a private, rather on an average, at one third of a dollar per fleece, sold annually at Brighton, at a million and a half of perceptible. Secondly, the necessity of improve- ed in draught or in ploughing. The ox has been

denominated by one of the most distinguished theory. No one is better convinced, that more is topic which can divide the opinions without severand best of men, Dr Watts, our fellow laborer, and the often learned from a few shrewd remarks from ing the friendship of good men-one green spot appellation is as true as it is beautiful. Yet how such an individual, or from a single day's observalong was it, before we rendered full justice, to the tion of his course of farming, than from volumes tende—one most interesting object of human inmerits of this humble but powerful auxiliary, of essays, and hours of declamation from a mere quiry which we can investigate and discuss with His meekness, his steadiness, his capacity of en-theorist in agriculture. No one is more aware, all our heart and soul, not only without forgetting, during severe labor and subsisting on coarse fare, that there have been, and now are among our far-but without being tempted to forget, that we are were indeed too striking to remain concealed, but mers, men gifted with talents of the highest order. it was for a long time supposed that these good which would have raised them to distinction, had party division fade away-if we ever realize that qualities were in a great degree balanced by the such been their object, in any walk of human inextreme tardiness of his movements. A proper dustry. But it is for this very reason, that I would attention to his training has convinced us how uphold Agricultural Societies and Shows. For, Agriculture are in question. much this supposition was founded in error, and let me ask, what becomes of the sterling wisdom we may now boast a race of working oxen, which of these practical men? Something of it may be ricultural Societies have tended to suspend and for the despatch, neatness and efficiency with which they perform their labor, are certainly not surpassed, and most probably not equalled in any part of the world. Such, my friends, are a very few of the improvements which have taken place in our Agriculture, since the establishment of our mark will apply with equal truth to the skill and superior merit in its members, but simply from the agricultural societies and Cattle Shows. In what way these societies and shows have contributed to these improvements, is a point which has been so fully and ably handled in this place on former occasions, as to leave little room for any farther illustration. Indeed I think a candid mind will require little other proof of the advantages resulting from Agricultural Societies, to the great farming interest of this state, than that which can be drawn from their very existence. Twenty years ago mere writer of agricultural essays has no need of pressions of an opposite kind exist anywhere there was searcely a County Society in this Commonwealth. At present, these societies exist, Counties. Whence this increase? Was it owing to a sudden impulse of popular feeling? No, for these societies rose into being in gradual succession. Can it be ascribed wholly or principally to the encouragement afforded by the Commonwealth? That encouragement is highly creditable to the liberality of the Legislature, for it has proved amply sufficient to effect the desired object, and has been uniformly given with a promptness, which evinced that more would have been done, had more been necessary. But the sum which any society can receive annually from the treasury, is limited to an amount equal to the revenue derived by such society from its own funds, and can in no case exceed six hundred dotfor the establishment of an Agricultural Society. Consider too the character of the people among whom these institutions have sprung up. It is among the farmers of Massachusstts, a race not given to change, men proverbially and wisely cantious, holding on to their settled opinions and habits with a grasp, which yields to nothing but the force of eogent reasoning. To what else then can we ascribe the multiplication of these societies than to general, a deliberate, and may we not add a just conviction, of their utility? There is however, one objection to these institutions, which though it prevaimuch less extensively than formerly, yet still retains its hold on many worthy minds, and is much oftener felt than avowed. It is said that an opportunity for theorists to display their fanimportance or benefit to the practical farmer. My

WOOL,-The Foreign Quarterly Review has an re gather the following facts:

From 1814 to 1819, the annual amount of wool nported into England from Germany increased om 3,505,145 lbs. to 4,557,938 lbs.; and in 1828 was no less than 23,110,822 lbs. At the same peods the annual amounts of wool imported into Enand from N. S. Wales, were 32,971,-7 284,id 1,603,512 lbs. Some of the N. S. W. wool is aid to be fully equal to the best from Saxony .reat efforts are now made to improve the breed f sheep in Russia, as well as in Silesia, Bohemia, oland, &c. Merinos are also spreading into Italy. pain has lost her credit; many of the best flocks merinos were driven to France by Napoleon's enerals, and those that remain, have become so generate, as not to be worth more than one third much as the same stock of sheep in Germany, -The average weight of a German merino ficece from 21 to 3 lbs.-The average annual producon of wool in England is 111,160,560 lbs .urnal of Humanity.

From the Hartford Mercury.

THE PEACH TREE.

From a desire to encourage the culture of peach es, we offer the following as the result of experients and observation.

It is generally known that worms, near the surse of the earth, destroy them by eating the bark ; e object is therefore to find a preventive, in order it the trees may become aged in a healthy state. It is evident that those worms pass through the minon change, and assume the form of millers, rly in the summer, and deposit their eggs in bark as low as they can find access to it; and it the worms proceeding from them, begin to erate in the latter part of the summer; when y have been found of the size of a common 1. If suffered to remain they grow to the thickss of rve straw; each of them girdles the tree out an inch, and the wood from the wound to

recommended with full confidence.

About the first of May, remove the earth from on their shelves, the body of the tree, and skirt it to the height of 15 or 18 inches, in such manner as to exclude the half an inch in thickness, bound on with twine. This should be removed about the first of Septhen readily discovered on the surface of the bark covered by a little gum. The process should be commenced when the tree is young-they have this cause of decay; a very triffing expense com-JONATHAN BRACE.

Hartford, Sept. 8, 1830.

SILK.

Believing that the culture of silk might be made a source of profit to this country, we have occarticle on the German Wool Trade, from which sionally called to the subject the attention of our readers; and we are pleased to learn that it has excited some inquiry and investigation, which if prudently conducted, bid fair to produce important results. The premiums offered by the II. II. and F. Agricultural Society, we trust, have done some good in the cause, by directing the efforts of individuals who might not otherwise have been induced to enter the untravelled road of experiments. At the approaching anniversary to be held at Northampton, we expect there will be occular evidence that old Hampshire has not been sound asleep upon the subject. It is hoped there will be numerous specimens of American silk ex-

> We have had oceasion to examine some American sewing silk; and, though it is generally inferior in some respects to European silk, yet, we are told, that when well made it is, except the blue, preferred to that. One important point, in which the Americans fail, is the coloring; which is usually of a dull, dingy hue, and makes but a sorry appearance by the side of the bright and glossy skeins of Italy. Ours is not so well twisted as foreign silk; and a great deal of it is so uneven that one would almost think it had been purposely made to imitate strings of onions; of course such silk is worthless, for no tailor or sempstress will use it if any other can be obtained.

But our people make some very good silk. The color is fair, the twisting neat and tight, and the thread even. This is preferred before the foreign article, because it is stronger. We have recently been presented with a few skeins of such silk, made the last season by Mrs Shaw, of Belchertown. It certainly reflects great credit upon the lady for her skill and ingenuity. Some of the skeins are too fine for ordinary use, and one excels in fineness anything of the kind we ever saw, and is nevertheless a triple thread. A skein of red silk amongst it has been pronounced, by a good judge, to be English; but an individual who is heart, dies. Hence it is, that a single wound in the constant habit of using sewing silk, declar-

impairs the vigor of the tree, and a number of ed his conviction that it was American, though them kill it. The point to be gained, is to protect superior in quality to any European silk that the tree from the millers, and by a single method could be obtained. Two sticks of twist, were inwe have succeeded for several years, which is cluded in the present, and we think we may challenge our friends, the merchants, to find better

We were highly gratified to receive the above specimen from a friend; and will comply with millers, burying the lower part of it in the earth. his request to place it in a conspicuous situation We have used straw out to the length and about in our office where it may be seen .- N. Hamp. pa.

Remedy for the Lockjaw.-We are informed by a tember, as we have sometimes found the young friend that a sure preventive against this terrible worms within the upper part of the straw, being disease is to take some strong soft soap and mix with it a sufficient quantity of pulverized chalk, so as to make it of the consistence of buck-wheat batter-put it into a cloth or small bag and apply been found in a rapid growth, the first fall after it to the wound-keep the chalk moistened with it sprouted. Thus a few minutes in a year de- a fresh supply of soap until the wound begins to voted to a tree, will probably protect it against discharge, and the patient receives relief. Our friend stated to us, and implicit confidence may pared with the value of this healthy and delicious be placed in what he says, that he has known several cases where this remedy has been successfully applied. So simple and valuable a remedy within the reach of every person, ought to be universally known .- N. Y. Evening Post.

> In the report of a committee of the Worcester County Agricultural Society, Wm. Lincoln, Chairman, it is stated that 'Mr Cyril Flint, of Hardwick, exhibited an instrument for extracting teeth, so inviting in appearance and ingenious in construction, as to make one's mouth water to experience its application!

PICKLES.

This being the season of the year at which almost every housewife is busily employed in replenishing her annual store of pickles, it may not be improper for us to say a few words on the value of these articles, in a dietetic point of view.

No one, we presume, considers the various pickles usually met with on our tables, as articles of food-they can be viewed in no other light than as exciters of the appetite, or as a means of imparting an additional flavor to the more substantial viands of which the meal is composed.

The articles generally selected for pickling, are unripe vegetable substances, and those of the most indigestible class; as, for instance, immature cucumbers, or melons-the young ears of indian corn-unripe walnuts, peppers, and the like. Whatever principles in any degree soluble by the stomach, these may contain, previous to their conversion into pickles, they are completely destroyed by the latter process; hence, when served at table, a pickle consists simply of an indigestible sponge saturated with vinegar.

A moderate quantity of vinegar, it is true, is by no means an unwholesome addition to many articles of food. When made use of however in the form of pickles, its wholesomeness is entirely destroyed, as well by the indigestible mass with which it is combined, as by the pepper and other spices by which it is highly flavored. These, besides disordering the stomach of themselves, are very apt to produce a factitious appetite, or to prolong the desire for food after the natural appetite has been satisfied-in either case, endangering the loading of the stomach with a quantity of aliment far beyond its powers of digestion, or the actual wants of the system.

By the individual in perfect health, the same

HEW BUGLAND FARMER.

BOSTON, FRIDAY, NOVEMBER 5, 1830.

BRIGHTON CATTLE SHOW.

In our last, want of room obliged us to omit some particulars relative to this exhibition, which | The Committee appointed to award premiums on we now furnish.

Among the Fat Cattle were a pair of young Oxen, sent by Theodore Lyman, Esq. for exhibition only, which were remarkable for their fine symmetry and just proportions,

A newly invented Pump, patented by a Mr Elisha Hale, of New York, presented also an attractive object. The pump box is in the form of ter, the second premium for one of his fat oxen a flat circular vessel, which is placed edgewise, and the vacuum is caused by turning a crank, the ox to which the premium is awarded has the which gives motion to metallic flies or valves most white on the back; weight 2312 pounds, §20. mistake himself in marking them. We should suppose from its materials, structure, and little liability to friction that it must be very durable, as well as present a very advantageous method of applying power for the purpose of raising water. This may be seen, and its principles explained at the Agricultural Warehouse,

No. 52 North Market Street, of the show-dinner, in addition to those which Lave been before mentioned, were Black Humlurgh Grapes, from P. C. Traders in the country who may wish to keep an assortment of Garden Seeds for sale, are informed they can be furnished, at J. B. Russell's Seed Store, connected with the New England Farmer, 52 North Market Street, Boston, with boxes of various sizes and prices, from 10 to \$50, containing a COMPLETE ASSORTMENT of the seeds mostly used in a kitchen garden, on as favorable terms as they can be procured in this country, of equal quality, neatly done up in small packages, ready for retailing, with short directions on each package for its culture and management—warranted to be of the growth of 1830. and of the purest quality.

Catawba Grape Vines.

THE GENUINE SORT.

For sale at the New England Seed Store, No. 52 North Market-street-

50 Vines of the true Catawba Grape, one year old. price 75 cts. each. This is one of the best native, table, or wine Grapes cultivated; the bunches large, with shoulders, very thickly set, with large herries of a pale red or lilac color, and in some situations covered with a beautiful bloom, giving them a blueish purple appearance. They have a slight musky taste, and delicate flavor. They have a thin skin, very little pulp, are perfectly hardy, and surpass most of the native grapes that have been exhibited at the Hall of the Massachusetts Horticultural Society, the two past seasons. The pulp diminishes and almost disappears when they are left on the vine till they attain to perfect maturity. The vines are great bearers: one vine in Mrs Schell's garden, in Clarksburg, Maryland, has produced eight bushels of grapes in one season -and eleven younger vines in the garden of Joshua Johnson, Esq. of the same State, have produced in one season thirty bushels of fruit. A particular history and description of this fine grape will be found in Prince's new Treatise on the Vine, just published. There can be no mistake with regard to the identity of the above vines, as they are all from the garden of Mr SEAVER, who raised the first Catawba Grapes over exhibited in Massachusetts.

Wanted

In a Book and Job Printing Office, in Boston, two Apprentices. Those from the country would be preferred. Apply to Mr J. B. Russell, at the New England Seed Store, No. 52 North Market Street.

Wanted,

A young woman from the country, from 20 to 25 years of age, to do the work in a small family in this city." active, laithful woman, will meet with kind treatment and good wages. Apply at this office.

Grape Vines.

The subscriber has for sale at his garden in Dorchester. the choicest variety of Grape Vines ever offered for sale in this vicinity. Many of them are now in fruit, and purchasers are invited to call and make a selection. The ollowing compose a part of the variety.

But purchasers are invited when convenient, to call and examine the trees, &c, for themselves, and make their own selections.

Trees, &c, will be delivered in Boston free of expense for transportation, when ordered; and when particularly desired, they will be packed in matts with either clay or moss for sea or land transportation. eptD

Splendid Bulbous Roots.

Just received at the New England Farmer Seed Store, No. 52 North Market-street, direct from Van Eeden & Co. Harlem, Holland, and a large assortment of Bulbous Flower Roots, comprising the finest varieties of

HYACINTHS -(double and single) dark blue, porcelain blue, red and rosy colored pure white with yellow eye, white with rosy eye, and yellow with various eyes; from 12 cts. to \$1.00 each.
TULIPS—splendid variegated, red, yellow and mixed,

12 cts, each \$1 00 per dozen, (our importation of fine tulips is very large, and we are enabled to put some sorts as low as \$5 per 100-an object to those who wish to form a superb tulip bed.)
CROWN IMPERIALS—assorted, of the most splendid

colours, and showy flowers, large roots, 25 to 38 ets.

each, JONQUILLES—sweet scented, finest roots 12 cts

POLYANTHUS NARCISSUS-fragrant, white with citron cups, and yellow with double white cups, extaa sized roots, 25 ets. cach.

DOUBLE NARCISSUS-fragrant, of all colours, 12 cts. cach—per dozen, \$1,00

SPRING CROCUS-of all colours, 6 cts. each-50 cts. per dezen.

The above roots are from the same house from which we received our supply last season, and which gave such universal satisfaction; some of the double Hyacinths having produced bells 1 inch and 8-10ths in diameter.

Purchasers are requested to notice that the above roots are not purchased at auction, and are all remarkable for their size, and for the beauty and delicacy of tint of their flowers.

Also, a further supply of Bulbous Roots, comprising Large White tragrant Lilies, 12 cts. each, I dollar per dozen, Tiger (spotted) Lilies, same price, Martagon or Turk's Caps Lilies, same price.

BRIGHTON MARKET-Monday, Nov. 1.

[Reported for the Chronicle and Patriot.] At Market this day 3868 Cattle, 10825 Sheep, and 962

Prices-Beef Cattle-From \$3,25 to 4,37%; we noticed

few taken at \$4,50; we also noticed 6 extra prime Cattle, 4 of which were taken by Mr T. W. Bennett, of Brighton, for 5.00, and 2 by Mr C. Brackett, of Newton,

Barrelling Cattle-for Mess, \$3,50, a 3,58; No. 1, 3 a 3,17; No. 2, 2,76 a 2,75.

Sheep .- Very little variation from last week, not so many good Sheep as usual, for the number; we noticed lots at the following prices: \$1,12\frac{1}{2}, 1,25, 1,33, 1,42, 1,50, 1,58, 1,63, 1,75, and one lot at \$2, part of which were wethers.

Swine .- We noticed one lot of about 50 selected Sows and Barrows, at 3gc.: one lot of 40, 44c; one entire lot leff, Jr, Chelsea, or at 52 Hanover Street, Boston. July 9. of 250, for 4c; at retail, 4c for Sows, 5c for Barrows.

MISCELLANIES.

SONGS,

WRITTEN FOR THE MERRIMACK AGRICULTURAL EXHIBITION, OCT. 13, 1830.

BY J. E. MOORE, ESQ. TUNE - '. luld Lang Syne.'

Should Autumn's blessings be forgot, And never brought to min'? Should all our conforts be forgot,

With auld lang syne?

For auld lang syne, my dear,

For auld lang syne,

We'll take a cup of kindness yet,

For auld lang syne.

The FARMER ploughs his mellow fields,
He saws the choicest grains,
And lo! how rich the harvest yields,
How wide a plenty reigns!
Behold! how wide a plenty reigns!
Around ye far and near!
Sure none can with the Farmer vie—
So let's be merry here.

October's ripened splendors shine, The Harvest's fruits appear, The flocks and herds their fatlings yield, To crown the closing year.

Then merry let us be, my dear,
I'ush round the generous wine;
We'll take a cup of kindness yet,
For auld lang syne.

But not sie' draughts as turn the brain, And stupid make the min'; O no! we'll leave sie' faults as these To auld lang syne.

For and lang syne, my dear, Yes! and lang syne, Would sometimes tak' a drap too much— Poor and lang syne!

But since we've wandered here to see Sic' sights as glad the min', We'll merry make the festive board, As in auld lang syne. For auld lang syne, my dear, For auld lang syne,

For auld lang syne, my dear, For auld lang syne Ne'er had sic' wine as sparkles here, Poor auld lang syne.

Then pledge we all the Farmer's weal,
Success to Loom and Plough.
And coming years shall keep alive
The joys that bless us now.
Then nerry let us be, my dear,
Push round the generous wine,
We'll take a Cup of Cider yet,
For auld lang syne.

BY GEORGE KENT.

Assembled once more on their annual duty,
Our Merrimack Farmers will here merry make—
The trophics we boast are not 'beauty or booty,'
But the finits of the soil that we meet to partake.

Derry down, down, down, dary down.

Warmed with 'lire of the flint,' our brave fathers of old Told the tale of their urrongs in the thunders of battle: Their sons, blest with peace, the proud tale may unfold Oftheir rights in fine furns, and rich flocks, and fat cattle.

To Ceres a bumper we'll fill, worth the having— Of the purest of wine that Pomona can yield; We'll waive other topics, and drink to the waving Of the harvest that crown every Husbandman's field.

We pour no libations in Bacchanal revels— The nectar we qualf is the orchard's rich juice; The parent of drunkenness, and of 'blue devils,' Gives place to the fruits that our farms can produce.

As patriots we boast not abundance of spirit— Sufficient for us if we're good in the grain; As lovers of Freedom, our pride is to merit A niche, though but humble, in Liberty's fane. We chant no 'All hail!' at our modest collations— For all hail will not answer the husbandman's end; For the mild rain of peace we send up aspirations— And from all 'reigns of terror,' may Heaven forefend.

May the web of our life, in the GREAT ARTIST'S hand,
Show a warp that is good, and a filling that's true—
Whether 'dyed in the wood,' or the wood,' let us stand
Fast in color forever—and that be TRUE BLUE.

Derry down, down, dawn, derry down.

PARENTS.—Consider, thou who art a parent, the importance of thy trust. The being thou hast produced it is thy duty to support. I pon thee also it dependeth, whether the child of thy bosom shall be a blessing or a curse to thyself—a useful or a worthless member of the community. Prepare him early with instruction, and season his mind early with the maxims of truth. Watch the bent of his inclination, set him right in his youth, and let no evil habit gain strength with his years. So shall he rise like a cedar on the mountain. His head shall be seen above the trees of the forest. The soil is thine own. Let it not want cultivation. The seed which thou sowest, that also shalt thou reap.

A wicked son is a reproach to his father; but he that doeth right is an honor to his gray hairs. Teach him obedience, and he shall bless thee. Teach him modesty and he shall not be ashamed Teach him gratitude, and he shall receive benefits.

Teach him charity, and he shall gain love.
Teach him temperance, and he shall have health.
Teach him prudence, and fortune shall attend

Teach him justice, and he shall be honored by the world.

Teach him sincerity, and his own heart shall not reproach him.

Teach him diligence, and his wealth shall increase.

Teach him benevolence, and his mind shall be

Teach him science, and his life shall be useful. Teach him religion, and his death shall be happy.

Suspended animation .- When persons die from hanging or drowning, the face is suffused and swollen with dark colored blood; when from inhaling any noxious gas, the countenance is pale; when from lightning, the face is pallid, the limbs are flexible, and the blood thin; and when from intense cold, the countenance is pale, and the limbs are rigid. The most destructive vapors are the earbonic acid hydrogen, and nitrogen gases: as also those that are emitted from animal and vegetable matter in a state of putrefaction. Carbonic gas is the most common; it is met with in close apartments where charcoal has been burnt, at the bottom of large beer casks, in cellars where a large quantity of wine or liquors is in a state of fermentation, and in many natural caverns or cellars. When this vapor is thought to exist, a lighted candle should be let down; and if there is a sufficient quantity of it to destroy life, the flame will be instantly extinguished,—When death is occasioned by lightning the whole frame is instautaneously exhausted of its nervous power; when from intense cold, it is invariably preceded by a strong disposition for sleep, which, if indulged, would be generally fatal. Extreme cold deprives the body of all its animal heat, exhausts it of sensibility of touch and gradually extinguishes life.

Book of Health.

Selling off at cost.—A New York pape says, that this pretence is so common that label are struck off by hundreds for general use. But the public has a pleasure in being cheated.

· Doubtless the pleasure is as great Of being cheated as to cheat.'

Otherwise the public would not be so slow to perceive that an honest dealer is willing to thrive in the ordinary way, and that selling off at cost. little creditable to prudence or honesty.

There is another error into which the countr purchasers are apt to fall. They think, in the simplicity of their hearts, that the purchaser he but a standing price for his goods, but that a sma abatement will be made as a personal favor to the individual buyer. The trader, therefore, whasks seven dollars a yard for cloth worth four has often an advantage over him who sells at four if he will take off half a dollar, as a securing grunty. The honest man, who asks but the value of his goods, is thus often left for others, whack double, and will deduct a trifle from the or hundred per centum.

CURE FOR THE RINGWORM.—Take the root the common yellow, or wild dock; wash it clea bruise it, or cut it in very thin slices; put it a cup, or other small vessel, and add vinegar st ficient to cover it. Let it stand a day or two, th apply the moisture to the ringworm, by rubbi it with a piece of the root, two or three times day, for a few successive days. This, it is said, we effect an entire cure.

In Ruthford, N. C. a man lately burnt sulphur on hearth to free his chimney from swallows. He coved the top of his chimney, and 214 fell dead uponhearth.

SLANDERERS.—Slanderers are like flies, t leap over all a man's good parts, to light o upon his sores.—Rule of life.

New Work on Farriery.

Just received and for sale at the Seed Store connect with the New England Farmer Office, No. 52 No. Market Street.

The Veterinary Surgeon; or, Farriery taught on at and easy plan: being a treatise on all the diseases accidents to which the Horse is liable; the causes symptoms of each, and the most improved remediest ployed for the cure in every ease; with instructions of shoeing-Shuth, Farrier, and Groom, how to acque knowledge in the art of Farriery, and the prevention Diseases. Preceded by a popular description of the art functions in health, and showing the principle which these art to be restored when disordered. ByJ. Hinds, Veterinary Surgeon. With considerable additional inoprovements, particularly adopted to this country Thomas M. Smith, Veterinary Surgeon, and Mem of the London Veterinary Medical Society. Price \$1

Published every Friday, at \$3 per annum, payable at end of the year-but those who pay within sixty days from time of subserpling, are cuttled to a deduction of fifty et []. No paper will be sent to a distance without payabeing made in advance.

Printed for J. B. Russell, by I. R. Betts-by will descriptions of Printing can be executed to meet wishes of customers. Orders for printing received by Russell. at the Agricultural Warehouse, No. 52 No Market Street.

CORMUNICA LIONS.

MR FESSENDEN .- Since my last communication, the July number of Annales de la Societe D'Horticulture D' as appeared most valuable, which are enclosed.

Truly your most obedient servant,

H. A. S. DEARBORN. Brinley Place, Rotbury, & October 23, 1830.

EXTRACT NO. XXV.

From the Annales D'Horticulture.

I method of increasing the size of Fruits; by M. JAUNE SAINT-HILAIRE.

Amateurs of beautiful fruits, will doubtless read ith pleasure, the experiments made by M. Janme aint-Hilaire, for increasing the size of Pears, hich are described in a memoir, read by him, on e 5th of November, 1829, before the Societe ovale et Centrale D'Agriculture.

On examining the espalier pear trees, in the usery of the Luxembourg and in many other such as Quinces, Apples, Oranges, &c. rdens, I have several times remarked, says the thor, and particularly during the month of Aust last, that when a pear was accidentally sus- A method of making Camellias produce seed; by ned by the trellis and wall, or was placed in the k of two branches, it was generally larger, pended from the branches. I presumed that fruit attained a certain size, its weight conted the tubes and vessels of the peduncle desd to conduct the sap of the tree, and prevented om obtaining a size equal to such as were supted and consequently more favorably situated, receiving the nourishing juices. I was there-, desirous of ascertaining, how far this hyiesis would be confirmed by experiments, upon erent kinds of pears; M. Dalbert, an intelligent zealous gardener, aided me in making them, te department of fruit trees, in the Royal Gar-

We first selected a young tree bearing a called the Duchesse D'Augouleme figured in Flora et la Pomone Française (Pl. LVI.) A , situated near the middle of the tree, was, on 15th of September, 9 inches and 4 lines in cirference; it was left suspended from the branch, ther pear situated lower, was at the same time thes and 10 lines in circumference. We placed r the latter a little shelf fixed upon a stake n into the ground, in such a manner that the was supported by it. The 30th of September ving, the two pears were gathered; the first, h remained suspended, had increased but 2 I gained 9 lines, which is considerable, for so a pear, and in fifteen days.

ise the size of one more than the other.

the same fruit spur. On the 15th of Seper, one of them was 8 inches and 4 lines in

the second was 8 inches and 8 lines in cir-degree of South latitude; and yet the number of cumference, having been enlarged 8 lines. It cormorants, flamingos, and cranes appears to be will be seen that the largest of the two pears equally considerable in the islands situated farther Paris, has been received. Thave extracted such articles, was left suspended and the smallest was supported, towards the north or south. In Asia large maga-An experiment, the reverse of this was made,

XCIII,) two were se- since the twelfth, or at least the thirteenth cenlected, which emanated from the same fruit spur : tury, it has been customary in Peru to manure instead of placing the shelf under the smallest it with this substance; that many millions of cubic than the other. On the 15th of October, these two agriculture along the sea-coast depends entirely pears were gathered; the largest was then 9 lines on this precious material); and farther, that the larger than the other, that is, it had increased 6 guano still continues to be furnished in large quanlines more.

From these experiments, it is believed, if they were repeated the following year, and commenced in July or Aug. a more marked difference and more satisfactory results would be produced; and my theory could be applied to other kinds of fruits.

EXTRACT NO. XXVI.

M. LAFFAY FOURNEIR.

The author says, that having seen Camellias n those on the same tree, which were freely filled with seeds, in a garden be remarked these plants with more attention, and perceived, that difference was thus occasioned; that when the most of them had their branches mutilated and the ends broken off. In February following, Mr Laffay suppressed the wood buds, which accompanied the flowers, on several of his camellias, in order to direct the sap into the flowers and nourish the seeds; the experiment was successful, and has been repeated since with equally good fortune. particularly with Camellias cultivated in pots.

EXTRACT NO XXVII.

A method of accelerating the maturity of Melons. This consists in spreading under and around the melons, a bed of pulverized charcoal two inches deep. Lampodias, at Freiheng, attempted this experiment in 1813, and he succeeded in ripening melons in a box filled with earth and not covered during the cold summer of that year. The surface of the charcoal attained a temperature at noon of from 115 to 188 degrees, while elsewhere it was only from \$5 to \$8 degrees.

FOR THE NEW ENGLAND FARMER.

GUANO.

Dear Sir-I observed in the New England and the second which was supported by the Farmer of Sept. 3, page 54, an extract of a letter economy. It was prohibited, under pain of death, was 9 inches and 7 lines in circumference; from the American Consul at Arequipa, Peru, to destroy any of the birds on the Guano islands, relative to a kind of manure, called by the Span- each of which had its inspectors, and was divided iards, guano.' Perhaps the following more par- into departments. From Arica to Chancay, a may be objected, that the position of the pears ticular account of that substance, extracted from tract of 200 leagues in length, no other manure the upper or lower branches, contributed to M. Von Humboldt's letter to M. Klaproth, may be was made use of than guano. This great care interesting to those who have seen the above quota- accounts in some measure for the vast increase of selected two pears, called Beurre D'Arem- tion.—Undoubtedly it is the ordure of sea-birds of the guano. But those wise regulations have long growing on the same branch and emanating the Pacific, which has been accumulating a seculis been abolished: at present the guano is dug for

All the Aberigines of Peru were of opinion, reference, which was left suspended; the that this substance is birds-dung; which was, Fourcroy, and Vauquelin, [to whom specimens was 8 inches and was supported by a however, doubted by many of the Spaniards. It were communicated] mention is made of a few

were gathered; the first had increased but 2 lines; and rocks are situated between the 13th and 21st zines are erected alongside the shore for the re-Upon a Chaptal pear tree, figured in the Flora ception of the guano. If we consider that, ever was put under the largest, which, on the 15th of feet have been strewed over the sandy parts of September, was 3 lines greater in circumference, Peru (and indeed the possibility of practising tities, and that the experience of the present generation appears to prove that those birds, on one of the islands, will scarcely produce a ship load of dung in a great number of years; if we consider all this, we cannot refrain from being astonished at the long series of centuries, or the vast number of birds, that must have been required to accumulate those immense strata of guano.

Though we can no longer hesitate to consider also the guano as dung of birds, yet it may be asked, has it originated on the same islands where it is now found, or has it been accumulated there by some revolution of the earth? Does it point back to an era when the deluged globe was provided with a greater number of aquatic birds than at the present thus, in the same manner as the coal formation refers us back to a vastly luxuriant vegetation? Or was the guano formed under circumstances perfectly similar to those now existing, and was nothing required to produce such immense stratification but a long succession of ages? A long residence on the rocks and islands of the Peruvian coast, and attentive observation of the quantity of dung deposited at present by many thousand cormorants and flamingos in the space of one year, are the means which may, perhaps, at a future period, enable us to answer these questions. But it may be asked, what is to become of Peruvian agriculture, and what of the population of the coast, when the exhausted Guano islands shalf no longer yield this manure?

In the neighborhood of Arica, where the crop of pepper (Capsicum baccatum, bird-pepper,) is valued at from 3 to 400,000 dollars a year, each plant is manured three times every season with guano, viz. at the periods of taking root, flowering, and producing the fruit.

Under the government of the Incas, the guano was considered as an important object of political without regularity and at all seasons,

In an account of the gnano, given to Messrs The 7th of October following, both pears is worth remarking that all the Guano-Islands other circumstances relative to that substance.

in the Chinche islands, near Pisco, but it exists also on the parts of the coast and its isles situated more in the South, at 110, 12a, and Arica. The inhabitants of Chancay, who trade in this article, go to the Chinche islands, and return in twenty with the Merrimack Temperance Society, to the days. Each hoat takes a cargo of from 1500 to Rev. Mr Patrick's Meeting house, where an ap-2000 cubic feet of guano

The strata in which the guano is disposed are from fifty to sixty feet in thickness, and they are worked in the same manner as the iron ochre mines. It is an excellent manure for the Indian eorn or maize; but if too much of it be applied the root is burnt and destroyed by it,

When exposed to the fire the brownish yellow color of the guano is converted into black; it select choir. The Society thence proceeded to gives out white funcs, and the smell of empyreumatic ammonia. Water dissolves part of it, was provided-the choicest of Cider giving a becomes thereby of a reddish color, and adopts an acid taste. Potassia dissolves much more of it than water; the solution is of a deep brown color, and is produced under an abundant development of ammonia. The result of the chemical analysis, made by Foureroy and Vanquelin, is that the principal constituent part is concrete uric SOLOMON DROWN. acid.

Foster, R. I. Oct. 9, 1830.

TRANSPLANTING TREES.

Mr Fessenden-Asthere has been considerable diversity of opinion exhibited with regard to transplanting fruit trees, I would recommend in order that Horticulturists may be satisfied which is the hest time to remove and plant trees, to try the following mode with every kind of fruit trees cultivated in New England. In the autumn, any time after the frost has had a proper effect, take the trees up, carefully preserving the roots, lay them in with an inclination of about twentyfive to fortyfive degrees in the coldest situation; cover the roots and part of the stocks six to twelve inehes deep; during the severity of winter cover the tops with mats or any material to exclude the rays of the sun; as spring advances throw some rubbish over the roots if necessary to retain the frost, until the ground becomes elsewhere warm and vegetation has commenced, when they may be transplanted,-By this mode of management no perceptible injury will be sustained in consequence of their removal-the trees will generally grow as vigorous as they would have done in their former situation. From experience I am satisfied this is decidedly the best way of transplanting trees. I refer with much satisfaction your readers to the reply of ELIAS PHINNEY, Esq. to the Hon, Mr Lowell, Chairman of the Committee for the Mass. Agr. Society as inserted in the New England Farmer vol. 6, page 122, for a successful experiment in the transplanting and management of Apple trees. JONA. WINSHIP.

Brighton, Nov. 8.

MERRIMACK AGRICULTURAL EXHIBI-TION.

Wednesday and Thursday last were proud days for the farmers and home manufacturers of Merrimack County, as manifested by the Cattle Show, and Exhibition of domestic products and manufactures, then attended at Canterbury. The collection of members of the Societies assembled and the concourse of spectators was unusually minierous-and the attention and hospitality of

Agricultural Society met at the Town house on Wednesday morning, and, after the admission of members, and the filling up of the various Committees proceeded, at 12 o'clock, in connexion propriate Prayer was offered by Rev. Mr Scales, of Henniker, an eloquent Oration pronounced by the Hon, PHILIP CARRIGAIN, of Epsom, on the subject of Agriculture and the Arts, followed by an able Address on Temperance from the Hon, John Vose, of Pembroke, and concluded by a pertinent prayer from the Rev. Mr Conaxt, of Northfield-the whole interspersed with music by a Capt. Brown's, at whose house a suitable dinner zest to wholesome food- and two Songs, written for the occasion by members of the Society, closing the table entertainment. In the afternoon, the respective Committees attended to the duties assigned them. The pens were well filled with cattle of all descriptions, and the out door show of noble animals was considered decidedly superior to any ever before witnessed in the County. Within doors the show was not less imposing. The hall for the display of Domestic Manufactures was not sufficiently commodious-but one could be well content to be elbowed and crowded. to have his eye regaled with the proud exhibition. Our limits compel us to be very brief in our notice at this time-a circumstance which we the less regret, as the Reports, soon to be published, will give a particular detail. We would barely observe that we have never, in this or an other County, witnessed so fine a display of articles of woollen manufacture generally, such as flannels, blankets and earpeting-and of many articles of cotton, and some of finer fabric.

On Thursday morning the Society again met and attended to the reports from the various awarding committees. In the afternoon the choice of Officers was made for the ensuing year -the paying of Premiums attended to-and the whole closed by a well contested Ploughing Match. The members of the Society separated in good season for their respective homes, exulting in the reflection, that while other Agricultural Societies, much to our regret, are dwindling and dying around us, ours, in the heart of the Granite State, still lives and prospers, going on from strength to strength.

PREMIUMS.

Col. James Cofran, Northfield, best farm, \$5 and I year's subscription to the New England

Walter Harris, Jr. Dunbarton, next best and I year's subscription to the New England

Samuel Chadwick, Boscawen, next best and one year's subscription to the New England Farmer.

Samuel Coffin, Esq. Concord, Secretary, 2.00

To add to the interest of the above Exhibition at Canterbury, Mr. William Gault, of Concord, in 2,00 addition to his mammoth cucumbers before noticed, presented six other varieties, of the cucumber -viz. Long Green Turkey, Long Orange Turkey. long prickly, short prickly, early cluster and early 1,50 Russia, from more than 500 of which that were 1,00 ripe and handsome, we understand he has already harvested the seeds.

Also, 4 varieties of Beets, viz. Mangel Wurt-A. P. Stinson, Concord, best boots & shoes 1,00 | zel, 251 inches in circumference, weighing 10 lbs.; French Sugar Beet, 221 inches do, weighing 7 4,00 lbs.; Long Blood, 191 do. weighing 7 lbs.; early 1,00 turnip-rooted do. 185 do weighing 4 lbs.

Also, 3 kinds corn, viz. long eared, small cob. 2.00 8 row, for field; Tuscarora do. for boiling, sweet 1,00 do. for do.

Also, Large Cape Savoy and Green Globe Savoy Cabbage, and long Dutch parsnips,

Among the Stock exhibited, was a very supe-50 rior Heifer Calf, six months and a half old, of 2,00 the common native breed raised by Mr Elliot 1,00 Chickering of this town. The Cow, we under-2,00 stand, has had for the season nothing more than common keeping, and the Calf been allowed but half the milk. It is a finely formed young animal, of a handsome dark red color, free from any 1.00 mixture of white, and weighs 480 pounds.

The Reports of the above Society, which are unusually interesting, we shall publish, as soon as we have room.

2,00 SHORT DIRECTIONS FOR TRANSPLANT-ING TREES.

Food is as necessary to the health and growth eness of Capt. John Eastman, of Concord 2.00 of plants, as it is to animals. The best food for 1,00 plants is rich, pulverized earth, or rather the vege-1,00 table matter which it contains. That your trees 1,00 and shrubs may live and thrive, proceed as fol-1,00 lows: dig for your trees holes at least three feet in 1,00 diameter, and 18 inches deep, and for shrubs a 1,00 proportionate size and depth, throwing away The Committee on carpets and hearth rugs, re- the lower spit of earth. Then fill up the hole to a tted that the funds of the Society would not proper height for setting the tree, with rich surface w them to award premiums on two other earth, or perfectly rotted manure, blended with 38, wrought by Miss Sarah Herbert and Miss four out of five parts of earth. Set your tree and M. Cady of Concord, which were entitled to cover with surface soil, treading down when the ch commendation. There were also several roots are covered with earth. See that the roots y handsome floor carpets, which for the above are trimmed of all bruised and broken parts; that they are separately extended in their natural direc-1,00 tion; that fine earth everywhere comes in contact . M. Harper, growing the Mulberry tree 1,00 with them. A potato or two, or a gill of flaxseed 1,00 or oats, may be advantageously placed in the hole 1.00 before the tree is set, and a pail of water turned in after the hole is two thirds filled. The rich earth affords nutritive pasture for the young root to 2,00 range in; the potatoes, &c, keep the ground loose 1.00 and moist, and enable them to roam freely; and 1,00 the water brings the earth in contact with the roots, and prevents them from becoming mouldy. Keep the ground free of grass as far as the roots extend; for these exhaust the moisture and nu-

from the roots air and heat, the indispensable agents to vigorous growth. Treat your trees as you would favorite corn hills, which you wish to make the most of, except give them no unrotted dung. Washing with a strong ley in May will destroy insects, and promote the herita and vigor of your trees. To persons living remote or who are unable to obtain their trees for early spring planting, we recommend that they procure them in the autumn and lay them in by the heel, as nurserymen technically term it; which is merely to dig a trench on a dry piece of ground, laying the earth on one side-the trench wide enough to contain the roots; but the roots into this, close together, letting the stocks rest in an inclined position upon the bank of earth and then cover the roots and a part of the stocks with earth. In this way they escape injury from the frost of winter, and are in readiness for early planting in the spring. Besides, better plants are generally obtained in the autumn than in the spring, after nurseries have been culled .- Buel,

Agricultural Societies .- On our first page will be found the proceedings of the meeting in Oakland County, for the formation of an Agricultural Society. We cordially wish success to the new association. The experience of the old States abundantly proves that such enterprise is sure of its reward, in the impulse it imparts to the operations of the farmer, in the increased value of his land, and in the augmentation of his profits. More than all it diffuses a spirit of emulation, the good influence of which cannot but be extensively felt,

If similar associations were formed in each county, there would be more frequent occasions for the publication of such notes as the following, handed to us by a friend from Tecumseh.—Detroit Jour.

Mr Jere, Arnold, of Tecumseli, has this season cleared 45 acres of land, ploughed 102 acres the first time, sowed 30 of it to oats, and harrowed. cross-ploughed and sowed 60 acres of the above land to wheat; and he has hauled 95 cwt. from Detroit to Tecumseh, distance 55 miles.

The whole of the above work has been done by Mr Arnold and two small boys, one 14 the other 11 years old; and his whole team has consisted of four horses, but the work has nearly all been done by three; he has had but one plough, and all has been done without the use of ardent spirits.

Sept. 27, 1830.

Silk .- A Silk-Cultivation Society has been formed in Holland. The efforts of a similar Association in England are said to have failed on acount of the humidity of the climate. They have abandoned their mulberry plantations, one of which was in England, and the other in Ireland. A writer in the Bulletin Universel thinks the business cannot be made profitable in Europe much tarther north than at present.

Mr Benj. Pickering, Newington, N. H. has a sweet apple tree which has produced three crops of ripe apples this season.

Mr Jabez H. Hammond, Windsor, Vt. has a cabbage showing 24 good hard heads, which grew on one stump.

The drought was so great in Tennessee last summer, that thousands of forest trees died, particularly where strata of limestone were near the triment necessary to the plant, and exclude surface of the ground .- Boston Patriot.

BRIGHTON CATTLE SHOW.

The Committee on Useful Inventions report as follows, viz.-

That Mr Hale of New York, by J. R. Newell, entered for premium Hale's patent pump.-This pump is of continuous rotary action, the power being applied to a crank. This very compact bydraulic machine combines the actions of the sucking and forcing pumps; and is even capable of throwing water effectively as a fire engine; the arrangement and action of the valves is original, and highly ingenious; the Committee however, forbear attempting a description of these, as they could not be made intelligible without drawings. Perhaps the cost of this pump compared with that of the ordinary construction, will render its application in some degree limited; yet the Committee have no hesitation in expressing an opinion, that it is superior to any rotary pump heretofore constructed. As this invention was not made within this Commonwealth, and moreover the inventor has omitted to furnish certificates of its actual use, the Committee are restrained by the regulations of the Society from awarding a premium which in agreeably to the rules of the Society, and a list contheir opinion it deserves.

John & Horace M. Pool, of Easton, County of Bristol, entered for premium several geometrical protractors of a new construction, by which lines may be drawn with great facility, and at any required angle to the side of the tablet or drawing board, which in this case forms a base line; it is therefore a most convenient instrument in ferming plans of surveys, an operation of primary importance to the farmer, considering the simplicity of the instrument and the case with which it may be applied, the Committee award to the Messrs Pool, a premium of-Fitteen dollars.

The same gentlemen, the Messrs Pool, presented for exhibition, two steel drafting scales and a drafting square, the workmanship of which was executed in the best manner and equal to imported articles of the kind.

Amasa Dunbar of Sharon, County of Norfolk, entered for premium a machine for forming Boot fronts; good certificates of its having been tried and found useful were produced; the workmanship was well executed, and it did not appear complicated or likely to get out of order; but in the opinion of the Committee, was calculated for large establishments, and too co-tly for general use—and sex, presented two cast iron harrow teeth, of a they do not award a premium.

Joseph Hutchinkon of Dorchester, entered a Dash Churn for premium, but it did not appear to the Committee to be any improvement on the common churn in general use, and do not award a premium.

Daniel Chandler of Lexington, County of Middlesex, entered for premium a double harrow, and produced a certificate of its having been used and approved for harrowing among trees, on rocky and uneven ground, and operating in sharp hollows or valleys, when the two sides would rise, and permit all the teeth to come in contact with the earth; the workmanship was good; it was made in the common Heater shape, in two parts divided longitudinally, and hung with two strong hinges in the of most farmers from iron Foundries, the difficentre, for the purpose of turning up one half and culty of renewing the teeth when broken, the loss placing it on the other, by which means it is made of time in replacing them, and the probable exfit to pass in narrow places, between trees, stumps, pense that would attach, would have pre and rocks.-When turned up or doubled over, vented the Committee from awarding a pre

plough, passing through the hind bar of the harrow, braced in the same manner as plough handles, answers all the purposes of Mr Chandler's harrow, with the handles a person could raise up either side of the harrow-raise or depress either end, and make the whole harrow bear on small nneven spots of earth, light it up if the teeth came in contact with a root or fast stone, and generally give a smoother and better pulverized surface to a field. In harrowing in seed the advantage of handles must be obvious to every farmer that makes use of them, or that sees them used: the double harrow has been in use in England for many years; hardly a book on Agricultural implements, but what contains plates of them, not precisely of the shape of Mr Chandler's harrow, not however varying materially. It can be used the two harrows together, or separate; and when separated, being lighter, make two teams-they are readily put together and as readily detached. Therefore the Committee do not award a premi- roots and fixed rocks. I then altered the mode

The preceding entries were all made in season, taining those entries only, handed the Committee by the Secretary, at the time of their meeting on the 19th, to make the examination. The next day the Committee found other articles had been entered and placed in the Society's rooms on that day, viz .- a Washing Machine, by Mr Shepherd, of Watertown; three ploughs, by Mr Prouty, of Hanover, county of Plymouth, who appears to be only the manufacturer of the iron work; his certificate, which has many respectable signatures, mentioning its having been used and approved, has in the printed caption, Hitchcock's Patent Plonghs. manufactured by D. Prouty; no application by the Inventor, so that no question as to premium could have arisen, as regards this entry. A double plough, with two moulds of iron and two shares, two sharp lips behind, on bottom of moulds, said to be made for ploughing between corn, but no person appeared to explain to the Committee,

four ploughs, but the Committee could not per- much less than the cost of the common teeth f ceive any new improvements in their construction; a harrow of this size, their certificates stated they had been used and highly approved.

Dr Andrew Nichols, of Danvers, county of Esnew form, differing from any harrow teeth in that should even one tooth on an average I common use. In a letter to the Trustees, of the broken daily, it would still be the most economic 19th, he gives a particular description of these teeth; the superiority over any other in use, with is not to be apprehended, it would be cheaper a certificate from a person that had used a harrow with his cast iron teeth, and approved of it highly. The Committee will request the Trustees to publish Dr Nichols' letter to them, in the New England Farmer, and to cause one of his harrow to the to be deposited in the Agricultural Warchouse, under the same roof of the New England Farmer Office, for public inspection; but perhaps it may be well for the Committee to observe that the entry made by Dr Nichols, for premium, is for his improved harrow teeth, of cast iron. The distance one half the teeth are not in use. The Committee mium, had the regulation prescribed for make as follows:-

were of opinion that strong handles like those of a jung the entry, been strictly complied with. All which is submitted by

GORHAM PARSONS, DANIEL TREADWELL. Committee. DAVID MOODY. Brighton, October 20, 1830.

The following is Doct. Nichols' letter alluded to above,

To the Trustees of the Mass, Agricultural Society. GENTLEMEN-Believing that the Harrow might be greatly improved without any increase of expense, Hast spring formed a model, and had a set of teeth cast at the Danvers Foundry which were immediately set in a frame and put in use on my farm in Middleton. They fully answered my expectations in everything but strength, being cast of hard brittle iron and too slender in that par where the greatest strength is required, to wit, the part nearest the stock which is not supported by it. Several of them were broken among large and had teeth cast of softer and stronger iron (Scotch iron) such as are berewith exhibited, nonof these have been broken. The projection from behind the point of the tooth is designed to re ceive a brace should the strength prove insufficien without one. I have not however found it ne cessary to brace the teeth of my harrow. Th notch near the top is designed to secure the toot in the frame by a pin which together with a wedg driven in behind, filling the trough of the toot readily secures it, and at the same time leaves in a situation to be easily taken out and set in smaller frame for harrowing among corn, & With the form exhibited I am well satisfied, be lieving it combines a good degree of streng with a saving of metal. But very possibly it me still be improved, and as no patent will be take out for it, every farmer will be at liberty to has it formed to suit himself. Each tooth at seve cents per pound costs about 30 cents-eac tooth moves five inches of earth. Eleven tee forms my harrow, which moves and pulveriz very completely a strip of land 55 inches wid Messrs Nourse & Co. of Sherburne, introduced \$3.30 the cost of the teeth, which is I thin

> I think it not extravagant to say that with the same or or horse power most tillage land ma be benefited twice as much as it can be by the use of the common harrow in the same time, at harrow in use. In such a result however, which make them of wrought iron,

Yours respectfully.

ANDREW NICHOLS.

Danrers, Oct. 19, 1830.

The Committee on Working Cattle, consisting Messes Loke Fiske, Jaron Capen, and Sami Brooks, Laring attended to the duty assign them, ask leave to report-

Twenty voke of Cattle were regularly enter for the Society's premiums, and they did mu credit to the farmers who offered them.

The Committee after trial of their nower a training, and a comparison in reference to at strength, form, equality of match, and other ge eral properties, were unanimous in their awar

To Benjamin Woodbury of Sutton, his cattle, four years old, first premium, \$25,00

To Leonard Woodbury of Sutton, his cattle, four years old, second premium, \$20,00 To Luther Whiting, of Sutton, his cattle, four

years old, third premions, \$15,00 To George M. Barrett, of Concord, his cattle,

four years old, fourth premium, \$12.00 To Henry Barrett, of Concord, his cattle, four years old, tith premium, \$8,00

Many other Cattle were very deserving and performed well, and in other years would have obtained premiums; but the superiority of the show, in this respect, over former years, excluded

All which is respectfully submitted, Per Order, LUKE FISKE.

Brighton, Oct. 20, 1830. Chairman

COMFORT.

This is a very comfortable word; and it is a sad pity the French don't know what it means. But it is a still greater pity that we, who have the word, and do know its meaning, should so often sacrifice it for the most unsubstantial reasons. The fact is, we are ashamed to be comfortable, lest we should appear ungenteel. The best chamber in the house must be shut up for company; the lightest and the randsomest parlor must be kept closed for the same eason. We must have a large house, and few donestics, for the sake of appearances,-and we someimes cut ourselves off from intelligent society, beause we cannot afford to receive them with quite so nuch show and ceremony as our neighbors. All his is foolish. If we cannot afford to be elegant, ve can, at least, be comfortable; and if we can proure the elegancies of life, why not empy them evey day? Why must spring-cushions, and warm carets, and airy rooms, and handsome walls, be shut p three hundred and fifty days of the year, for the ake of making a grand show off, now and then? Vhy do we not consult our comfort by living in maller houses, and keeping more domestics? Sure-, leisure for intellectual and tasteful pursuits is etter than the reputation for lofty rooms and Venian windows. Why should we refrain from seeing ultivated people in a social, cordial way, because nother can give them better wine and rarer fruit? I admire splendor, and where circumstances warent it, I am even strongly in favor of magnificence: it above all things I do love comfort.

I believe no people in the world have such fear of iblic opinion as the Americans. To a certain exnt, the check is a salutary one; but our domestic e is a matter of much more concern to us than it to the public; and we ought to have sufficient courge to study our own comfort, and gratify our own stes.

Our manner of visiting, and of receiving visiters, laborious in the extreme. If friends are staying ith us, we feel as if every moment must be devod to them. We cannot sleep, or ride, or read, or sit, for fear our friends should be left alone. This making visiting a burden to them, as well as to rselves. We soon become uneasy at such conaint, and they are restless under a conviction that ey impose it upon us. The fact is, it is a luxury to risiter sometimes to be left alone-to read, or raine, or sleep, according to fancy. Many a time, ien I have really admired and loved my hostess, I ould have thanked her from my heart for a little axation of attention-the privilege of being someies left to my own thoughts-the luxury of a little re freedom, for her and for nivself.

At the South, they manage these things better in we do. Their hospitality is unbounded. Visrs may be at home in a mansion, without depriving inhabitants of the pleasures of home. Every ng is at the service of friends; but if the hostess shes to visit, where her guest has no particular innation to go, she does not hesitate to leave her to

herself, to dispose of time as best suits her. What a re-the sick, and not as an enjoyment to people in a hef not to be obliged to visit, or obliged to stay at state of perfect health. home! This perfect freedom is the only thing that can make visiting a real pleasure to all parties. A friend lately told me of a very elegant woman he had seen at the South, who formed the most prominent attraction at all the fashionable parties,

'I saw her once early in the morning,' said he, buying some fine fruit, at her door. She had on a calico morning-dress, and a very neat plain cap, I thought her an uncommonly genteel domestic-but never dreamed of its being the brilliant belle I had seen the evening before, until she bowed and spoke to me. We entered into some conversation concerning the fruit she was buying; and simple and common place as the remarks must have been, during such an interview, I was absolutely enchanted with the graceful ease of her manner. A New England woman would have escaped into the house, on my approach-or not recognized me; or, if I had spoken first, would have blushed, and fidgetted, and apologized for her morning dress.' Which course is the wisest?-not to ask, which is the most comfortable. An ordinary woman will never get a character for real elegance by starving herself for state occasions; and a truly tasteful one will lose nothing by being sometimes seen without coronation robes.

Journal and Tribune.

BLOATING IN CATTLE.

A gentleman recently from France, communicates to us the following care for this commonly fatal disease.

The Volatile Spirit of Ammonia is found to produce instantaneous relief. Its action is chemical, decomposing the gas generated in the stomach by fermentation.

M. Thonard, the celebrated French professor of Chemistry, speaking of the utility of scientific investigations, and of the innumerable instances where they had been found subservient to the general interests of society, among many others, adduced this as an example, and related the following anecdote, in illustration of its effects.

A short time previous, while on a visit to his native village in some remote part of France, a drove of 30 or 40 cattle broke into a field of rank clover, and all of them became affected with bloating, and when discovered some of them were so far gone as to fall down upon their fore legs. He called immediately for Spirits of Ammonia, but none could be found in the place, and they were obliged to send four miles to a neighboring village before it could be procured, He commenced by giving it to those most severely affected, and so on to the others, and all were saved excepting two. If there had been no delay in getting the remedy, probably none would have been lost

The dose for a cow or ox is a table spoonful; for a sheep a teaspoonful, diluted in water or any convenient liquid. If not effectual, repeat the dose.—.Am. Citizen.

EARLY RISING.

Early rising is a habit so easily acquired, so necessary to the despatch of every business, so advantageous to health, and so important to devotion, that, except in cases of necessity, it cannot be dispensed with by any prudent and diligent man.

Thanks to the goodness of God, and the fostering hands of our kind parents, this habit is so formed in some of us, that we should think it a cruel punishment to be confined to our beds after the usual early hour. Let us prize and preserve this profitable practice; and let us habituate all our children and servants to consider lying in bed after daylight as one of the ills of the aged and 52 yards per diem.

If any of us have been so unfortunate as to have acquired the idle habit of lying late in bed, let us get rid of it. Nothing is easier. A habit is nothing but a repetition of single acts: and bad habits are to be broke as they were formed, that is, by degrees. Let a person accustomed to sleep till eight in the morning, rise the first week in April at a quarter before eight, the second week at half after seven, the third at a quarter after seven, and the fourth at seven: let him continue this method till the end of July, subtracting one quarter of an hour each week from sleep, and he will accomplish the work that at first sight appears so difficult. It is not a stride, it is a succession of short steps, that conveys us from the foot to the top of a mountain. Early rising is a great gain of time; and should the learner just now supposed. rise all the harvest mouth at four instead of eight. he would make that month equal to five weeks of his former indolent life.

Country business cannot be despatched without early rising. In spring, summer, and autumn, the cool of the morning is the time both for the pleasure and riddance of work; and in the winter, the stores of the year are to be prepared for sale, and carried to market. The crop of next year, too, is to be set, or prepared for. Every business worth doing at all, is worth doing well, and as most businesses consist of a multiplicity of affairs, it is impossible to disentangle each from another, to put all in a regular train, and to arrange the whole so that nothing may be neglected, without coolness and clearness of thinking, as well as indefatigable application. The morning is necessary to all this, and the time and the manner of setting out generally determine the success or the listlessness of the day. Besides, all businesses are subject to accidents, and to set forward early is to provide for the repair, if not for the prevention of them. It is a fine saving of Job, 'If my land cry against me, or the furrows thereof complain, let thistles grow instead of wheat, and cockle instead of barley,'

Lying long and late in bed impairs the health, generates diseases, and in the end destroys the lives of multitudes. It is an intemperance of the most pernicious kind, having nothing to recommend it, nothing to set against its ten thousand mischievous consequences, for to be asleen is to be dead for the time. This tyrannical habit attacks life in its essential powers, it makes the blood forget its way, and creep lazily along the veins, it relaxes the fibres, unstrings the nerves. evaporates the animal spirits, saddens the soul, dulls the fancy, subdues and stupifies a man to such a degree, that he, the lord of the creation, hath no appetite for anything in it, loaths labor, vawns for want of thought, trembles at the sight of a spider, and in the absence of that, at the creatures of his own gloomy imagination. In every view, therefore, it was wise in the psalmist to say, 'My voice shall be heard in the morning,'

Remarkable Hank of Silk .- A hank of silk, produced by a single worm, was lately recled in the presence of several gentlemen, in Bolton, which was 365 yards in length, and on being weighed was found to be of the texture of 15000 hanks in the lb. A single pound of this silk would reach 716 miles. The worm was only 7 days in spinning the bank, consequently it produced at the rate of

Cattle Show at Northampton,-On the 27th ult. the anniversary of the Hampshire, Hampden and Franklin Agricultural Society was celebrated in Northampton.

Northfield delivered the address. This is said to flavor. have been a very able production. The collection of people, especially of the younger portion of the community was very great. The manufactures are highly spoken of by the Editor of the Greenfield Gazette. Among them were a piece of blue cloth, which took the first premium; several pieces of excellent flannels, and some rose blankets; do. of stair carpeting; a cloth floor carpet from New Braintree and Barre, and from those wrought in colors with the needle, by Miss Esther Williams, 69 years of age; A bounet made of the down of milk-weed attracted particular attention. Cutlery manufactured by Mr E. S. Phelps, and Messrs Fowle and Kirkham, of Northampton, was highly commended. Spiral springs for fastening doors and windows were exhibited, which were well calculated for their object. There were also fine butter, a few skeins of excellent sowing silk, made by Mrs Shaw, of Belchertown, and four or five pounds of raw silk, raised and recled by Mrs Starkweather, of Northampton. This silk was wound on an Italian reel, said to be greatly preferable to any other.

· The manufactured articles generally were pronounced to be of a quality superior to those usually exhibited on such occasions,' although they

were not so numerous,

gland Farmer.

West Springfield, November 2, 1830.

THOMAS G. FESSENDEN, Esq.-

DEAR SIR-I have this day put into the Stage Office at Springfield, a small box containing 8 or 10 Pears, known to me by no other name than the Bagpipe. The scions were sent to me by Col. Thomas Forrest, late of Germantown, Pa., and formerly a member of Congress from that State. He informed me that it was a native fruit-that it originated on his farm, and that he had given it \$10 the above name. He spoke of the pear as excelling almost all others in his estimation, and of the tree as a good bearer.

I esteem it as a very valuable fruit, and have considered it a great accession to my assortment, which is small, the more so, as it was wholly unknown to any person here, who has seen or tasted it. It may not be a new kind to the members of the Society, but if it should be, and any person should wish for scions, it will give me pleasure to furnish them, at the proper season, to the extent of my means.

The fruit which I have sent you, is a fair sample-not a selection of the largest pears, but a just average of the whole produce. It is not so large this season as common-indeed the season has proved unfavorable with me for all kinds of pears. I am, very respectfully,

Your friend and servant, SAMUEL LATHROP.

The Committee have carefully examined the fruit, and have identified it to their satisfaction as the Holland Green, No. 26, of Cox, to whose description Mr Lathrop is referred, Col. Forrest must have been mistaken in its being a seedling, or have sent scions of the Holland Green for those of the 'Bagpipe.' The Holland Green has been produced for several years by one of the Committee. In all seasons it has been bad; he therefore came to the conclusion that it was unfit for our climate, and regrafted his trees, as did others who had raised the same fruit. The pears sent to the Society by Mr Lathrop, were of fine flavor; and in the warm soil of Springfield, and in New York and Pennsylvania, it is no doubt a very desirable fruit.

From Mr Otis Pettee, of Newton, llyslop Cling-

stone Peaches. A melon was also exhibited, which was taken from the Vine in Spain early in September. The flavor was good, and the seeds were distributed ROBERT MANNING. for cultivation.

POTATO ONIONS.

This curious variety of the onion is very early and mild. They should be planted in common dry situations, in the autumn,-covered over about two inches deep in gardens. The small ones should be planted out 4 inches apart-the large ones 12 to 14. They are generally ripe about the 10th of July, and yield eight to ten fold.

It is stated that there were in Boston on Monday, 18 ships, 6 barks, 86 brigs, 162 schooners, and 58 sloops, total, 330; exclusive of 200 or

Mr John Reid, of Halifax, Vt. took from fig.

To CORRESPONDENTS .- We have received the Address recently delivered before the South Carolina Agricultural Society, by JAMES CUTHBERT: also one delivered before the Massachusetts Horticultural Society, by Mr Cook ;-and that before the Albany Horneultural Society, by Doct. BECK-extracts from each of which will appear in the New England Farmer as soon as our columns will admit. Several communications are on file, and will seen appear.

Sheep for Sale.

On hand and for sale 2000 fine woolled sheep of various grades from balt to full blooded Merinos. Among them are about 500 Wethers and fat Ewes. 1250 Stock Ewes, (a desirable lot for persons wishing to obtain a flock,) and 250 lambs. The above will be sold on accommodating terms and in lots to suit purchasers on application to the subscriber in Cummington, Hampshire County, Mass CYRUS FORD. Cummington, Nov. 4, 1830. 31.

Pear Seedlings.

For sale at the New England Seed Store, No. 52 North Market Street-

20,000 Pear Seedlings, in fine order for Nurseriesraised within six miles of Boston-at from 5 to \$10 per thousand, according to their size, &c. They will be suitably packed, as wanted, for transportation to any distance.

Durham Short Horns.

For sale, several of the pure breed, descendants of the celebrated animals presented by ADMIRAL SIR ISAAC COFFIN, to the Massachusetts Society for the Promotion of Agriculture. The pedigice of these animals can be given as far back as Hubbach, who was calved in 1777, and is reputed the foundation of this much admired stock. Also, several Heifers bred from the same, of various grades, from half up to seven eighths blooded animals, For particulars, inquire of E. Hersey Derby, Salem. Salem, October, 1830.

Seeds for Country Dealers.

Traders in the country who may wish to keep an assortnent of Garden Seeds for sale, are informed they can be urnished, at J. B. Russell's Seed Store, connected with the New England Farmer, 52 North Market Street, Boston, with bexes of various sizes and prices, from 10 to \$50, containing a COMPLETE ASSORTMENT of the seeds nostly used in a kitchen garden, on as favorable terms as hey can be produted in this country, of equal quality, leatly done up in small packages, ready for retailing, with hort directions on each package for its culture and unagreent-warranted to be of the growth of 1830, nd of the purest quality.

Kenrick Nurseries in Newton, near Boston.

For sale at the Kennick Nurseries in For sale at the Kennick Nurseries in Newton, an extensive assortment of Apples, Pears, Peaches, Plums, Cherrics, Apricots, Nectarines, Mulberries, Quinces, Raspberries, Grape Vines, Gooseberry and Currant ushes, and ten finest varieties of Strawberries, including Vilmot's Superb, Genuine Keen's Seedling, do.

Also about 200 varieties of the most ornamental hardy ees and shrubs, including the Double Silver Fir and bouble Spruce, Horse Chestnuts, Mountain Ash, Gum cacia, Three Thorned Acacia, Butternuts, Ailanthus or ree of Heaven, Elms, Sugar Maples, Flowering Catalis, Weeping Willows, Napoleon, do. do. Honeysuckles, id a superb variety of hardy Roses, &c, &c. Many of e above sorts of trees of extra sizes.

WHITE MULBERRY TREES by the 100 or 1000-for antations.

ISABELLA GRAPE VINES, either singly or by the 100, reduced prices.

Catawba Grape Vines.

THE GENUINE SORT. For sale at the New England Seed Store, No. 52 North Market-street-

50 Vines of the true Catawba Grape, one year old. price 75 cts. each. This is one of the best native, table, or wine Grapes cultivated; the bunches large, with shoulders, very thickly set, with large berries of a pale red or lilac color, and in some situations covered with a beautiful bloom, giving them a blueish purple appearance. They have a slight musky taste, and delicate flavor, They have a thin skin, very little pulp, are perfectly hardy, and surpass most of the native grapes that have been exhibited at the Hall of the Massachusetts Horticultural Society, the two past seasons. The pulp diminishes and almost disappears when they are left on the vine till they attain to perfect maturity. The vines are great bearers: one vine in Mrs Schell's garden, in Clarksburg, Mary-Land, has produced eight bushels of grapes in one season -and eleven younger vines in the garden of Joshua Johnson, Esq. of the same State, have produced in one season thirty bushels of fruit. A particular history and description of this fine grape will be found in Prince's new Treatise on the Vine, just published. There can be no mistake with regard to the identity of the above vines, as they are all from the garden of Mr Seaver, who raised the first Catawba Grapes ever exhibited in Massachusetts. Splendid Bulbous Roots.

Just received at the New England Farmer Seed Store, No. 52 North Market-street, direct from Van Eeden & 'o. Harlem, Holland, and a large assortment of Bulbous Flower Roots, comprising the finest varieties of

HVACINTHS -(double and single) dark blue, porcelain blue, red and rosy colored pure white with yellow eye, white with rosy eye, and yellow with various eyes; from 12 ets. to \$1 00 each.

TULIPS-splendid variegated, red, yellow and mixed, 12 cts, each \$1 00 per dozen, (our importation of fine tulips is very large, and we are enabled to put some sorts as low as \$5 per 100-an object to those who wish to form a superb tulip bed.)

CROWN IMPERIALS—assorted, of the nost splendid colours, and showy flowers, large roots, 25 to 38 cts.

JONQUILLES-sweet scented, finest roots 12 cts each.

POLYANTHUS NARCISSUS-fragrant, white with citron cups, and yellow with double white cups, extaa sized roots, 25 ets. each.

DOUBLE NARCISSUS—fragrant, of all colours, 12 cts. each-per dozen, \$1,00

SPRING CROCUS-of all colours, 6 cts. each-50 ets, per dezen,

The above roots are from the same house from which we received our supply last season, and which gave such universal satisfaction; some of the double Hyacinths having produced bells 1 inch and 8-10ths in diameter.

Purchasers are requested to notice that the above roots are not purchased at auction, and are all remarkable for their size, and for the beauty and delicacy of tint of their flowers.

Also, a further supply of Bulbous Roots, comprising Large White fragrant Lilies, 12 cts. each, 1 dollar per dozen, Tiger (spotted) Lilies, same price, Martagen or Turk's Caps Lilies, same price.

Grape Vines.

The subscriber has for sale at his garden in Dorchester, the choicest variety of Grape Vines ever offered for sale in this vicinity. Many of them are now in fruit, and purchasers are invited to call and make a selection. The following compose a part of the variety. Black Hamburg,

Napoleon,

Bland,

White Chasselas,

Golden Chasselas,

Black Constantia,

Red Chasselas.

Black Cape, White Muscadine, Golden Muscat,

Gore's, (a beautiful Black Grape) Careline

Ferrel. 8 varieties of superior fruit from Xeres and Malaga. 400 two years old Isabellas. 1400 one " "

200 CATAWBA, or what has heretofore been considered the BLAND. It is now satisfactorily ascertained that the Bland grape will not ripen in this climate, in the open

ground. Orders by mail, addressed to the Subscriber, or personal application at his office, No. 71 Congress-street, for any number of Vines from one to one hundred or more, will meet with prompt attention. Application may also be

made to Patrick Kennedy, at the garden.

Boston, Sept. 27, 1830. 5t ZEBEDEE COOK, JR.

Grape Vines.

The Subscriber effers for sale at his Garden, the following Grape Vines.

White Frontinge,

White Corinthian,

White Chasselas,

Chasselas de Fontainbleau.

Black Hamburg, Black Cape, ters. Black Frankendaldt. Esperione, Muscat of Alexandria,

Isabella, Grizzly Muscat, Red Frontinae, Red Chasselas. Purple Muscat, Red Constantia. Golden Chasselas, &c.

Bar Sur Aube, Parsley leaved, Cioutat, Early Oyal, Thomery Vines.

These Vines are from one to four years old, with fine roots and fit for planting immediately. The black Hamburg, Muscat of Alexandria, and the Coriothian, were sent to the subscriber by Sir Joseph Banks, from Kew Gardens, and are known to be genuine, the original plants having all borne fruit for many years. The tine Black Hamburgs from Mr Breed's Vinery, which were so much admired at the Horticultural dinner this season were raised from the subscriber's vines. Orders left at the Gardon or with the subscriber, will meet due attention. Plants may be seen at the Garden.

SAMUEL G. PERKINS.

N. B. A few Pear Trees of the new species, both of this country and Europe, are also offered for sale; among which are the Angueleme, the Siculle, and the Colmar

Bolivar Calves, Saxony Bucks, and Bremen Geese. For sale, 4 Bull Calves, sired by the celebrated imported improved Durham short horned bull Bolivar, which stock have produced 36 quarts of milk a day. No. 1, dam

Grey Brown, half Collebs and half Galloway, No. 2, dam Juno, three fourths Fill Pail. No. 3, dam Ceres, her sire Cœlebs, her dam Mr Gray's imported Cow. No. 4, dam Beauty. half Cœlebs and half Galloway. The Calves are beautiful, and their dams all great milkers.

Two imported Saxony Bucks, 2 Yearlings, and 2 Lambs. pairs of Bremen Geese. Inquire of Benjamin Shurtleff, Jr, Chelsea, or at 52 Hanover Street, Boston. July 9.

Wanted.

A young woman from the country, from 20 to 25 years of age, to de the work in a small family in this city. An active, faithful woman, will meet with kind treatment and good wages. Apply at this office.

Bulbous Roots.

Just received at the Seed store connected with the New England Farmer, 52 North Market-street,

A good collection of Lily Ruets, viz .- the Tiger, (spetted) Martagon, (spotted) Orange, and White Lilies. These make a fine appearance in the borders of gardens. They are hardy and durable. These plants have bulbous roots, and should be planted in rich soil, four inches deep, measuring from the top of the hulb. The small roots be-low the bulb, are perennial. Martagon Lilies grow from five to seven feet high, and produce from fifteen to twentyfive very delicate flowers on a stalk. The White Lily grows to the height of three to four feet, and produced large, white, fragrant flowers. The whole are easily cultivated, and are well calculated to beautify a border.

Treatise on Bees.

Just received and for sale at the Seed Store connected with the New England Farmer, 52 North Market-street, A further supply of a Practical Treatise on the Management of Bees; and the Establishment of Apiaries, with the best method of destroying and preventing the depredations of the Bee Moth. By James Thacher, M. D. Price 75 cents

BRIGHTON MARKET-Monday, Nov. 8. [Reported for the Chronicle and Patriot.]

At Market this day 4246 Cattle, 4140 Sheep, and 776 Swine. Prices-Beef Cattle-From \$3,25 to 4,371; we noticed

a few taken at \$4,50. Barrelling Cattle- for Mess. \$3,50, No. 1. \$3 a 3,08, No. 2, \$2,66 a 2,75.

Sheep .- We noticed a few lots only-one lot for \$1,25, one for $1,37\frac{1}{2}$, one for 1,50, one for 1,75, and one for 2,10-a few cosset wethers were taken for \$5,50.

Swine .- We noticed one entire lot of 250 at 3 kc; one let of 150 Sows and Barrows, at 4c; one of 50 large Barrows, at 45c; one of 36 selected Barrows, Shoats, at 4\$c; one of 20 selected Sows, Sheats, at 3\$c-at retail, 4½ for Sows, 5c for Barrows.

MISCELLANIES.

The following beautiful lines, by N. P. Willis, illustrate the most interesting engraving in the Youth's Keepsake for 1831. We have never seen a better Juve-uile annual than this volume.—Mass, Jour. and Trib.

TIRED OF PLAY.

Tired of play! Tired of play!
What hast thou done this live long day?
The birds are hushed, and so is the bee.
The sun is creeping up steeple and tree,
The doves have flown to the sheltering caves,
And the nests are dark with the drooping leaves—
Thylight gathers and day is done—
How hast thou spent it, beautiful one?

Playing? But what hast then done beside, To tell thy mother at eventide? What promise of morn is left unbroken? What kind word to thy playmates spoken? Whom hast thou pitted, and whom forgiven? How with thy taults has duty striven! What hast thou learned by field and hill—By greenwood path and by singing rill?

There will come an eve to a longer day. That will find thee tired—but not of play! When thou will lean as thou leanest now. With drooping lumbs and aching brow. And wish the shadows would faster creep. And long to go to thy quiet sleep.

Well were it then if thine aching brow, Were as free from sin and shame as now -Well for thre if thy lip could tell A tale like this of a day spent well, If thise open hand hath reheved distress-It the pity bath sprung to wretchedness-If thou hast forgiven the sore offence, And humbled thy heart with penitence-If Nature's voices have spoken to thee With their holy meaning cloquently-If every creature hath won thy love, From the creeping worm to the brooding dove. And never a sad, low-spoken word Hath plead with thy buman heart unheard-Tuen, when the night steals on as now, It will bring relief to thine aching brow, And with joy and peace at the thought of rest, Thou wilt sink to sleep on thy mother's breast.

A Transparent watch,—A watch has been presented to the Academy of Sciences at Paris, constructed of very peculiar materials, the parts being principally formed of nock crystal. It was made by M. Robellier, and is small in star. The internal works are all visible; the two teethed who label are of metal, to prevent accidents from the breaking of the springs. All the screws are fixed in crystal, and at all the axes turn oursides. The escapement is of stap, hore, the balance wheel of rock crystal, and its spring of 2.44. The regularity of this watch as a time keeper, is attributed by the maker to the feeble expansion of the rock crystal in the balance wheel, &c. The execution of the whole shows to what a state of perfection the art of cutting precious stones has been carried in modern times.—Quarterly fournal of Science.

Account of Dawel Wilson.—This singular to lividual was one of the caliest emigrants to Kentucky. From the time of his settlement in the country, till within a faw years past, he resided a few miles south of Port Williams, at the mouth of Kentucky river, on the waters of Mill Creek. The place of his abode, and his style of living are not more remakable, than the character of the individual himself, and all Leould learn of and concerning him, is in perfect harmony and good keeping. The habitation in which he spent so many and happy days, was composed of round poles and Kentucky mud. It consisted of two apartments, simply, with no out-house or cellar. During his residence in this singular place of abode, he became the husband of five wives, and the father of fortre-six children.

According to his own account of himself, he was born in New Jersey, in the year 1728. He is in height about five feet six nehes. His muscular frame and strength of constitution, even to have defied the decay of years, or hardships and buildings of a backwoods life.—The scientific and curious have examined the conformation of this singular being so far as pacticable, and they represent his tibs, unlike those of his tellow mortals, separate and distinct, but as united together, forming on each side a solid sheet of hone; in short, that the vital part is safely deposited in a 'strong box,' delying all attacks of foes from without.

At the age of 96, he was in the enjoyment of entire health; his teeth all sound, his weight about 160, and his muscular strength truly astonishing. He never shook hands with an athletic man, but he gave him such a grip that he was fain to beg for mercy. At that advanced age, he could perform more labour than ordinary men could in the prime of life. His neighbors mention as a proof not only of his good constitution, but of his undiminished activity, that at his advanced age, he would leap from the ground, and crack his feet together, with the agility of a boy of sixteen.

Some 5 or 6 years since, he removed to Indiana, there to build himself a new habitation, plant a new colony, and become the father of a new race. He is now living near Versailles, Ripley county, Indiana, with his sixth wife, and has two children of the new stock.—Baltimore Farmer.

Gu-Betweens.—There is perhaps not a more odious character in the world than that of a go-between—by which I mean that creative who carries to the ears of one neighbour every injurious observation that happens to drop from the mouth of another. Such a person is the slanderer's herald, and is altogether more odious than the slanderer himself. By his vite officiousness, he makes that porson effective, which else were inert; for three-fourths of the slanders in the world would never injure their object, except by the malice of go-betweens, who, under the mask of double friendship, act the part of double traitors.

The French sawyers in Paris put one end of their saw upon the ground, and the other against their breast. They then take up a stick of wood in their hands, and move it across the saw until it is divided. In vain has an American r-peatedly attempted to teach them the use of a wooden horse in sawing: they have only laughed at him; and because none of their sticks are large, have preferred to tollow the custom of their fathers.

American Cotton goods are now exported to Calcutta with great profit, and materials for our manufactures are received here from there. The Raleigh Register say—

'In a letter written by the Rev. Mr. Dwight from Constantinople, to a friend in Utica, New York, he states that our Cotton goods are in good reputation at that place—so much so, that the English actually put American stamps on their goods, to sell them to better advantage.'

Women are greatly deceived when they think that they recomend themselves to the other sex by an indifference to religion. Every man who knows human nature, connects a religious feeling with softness and sensibility of chart. At least we always consider the want of it a proof of that masculme spirit, which of all your faults we distlike the most. Besides, men consider your religions such elections which they are most censily interested. Never indulge yourselves in ridicule on religious subjects, nor give countenance to it in others by seeming diverted with what they say.—This, to people of good understanding, will be a sufficient check

Let a woman be decked with all the embellishments of art and the gifts of nature—yet, it boldness is to be read in her face, it blots all the lines of beauty. Modesty is not only an ornament, out also a guard to virtue. It is a delicate feeling in the sout, which makes her shrink and withdraw herself from the appearance of danger. It is an exquisite sensibility, that warns her to shou the approach of every thing hurful.

To CURE Some Eyes.—'Good morning landlord,' said a man the other day as he stepped into a tayern to get something to drink.

'Good morning, sir,' replied mine host-'how de you de ?'

^cOh, I don't know,' said the man, raising his goggles and wiping away the rheum, '1'm plagued most to death with these here pesky sore eyes, I wish you'd tell me how to cure em.'

'Willingly,' said the merry host,—'Wear your goggles over your mouth; wash your eyes in brandy—and Fil warrant a cure,'—,V. Y. Cons.

A few questions asked and answered, according to our way of thinking.

Who is the best man? Not he who makes the greatest show, or the most noise. But he who does the most good at the least expense.

Who is the best Farmer? Not he who has the largest farm or the most land. But he who does all his work at the right time, and in the right way.

Who is the best Lawyer? Not he who makes the most writs, or gets the most money. But he who has the most knowledge, and uses that knowledge honestly.

Who is the best Politician? Not he who rides the frace till he sees which side is the strongest, or who intrigues with the ignorant, the ricious, and the profligate, to get himself into office. But he who reads candidly, inparts the information he has acquired honestly, and is faithful in all situations.—V. II. Post.

Overfeeding.—Most persons act as though the strength, vigor and health of the body rise in proportion to the load of food they are capable of foreing daily into the stomach; and hence overfeeding is the common error, at least, in our country. A slight deficiency of food is, however, far less injurious than too great an amount. The old maxim if health be your object, rise from the table before the appetite is sated, is founded in truth and though the epicture will sneer at it, yet wer he wisely to adhere to it, he would save himselfrom many a gloonly hour of pain and suffering

When the stomach is not laboring under discase, and the individual is otherwise in health, the natural appetite is one of the best guides—the only one, indeed, as to the time for cating, as well as to the quantity of food that may, and ought the taken: we should cease from eating the moment it is satisfied.

New Work on Farriery.

Just received and for sale at the Seed Store connects with the New England Farmer Office, No. 52 Nor!
Market Street.

The Veterinary Surgeon; or, Farriery taught on a ne and casy plan: being a treatise on all the diseases ar accidents to which the Horse is liable; the causes at symptoms of each, and the most improved remedies en ployed for the cure in every ease; with instructions to the Shoeing-Smith, Farrier, and Groom, how to acquis knowledge in the art of Farriery, and the prevention Diseases. Preceded by a popular description of the annal functions in health, and showing the principles of which these are to be restored when disordered. By John Hinds, Veterinary Surgeon. With considerable addition and improvements, particularly surgeon, and Memby of the London Veterinary Medical Society. Price §12

Published every Friday, at So per annum, payable at the end of the year-but those who pay within sixty days from time of subserbing, are entitled to a deduction of fifty cent []. No paper will be sent to a distance without payme being made in advance.

NEW ENGLAND FARMER.

PUBLISHED BY J. B. RUSSELL. AT NO. 52 NORTH MARKET STREET, (AT THE AGRICULTURAL WAREHOUSE.)-T. G. FESSENDEN, EDITOR,

VOL. IX.

BOSTON. FRIDAY, NOVEMBER 19, 1830. No. 18.

COMMUNICA TIONS.

FOR THE NEW ENGLAND PARMER.

Mr Fessenden-Many persons who have cultivated the common Double Purple, and Double White Althea Frutey, and found them too delicate to support the winter uninjured, are not aware that there are other kinds far more hardy; several of which, having originated in this vicinity, These are the Double Blue Striped, and the these are the Deep Red, and the Carnation Striped, branch of national industry.

While on the subject of Ornamental Trees, &c, I will mention some others that are of a very ineresting character.

Magnolia Cordata, or Yellow Twice Flowering Magnolia-This is one of the most admired speies of its class, and will flower freely at the reight of two feet, and continue to do so until it orms a tree of considerable size. It is highly ineresting from being the only species with flowers f this color; and the more so, from its producing hem twice in each season; once in May, and gain in August, whence it has obtained the title disease, as I have two instances before me. f'Twice Flowering Magnolia.' It is perfectly f Maine.

Magnolia Obovata, or Chinese Purple Flowering lagnolia .- This is esteemed for the uncommon chness and beauty of its flower, which, in the ouse are produced in March. They are bell taped, of a delicate violet purple outside, and hite within, from which circumstance it is somenes called the 'Two Colored Magnolia.' It suports our winters unprotected in the vicinity of ew York, and perhaps may do so farther north. sometimes produces flowers a second time in e month of August.

Magnolia Conspicua-Chandelier Magnolia, or dan .- This has very large flowers of a pure lite color, very splendid in appearance, and in ape like a chandelier. In the house it flowers March, but will support our winters unprotect-

. A tree is mentioned by the London Horti-Itural Society, as growing at the seat of Mr raham Hume, in England, which is 14 feet

wers in one season.

Silver Leaved Abele .- This tree is highly calcued to ornament pleasure grounds, &c. It atas to a large size, and is of quick growth; but great beauty consists in its foliage, of a fine en, on the upper surface, and of a perfectly ite silvery hue on the under side. The leaves ing supported by slender petioles, are easily tated, and hang quivering, with the least eze, like the trembling aspen; and the green white surfaces of the leaves mingled thereby,

is of the most rapid growth and flourishing ap- my old trees, and seek in the new varieties of Eupearance, and at present is very much in request for ornamental grounds, &c.

Very respectfully, WM. ROBERT PRINCE.

Linnwan Botanic Garden,)

FOR THE NEW ENGLAND FARMER.

MR FESSENDEN-The following observations have become completely naturalized to the lo- are contained in a letter received from a very incality, and I think will support your winters also. telligent amateur Horticulturist, in New York, which I have no doubt you will think with me, Double Pheasant Eye. There are also some merit an insertion in the New England Farmer single varieties, which are very beautiful and The writer has given the subject much attention, showy, and which I have never seen elsewhere, and is eminently qualified to pronounce an opinion they having originated here-the two finest of upon any and all matters apportaining to this

DORCHESTER.

DESTRUCTION OF PEAR TREES, &c.

'I have been led to doubt the theory of the destruction of the old pear trees, by the insect, as stated by Dr Fiske, and Gov. Lincoln, and as yet consider the insects only as the attendants of dead

'1st, Seedlings grafted on seedlings are not infeeted, as far as I can learn.

4 2d. Seedlings on old stocks are subject to the

'3d. In no instance have I found the worm in ardy, and will withstand the winters of the State a fresh diseased tree in the wood, nor in the green

> '4th. That in some cases the centre of the wood appears to have begun its decay,

'5th. That the decay of the bark begins in the lower part of the limb, or trunk, but the decay of the leaves commonly at the end of the branch. and the leaves are frequently dead, while the bark is still fresh several feet below.

66th. That cutting off the diseased limbs appears only to have the effect of severe lopping, in the ordinary diseases of trees, to strengthen a few vigorous limbs; but this relief is here partial. have preserved a limb in one instance, alive, and in bearing four years, but this year it perished.

'7th. That neighboring trees do not appear to take the disorder indiscriminately. It began in my garden about seven years since, when two winter Bon Chretiens died. The year following a distant tree, the Early Blanquette, died. The next, a Little Muscat. Since then several others th, 15½ feet broad, and which produced 956 of unknown kinds in different situations have also died, but none of the St Michael's, and other kinds near them have suffered. This year, I find the Monsieur John,

> 'Sth. That girdling would not produce so rapid a decay as these trees have suffered. This is at least my present opinion. I purpose the ensuing year to make some experiments, unless I can find further satisfactory information on the subject, to supersede the necessity of such an examination.

'These are ALL imported trees of thirty years' sent a contrast which, at a distance, gives to standing. In a few years we shall be able to detree an appearance of being covered with nn- cide upon the question of the decay of these spees of holding its foliage late in the season.—It method of lopping, and burning the branches of required, than to keep the land drained, and cattle

rope and America, (on seedling stocks) a succession more premising.

'I have thrown my ideas together hastily, only for your remarks.

'The rain during the blossoming of my European Vines, destroyed the blossoms, so that I have had but few grapes this year. I have found as yet, no advantage from the application of sulphur, against Mildew, nor in Ross' preparation for the destruction of the worm in the peach tree.

FOR THE NEW ENGLAND FARMER.

Mr Fessenden-I see it stated in your Nov. 9th paper, that Mr Samuel R. Johnson's plum tree, that has produced about \$50 worth of fruit annually, is the Washington, or Bolmar plum. As the tree referred to was sent to him by myself, I think it proper to mention that it is the White Gage, sometimes called Prince's Gage, and raised from seed by my father, and not the Washington plum. By reference to your back files, you will perceive Mr Johnson stated the facts correctly in the original notice of the great product of his tree about two years since.

Very respectfully,

WM. ROBERT PRINCE.

Linnman Botanic Garden,) November 9, 1830

CRANBERRIES.

The Barnstable Journal states that Capt. Henry Hall of Barnstable has for the last 20 years cultivated cranberries. He has now about an acre of ground under cultivation. For the last 10 years he has raised an average of 70 bushels, and in some favorable seasons 100 bushels,

Sandy bog-land is the soil best adapted to their growth, and it should be kept well drained .-Capt. Hall has a tract of about four acres enclosed, which he calls his 'Cranberry Yard,' of a damp sandy soil, surface nearly level, and, where not planted with cranberries, covered with rushes and swamp brush. The eranberry vincs were set around on the borders of the 'yard,' some on land, elevated two or three feet above the general level of the surface. The vines grow most vigorously, and the berries are of a better quality and more abundant where the soil is most sandy and damp. In very dry seasons, the cranberries are liable to be eaten and destroyed by worms; but, in general, are, under skilful management, as certain a crop as any kind of grain or garden vegetables.

The manner of transplanting is simple. Holes are dug four feet apart; only they are made deeper disease in two Jurgonelles, in the Virgouleuse, and than for corn: into each of these, sods of vines are placed. The cranberry has creeping roots, spreads very rapidly and in three years from the time of planting will entirely cover the ground. If the land is overgrown with bushes they must first be removed; but it is not necessary to destroy rushes, for the cranberry vine will do it in a few years, When the land is very low or covered with a thick growth of weeds and rushes, Capt. Hall practises spreading over it a quantity of beach sand before tree an appearance of being covered with nn-cus flowers. This tree has also the advan-cus, and until then, I shall continue my usual planting. The fall is the best season for trans-cus, and until then, I shall continue my usual planting. No other cultivation is performed or is 20 cents per bushel.

from his farm in Lincoln, this season, 400 bushels that the usefulness and value of the ox, for labor, of Cranberries, which he sold in this city, last week, for \$600.

Committees for the Cattle Show of the Worcester Agricultural Society, Oct. 13, 1830.

That twentythree pairs of Oxen were entered opinion, that this part of the exhibition excelled distance. any preceding year in number, appearance and performance generally.

\$1,00 to 1,50 per bushel, and the cost of picking inhabitants have heretefore, on similar occasions, given proof of their skill in training Oxen for the Mr F. A. Hayden, of Lincoln, has gathered draft. -It is so apparent to every practical farmer, consists so much in his docility and discipline under the yoke, that it is to be regretted, that competitors for the premiums are generally from a few towns only; and that the owners of good oxen in other towns should be found unwilling to bestow the small portion of time and labor necessary to prepare them to compete for a premium, when Boar. at the same time they would be doubly paid for their trouble by the increased value of their labor on the farm.

In awarding the premiums, the Committee had particular regard to the strength, equality of match, and docility of the cattle, as well as to minum for the best Sow, \$5. their size and appearance. The manner in which the labor was performed was so nearly equal as ascertaining who was entitled to premium. 10 to render it difficult to designate to whom the pre- (Pigs were offered for premium by Messrs Salismiums were justly due.

themselves, that the premiums ought to be awarded as follows:-

premium of twelve dollars.

To Simon Carpenter, of Charlton, the second premium of ten dollars.

To Leonard Woodbury, of Sutton, the third premium of eight dollars.

To Halloway Bailey, of Northborough, the fourth premium of five dollars.

Thomas Harback, of Sutton, would have had one of the premiums awarded to him; but it was made known to the Committee that he received the second premium on the same oxen last year; and therefore was not entitled to any except the

> By order of the Committee. SAMUEL MIXTER, Chairman.

The Committee on Swine submit the following Report:

Your Committee have been highly gratified in the examination of the various animals which have claimed their particular attention as a Committee on Swine .- The Hog was introduced into this country by the first discoverers of this western world, and is a native of all the temperate climates of Europe. From the excellence of its flesh-its prolific nature-its quick fattening properties-it may, with great propriety, be considered as one of the most profitable and advantageous of domestic animals. Such seems to be the opinion of the practical farmers of Worcester County. Although a portion of the pens allotted to Swine were filled with fine animals-still there were none exhibited from any town in the County except Worcester. Not that the farmers do not appreciate the value and importance of Hogs, ashes of peat is an important manure, and Dr but do not exhibit them in consequence of the Deane, asserted that it had three times the value trouble and inconvenience of driving or bringing of wood ashes. Fifteen bushels are recommended them any considerable distance. Your Committee for an acre, used as a top dressing. It is an exare however confident that there might have been cellent manure for cold lands; and for all crops for premium—(almost twice the number that was a much larger exhibition of Swine of a superior on dry soil, which require much heat to bring entered last year)-and the Committee were of quality, without bringing them any considerable them to maturity. They should be sowed by

from injuring the vines. The cranberries sell from mium from a few towns in the County, whose in England from whence the race was imported. The Bedford English Whites or English Broad Backs, introduced into this country by the Duke of Bedford, and sent by him as a present to Gen. Washington. Dr Fiske has had the breed about 10 years. The mother of the family obtained the first premium here 2 years ago. From this breed the best Hogs in New England originated. Your Committee are of an opinion although this animal had no competitor-that the Hon, Oliver Fisk, is entitled to the first premium of \$5,00 for the best

> There was but one Sow in the pens. She was offered for premium by Mr Elisha Flagg of Worcester. A very beautiful animal and possesing in an eminent degree the fine quality of a profitable Hog. The Committee award to Mr Flagg the first pre-

On Pigs your Committee had more difficulty in bury and Williams; 2 Pigs by Artemas Ward, After occupying the short space of time allotted Esq.; 2 by Mr Elisha Flagg, and 2 by Capt. John them for the examination, the Committee satisfied F. Clark. Your Committee were at a loss to ascertain to whom the premium should be awarded-but after a considerable deliberation, have To Benjamin Woodbury, 2d, of Sutton, the first awarded it to Messrs Salisbury and Williams for the best Pig, \$3.

Two premiums provided by the Society have not been awarded for the very best reason-because there were no animals exhibited for them.

Your committee had no inconsiderable difficulty n coming to the result on Pigs, such was the competition. They have endeavored to do their duty faithfully-if they have satisfied their fellow citizens, it is all they wish for. On former occasions the Society have been highly entertained with the interesting and witty reports of able and ingenious gentlemen. Your Committee would not shrink from going the whole hog on this occasion, as they feel confident that no former exhibition has merited a stronger and warmer approbation of the animals, considering the number exhibited. than the present.

It is not, however, the wish of the Committee to bore you with a long report—and will close our remarks-having alluded to the most useful and profitable breed of hogs-by congratulating the Society upon this occasion that after a careful attention, to our duty, we have not witnessed a single specimen of that unprofitable and slovenly breed of animals sometimes delicately called Hogs, by our charitable neighbors across the waters, who walk on two legs-and the Committee flatter themselves that the breed is nearly or quite extinct in New England,

ISAAC DAVIS. LEWIS BIGELOW, Committee CYRUS LELAND. [To be continued.]

Peat Ashes .- It has been found by trials that the hand, as they can thus be more evenly spread. There was but one Boar in the pens, so that It may be done in winter with the least danger of the competition with this animal did not long hurting plants by its heat. If sown in summer The Committee were gratified to observe an puzzle the Committee. This animal offered by it should be just before a rain, by which it would increase in the number of Oven entered for pre- Hon. Oliver Fish is of the Bedford breed-called be deprived of its burning quality. These asker

peas, &c, as they make the vines too luxuriant.

Sir Humphrey Davy, observed that 'Peat ashes are used as a topdressing for cultivated grasses, particularly sainfoin and clover,' and we find that peat ashes are very commonly used in Great Britian for manure.

NEW VARIETY OF WHEAT.

The Hou. R. Rush, has sent to our office some parcels of remarkably fine wheat, accompanied with the letter which will be found below. Any of our York County farmers who feel disposed to try it, will be supplied by calling at this office, as it is the desire of Mr Rush that it should be distributed among them,

York, Oct. 19th, 1830.

DEAR SIR-I beg leave to send you herewith a few samples of wheat, originally from Syria, afterwards raised in England, and new, as far as I am informed, in our country. Its quality is said to be very fine, and its productiveness very great. I place the samples, regretting that they are not larger, in your hands, to be given away to such of our farmers of York County as you think may feel a disposition to make trial of them upon their farms. I have ventured to give it the name of the 'Bexley Wheat,' having received the first samples of it from Lord Bexley in England, who friend Col. Maynadier, of Annapolis, Maryland, under whose cultivation in that neighborhood, it has, on a single trial, succeeded wonderfully.

In the hope that it may prove useful among us,

I remain very respectfully Yours, &c.

RICHARD RUSH.

T. C. HAMBLY, Esq.

Editor of the York Republican.

From the Daily Chronicle.

SAUERKRAUT, OR SALTED CABBAGE,

It is only 10 or 15 years since this article was introduced on board British ships of war, as an article possessed of valuable anti-scorbutic properties .-Experience proving it to be valuable for the above mentioned qualities, it is still retained in their supplies. It has long been in use on board of German and Dutch national vessels, as well as merchant ships, the crews of which, even during the longest voyages, remain perfectly free from scorbutic complaints. From time immemorial, it has formed a avorite standing dish to the robust inhabitants of he north of Europe during their long and rigorous vinters. It is recommended by cheapness, saor, salubrity and simplicity of preparaton. Cabbage should be taken that has sustained two or which will be found equal to the American, hree white frosts previous to being gathered; sound, mnerfect leaves should be carefully removed, each read divided, and the stalk cut out : then sliced ine with an instrument made for the purpose; a uitable tub, barrel shaped, should be prepared. After cutting, it should be salted with the proporion of a pint of fine salt to the bushel of cabbage, vell intermingled, which may then be gradually acked in the tub, pressing it continually with an ppropriate wooden rammer. It should then be fameter than the tub, and a weight of 20 or 30 lbs. season.

are said to have a better effect on winter than on placed on it. In two weeks it will undergo the summer grain; and not to be good for beans, acetous fermentaton, when it will be fit for use. Attention should be paid it every week, to skim the froth from the brine, to wash the board, stone, and sides of the tub. When Sauerkraut is taken out of the tub to cook, it should always be washed with fresh water and cooked without the addition of any other vegetable. A piece of fat porkbeef-or a fat goose, enclosed with the Sauerkraut in a close tin vessel, and stewed three hours, forms an excellent dish, and is the more valuable as it can be had at the seasons of the year, and under eircumstances that vegetables cannot be procured.

From the Newburyport Herald.

As the time for laying in cider has come, I would observe, that mustard seed put into new eider will keep it much better than any other thing I have tried. I put a half pist common mustard seed into a harrel of new cider; and let it remain on the lees without drawing off, till it was all used, and it kept perfectly sweet till the last-not the new sickly sweet, but more like mellow old wine : the cider tasted a little of the mustard, but some gentlemen who drank of it thought it was improved by it. As the last year was the first time I put in the seed, I cannot say that it will always have the same effeet; but so simple a thing is worth trying for my cider was decidedly the best I ever had.

We can add our own testimony in confirmation obtained it from Syria, as I understood. When of the above. We took two barrels last season from at Washington, I gave a small quantity to my the same pressing, and put half a pint of mustard seed in one of them as soon as fermentation commenced, and bunged it up tight. The other barrel was carefully treated in the common mode, letting the fermentation go on as long as anything was discharged from the bung hole, and than stopping it tight. That in which the mustard seed was put, was decidedly the brightest, clearest, and finest flavored cider we ever saw, and was so adjudged to be by all our friends who tasted it, and continued so to the last, -some of it remaining late in the spring, while the other barrel became hard and unpalatable, being very ordinary in its quality, and remains undrunk in our cellar to this day .- Ed. Wor. Spy.

> Maine State House .- The pillars of the colonnade of this new edifice at Augusta, eight in number, elegantly wrought of granite, have been raised. They are 21 feet in length, exclusive of the base and capitals, 101 feet in circumference at the bottom and 9 at the top, and weigh 10 tons each. The outside of the building will be finished before side to Dighton, till a depth of ten feet of water shall be

We observe in the Halifax Recorder of October 23, a person advertises, as just received from Liverpool, '100 pieces of Sattinets, assorted colors. is a novel style of puffing off English manufacturcompact heads should be chosen, the green and ed goods, but one, we dare say, that the venders find expedient, if not necessary.

> The revival of business in Boston is universal: every trade-every branch of business feels it. The city wears a cheerful aspect, the stores are let at advanced rents, and everything shows life and activity.

Large quantities of copperas have been manuovered with a circular board, two inches less in factured at Hubbardston, in this State, the past covery is not a new one.

The following pithy article from the New York Journal of Commerce expresses, probably, the feelings of a majority of the community upon the Militia System: Nat. Argis.

DOWN WITH THE TYBANT! Now is the time to get rid of the adious, useless, and oppressive militia system with which we are burdened. Now is the time! The merchants are against it -the working men are against it-the whole community are against it. What more is wanting? Simply to have this united feeling express itself in some visible, tangible shape; so that it may tell upon the decisions of the next Legislature.

Down, we say, with the tyrant! It interferes with the pursuits of industry-corrupts the publie morals-operates as a tax upon the community of five million dollars per annum-is worse than uscless as a means of discipline and subordination -a barlesque upon patriotic feeling-and a libel upon the military spirit of the nation. Fellow citizens! when danger approaches, every man of us will enter the ranks like good soldiers; we will cheerfully submit to be drilled from day to day. and week to week, if need be; we will march to the combat with gallant hearts and determined spirits; and the country shall say that we have done our duty. It is not that we shrink from any necessary burden, in short, which as good citizens it becomes us to hear; but we have some pride left, both for ourselves and our country; and therefore we say, down with this hateful, useless, ridiculous, militia system,

Mrs Eliza Clasby, who keeps a boarding house in New York, has recovered \$800 of one William Brown in an action for slander. The less men have to say and do with female characters of any kind, the better.

Canal Survey -It will be recollected that a survey for a Canal between Weymouth and Taunton Rivers, with a view to connect the waters of Boston and Narragansett Bays, was begun and partially completed two or three years ago, by order of the General Government. The U States' Engineers were joined and attended in the survey by three Commissioners appointed by the Government of Massachusetts. This survey not having been fully completed, no report has ever been made to the Engineer Department at Washington. During the present season, another route has been surveyed by Col. Auderson, who commenced the former survey three years ago. We learn that the new route is to the westward of the former one, is somewhat shorter than the other, and affords greater facilities for the construction of a eanal. The summit level is at Howard's Meadow in Randolph; the route meets the Taunton River at Williams' Landing in this town, and thence is down the river on the west found in the river at low tide. The Engineers have already reached near that point, which is said to be not far from the 'Four Corners,' in Dighton. The new survey is for a canal sixty feet wide and ten feet deep, sufficient for coasting vessels, with a tow path also for horse boats; the locks to be 100 feet in length. We learn that the Engineers have become entirely satisfied as to the practicability of a canal of this description, after a thorough examination of the country, the adjacent ponds, &c. No doubt is entertained, we understand, as to the sufficiency of the supply of water. A favorable report from the Engineers may therefore be anticipated; but whether any thing will be done towards the construction of the canal during the administration of our veto President, is another and different matter .- Taunton Reporter.

The Wheeling Compiler, on the authority of recent experience by some of the shopkeepers of that place, recommends the use of hog's lard, in lamps, as a substitute for sperm oil. The light afforded by it is said to he fully equal to, and is much cheaper than sperm oil. The disFrom Prince's ' Pomological Manual.'

AMBRETTE. Quin, Roz. Tourn. Min. FOR.

Ambret, Ambrette, Winter Ambret. Evel. Trompe-valet, of some countries according to Quintinye.

Cheat-servant, synonyme according to Evelyn.

Ambrette d'hiver,

Ambrette aver épines,

Ambrette d'hiver avec épines, of various col-Ambrette grise,

Thorny .lmbrette, The first notice I have found of this fine pear is in the works of the celebrated De la Quintinve, published about the year 1690. He enumerates

three varieties of the Ambrette, viz. The Ambrette, ripe in November, December, and

January, a very good pear. The Ambrette of Bourgeuil, or Graville, ripe the thirteenth of October, an indifferent pear.

The thornless Ambrette, ripe in November, an

indifferent pear.

It is the first of these that is the subject of the present article, and strange as it may appear, the other two are not described by either Duhamel, Rozier, Miller, or Forsyth, or noticed in the Jardin Fruitier, or Bon Jardinier. This fine fruit is said to have derived its title from its musky odor, which has a strong affinity to that of the Sweet Sultan flower, called in France Ambrette.

In the description given by De la Quintinye, after first remarking that the Ambret or Ambrette and the L'Echasserie bear considerable resemblance to each other, he proceeds to comment on the differences that exist between them. The Ambrette, he states, is in point of shape a little flatter, and its eye sunk in a cavity, whereas the L'Echasserie has its eye or crown quite jetting out: their size is similar, and they resemble each other likewise in color, though the former is commonly of a deeper and ruddier hue, and the latter lighter and yellower, more especially when it becomes fully ripe. They are also nearly alike in their stems, and ripen at the same period. They greatly assimilate in the delicious qualities of the fruit when at maturity, in which respect however, the L'Echasserie partially surpasses the other. The flesh of the Ambrette is sometimes rather more of a greenish hue, its seeds blacker and in large cells, and its skin is usually a little more rough to the touch.

The L'Echasseric is occasionally knobbed or warty, but it is the wood which presents the most striking distinction, that of the Ambrette being extremely thorny and prickly, precisely like the wild trees seen in the hedges, which is not the case with the other; for although it shoots out some points, they are not however sufficiently sharp to prick the fingers as those of the Ambrette will do. M. De la Quintinye further remarks, that the L'-Echasserie had not made its appearance above twenty years, but that the Ambrette was already of ancient standing.

I will now proceed to give the description of it & detailed by Duhamel, and Rozier.

The shoots of the Ambrette tree are short, straight, and perfectly round, of a light grayish green line where shaded, and a gridelin color next the sun; the buds are large, rounded, very acute, turned off from the branch, the base that supports them projecting but slightly; the leaves The only difference he speaks of is in regard to are of medium size, not indented, but furrowed or wrinkled; the flower consists of oval petals, hole he fell into an error in his description, for all the mumber. It proceeded towards Brandon at the velo

lowed in the manner of a spoon, and the summits trees that I have seen or heard of, that have been of the stamens are light purple mingled with white; obtained from New Jersey, as the Ambrette or Tilthe fruit is two inches in diameter, and twentyfive ton pear, have indented leaves, and this fact, with lines in height; its form is rounded, and inclining the circumstance of their being devoid of sharp to oval, diminishing a little towards the stem, which is large, nine lines in length, and inserted in a very small eavity, whose circumference is swollen by some small protuberences; the head is very round, and the eye is placed in a slight depression surrounded by some small projections: the skin is whitish, and sometimes grayish, according to the soils; the flesh is greenish white, melting, and of a sweet, rich, and very pleasant flavor; the seeds are black and contained in broad cells, and the fruit begins to ripen in November, but keeps well till in February; the branches are thorny, and the tree may be propagated on the pear, but better on the quince. It delights in a dry warm soil, with a good exposition, and succeeds better as a standard than as a dwarf; in wet and cold soils the fruit is far inferior to that produced in more favorable situations,

ECHASSERY, Pr. cat. Mil, N. Dub. L'echasserie. Coxe. Pr. cat. 25 ed. Ambrette. Coxe. Fes. New Amer. Gard. Bezy de Chassery. Duh. syn. Mil. syn. Eschussery. For. Leschasserie, Quin. Evel. Mil. at every joint, very much speckled (tiquee), gray on one side, and of a greenish gray on the other; the buds moderately large, longish, pointed, turned off from the branch, and have a small and very slightly projecting base; the leaves are long, narrow, somewhat wrinkled or furrowed, indented very partially, but coarsely; the flower is formed of oblong petals, each somewhat hollowed or spoon-shaped, and terminating in a plicate or plaited point; the fruit is round, approaching to oval, and diminishes in size towards the stalk, considerably resembling the Ambrette; it is generally two inches in diameter, and twentynine lines in height, but sometimes it measures no more in one direction than in the other; the stem is large, eight to fifteen lines long, inserted in a small cayity, which is commonly surrounded with some a short time, but this slight inconvenience will soon small protuberances; the part next the head is disappear. New Bedford Courier. perfectly round, and the eye is there placed even with the fruit; the skin is a whitish green, but becomes of a yellowish face at maturity; the flesh is melting, of a sweet, musky, and very agreeable flavor; the seeds are brown, and the fruit ripens in November, and January; the tree may be ingrafted upon either the pear or the quince; it is productive and soon begins to bear fruit.

I have examined the subject very minutely, and have ascertained decidedly that this is the Ambrette pear of Coxe's work, a fruit of great excellence and held in the highest estimation,

thorns settles the question of identity satisfactorily.

Carious discovery—cause and remedy for carious teeth .- M. La Beaume, the medical electrician, has made a curious discovery, that the accumulation on the teeth termed 'tartar,' is occasioned by animalcula, which are visible on microscopic examination. According to this gentleman, they gradually burrow between the teeth and gums, penetrate the enamel, and enter the interior of the teeth, thereby producing the destruction termed 'caries,' and also tooth ache. Mr La Beaume, after numerous experiments, ascertained that the true malic acid (the purified acid of the crab apple) not only destroyed them, but dissolved the mucus collection which protected them. He therefore, recommends the teeth to be brushed every morning, and also the tongue, which, when loaded with foul slime, is covered with animalcula, with a lotion composed of malic acid and rose water, and afterwards with the prepared areca-nut charcoal, This mode of managing teeth is extremly beneficial, as it not only removes, and when used only once a week, prevents its reaccumulation, but cleanses the tongue and produces a relish for food. Its good effects on the tengue and palate, proceed in fact, from sympathy, or from a continuous influence transmitted to the stomach. The irritation produced by the animalcula, and offensive effluvia from them or their surrounding slime, probably of a feeal nature, are extended to the saliva glands; the consequence of which is, that their secretion is unhealthy, and no doubt, a very common cause of indigestion .-Hyppocrates, who, in all cases, paid particular attention to the state of the stomach, was of a similar opinion, that a perfect or good digestion depends The shoots of this tree are very slender, bending as much on the healthy state of the teeth, as on the sound condition of the digestive organs.

> Itching Feet,-Among the minor evils to which the human frame is subject there are few more tormenting than that of violent itching of the feet, during severe frosty weather, caused by incipient chilblains. The following specific is so simple and cheap, that no person ought to be ignorant of it; it is merely one part muriatic acid, mingled with seven parts water, with which the feet must be well rubbed for a night or two before going to bed, and perfect relief will be experienced. The application must of course be made before the skin breaks, and it will be found not only to allay the itching, but to prevent the farther progress of the chilblains. - The feet may be a little tender for

New Steam Carriage,-Extract of a letter from the Sheffield Iris, signed 'An Engineer,' 'Being last week at Lyon, I was induced from reports I had heard of a steam carriage, to visit the manufactory of Carlton and Galbee where I saw this beautiful piece of machinery perform its evolutions. In viewing this modern wonder of mechanies, the beholder is at a loss which most to admire, whether the beauty, yet the simplicity of its construction, the case with which it is guided, or the velocity of its movements. After going several times round the yard it took up a number of gentlethe indeuture of the leaf, and on this point I find men, and I had the good fortune to be one of the opened the valve for the heated air, which increased the speed to thirty miles an hour. The trees, gates, and houses, appeared to be retrograding at a most incredible velocity; the effects of which, was grand indeed; and after passing rivers, brooks and gentlemen's houses, it arrived at Brandon without any accident, in one hour and ten minutes from the time of its leaving Lynn, (a distance of twentyfive miles) which surpasses any thing that has been performed either on rail roads or turnpikes. It seems, therefore that more depends on the construction of the carriage than its running on rails.' -English paper.

Scratches in Horses.-This disorder or difficulty is too well known to all who own these noble animals, or deal in them, to need a particular descripion of it. The remedy is simple, safe, and certain, n all cases which have come to my knowledge, lowever inveterate. It is only to mix white lead and linseed oil in such proportions as will render he application convenient, and I never have known nore than two or three applications necessary to ffect a common cure. Turf Reg.

From the Maryland Gazette.

THE BITE OF THE SNAKE.

Sir-I observed in your paper of Thursday ist, a notice, extracted from the Boston Travelr, giving an account of a Mr Dunlap, one of the eepers of the New England Museum, having een bitten by a Rattlesnake. The probability , had not Mr Dunlap applied the 'cord' with the comptitude which he did, that in a few hours after ie accident, he would have been numbered with ie dead. Mr Dunlap, however would have saved mself much suffering, and have immediately aced himself beyond all danger, had he with the me promptness have sucked the wound after stening the ligature about his finger. The ignorit may start at this suggestion, but every intellient and well informed reader knows, that not e slightest inconvenience could have resulted to m from it. The late Professor Barton, of the niversity of Pensylvania, and successor of the er to be lamented 'Dr Rush in the department the Theory and Practice of Medicine,' in his etime tried the effect of the poison of the attlesnake upon himself, by taking it into his outh, fresh from the fangs of the reptile. It oved perfectly innocent, and was attended only th a slight pungency, which readily passed ray on riusing his mouth, (if I rightly recollect,) th a solution of common salt. It is to be reatted, that the efficacy of pressure upon the de of the wound nearest the heart' in cases here poisons have been infused into the blood by bites of snakes, is not more generally known, ie bite of the Asp, which is ranked among most poisonous of reptiles, it is said, may be idered harmless by the timely application of ligature and cupping glass. The editor of a tinguished scientific work in my possession 's, 'dreadful as the poison of the Asp, and ined of most vipers, is, it may be rendered only harmless by immediately applying forcible ssure on the side of the wound nearest the ut. In this way the cupping glass, ligature, , produce their beneficial effects.

Squashes .- The Baltimore Gazette states that garden of Mr William B. Trufant, of that in January.

city of twelve miles per hour. The fireman then town, has produced three full grown squashes!

BROOM CORN.

This crop has become a very important one in this part of the Connecticut valley. More acres were planted the last spring than in any previous season, but not far from one fourth of the brush. and the greater part of the seed, were destroyed by the early frosts. In consequence of the diminished quantity, increasing demand, and other circumstances, the price of broom-brush has advanced rapidly, and is now about 100 per cent higher than it has been for some years past. It is an object of speculation, and large quantities have been sold and re-sold within a short time. The price a few days ago was from 8 to 9 cents per pound; it is now 10 cents, and it is reported that some has been sold at a still higher rate. A man recently purchased 7500 pounds at 8 cents, and sold it immediately at 10 cents. We have heard of one hard casea farmer who planted several acres last spring, made a contract at the time of planting, by which he is bound to deliver all his brush at 5 cents per pound, which is only half the present price.

Hamp. Gazette.

Flasseed,-This article seems to be higher than usual-at least it brings more salt. Two bushels of American salt have been given in this place for one bushel of flaxseed.—Ibid.

STRAFFORD, (N. H.) CATTLE SHOW,

Nehemiah Eastman of Farmington, President. Wm, Hale, ir, of Barrington, Ist, vice do, Jeremiah Wilson, Gilmanton, 2d, do do, Francis Cogswell, Ossipee, C. Secretary, Daniel Pickering, Wolfborough, Treasurer, John Ham, Gilmanton, R. Secretaru.

EXECUTIVE COMMITTEE.

Augustus Rollins, Somersworth. Ezekiel Hayes, Milton. Daniel Tucker, Meredith Richard Furber, Centre Harbor. Paul Wentworth, Sandwich, Francis P. Smith, Ossinee. Elisha Rollins, Wakefield,

Geology.-Governor Crafts, in his late message to the Legislature of Vermont, recommended the subject of Geology and Mineralogy to public attention as a source of industry and wealth, Some of the papers in that state have warmly approved of this suggestion of their Governor, and proposed that a Lyceum in each town collect its own specimens and furnish a deposit for each for me; they are always willing to give me what they county Lyceum, by which means all the specimens could be named and described at the semi-annual meetings.

A late convention of the friends of education and general improvement in Utica, recommended that the second number of the Scientific Tracts, which treats upon Geology, be read in each town in the state, at meetings for appointing delegates they'll do as much for me as I have done for them. Squash Seed, deposited the present season in to attend an adjourned meeting of the Convention

The exhibition and explanation of a few Geoweighing together one hundred and fifty five pounds. | logical specimens at the various county conven-The length of the vine and branches was 368 ft, tions of teachers have induced and enabled very many of those who witnessed them, to introduce the subject into their schools, by which means several thousand children are now familiar with the common rocks and minerals which come under their observation.

> The experiments already made upon this subject, are proof that if Lyceums generally should make Geology a specific object of attention for a few months, the whole country would be theroughly explored, our resources in the mineral kingdom extensively developed, and new sources of industry and wealth opened to individuals and the public .- Traveller.

> Burns .- Equal parts of lime water and sweet oil mixed and incorporated, will form a kind of soap, which makes an excellent application for burns. It is said to be very efficacious in taking out the inflammation, as well as for healing the wounds caused either by burns or scalds.

> > From the Cherokee Phoenix. PHILOSOPHY.

Going into a bookstore the other day, I accidentally took up a new publication called 'The Frugal Housewife. Turning over the leaves, my attention was caught by the following story, which I thought was worth five shillings, the price of the book; accordingly I bought it, and now send the extract for publication.

'Philosophy is rarely found. The most perfect sample I ever met, was an old woman, who was apparently the poorest and most forlorn of the human species; so true is the maxim which all profess to believe, and none act upon invariably, viz. that happiness does not depend on outward circumstances. The wise woman, to whom t have alluded, walks to Boston, from a distance of twenty miles, to sell a bag of brown thread and stockings, and then patiently walks back again with her little gains .-Her dress, though tidy, is a grotesque collection of 'shreds and patches,' coarse in the extreme.

'Why don't you come down in a wagon :' said I, when I observed she was evidently wearied with her long

'We han't got any horse,' replied she; 'the neighbors are very kind to me, but they can't spare their'n; and it would cost as much to hire one as all my thread would come to. 'You have a busband, don't he do any thing for you?'

'He is a good man, he does all he can, but he's a cripple and an invalid. He reels my yarn and specks the children's shoes. He's a kind husband as a woman need 'But his being a cripple is a heavy misfortune to you,'

'Why ma'am I don't look at it in that light,' replied the thread woman; 'I consider that I've great reason to be thankful that he's never took to any bad habits.'

'How many children have you? 'Six sons and five darters, ma'am.'

'Six sons and five daughters! What a family for a poor woman to support !"

It's a family surely ma'am, but there an't one of 'em I'd be willing to lose. They are as good children as need be-all willing to work, and all clever to me. Even the littlest boy, when he gets a cent now and then for doing a chore, will be sure to bring it to me, ma'am.

'Do your daughters spin your thread?'

'No, ma'am; as soon as they are big enough they go out to service. I don't want to keep them always delvin can; but it is right and fair they should do a little for themselves. I do all my spinning after the folks are

'Don't you think you should be better off, if you had

none but yourself to provide for? 'Why no ma'am I don't. If I had'nt been married, I should always have been to work as hard as I could, and now I don't do more than that. My children are a great comfort to me; and I look forward to the time when

Here was true philosophy! I learned a lesson of that poor woman which I shall not forget.

ETHLAND PARMER.

BOSTON, FRIDAY, NOVEMBER 19, 1830.

FALLEN LEAVES FOR MANURE, HOT BEDS, &C. In the Massachusetts Agricultural Repository, vol. iv. page 60, will be found 'Extracts from the Bath Society papers, with remarks by John Low-ELL, Esq. from which the following are selected.

'A correspondent of the Bath Society in England warmly recommends a species of manure for potatoes, which I think peculiarly applicable to our country, because easily attainable. It is the employment of mould and fallen leaves taken from the woods. This, the writer observes, he has found an excellent substitute for other manure. He found the potatoes raised in this way, much more mealy, and of a finer flavor, much finer than when produced by the application of ashes and dung; people, who have not the means of procuring much dung. This, he observes, can always be procured in woody countries, and in those which are not so, it may be obtained in bedges and ditches and in old ponds. If this be a fact and we have little doubt of it, since it is known that few substances are more favorable to vegetation than rotten leaves, and the soil formed by their decomposition, there is searcely a farmer in Massachusetts, who may not, by two or three days' labor, collect enough to plant all his potatoes, and thus save his manure for his corn and grass lands.

The leaves of trees are very valuable for the purposes of gardening and for fruit trees. Speechly, an eminent English gardener, gives the following account of his mode of using them:

After being raked into heaps, they should immediately be carried to some place near the hot house, where they must lie to couch. I generally fence them round with hurdles or anything else to keep them from being blown about the garden, in windy weather. In this place we tread them well, and water them, in ease they happen to have been brought in dry. We make the beap six or seven feet in thickness, covering it over with old mats, or anything else, to prevent the upper leaves from being blown away. In a few days the heap will come to a strong heat. For the first year or two that I used these leaves, I did not continue them in the heaps longer than ten days or a fortnight: but in this I discovered a considerable inconvenience, as they settled so much, when got into the hot house as soon to require a supply. Taught by experience, I now let them remain in the heap for five or six weeks, in which time they are properly prepared for the hot house. In getting them into the pine pits, if they appear dry, we water them again, treading them in layers exceedingly well till the pit is quite full. We then cover the whole with tan to the thickness of two inches, and tread it well till the surface becomes smooth and even. On this we place the pine pots in the manner they are to stand, beginning with the middle row first, and filling up the spaces between the pots with tan, In like manner we proceed to the next row, till the whole is finished; and this operation is performed in the same manner as when tan only is

'Thus prepared, they will continue a constant and regular heat for twelve months, without stirring or turning; and if I may form a judgment politic.

from their appearance when taken out, (being al- | MASSACHUSETTS HORTICULTURAL SOCIETY ways entire and perfect,) it is probable they would continue their heat through a second year.' After some further details this writer observes, 'I believe oak leaves are preferable to those of any other sort; but I have found by repeated trials, that the leaves of beech, Spanish chestnut, and hornbeam, will answer the purpose very well. Haverhill, Marsh Pears, so called, a medium good It seems that all leaves of a hard and firm texture trees in general, are very unfit for this mode of

The superiority of oak leaves as a material for hot beds according to this writer, consists in the following particulars :- They always heat regularly; for during the whole time I have used them, which is nearly twentyfive years, I never once knew their heating with violence,

'The heat of oak leaves is constant; whereas and he considered it of great importance to poor tanners bark generally turns cold in a very short quality, and in fine eating. time, after its furious heat is gone off.

> There is a saving in point of expense, and deeaved leaves make good manure: whereas rotten tan is experimentally found to be of no value.'

> Green Peas in November .- We were presented, on Friday last, Nov. 12, by John Henshaw, Esq. of Roxbury, with a basket of Green Peas, being the third eron raised by him this season, in the open air, from our Early Washington Peas. The new vines are still green, and uninjured by the frost.

American Manufactures .- The brig Danube, cleared from Boston for South America last week, with 595 bales of American cotton cloth, measuring 413,000 yards,

Poultry .- Fowls of every sort may be profitably fed on boiled potatoes and meal, mixed. Hens which do not lay in winter should have access to pounded bones, oyster shells, or some other matter which contains lime, in some of its compounds, because something of the kind is necessary to form the shells of eggs, which are composed of MR J. B. Russell, the phosphate of lime.

Indian Corn .- It is stated in a letter from Paris, that in consequence of the total failure of the erops of Cobbett's corn in the vicinity of the French capital last season, very few experiments of the kind will be tried the next year. A farmer, near Rouen is said to have lost 15,000 francs by his speculation in this way, - Edinburgh Journal of

London Horticultural Society.—There were exhibited at a late meeting of this Society one hundred sorts of apples from Mr Hugh Ronalds. A bundle of asparagus consisting of 125 heads, weighing twentyeight pounds, from Mr Wm Robert Grayson, of Mortlake. A scarlet Brazilian pine apple from the garden of the Society. Asparagus, blanched in tubes from the garden of the Society.

Extraordinary Cabbage, - Jabez H. Hammond, has a cabbage in his possession, and ready to be shown, that has 24 good hard heads, that grew to one stump, and sprung from one seed. He thinks that this beats the Cow Cabbage .- Windsor Chr.

The papers in all our great commercial and manufacturing eities and towns, give us the cheering intelligence of a revival of business. It is like an electric shock, it reaches the whole body Grape, exhibited by him at the Hall, this season

Saturday, November 13, 1830.

Pears .- From Mr Burr, of Hingham, Holland Green Pears-were not of so fine quality and appearance as those exhibited on Saturday last, from Samuel Lathrop, Esq. From Mr Webster, of cating pear. A description of this pear, if a foreign are very proper; but soft leaves that soon decay, or native variety, &c, would be acceptable to the such as lime, sycamore, ash, and those of fruit Committee. From Mr William Pratt, Jr, large and very fair Chaumontelle Pears-not in eating, From S. Downer, Ambrette Pears-not in eating. These pears were exhibited to show the variation in form of this variety-some being in the shape of a duck's egg, and a cluster of four, resembling thin Jargonelle pears. Those exhibited grew on different trees, but the same variation may be found on the same tree. From Mr R, Manning, Bon Louis Pears, (Forsyth's 7th edition) of good

Apples .- From Mr Burr, of Hingham, a Seedling Sweeting, said to be a great bearer, and keeps well, flesh tender and erispy, flavor very pleasant. From Mr Manning, Menagere Apple, (of A. Parmentier's Catalogue,) also see Prince's Treatise, Fall Pippin, from Mr Floy's Nursery. Winesap Apples (Cox, No. 89.) Danvers Winter Sweet, or Eppes' Sweet. This fruit was of remarkable fine appearance, not a blemish could be discovered on the dozen exhibited. They were of medium size, bright yellow color, good flavor, and worthy of cultivation for our market-will keep from December to April, From Mr John Perry, of Sherburne, Native Sweet Russets; a good apple, and said to keep well.

Grapes.-From Mr John B, Russell, fruit of the Isabella, received from Mr Rufus Kittredge (Ports mouth.) with the annexed letter. The fruit exhibited was of the true kind, but not sufficiently ripe to have attained flavor.

Portsmouth, Nov. 12, 1830.

SIR-Six years ago 1 received some Isabelli grape vines from Prince's Nursery, from which l have distributed cuttings to many of my friends it this town. It not having fully answered our ex pectations, we have had some doubts of its being the true Isabella. Our doubts have been strength ened by comparing it with the figure in Prince! New Treatise on the Vine. They are much smaller, and not so oval. I have sent you a bunch and wish you to inform me by the bearer, if they are the Isabella. If not, what kind are they?

RUFUS KITTREDGE.

Nuts .- From S. Downer, a scion of the Shag bark Nut. This scion was set in the spring of 1826-it measured eight feet in length, and one inch in diameter at the foot,

Respectfully yours,

In behalf of the Committee,

SAMUEL DOWNER.

NOTICE.

A box of Dahlias, received from M. Faldermann of the Imperial Botanic Gardens of St Peters burgh,) will be distributed at the Hall on Saturday next. Also a bundle of cuttings (received from Mr Amos Perry, of Sherburne,) of the Native are at the Hall for distribution

New England Farmer's Alwanac, for 1831. Just published, and for sale by J. B. RUSSELL, at his

Seed Store, No. 52 North Market Street, the New England Farmer's Almanac, for 1831. By THOMAS G. FESSENDEN, Editor of the New England Farmer. The Astronomical Calculations, by the Editor

of the Astronomical part of the American Almanac.

agricultural articles-a list of the civil others of the United States, with the Governors, Lieut. Governors, and Judges of the United States, and the Governors of the British Colonies-a chronicle of the most remarkable events between August, 1829, and Sept. 1830-a complete Calendar for each State in New England, including the Probate Courts for New England-the Sun's declination, &c. The tides are particularly calculated. Among he agricultural articles, are a description of Mr Phinney's Improved Roller, with a drawing; and a drawing and handler's farm, in Lexington.

Price \$6.00 per groce-621 cts per dozen. Oct. 1.

Rees' Cyclopedia,

American edition, revised, corrected, enlarged and dapted to the United States, in 47 volumes, quarto, inluding a large atlas, and 5 volumes of plates. This valable work, the labor of 20 years, is illustrated by eleven undred and fifty engravings, by the most distinguished rtists. (There are 43 plates upon agriculture alone, condining 394 figures; upon Natural History, including lotany, the number of plates exceeds 260.) The original ost of this work in boards was \$170, and will now be ild in elegant Russia half binding very low, if applied for on. Apply (post paid) at the office of the N. E. Farmer. Nov. 10, 1830.

Sheep for Sale.

On hand and for sale 2000 fine woolled sheep of varis grades from half to full blooded Merinos. em are about 500 Wethers and fat Ewes. 1250 Stock ves, (a desirable lot for persons wishing to obtain a ck,) and 250 lambs. The above will be sold on acmmodating terms and in lots to suit purchasers on apcation to the subscriber in Cummington, Hampshire unty, Mass. CYRUS FORD. Cummington, Nov. 4, 1830. 31.

Pear Scedlings.

For sale at the New England Seed Store, No. 52 North irket Street-

20,000 Pear Seedlings, in fine order for Nurseriessed within six miles of Boston-at from 5 to \$10 per t usand, according to their size, &c. They will be suitry packed, as wanted, for transportation to any distance.

Durham Short Horns.

for sale, several of the pure breed, descendants of the cabrated animals presented by Admiral Sir Isaac CFIX, to the Massachusetts Society for the Promotion c Agriculture. Agriculture. The pedigree of these animals can be en as far back as *Hubbach*, who was calved in 1777. is reputed the foundation of this much admired stock. o, several Heifers bred from the same, of various g les, from half up to seven eighths blooded animals. particulars, inquire of E. Hersey Derby, Salem. ialem, October, 1830.

Seeds for Country Dealers.

raders in the country who may wish to keep an assortit of Garden Seeds for sale, are informed they can be nished, at J. B. Russell's Seed Store, connected the New England Farmer, 52 North Market Street, Blon, with boxes of various sizes and prices, from 10 to , containing a COMPLETE ASSORTMENT of the seeds tly used in a kitchen garden, on as favorable terms as can be procured in this country, of equal quality. by done up in small packages, ready for retailing, with t directions on each package for its culture and eagement-warranted to be of the growth of 1830, of the purest quality.

🕅 Livar Calves, Saxony Bucks, and Bremen Geese. or sale, 4 Bull Calves, sired by the celebrated imported oved Durham short horned bull Bolivar, which chave produced 36 quarts of milk a day. No. 1, dam y Brown, half Coelebs and half Galloway. No. 2, dam b, three fourths Fill Pail. No. 3, dam Ceres, her sire ebs, her dam Mr Gray's imported Cow. No. 4, dam ity, half Cœlebs and half Galloway. The Calves epeautiful, and their dams all great milkers.

wo imported Saxony Bucks, 2 Yearlings, and 2 Lambs. rs of Bremen Geese. Inquire of Benjamin Shurt-Jr, Chelsea, or at 52 Hanover Street, Boston. July 9. Culawba Grape Vines.

THE GENUINE SORT.

For sale at the New England Seed Store, No. 52 North Market-street-

50 Vines of the true Catawba Grape, one year old. price 75 cts. each. This is one of the best native, table, or wine Grapes cultivated; the bunches large, with This Almanac contains the usual miscellaneous and shoulders, very thickly set, with large berries of a pale red or lilac color, and in some situations covered with a beautiful bloom, giving them a blueish purple appearance. They have a slight musky taste, and delicate flavor. They have a thin skin, very little pulp, are perfectly bardy, and surpass most of the native grapes that have been xhibited at the Hall of the Massachusetts Horticultural Society, the two past seasons. The pulp diminishes and almost disappears when they are left on the vine till they attain to perfect maturity. The vines are great bearers: one vine in Mrs Schell's garden, in Clarksburg, Marydescription of an Improved Harrow, used on Capt. Daniel Land, has produced eight bushels of grapes in one season -and eleren younger vines in the garden of Joshua Johnson, Esq. of the same State, have produced in one season thirty bushels of fruit. A particular history and description of this fine grape will be found in Prince's new Treatise on the Vine, just published. There can be no mistake with regard to the identity of the above vines, as they are all from the garden of Mr SEAVER, who raised the first Catawba Grapes ever exhibited in Massachusetts.

Sulendid Bulbous Roots.

Just received at the New England Farmer Seed Store. No. 52 North Market-street, direct from Van Eeden & Co. Harlem, Holland, and a large assortment of Bulbous Flower Roots, comprising the finest varieties of

HYACINTHS -(double and single) dark blue, porcelain blue, red and rosy colored, pure white with yellow eye, white with rosy eye, and yellow with various eyes;

from 12 cts. to \$1.00 each.

TULIPS-splendid variegated, red, yellow and mixed, 12 cts, each \$1 00 per dozen, (our importation of fine tulips is very large, and we are enabled to put some sorts as low as \$5 per 100-an object to those who wish to form a superb tulip bed.)

CROWN IMPERIALS-assorted, of the most splendid colours, and showy flowers, large roots, 25 to 38 cts. each

JONQUILLES-sweet scented, finest roots 12 ets

POLYANTHUS NARCISSUS-fragrant, white with citron cups, and yellow with double white cups, extau sized roots, 25 ets. each.

DOUBLE NARCISSUS-fragrant, of all colours, 12 cts, each-per dozen, \$1,00

SPRING CROCUS-of all colours, 6 cts. each-50 cts. per dezen.

The above roots are from the same house from which we received our supply last season, and which gave such universal satisfaction; some of the double Hyacinths having produced bells 1 inch and 8-10ths in diameter.

Purchasers are requested to notice that the above roots are not purchased at auction, and are all remarkable for their size, and for the beauty and delicacy of tint of their

Also, a further supply of Bulbous Roots, comprising Large White fragiant Lilies, 12 cts. each, I dollar per dozen, Tiger (spotted) Lilies, same price, Martagon or Turk's Caps Lilies, same price.

Grupe Vines.

The subscriber has for sale at his garden in Dorchester, the choicest variety of Grape Vines ever offered for sale in this vicinity. Many of them are now in fruit, and purchasers are invited to call and make a selection. The following compose a part of the variety.

Napoleon,

Bland,

White Chasselas,

Golden Chasselas,

Black Constantia,

Red Chasselas,

Black Hamburg, Black Cape, White Muscadine,

Golden Muscat, Gore's, (a beautiful Black Grape)

Ferrol. 8 varieties of superior fruit from Xeres and Malaga. 400 two years old Isabellas. 1400 one " "

200 CATAWBA, or what has heretofore been considered the BLAND. It is now satisfactorily ascertained that the Bland grape will not ripen in this climate, in the open

Orders by mail, addressed to the Subscriber, or personal application at his office, No. 72 Congress-street, for any number of Vines from one to one hundred or more, will meet with prompt attention. Application may also be

made to Patrick Kennedy, at the garden.

Boston, Sept. 27, 1830. 5t ZEBEDEE COOK, Jr.

Swine .- A small advance on Shoats. We noticed one entire prime lot of 50 Sows and 80 Barrows, taken at 31c for Sows, and 42 for Barrows. Also another entire lot of 120, two thirds Barrows, taken at 47-16c; one or two lots of old Swine, at 4c at retail: large Shoats, 4c for Sows, and 5c for Barrows; small Shoats, 4½c for Sows, and 5½c for Barrows.

MISCELLANIES.

AUTUMNAL SCENERY.

How bright is the scene when the Autumn sun glowing, Spreads richness and plenty o'er mountain and vale! When the orchards and fields their ripe fruits are be-

And the Harvest hymn floats on the breath of the gale! And while the gay season our hearts foully cherish, Still shaded with sadness its visions appear; For they tell us of beauty which bloomed but to perish,-

That beauty which passed-with the Infantile Year! Where now are those sweets which fond nature discloses When first she assumes her gay mantle of green;

When Spring decks the fields with her garlands of roses, Or Summer's bright verdure enlivens the scene ?-They have passed-and, like beauty by age superseded, Grav AUTUMN has left them all withered and sere! They have fled, one by one, all unwept and unheeded. Too frail to abide, with the Ripening Year.

But bright is the livery which AUTUMN is spreading, To garnish the fields where the early flowers grew! A hardier race their rich perfumes are shedding, Of growth more majestic and ruddier bue! The fields and the brooks and the hedges are bordered With herbage and flowers to the Autumn winds dear; While the plains with rich cornfields and vineyards em-

broidered. Exult in the pride of the Bountiful Year.

And see, through the woodlands what hues are extending, As midst the sere foliage the arid winds blow!

How the crimson, the gold, and the scarlet are blending, And the purple, the green, and the orange tints glow ! But false are those colors, whose splendor thus heighten-The charms which fast verging to ruin appear !-As the hectic's deep flush oft the dying check brightens,

They mark but the flight of the Hastening Year! For soon shall the flowers to rude frosts be subjected, The orchards and fields their late joys shall deplore;

The herbage shall die on the plains unprotected. And Nature look gladsome and smiling no more!

And soon shall the long tedious nights be prevailing, The sun to the Tropic shall speed his career; While through the bare woodlands the piercing winds

Commence the sad moan for the Languishing Year. Salem Observer.

The facetious Mr. Sheridan, on hearing his father speak of the antiquity of his family, stating, at the same time, that the original name was O'Sheridan, humorously observed: 'No doubt of that, father; no one has a better right to the O, for we owe every body.'

A writer in Blackwood, complaining of the march of intellect, says:

· Crossing Grosvenor-square, I was followed by one of those wretched beings who volunteer sweeping the pave. He had some ragged pieces of leather on his hand. The polite mendicant! As he held it out for the penny, "Excuse my glove,' said this Chesterfield of the mire.

An old lady, remarkable for her confused idea of the meaning of words, described a clear summer evening thus: 'It was a beautiful bright night-The moon made every thing as light us a cork.

Dancing .- 'I am an old fellow,' says Cowper, in one of his letters to Hurb, but I had once my dancing days as you have now; yet I could never find that I could learn half so much of a woman's real character by dancing with her, as by conversing with her at home, where I could observe her behaviour at the table, at the fire side, and in all the trying circumstances of domestic life. We are all good when we are pleased; but she is the good woman who wants no fiddler to sweeten her.'

"Married Well."-There is not an expression in the English language more wretchedly abused than this married well; it is abused, because it is misapplied. When fourteen years by the subscriber, containing about 200 properly used, it tells of a heart and hand connexion; a blending together of similar tastes and fancies for the journ'y of life; a giving away early in the spring of years the affections of the heart; and a joining then of the sexes in marriage, with the determination of adding a joy to each other. But this is all lorgosten in the race a joy to each other. of selfishness. We live to be happy-', e ponder much upon the best mode of becoming so; yet if we wander from the troe path in marriage, we get lost in a wild of misery, where the sun light of enjoyment scarce y ever finds its way. Now I for one, do not believe that money is the grand panacea for every ill of marriage, or that it will create a smile of joy upon the brow where effection does not dwell. Take the word of an old fellow for it; he who woos and wins modest merit; who seeks a partner for the social circle, and a helpmate for the domestic concerns of life; who uses the voice of reason, and I have no objection to his listening a little to the warblings of fancy in his choice, will marry well, although he may not obtain a copper with his bride, yet she brings to him a willing heart and a free mind: and these are of infinite, each. value, to have around us, as we journey through the

From observations made on the river Rhine, it appears that granite, sienite, and argillaceous slate soils, are among the best for the vine, with respect to both productiveness and quality.

An American gentleman in Paris, during what an English lady has most felicitously denominated the late pattern revolution, after detailing the events of that glorious and proud epoch of French history, exclaims, in the fullness of his feelings, if I were not an American I would proudly be a Frenchman.' We admire the scutiment; it is worthy of an American bosom ; and we pray Heaven that the time may be far distant when there will be more of point than patriotism in it. To be an American is now to hold the highest elevation on earth. To claim indentity with Washington, with the Hancocks, the Jeffersons, the Pinckneys, and the Rutleges, of United America, is, indeed, a distinction above all Greek, 'above all Roman fame.' There is a glory belonging to the humblest native of the soil where true liberty first sprang, which we had hoped would be perpetual as its own mountains, But what becomes of that glory, when that sacred soil is made the theatre of DISUNION? When that England Farmer, 52 North Market-streetgrand experiment upon which a whole world has looked with breathless solicitude, becomes a 'splendid failure?' The heart sickens over the idea!

INNOCENCE AND GUILT,-To dread no eye, and to suspect no tongue, is the great prerogative of innocence-an exemption granted only to invarible virtue. But guilt has always its horrors and solicitudes; and to make it yet more shameful and detestable, it is doomed often to stand in awe of those to whom nothing could give influence or weight, but their power of betraying .- Rambler.

SICK HEAD ACHE. A correspondent in the Tuesday's Advertiser states, that three or four small lumps of nitric acid, dissolved in cold water, and drunk off, is a cure for sick head ache, arising from the deficiency of acid in the stomach. The experiment is simple, and worth a trial, at least, We are not informed whether the remedy has a similar effect when the disease arises from a superabundance of acid on the stomach .- Livernoo!

HEALTH,-The principal secrets of health are early rising, exercise, personal eleanliness, and leaving the table unoppressed,

For Sule,

The well known FARM in Dover, occupied for the last acres, well located in a square, bounded on the south by Cochecho river, and on the east by Fresh creek, on which is a tide mill, with an apparates for pounding and grinding The Buildings consist of a large two story Brick flouse, of 46 feet by 38, with a wing of 20 by 16, all wel imished, adjoined to which is a shed 34 feet by I4, connecting the eider house 27 by 37, two stories, with one plastered room, where all the spinning and weaving is done for the family; two Barus, one of which is 100 fee by 42, with two wings of about 40 feet each, one employed as a stable, the other for a sheepfold, with a good vare well walled in; the other is a Store Barn of 45 feet square, of 16 feet post, and will contain 60 tons of hay; a pig gery of 50 feet by 30, with a cellar of 18 feet square un der it, with borlers set to make soap, brew, and cook fo. swine. The fields are divided by permanent stone walls and consist of one of 40 acres in front of the house, on of 17 on the East, one of 10 acres on the North, (princi pally orchard,) one of 15 Northeast, and one of 30 acre West of the house, with three pastures of 20 to 25 acre

The Farm has been gradually improving for the lasten years, and the two last has cut each year one hun dred tons of hay, and 20 to 25 tons of thatch. It is on and a half miles from the village of Dover, which afford a good market. There has been planted some hundred of Fruit Trees, principally Apple, many of which ar grafted-with Pears, Cherry, Plum, Peach and Quinc trees, and many in bearing, with a small nursery.

The terms of sale may be known by applying to Maje ANDREW PIERCE, of Dover, Mr SAMUEL LORD, (Portsmouth, or the subscriber on the premises.

June 11. WILLIAM FLAGG. New Work on Farriery.

Just received and for sale at the Seed Store connecte with the New England Farmer Office, No. 52 Nort Market Street,

The Veterinary Surgeon; or, Farriery taught on a nev and easy plan: being a treatise on all the diseases an accidents to which the Horse is liable; the causes an symptoms of each, and the most improved remedies en ployed for the cure in every case; with instructions to the Shoeing-Smith, Farrier, and Groom, how to acquire knowledge in the art of Farriery, and the prevention Diseases. Preceded by a popular description of the an mal functions in health, and showing the principles (which these are to be restored when disordered. By Jot Hinds, Veterinary Surgeon. With considerable addition and improvements, particularly adapted to this countr by Thomas M. Smith, Veterinary Surgeon, and Membe of the London Veterinary Medical Society. Price \$1,2

No. 19.

OVO EL E VEE

From the American Farmer.

The following Review of Mr Prince's Treatise on the Vine, by a distinguished gentleman of Virginia, ias saved us the trouble of a detailed notice of it; ad the many extracts heretofore made from the sheets, vith which we were politely favored by the author, chile in the course of publication, will have enabled our eaders to judge of its merits from the text; but still we eem it proper to urge upon cultivators and amateurs the reat advantage to be derived from the possessing the ork. It should be in the hands of all Vignerons and ardeners.

TREATISE ON THE VINE.

nbracing its history from the earliest ages to the present day, with descriptions of above two hundred foreign, and eighty Vinerian varieties; together with a complete dissertation on the satabilishment of Vineyards, by William Robert Prince, and aby William Prince, Proprietor of the Limman Botanie Garlen, Vice President of the New York Horticultural Society, &c. &c. New York, 1850, pp. 355.

The public has been for some time in expectan of the appearance of Mr Prince's Treatise on e Vine, which has recently issued from the New ork press. The long experience of the elder possible. · Prince, who has devoted so much of his attenin to the subject of the vine, and who has been twenty years engaged in importing and cultiing the finest varieties of Europe, as well as laging into notice many of our native kinds, has work. No American perhaps was so well lified as Mr Prince to render such an acceptaservice to the public. He was, moreover, one he first persons who strenuously contended the vine must succeed in the United States. idst the diversity of soil and climate which or country presents, from the Gulf of Mexico to th 45th degree of N. latitude, and from the Ata c ocean to the western wilds, in the same with the celebrated wine countries of Europe, be ould see no just reason why we might not in become equally successful in the cultivation fais plant; and, with sufficient experience,

its productions in the other hemisphere. it was then a matter of speculation, is now in nost intelligent citizens are engaged in rearhe vine; fruit of the most delicious quality been raised; extensive vineyards have been ed in some parts of the country; and excelwine has been made from them. Even socie-

at there may have been some disappointment they have attained, is very probable and everywhere in rich luxuriance, extending branches over an ample space, and yielding ens of fruit without any care from the hand ven the foreign vine would prosper in our ins, and bear abundantly. Expectations foundsuch conclusions could never be realized, ence some failures have been the result.

ierable increase of knowledge was diffused; another.

but as the vine has been extended in a much greattionate demand for correct rules applicable to this branch of industry. It was to supply this want, and at the same time to stimulate to still greater exertion, that the Treatise of Mr Prince has been published. No effort has been spared to render it in the highest degree useful and acceptable, since not only has the particular adaptation of our own country to the vine been fully considered, tomode of culture as our experience has suggested of the vine dresser. It was one great object of ted intelligence of every clime, derived from all the experience of the past, for the benefit of the American horticulturist. The most careful observition and the greatest research have evidently ben made to render the offering as acceptable as

As many persons seek with avidity everything connected with the vine, it may not be uninteresting to give a brief sketch of the contents of this Treatise; suggesting at the same time to every person who has half a dozen vines that he could ward with great auxiety to the publication of than in purchasing the work. It may be taken for _ranted that no one who has ever feasted once upon this delicious fruit, but would be well pleased to raise enough for his own use; and whoever has succeeded in raising enough to supply his own wants, has no doubt felt that passion common to all who are fond of the vine, namely, a desire to extend his stock and introduce into his collection still finer varieties. It is certainly one of the most delightful and ennobling pursuits that can engage the attention; a fact, which may enable us to account for the enthusiasm which invariably seizes the minds of those who become in the least enamored of the subject,

Among the many strong considerations which should recommend Mr Prince to our favor, not houll tide of successful experiment. Many of the least is the one, that he is an American in feeling as well as by birth. He takes a deep interest in the prosperity of our country, and he has employed his pen, not so much with a view to his own profit, as from the laudable desire to instruct his fellow citizens on the important subhave been formed to promote an extension of ject of which he treats. Wishing to see every branch of industry thrive, and to extend the sphere of usefulness as much as possible, he has devoted ienced by individuals in the degree of success all his evergies to prove the adaptation of his country to the extensive introduction of the vine. be wondered at. Our native vines are In a most admirable and beautiful argument, founded upon known facts relative to other fruits. he demonstrates this to the satisfaction of every one who may read it. Under these patriotic feelin. Hence it was not unnatural to suppose ings, he has not inappropriately inscribed his Treatise to a distinguished statesman, whose life has been closely connected with the prosperity and independence of our Union. The dedication is remarkable for its neatness and simplicity, written in Tre correct practices, obtained in time, and a the spirit of one freeman addressing himself to in identifyin them.

Mr Prince commences his work with a brief er degree than just principles of culture have historical account of the vine from the carliest been adopted, there became consequently a proportimes, which contains a good deal of curious information. He traces the origin of this plant to Asia; indeed he goes so far as to fix upon Persia as its native land, though the evidence which he adduces in favor of this opinion is not altogether striking. From Asia its culture was extended to the southern parts of Europe. Its progress was at first slow, but as its advantages came to be better known, it was communicated with an inconceivagether with such departures from the foreign ble rapidity when contrasted with the difficulty which exists in the present day in causing the to be profitable, but all the information which best precepts and best modes of culture to be could be derived from the best European authors adopted. The vine was very early transmitted to has been collected in relation to the whole duties the Narhonese province of Gaul, but the cold was so intense beyond the Cevennes that it was deemthe author to present in his work the concentra- ed impossible to mature the grapes so far to the north. The climate had not become ameliorated to the degree it afterwards attained by cultivation; and the vine being a native of a much mere southern region, needed that acclimation by culture which it subsequently attained. As these difficulties were surmounted, vineyards were gradually established in the interior parts of the country. Kings and princes did all in their power to promote its extension by planting vineyards on their own account. Through a long course of time, the vine has become so completely naturalized in that gene sed the lovers of this interesting plant to look not expend a dollar and a half more appropriately, crous climate, and has attained such full development, that it might now be supposed it was its nauve region. These facts with many interesting particulars are very appropriately narrated; and may very justly lead to the conclusion that our own climate, without waiting for the softening and ameliorating hand of time to work a change in its temperature, is already sufficiently genial to invite an extensive cultivation of the vine, even if we had no varieties of our own capable of withstanding every vicissitude of season.

The author next devotes some chapters to a consideration of the effect of climate, soil, exposition &c, upon the flavor of the grape, and in a series of very sensible and forcible remarks, examines the subject in deail. There is a fund of valuable information enall these points, which should be referred to by every person who wishes to acquaint himsef with the proper manner of locating his vines.

We were next treated with descriptions of a vast number of the most estimable grapes, both for wine and for the table, amounting to upwards of two hunded foreign, and eighty native varieties. These descriptions are frequently very minute, being it most instances made from a particular personal examination of the fruit. The extensive nurseries of the author, in which he has planted two tandard vines of every variety, for the purpose of testing their merits and submitting them to the uspection of visiters, have enabled him to enjoy an advantage in perfecting this part of his work, which very few persons have had an opportunity o possess. So faithful and ample are the descriptions in many instances, that persons having the vines in their possession and being ignorat of their names, will find no difficulty

This part of Mr Prince's Treatise contains a

the scientific horticulturist, as well as to the practicular remain to be discovered. It would be well for the distinctive characteristics of our native species, tical man. He appears to have taken the utmost every person who seriously directs his attention to Mr Prince enters upon the subject of culture. pains to render the Nomenclature as perfect as pos- the culture of the grape, to make a careful exam- This be divides into three parts: first, great or sible. The importance of this branch of the sub- ination in his own neighborhood, that he may at vineyard culture, comprising that of fields or planject, cannot be too highly estimated. It is within least contribute one more valuable kind to the gen-tations on an extended scale for the manufacturer the knowledge of almost every person that the eral stock. It is the opinname of the person who may have been instru-join of many intelligent persons that we should effects of climate or to advance the maturity. mental in extending it, or of the place from chiefly rely upon our native varieties for the purwhence it has been obtained by a new cultivator; the effect of which is to produce immense confusion, and to unsettle that which might with very little trouble, have been established on a solid foundation. So deeply rooted is this evil in Europe, that though the most scientifie men have endeavored to eradicate it, their labor has been in a great measure without success; and if it is permitted to become effectually transulanted in our young country, we may find equal difficulty in getting rid of it. It cannot be too forcibly impressed upon the minds of those who either collect or distribute vines, to use the utmost caution in giving them their proper names. Nothing can be more mortifying than to be at considerable trouble or expense to procure a plant which may happen to hear a high sounding title, and nurse it with the greatest tenderness under a belief that it is something very rare; and after all, when it bears fruit, to discover that we had it before, or were well acquainted with it; and that perhaps it is of no great merit. A valuable part, therefore, of the Nomenclature, is the very careful arrangement of all the synonyma, which Mr Prince has made. These are so numerous as it regards some of the foreign vines as to amount sometimes to fifteen or twenty; and even our own native 'Bland' has acquired almost a dozen titles, under each of which it is cultivated in some district of country. It is therefore very obvious that every attempt should be made to rescue this subject from such endless confusion. M.: Prince recommends that the Agricultural and Horticultural Societies should take it under their care, for much no doubt yet remains to be done.

Surprising as it may appear, not less than eighty native varieties are enumerated and described in the Treatise. It is already well known that some of these are exceedingly valuable, being at the same time pleasant for the table, and possessing those qualities necessary for making an excellent wine. It is extremely probable that nany of the others will be found to be no less deserving of cultivation. With a public spirit and liberally truly honorable, jutelligent persons from all parts of the country have yied with each other in sending their rich contributions to the extensive nurseies of the author; and have been free in impating all the information in their possession relatve to their merits. Anoble and generous feeling seems to have animated all hearts. Mr Printe does not fail to dwell on this interesting development with delight and enthusiasm; he even compares the spirit which prompted these spontaneous offerings, to that which animated the people & France in though the time may be somewhat distant. that joyous period of her history, who the emperor Probus restored the vine to that ovely country; and when songs of rejoicing wer heard on the hills and in the plains, on being anin permitted to cherish the beloved and long los plant.

plant: the same general appearance of wood and itself, where the reader will find all elucidated in foliage remains identical. With due attention, clear and satisfactory manner. therefore, it is reasonable to suppose that the finit itself will not undergo material change for the worse, the vines in the extensive gardens of the author as some persons have contended; on the contrary, amounting to not less than five hundred varieties it can be established in numerous instances that affording ample selections for every diversity the most abundant crops of the most delicious soil and climate, where the vine may be brought quality, have been raised in various places in this flourish. country from the exotic vine, not at all inferior to what they are in France. In the vicinity of Bal-connexion with the subject, because it is natural timore this fact has been completely verified; and more interesting on that account. But it wou even as far north as Boston, singular as it may be an unpardonable omission to pass over it et appear, not less than one hundred thousand, ounds tirely without paying a tribute to its literal of grapes are annually raised in the neighborhood merits. Mr Prince has not only been able to in of that city. We cannot, therefore, but consider part a vast fund of information to his readers, by the sent ment which seems to prevail of laying he has evinced a talent for doing it in a perspict aside the foreign species, as founded on a very imperfect trial of their capacity for productions, We would not, however, by any means, be thought to discourage the extensive propagation of our valuable native varieties. In the eastern world, as Mr Prince very justly and forcibly remarks, they have never possessed but one species of the vine ; whereas in America we have not less than form or five, in-ligenous to the country. By long and continued cultivation the qualities of these natural age to indulge in a smile; yet he who has ev productions of our soil, may become so ameliorated, as to be equal perhaps in every respect, to the most celebrated varieties of Europe; for it was only by subjecting them to similar treatment, that such transcendent varieties have been obtained. Let us, therefore, not despair of equal success,

After this, perhaps unseasonable, digression, it is proper that we return to the Treatise, and give some account of the concluding part of the work, siderable part of the year, collects in astonishing which forms one of the most valuable portions of its contents. Succeeding the descriptions with newly-planted maize and other grain. In the There can be no reasonable doubt out there are which we are favored, of so many delightful varie-

great deal of exceedingly valuable information to many valuable varieties of our native vines that ties of the grape, and after devoting some pages to tificial heat is resorted to, either to obviate the

The author treats at considerable length whatpose of making wine; though the general opinion ever relates to these modes of cultivation. He is that the quality of the foreign grape is so much so ample and minute that scarcely anything is left deteriorated by a change of soil and climate, as untouched. The preparation of the ground; the that its product no longer resembles that which planting of vines; the most approved manwas derived from it in its original locality, is most uer of raising vines from cuttings, the operprobably founded on error. That there may be ations of layering and engrafting; the location of some change is not improbable. But many of the vineyards with enclosures suitable to protect them foreign vines produce very abundant crops; and propping and training according to the various Mr Herbermont of South Carolina, a gentleman methods which have been found to succeed best whose zeal, intelligence and experience are so well in different climates, from the low to the high known, has made a very rich and delightful wine trained vines, and from the common trellis to that from his 'Madeira,' supposed to have been origi-admirable system of espalier by which the delicious nally brought from the island of that name, and highly gilt fruit of Thomerry is perfected Other kinds have also been found to yield a very with several other modes applicable to particular pleasant wine. Much of the disappointment circumstances; all this, with every form of manwhich has resulted from our endeavors to raise agement which can contribute to the prosperit foreign vines, has in all probability proceeded from of the fullest development of the fruit, is dwel our ignorance of their management, and from a de- upon with minute attention. It would extend sire to obtain too much fruit before they arrived at a this article much beyond a proper limit to endeavo state for mature bearing. No change of soil and to condense the views of the author on these im climate can produce any alteration in the distin- portant subjects. They could not in any even guishing characteristics of any variety of this be so well understood as by consulting the wor

Appended to the Treatise is a catalogue of a

Thus far we have only spoken of the work in ous and agreeable manner. His language is well chosen and engaging ; full without being redu dant; easy, flowing and frequently nervous; anwhere the subject admits of it, abounding in cla sical allusions. It is evident that it is for the most part, the effort of an ardent and spright mind, devoted enthusiastically to the vine. At if we sometimes discover some indications of most youthful fervor, which might induce sob the known what it is to love and to cherish the vine, w duly appreciate any occasional exuberance of fet ing, and have a higher opinion of the generosi and amiableness of the author.

CROWS.

Few birds are more numerous and annoying the farmers of the Atlantic States than the could mon crow (C. corone), which, throughout a colle large flocks, and makes destructive descents up species it seems as if all the evil propensities

the race were united and augmented, Exceedingly cunning in detecting every contrivance intended for their destruction, they are rarely destroved to any great extent, except in seasons of excessive and long-protracted cold weather. Then (as during the winter of 1828-9) vast numbers perish from starvation, since the earth, brooks, rivers and bays being completely locked up, all their sources of supply are cut off. At such times, their hunger is so distressing as to force them to the most extraordinary exertions, and they devour substances, which nothing but excessive hunger could induce any animal to swallow. During the hard winter alluded to, immense flocks were observed passing from the direction of the amous roosting place in the vicinity of Bristol, a. (particularly noted by Wilson), towards the hores of the sea and bay, and returning regularly n the afternoon. Thousands upon thousands, for everal hours, moved heavily along in a broad, regular line; and, from the numbers found dead the field, it is most probable that, during the everest weather, but little benefit resulted from reir long diurnal pilgrimage. The common crow voracious at all times, and nearly, if not quite, omnivorous as the brown rat. Grain of all orts, but especially Indian corn, insects, carrion, igs, fish, young birds, the young of various doestic fowls, and even young pigs, are sought for gerly, and devoured with avidity. This species, om the peculiar excellence of its sight, smell d hearing, by which it is very early warned of proaching danger, is very audacious, frequently ming close to the farm-houses in search of prev. d persevering in efforts to rob the hens of their ickens, until successful. The writer has witssed several times, in the state of Maryland, tere crows are far too abundant, the pertinacity one of these robbers in attempting to seize a ung chicken, notwithstanding the fierce defince de by the hen. His approaches appeared to e in view the withdrawal of the hen to a little ctance from the brood; then, taking advantage this wings, he would fly suddenly over her, and se the chick. The same attempts were frecently made upon the goose, with a view to see her goslings, but the vigilant gander, though aly fatigued by his struggles, never failed to deat a single crow; it was otherwise, however, wen two or more united for the purpose of feaston the young. It is not an uncommon thing farmers to be under the necessity of replantcorn several times in the spring, and, when it ist rising above the ground, to be obliged to p several persons continually on guard in the als. When the corn has shot up an inch or two ave the surface, a host of these black-coated diderers invade the fields, and having posted inels in several commanding situations, march darly along the corn-rows, drawing up the n, pulling skilfully by the shoot, and then flowing the germinating corn. Among the at successful experiments made to prevent the was from doing this mischief is that of coatthe seed corn with a mixture of tar, oil, and all quantity of slacked lime, in powder. The edients being mixed in a tub, the seed corn is and in it until each grain receives a thorough ong of the mixture. This preparation, as it ted by moisture, is found to retard the gerting about three days. In the instance we essed of the trial of this preventive, it was

fully successful; for, although the field was daily satisfied that it was, throughout, equally unpalatable. During their breeding season, which is in the spring months, the flocks spread over a great sticks, lined with grass, in lofty trees, choosing the most remote and difficult of approach. The young, generally, are two in number, and until fully fledged are most solicitously protected by their parents. When the young crows first begin to receive lessons in flying, nothing is more remarkable and affecting than the efforts made to preserve them, by the parents, when a gunner approaches the vicinity. Every artifice is employed to call attention away from the young, which seem to comprehend the directions or calls of their parents, and remain perfectly silent and motionless. In the mean while, the father and mother fly towards the gunner, taking care not to remain an instant in one place, and, by the most vociferous outcries, deprecate his cruelty. These efforts being continued, their voluntary exposure, and the eagerness with which they fly about a particular spot, are almost always successful in withdrawing the sportsman from the place where the young actually are. As soon as they have succeeded in leading him to a sufficient distance, they cease their accents of distress, fly a little farther from their young, and from a lofty perch, which enables them to watch all around, after an occasional cry. which one may readily imagine to be intended for the direction and encouragement of their offspring, The most successful mode of destroying crows, is that of invading them in their extensive dormitories during the night. When they have selected a pine thicket, or other dense piece of wood, for a roosting place, they repair thither with great regularity. Every evening, vast flocks come sailing to the retreat, and the trees are literally covered and bowed down. When the state of Maryland received crow scalps in payment of taxes, at three cents each, parties were frequently made to attack the crow roosts. Gunners were stationed at various parts, surrounding the roosts, and all those of one division fired at once; the slaughter was necessarily dreadful, and those remaining unhur, bewildered by the darkness, the flashing and report of the guns, and the distressing cries of their companions, flew but to a little distance, and settled near another party of gunners. As soon as they were fairly at rest, the same tragedy was reacted and repeated, until the approach of day or the fatigue of their destroyers caused a cessation. The wounded were then despatched by knocking them on the head or wringing their necks, and the bill, with so much of the skull as passed for a scalp, was cut off and strung for the payment of the taxgatherer. The poor people, who had no taxes to pay, disposed of their crow scalps to the store-keepers, who purchased them at rather a lower rate. This premium has long been discontinued, and the number of these maranders is, in many parts of that state, quite large enough to require its reestablishment .- Ency. Americana.

Beet sugar.—The success of this branch of industry, in the North of France, leaves no doubt of sacrily keeps the grain from being readily ited by moisture, is found to retard the gerting about three days. In the instance we assed of the trial of this preventive, it was a considered the preventive, it was a considered the sugar.—The success of this branch of industry, in the North of France, leaves no doubt of success in Belgium, the soil and climate of which are so favorable to the culture of beets, and the success of the number of manufactories. We new factories were near the expected of indigenous sugar in many parts of France.

fully successful; for, although the field was daily visited by hosts of crows, they were content with pulling up enough corn, in various places, to be satisfied that it was, throughout, equally umpalastisfied that it was, throughout, equally umpalastic. During their breeding season, which is in the spring months, the flocks spread over a great extent of country, and build their nests of small sticks, lined with grass, in lofty trees, choosing is estimated at 120,000,000 pounds.

PUBLIC SCHOOLS.

The season is now approaching when the district Schools throughout the State commence for the winter.

Among the multitude of our statutes, there are none which reflect more credit upon the wisdom of our Legislators, and are better calculated to secure the rights and liberties of the people, than those providing for the establishment and support of public schools in every town.

Knowledge is power; and so long as our citizens receive a good common education, there can be little fear of the decline or decay of the sound principles of free government established by the toil and blood of our ancestors.

Those to whom the charge of procuring teachers is intrusted, fill a highly responsible office, and have much to answer for to their country and to the rising generation.

There has an opinion prevailed to some extent, which we think to be erroneous, that it is best in proenring teachers to take the one who will keep the longest time for the amount of money the district has to expend; if the merits of all instructers were equal, this would undoubtedly be correct; but there is no situation perhaps in which men are ever placed, where similar acquirements produce such entirely different results as in that of teachers.

The teacher, who, to a thorough knowledge of the branches he professes to teach, joins a happy facility of imparting information, and the art of preserving good order in his school, is calculated to be of the most service to his scholars.

Experience in teaching and managing a school is of no small advantage. Where order is not preserved, little progress in learning can be expected. The teacher who is obtained at a low rate is not always the cheapest. It is a great error in School Committees to attend so much to the price of the teacher's services, and so httle as they sonetimes do to their qualifications.

Children in the country have an opportunity of attending a school of only a few months duration in each year; they ought then to have the best instructes that can be procured.

No pans, no care and attention that can be bestowed upon the schooling of the youth of our country and in furnishing them a good, thorough and subsantial English education, can be considered as los or wasted. It is like money put to usury, the profit to be received in the end is certain, though the operation of its increase may not be visible.—National Egis.

Improvel pavements.—In London, pavements are being made of hwn granite blocks, neely fitted so as to make a smooth surface, and made crowning or arched so that the pressure of a load acts on the whole bed. This is an inprovement. We have taken occasion long ago to suggest wooden blocks for streets near churches and other places where it is important not to have noise.—Journal,

Factories.—We understand the foundations of two new factories were commenced at Lowell, last week, near the expected terminus of the contemplated Rail Road.—Cos. Yeo.

COMMUNICA PIONS.

AN EXCURSION ON THE HUDSON. LETTER 1.

DEAR SIR-I commenced my excursion 29th September, by way of New Bedford to Newport, where I devoted two days to the kind civilities of the family of my worthy friend Dr K. This procured me a gratifying visit to the stupendous fortifications now erecting at Brinton's point, under the able superintendence of Col. Totten. These works, of a mile in extent, and most formidable in height and strength, have been five years in progress, at an annual expense of \$100,000. It is calculated that in another five years the whole will be completed, at the cost of one million of dollars, and will present an impregnable barrier against the strongest force. At Newport, I embarked in the Chancellor Livingston, one of those massive arks which in the days of our fathers would have been viewed as a terrific phenomenon from the infernal regions. We now estimate it as a vehicle of great utility and convenience, a pleasant resort for the fashionable world, for recreation and amusement; steaming onward with 2 or 300 people at the rate of 16 miles an hour; one can scarcely enjoy a reposing nap ere he awakes at the end of the voyage. The well known skill and experience of the commanders on this line, preclude all apprehension of the awful disasters which have so frequently occurred in other places. Who, since the days of Columhus, more than Robert Fulton, has conferred wealth and benefit on the world of mankind? Where is the genius to be found, hold enough to predict the incalculable results yet to be derived from that all powerful, space-annihilating. laborsaving agent, expansive steam? At New York, I embarked on board the North America, a still more formidable and splendid vessel, accompanied by my respected friend Dr Hosack, bound to his noble residence at Hyde Park. Soon after leaving the wharf we passed on the left Hoboken; a short distance above are the romantic and beautiful hills called Weehawken, three miles from New York. Here occurred the tragical fate of the illustrious Hamilton, and this spot has obtained a reckless notoriety as the resort of duelists to adjust their misconceived points of honor, At Weehawken, on the western margin of the Hudson, commences a very singular and stupendous range of trap rock, called the Palisadots. This range extends about 22 miles, some parts of which rise to 20 and others to 550 feet it height, presenting an almost perpendicular surface. Seven miles from the city, on a beautful and commanding site on the east side, stands conspicnous, that noble edifice, the New York Lunatic, or Bloomingdale Asylum, crected a few years since. It is a splendid fabric of hewn reestone, and was the favorite object of that philanthropist land which extends across York Island is called Harlaem heights, well remembered for a line of fortifications in the early part of the revolutionary war, Fort Lee, on the west side, is 300 feet above after the fall of Fort Washington, creeted on the 2,600 men was among the first and mos, appalling the instruction of our youth in the important

disasters of the war. We passed, October 2d, in sciences of engineering and tactics, reflects much distant view of Tarrytown, on the east side, the honor on our government, and on our national place where was captured the lamented Andre, character. In a conspicuous place on the point, and Tappan on the west, where I witnessed the is erected a handsome monument of fine hewn execution of that unfortunate officer on the 2d marble; the inscription on it is 'Kosciusko.' October, 1780, precisely fifty years since :---an in- 'Erected by the corps of cadets, 1828.' Among teresting retrospection! Sing Sing, or Mount the interesting recollections pertaining to West Pleasant, is on the east side, 34 miles from the Point is Kosciusko's garden, situated in a deep city. This is a noted place, where the hones of rocky valley near the river, where in 1778, I was thousands of our unfortunate prisoners have been amused in viewing his curious water fountain, mouldering since the American war. The new state prison now located on the bank of the river makes a conspicuous and noble appearance. 'It is built of hewn white stone, quarried on the premises. The whole work was performed by the convicts. Its dimensions are 44 by 480 feet; it has a double row of cells built back to back, four tiers high, and 200 in each tier; making in all 800 cells. The average number of convicts here is 550. The discipline is that of the Auburn prison supposed to be the best now in use. The next object of interesting reminiscence is Slony atrocious deed, he sheathed his sword; and soon Point, on the west side 40 miles from New York, (after, having obtained permission of his sovereign This is a bold rough promentory on the summit of which a light house is now erected. It was a formidable fortification, wrested from the British of action. He served in the engineer department by assaultby the gallant general Wayne, July 16th,

Verplank's Point, opposite, was also the site of a fort, and a splendid mansion is now situated upon it, occupied by Mr Philip Verplank, Here commence the celebrated Highlands. The majestic river resembles a vast canal traversing a wild forest, its banks on each side for many miles exhibit a sublime spectacle of mountain based on mountains, precipitous crags, and huge rocks in wild

St Anthony's Nose-This is a mountain on the east side, rising 1228 feet above the river, directly opposite old Fort Montgomery, from which may be seen the Catskill mountains, part of Connecticut, with a view down the Hudson extending to New Jersey and Harlaem heights, Long Island, &c. This mountain is called St Anthony's nose, erroneonsly supposed to be that which exhibits a profile of a human face, the name of which is derived according to Washington Irving, from the nose of Anthony Van Corlaer in early times.

West Point. Of all situations on the Hudson, this is incomparably the most important, more celebrated in the history of our revolution than any other military post, and fraught with objects of peculiar interest at the present day. The venerable Fort Putnam occupying a majestic and commanding situation; the pride and hoast of our military chiefs, from which we were prepared to hurl engines of destruction on the assailing foe, and which was shorn of its strength by the vile traitor's hand, is now reduced to a mouldering pile of ruins. There is now at this noted place a hospital which is a fine stone edifice with a pianza in front and an extensive wing at each end, On the late Thomas Eddy, Esq. The ridge of high a commanding eminence is a spacious hotel in a style of much elegance, the keeper of which, Mr Bispham, is famed for good cheer and obliging deportment. The United States Military Academy and all the buildings apportaining to that exectthe level of the water, and was evacuated in 1776, lent establishment, exhibit a magnificent view, These consist of six brick buildings for the officers summit of a high hill on the east side, 12 miles and professors, and the number of cadets is about from the city. The fate of this fort falling into 209 under the superintendence of the accomplishthe hands of the Hessians in 1776, together with ed Lieut. Col. Thayer. This noble institution for

sponting jets and cascades, 'Clusters of lilaes are still growing which are said to have been planted by the Polish Patriot,' Col. Thaddeua Kosciusko was a gentleman of distinction in Paland, and a favorite of the king. But having cloped with a beautiful lady of high rank, they were overtaken in their flight by her father, who made a violent attempt to rescue his daughter, Kosciusko was reduced to the alternative of destroying the parent or of abandoning the object of his affections. His noble spirit disdaining the to ouit Poland, he resorted to America, where he resolved to exercise his gallantry in a new sphere with the rank of colonel in our army. After or before the close of the war, Kosciusko returned to his native country, where he acted the part of a zealous patriot in heading the Poles against the Russians. He was severely wounded in battle. and died in Switzerland in 1817. A little below West Point, on the opposite side, is seen the small point frem which the traitor Arnold took his flight and reached the British sloop of war Vulture it Systember, 1780. New Windsor-is on the wes side, where is seen a low house formerly the domicile of Mr Ellison in whose family General Washington for some time resided. Mrs Ellison who performed many domestic offices for the commander in chief, is still living, and is the wife of Mr Bullis, Newburg, is on the west side. A quar ter of a mile south of this village stands the ok stone house in which Washington held his hear quarters at the time when the celebrated anony mons 'Newburg letters' created so much excite ment in the army, and so much distress to the commander in chief. Pouglakcepsie-on the eas side is a handsome and pleasant village contain ing two elegant hotels famed for their excellen accommodations.

Hyle Park, is on the east side, six miles above Poughkeepsie, and divides the distance prett equally from New York to Albany, This pleas ant village received its name from Dr John Bard' country residence, now in the possession of Di David Hosack, and this is the extent of my pre sent excursion. Landing at the dock on the pre mises, we were met by the Doctor's carriage an conveyed up a circuitous road about half a mile to the mansion. The approach is truly enchant ing, the Louse a palace, the landscape a rural par adise, the respectable occupants distinguished for the kindest hospitality. Hyde Park estate we the country residence of Dr John Bard, * and i was the scene of his latter days. After him his son Dr Samuel Bard* creeted a splendid hous and made considerable improvements, while lison in law, Rev. Mr McNicker, erected a beautiful dwelling in the finest style of an English col

We shall be at work on the same road next year from the first of June to the last of September. We shall want as many hands as we had the past season; we will give them as much as they want to eat, Coffee and Tea three times a day, plenty of hard work, their cash when their work is done, but not one drop of Rum. Those who want to engage on these terms may apply to the subscriber at his camp on the Military Road between the Moluncus and the Fork of the Mattaw-CHARLES JARVIS.

Elisworth, Me. Nov. 16, 1830.

VENUS' FLY TRAP.

Botanie name, Dionæa .Muscipula. English name, Venus' Fly Trap. French name, Attrape Mouche.

This strange American flower is one of the greatest wonders of the vegetable world .-- There are many plants showing evitable signs of irritability and spontaneous motions, but few that decov and ensuare insects so completely by acts emulating volition.

This wonderful plant is quite peculiar to America, and even confined to a very small range. has only been found wild in the swamps of North the Lk :-Carolina, and seldom if ever out of that state. It is much admired and prized in all gardens, being arly excellent, the Ruta Baga, the Large Cape rare, difficult, to procure, cultivate and propagate. oy and Low Dutch Cabbages, the Long Dutch It must be kept in pots, always moist and surround- the hads of man; within the circle the benes

The leaves are radical, wedge shaped, and each has at the end a biloped appendage, surrounded by bristles. It is in those lobes that the power of moving resides. They can expand and shut or fold themselves. A kind of claiming expodation attracts small flies and winged insects, who come to sip it; but no sooner have they tickled the lobes by their feet, than the lobes shut and entangle the flies by their bristles, holding them fast, and never unfolding again until they are dead, and cease to irritate the leaves by their struggles to escape.

The flowers are white, forming a cluster of Though not immediately connected with agri- Corymbus, upon a leafless stem: they have five petals and ten stamina; therefore belong to Decandria, or the 10th class of Linnaus. In a natural arangement this plant is the type of the family of DIONIDIA.

> It has recieved the generic name of Dionia, which was one of the ancient names of Venus, and the specific name of Muscipula, means fly catcher. Only one species is known, and no varieties are afforded. It is therefore an unique wonder.

It may be considered as a true emblem of cau-TION, teaching us to beware of deceitful attractions and the concealed snares of the world .- Ohio

Opening of the Manchester and Liverpool Rail Road .- According to our report, the speed of the car was, while he observed the time, at the rate of 18 or 19 miles an hour; but he was assured by Mr Stephenson that, when the interruption took place, the rate was 24 miles an hour, and at one time even 38!

This is unquestionably one of the greatest triumphs of Mechanical Science. It is the commencement of a new era in loco-motive. We may expect the construction of rail-ways on all the roads where the dense population would render the spec ulation profitable. Already the shares of this company are at a premium, which is the best proof of the general opinion as to the speculation.

Distant cities are now brought near to each other. The ranting call of the Poct to annihilate space and time, may almost be said to be realised. Before a citizen of London could proceed in one of those lumbering coaches which vet disgrace the streets of the metropolis, the stronghold of so many monopdies, to the west end of the town, a Liverpool merchant will have finished his journey to Manchester.

The lower of man over the material world has been augmented within a few years in so extraordiary a manner, invention having succeeded rapidlyto invention, that there has been generated a dispoition to believe that the elements may be made vailable to man to a degree far be cond nvthing (which we have experienced. Had railroads long which carriages might proceed at the rate oi36 miles an hour been hinted at to Swift, he wold certainly have deemed the speculation adapted to Laputa, -- Lon. Morn. Chron.

Enemous Bones .- The skeleton of an animal, of prodigous size, was discovered about four weeks since, t the Big Bone Lick in Kentucky. We have to following particulars from a friend, who received them from a gentleman who resides near

Thre are ten or twelve sets of tusks, from 4 to 12 fee long; the claws are 4 feet long 3 broad; the taks were arranged in a circular order, as if by were leposited, which, when placed together,

showed the animal to have been at least 25 feet that came in their way, still I conceived they high, and 60 feet long. The skull bone alone might relish them more as a condiment or mediweighed 400 pounds. They were found by a Mr cine than as food, till I was assured by a friend of Finney, about 14 feet below the surface of the mine, long in command of a ship, that he once skeleton is said to be complete, saving only one or vessel which he commanded, and it was at last two ribs.

HEW ENGLAND FARMER.

BOSTON, FRIDAY, NOVEMBER 26, 1830.

LEAVES FOR MANURE.

In our last, we gave some remarks on this subject, but the following in addition may, perhaps, prove useful. We are assured that great use is made of leaves for manure in some parts of Europe, and that farmers pay for the privilege of gathering them from public walks, shaded by trees, as well as from forests. Our excellent correspondent J. M. G. of Weston, Mass., in a communication, published in the New England Farmer, vol. vi, page 102, observed that the gathering of leaves may be greatly accelerated by suitable arrangements: a cart with ladders fore and aft, and long slats of boards to go from ladder to ladder to secure the sides and stakes, is the best adapted carriage. The leaves should be raked into small heaps, a sheet of tow cloth two yards square, should then be laid on the ground, and the small heaps be raked into it; when full a man ties the corners of the sheet, and hands it to a boy, who keeps on the cart and receives it; he unties the bundle and lets the contents go, and keeps treading all the while; in this way a load is soon obtained; and to the above tackling, some little brush may be added to the sides of the load to build it up, and hold on the leaves. I have tried to use baskets to load the leaves: but have found the above sheet to work casier and quicker, and in order to make it more durable, I have had a small rope sowed round the edge of it, and let out about eighteen inches at the corners, which make i easier to tie, and secures the sheet from getting torn, Such a sheet will cost about one dollar,

'In the use of leaves, hogs excel; for whicher as a litter in the covered part of their stye, or whether thrown in mederate quantities in their yard when their dung. When the floor is cleared a the morning, the dung, urine and leaves, shoul be well worked and chopped together, with the hovel before they are thrown out on the heap; f it is not done, the wind will surely take hold, ad disappointment ensue; when so mixed, the will soon dissolve in the ground, and seldom antrace of them be seen in the fall, when potatos are

Fattening Pigs on Cold.—Cunningham, h his Two Years in New South Wales, relates, 'I lid often heard it said among sailors that pigs would fatten on coals, and though I had observe them very fond of munching up the coals and inders the Bib. Univ. Mars. 1830.

earth, who had refused \$5,000 for them. The knew of a pig being lost for several weeks in a found to have tumbled into the coal hole, and When and how this animal existed, must baffle there hved all that period without a single morsel all speculation. The manumoth himself, so long of anything to feed on but coals; on being dragthe wonder of these latter times, must dwindle into ged out it was found as plump and fat as if it had comparative insignificance before this newly dis-been feasing on the most nutritious food. Anothcovered prodigy. If carniverous, a buffalo would er friend told me of a similar case, which came scarcely serve him for a meal, and if granivorous under his observation; and although these may favored situations near, are liable to blast notoritrees must have been his tender herbage. - Nat. Int. be solitary instances, yet they serve to show the won derful facility which the stomachs of certain er. St Germains and the Chaumontelle of Cox. animals possess of adapting their digestive powers to such an extraordinary species of food, and by the committee to be the Black Pear of Worextracting wholesome nonrishment therefrom cester,' of Langley's Pomona; also Winter Rous-When we consider coal, however, as a vegetable production, containing the constituent principles of fat, carbon, hydrogen and oxygen our surprise will decrease.

> Jude Kimball of Lyndon, Vt. has cultivated this pea extensively the past summer. He considers it a most valuable variety, being very prolific, of the richest flavor, and continues in bearing a great length of time; one vine 12 ins, high produced 108 pods, two had 94 pods each, and many had from 50 to 70 pods each.—It seldom grows more than 10 to 14 inches in height, of course requires no and the Coignassier commun of France, or comsticks. It is but a few days later than the Early mon French Quince, Washington Pea. It should be planted 2 or 3 inches apart in the rows, which its spreading habit require, and which answers better than when sown closer; hence it is obvious there will be a lac, Tasselled White, Golden Lotus, Large Lilac, great saving of seed, as a quart of this will go as far as three quarts of other peas. It begins to blos- only. Changeable Buff, Paper White, Crimson, som when three inches high. They should be Pink, Lilac, and White, Semi-quilled White, Parks' planted every fortnight for a constant succession, small Yellow, Golden Yellow. From Nathaniel and green peas may be obtained all the summer Davenport, Milton, the following Chrysanthemums and autonom. From the nature of its growth, it for premium. Quilled Flame, Quilled Lilac, appears well calculated to withstand the great heat | Quilled White, Golden Yellow, Golden Lotus, of our summers.

Potatoes food for Horses.—To every 300 pounds of potatoes, washed and steamed, is added half a pint of salt, and occasionally a small portion of sulphur; this quantity will more than supply a members of the Society at their Hall, horse kept at work constantly for six days, Horses thus fed will perform with the greatest case, all the common labor of a farm, without havor outs .- English publication.

The Bunker Hill Aurora recommends a conmiry, they soon work them, and secure ther from vention of Military Officers, to devise measures for the power of the wind; when used for litering relief in the present Militia System. We doubt cattle it is absolutely needful to work then with if they would do much towards relieving the onerous burdens of Privates, whose complaints have generally been overlooked in the thousand and one transformations of the militia system.

> Two gentlemen of Liverpool, England, have subscribed liberally to the stock of the Virginia Rail Road, from Petersburg to Roanoke.

> Hydrophobia.-Three cases of the cure of this formidable disease by friction with mercurial ointment one of them at 40 days after the bite, when slight symptoms of the disease, attended with Spasm, had become manifested, and described in

MASSACHUSETTS HORTICULTURAL SOCIETY Saturday, November 20, 1830.

FRUITS.

. Ipples. - From Mr Manning, the Conway apple and the Reinnette d'Espagne. From Gen. Newhall, of Lynnfield, specimens of yellow and red apples.

Pears .- A St Germain, weighing 121 oz., a fine specimen from J. B. Joy, Esq. of Boston. Chanmentelle, very fine, from Wm. Pratt, Esq. Both of these fruits, and especially the former, however perfectly fine and fair in cities and some highly ously in the vicinity of Boston. From Mr Downand the Iron Pear, weighing 16 oz. Presumed selette, of high musky flavor, but dry. From Mr Manning, Pears, name unknown, and the Spanish Bon Chretien. From Wm. Robert Prince, Esq. of the Linnavan Botanic Garden, Prince's St Germain, fine and well deserving of cultivation; also Bishop's New Early Dwarf Prolific Pea.-Mr a small pear, in a state of decay received by him from a French Nursery, for the Verte longue d' Automne, and not true; also Colmar Sonverain, one of the new sorts of Van Mons, large and fine. This fruit has been noticed in the report of a former meeting.

Quinces .- Mr Prince sent also for exhibition specimens of French apple-shaped Quince, and WM. KENRICK.

FLOWERS.

Chrysanthemums, grown in the open ground, rom R. L. Emmons. Quilled Flame, Curled Lifor premium, and the following sorts for exhibition and Pink. A beautiful plant of Camellia Japonica, var. Double Striped, full of flowers and buds, was also exhibited by Mr Davenport.

Mr Cook's Address is now ready for delivery to

State Prison.-There are at present, 290 convicts in the prison in this town-who are confined in solitary cells in the night time and during meals. The whole cost of the new Pirson-together with a new chapel and cookery, crected the past year-is \$\$1,000,including the labor of the convicts. The cost of the old prison, erected in 1804-5, was \$170,000. This is now used principally for a Warehouse. The new prison contains 300 cells. Charlestown Aurora.

The legislature of Vermont has repealed imprisonment for debt, except in cases of traud.

Qui tam suit.-George J. Willis, vs. H. F. Sanders and L. Wilson, brought to recover a penalty incurred under the statute to prevent the making or setting up of lotteries, was tried before the county court of this county, which closed their session last week. The Jury found the respondents had incurred a penalty under the statute equal to the amount of the scheme, and accordingly returned a verdict for the complainant of \$402,660. - Vermont Gazette.

Rice was introduced into South Carolina in 1693 from the Island of Madagascar. Thomas Smith went on board of a British vessel which touched at Sullivan's Island on her way to Engand. He received a small bag of seed from the Captain with directions for cultivating it, which he distributed among his neighbors. We believe that the culture of Rice in the Southern provinces was protected by the British government as early as 1740.

Morus Mullicaulis, or New Chinese Mulberry.

most valuable variety, lately inmost valuable variety, most troduced to France from the Philippine Islands, and tound to sure pass all other kinds for silk worms. Price 89 per dozen.

esteemed in France, Italy, and

Turkey, for the silk culture, including the Broad lobed leaved, Large oval leaved, Count Dandolo's celebrated Foglia dappea and the Tartarian, particularly esteemed for its peculiarly hardy character, and which would probably support the winters of Lewer Canada.

500 Modeirs nut or Persian Walnut, 10 feet in height, De Orders received at the New England Seed Store, No. 52 North Market Street, Boston, by J. B RUSSELL.

Grape Vines, &c.

For sale at the New England Seed Store, No. 52 North Market Street, an extensive assortment of Grape Vines, of both American and European sorts at nursery prices, omprising all the standard varieties, now cultivated either a the open vir or the Green House.

Also Yellow Locust, Scarlet and Sugar Maple, Honey ocust, Early Washington, Blue Imperial, and Bishop's iew Early Dwarf Prolific Peas, of this year's growth.

Patent Door Springs.

Burwell's superior article of Door Springs, on an entirely ew construction, which have been most highly approved wherever used, are now offered for sale by J. R. New-I, at the Agricultural Warehouse, No. 51 and 52 North arket Street.

N. B. Mr Smallidge is now in the city and will pernally attend to the setting of them during the few days Nov 26 may temain.

Mussachusetts Horticuliural Society.

The members of the Massachusetts Horticultural Soci-, are requested to meet at the Exchange Coffee House Saturday, 27th inst, at 10 o'clock, for the purpose of conting upon and adopting measures relative to the proing a suitable room for the future meetings of the Soy. A general and punctual attendance is requested. ROBERT L. EMMONS. Recording Sevetary.

Thanksgiving . Irticles.

Prince's Treatise on the Vine,

Just received at the New England Seed Store, No. 52 North Market Street,

A Treatise on the Vine; embracing its History from the earliest ages to the present day, with descriptions of above two hundred Foreign, and eighty American varieties; together with a complete dissertation on the Establishment, Culture, and Management of Vineyards.

'The Vine, too, here her curling tendrils shoots,

Hangs out her clusters glowing to the south.

And scarcely wishes for a warmer sky.?

By WM. ROBERT PRINCE, aided by WM. PRINCE. Proprietor of the Linnwan Botanic Garden. 1 vol. octavo. 355 pages. Price \$1.50. Oct 99

New England Farmer's Mmanac, for 1831. Just published, and for sale by J. B. RUSSELL, at his Just phonshed, and for some by s. D. RUSSELL, at his Seed Store, No. 52 North Market Street, the New England Farmer's Almanac, for 1831. By Thomas G. Fessenden, Editor of the New England Farmer. The Astronomical Calculations, by the Editor of the Astronomical part of the American Almanac.

This Almanae contains the usual miscellaneous and agricultural articles—a list of the civil officers of the United States, with the Governors, Licut. Governors, and Judges of the United States, and the Governors of the British Colonies-a chroniele of the most remarkable events between August, 1829, and Sept. 1830-a complete Calendar for each State in New England, including the Probate Courts for New England-the Sun's declination, &e. The tides are particularly calculated. Among the agricultural articles, are a description of Mr Phinney's Improved Roller, with a drawing; and a drawing and description of an Improved Harrow, used on Capt. Daniel Chandler's farm, in Lexington.

Price \$6,00 per groce-621 ets per dozen. Oct. 1.

Rees' Cyclopedia,

American edition, revised, corrected, enlarged and adapted to the United States, in 47 volumes, quarto, including a large atlas, and 5 volumes of plates. This valuable work, the labor of 20 years, is illustrated by eleren hundred and fifty engravings, by the most distinguished artists. (There are 4.5 plates upon agriculture around taining 394 figures; upon Natural History, including the number of wates exceeds 260.) The original artists. (There are 43 plates upon agriculture alone, concost of this work in boar Is was \$470, and will now be sold in elegant Russia half binding very low, if applied for soon. Apply (post paid) at the office of the N. E. Farmer. Nov. 10, 1830.

Sheep for Sale.

On hand and for sale 2000 fine woolled sheep of various grades from half to full blooded Merinos. them are about 500 Wethers and fat Ewes. 1250 Stock Ewes, (a desirable lot for persons wishing to obtain a flock.) and 250 lambs. The above will be sold on accommodating terms and in lots to suit purchasers on application to the subscriber in Cummington, Hampshire CYRUS FORD. County, Mass. Cummington, Nov. 4, 1830.

· Seeds for Country Dealers.

Traders in the country who may wish to keep an assortment of Garden Seeds for sale, are informed they can be furnished, at J. B. RUSSELL'S Seed Store, connected with the New England Farmer, 52 North Market Street, Boston, with boxes of various sizes and prices, from 10 to \$50, containing a COMPLETE ASSORTMENT of the seeds mostly used in a kitchen garden, on as favorable terms as they can be procured in this country, of equal quality, neatly done up in small packages, ready for retailing, with short directions on each pockage for its culture and management—warranted to be of the growth of 1830, and of the purest quality. Nov. 5.

Boston Vegetable Market -Prices at Fancuil Hall Market.- Cranberries, 1.25 1,50 per bushel-Potatoes, (raised in this vicinity) 20 to 30 ets. per bushel; (Eastern, from the coasters, 20 to 25 cts.)—Cabhages, 37½ cts. per dozen-Cauliflowers, 6 to 19 cts. per head-Sweet Potatoes, 75 per bushel-Chestnuts, 1.75 per bushel-Shagbarks, 1,50 per bushel-Onions, 1,25 per barrel-Winter Crookneck Squashes, 1,00 per 100 lbs.—Small Canada Squashes, 1,50 per 100 lbs.—French Turnips, 374— Carrots, 50 cts.-Quinces, 2,00 per bushel. The market is also constantly well supplied with Radishes, Lettuces, &c, though out of season.

BRIGHTON MARKET -. Monday, Nov. 22,

At market, this day, 3009 Cattle, 7270 Sheep, and 90 Swine.

PRICES .- Beef Cattle from \$3 25 to 4 371; a few extra Cattle were taken at 4 50.

Barrelling Cattle dull; very few sales effected; the barrellers have had as many as they could conveniently turn their hands to of late, and appear to have already purchased nearly or quite their supply: lots were offered at the former prices, but refused—a falling off of nearly 17 ets. the hundred, say for Mess 3,33 a 3,42; No. 1, 2,84 a 2,92.

-Sales not so quick as usual, probably in consequence of the weather, and we were of opinion that former prices were hardly supported: we noticed one lot of several hundred taken at 1,00; also lots at 1,25, 1,33, and 1,37½; a lot of about 800 at 1,40; lots at 1,50, 1,62, 1,88, and 2,00; and one lot of 80 wethers at 2,50.

Swine .- Scarce, and in better demand than barrelling cattle; buyers are not yet fully supplied; a small advance was effected on those retailed, say 42 for Sows, and 52 for Barrows .- Patriot.

THE COTTAGE CONTRAST.

Nulla est succera voluptas Solicitumque aliquid lætis intervenit.

HAD I the least of little farms, A chatty wife to bless my arms, A chubby child to trisk and play, To sleep all night and romp all day. A snug thatthed house, though small, yet warm, A dog to bark in case of harm, A sturdy horse, a good fat cow The last to milk, the first to plough, A fine fat pig, a pleasing book, An honest friend, a babbling brook, A distant church its chimes to ring, A neighboring wood for birds to sing, A garden gay, a swarm of bees, A dabbling duck, some gabbling geese, A cackling hen, a crowing cock, A cask of ale, a kitchen clock,-Had I but these, then, free from cares, I'd laugh, and sing, and say my prayers; Happy to live, content to die, What prince more truly blest than I?

Then grant, kind Fortune, if you please, I may be gratified with these; Man wants but little more, I guess, Nor should be be content with less. Unhappy man! 't is sad to see Thy various turns of destiny ! Twixt good and ill forever lost, From pleasure still to misery tost; Through life's dark Wilderness we grope, Depressed by fear, revived by hope; Still poring o'er the text we look, Till Death steps in and shuts the book. Thrice blest, indeed, had mortals been, If friends forever might remain; If kindred kind and parents dear Did multiply from year to year: The old remain the young increase, In circling harmony and peace.

The lots of man two pitchers fill; One holds the good, and one the ill. No mortal yet could ever drain The cup of pleasure free from pain; Nor ever pain fill up the measure Without some corresponding pleasure-The wisest seem content to quaff A mixture fair of half and half.

As precious gems, opaque and dark, Condensed retain their native spark, Till science points the artful way To liberate the slumb'ring ray, Then, sparkling o'er some sordid foil, Its beaming splendors gaily smale; So to comparison we owe One half our sense of weal and wo. Thus sun and rain, thus hopes and fears, Alternate fill the circling years; Thus youth and age, thus strength, disease, With smiles and tears and toils and case Together mixed, combine, compound, Connect and fill the mortal round; And on their systematic strife Depends the balanced beam of life. content and health, two standing dishes, Compose the best of human wishes. This happy medium understood Leads in its train each earthly good; For sweet content, wheree'er she goes, Brings peace of mind and sound repose, And health attends on every station, With exercise and moderation; And blest are those that early find This equal balance of the mind, Nor high, nor low, nor rich, nor poor, In worth and innocence secure But wit, 't is said when best is brief:

'T is very true-so turn the leaf. Now we'll proceed the scene to vary, To view my life when quite contrary.

My barking dog begins to bite; My chubby child cries all the night; My sturdy horse has got the glanders; The fox devours my geese and ganders; My fine fat pig has got the measles; My hens are worried by the weasles; The ducks destroy my garden seeds, And all my flowers are choked with weeds; My cackling cock forgets to crow; My kitchen clock forgets to go; Incessant rains drown all my wheat; My honest friend turns out a cheat; My chatty wife begins to rail; The thunder sours my cask of ale; My cow, unconscious, gravely stalks And —— along my gravel walks; My pig, to scratch his measly rump, Mistakes my bechive for a stump, And when the indignant realm rebels, — in their cells; Continues ---The jarring screams of birds attest Some truant schoolboy robs their nest; My distant chimes nocturnal toll A requiem to some rustic soul; My snug thatched house, oh! sad to tell, Instead of home, is grown a hell; And discord dire and worse alarms Assail the worst of wretched tarms. Despair ensues, and mental case And health give place to slow disease; Condenance to live, afraid to die, What mortal half so cursed as I

Like learned judge, with serious face, The moral now sums up the case, And calls on wisdom to decide From counsel heard on either side. Wisdom attends, but first with awe Adjusts his wig, then gives the law;

Let Reason early take the rein, And over Sense its sway maintain; For, if too close your joys you cluster, You'll find they 'll lose their wonted lustre, Leaving behind the sad remains R. T. Of galling grief and endless pains.

Columbian Centinel.

THE WAR IN THE JERSEYS.

From various accounts it appears that the warfare between the friends and foes of distilled spirits is carried on in a spirited manner in New Jersey. One light skirmish is reported of rather an amusing character. Several knights of the puncheor, who had been annoyed by a cold water company, conceived the design of making their favorite beverage the weapon of its own defence, Thinking the artillery as irresistible by others as by themselves, they actually invaded the dwelling of one of their principal antagonists, a clergyman, with a barrel of rum. This piece of ordnance was planted in the front of the door, and a deputation sent in for his surrender. A barrel of rum, they thought, was certainly a present, which even a preacher of righteousness and temperance could not refuse. In this they were not deceived. It Directions to Farmers for raising Silk Worms - By Jo was most politely accepted, and with many thanks, The deputation eyed each other with significant gratulation. The fortress was gained. But, alas! the triumph of the wicked is short. What was the Pennsylvania Society associated for the Promot their astonishment when the clergyman continued, of those objects, (on excellent, plain, practical work, 'Here, Thomas, bring the axe.' 'Twas a word and a blow. In went the barrel head, and out gushed the rum. The victory was on the other side, and the clergyman declared his door-yard a depository for all the rum in the country, free of storage, and axes furnished to boot. Spirit of Monmouth and Trenton! If the Jerseymen go on at this rate the victory will be theirs, without blood shed, though not without rum shed; and though 'distilled spirits' should be' poured on to the land' instead of being 'banished from it,' we are not certain that we should find fault with this mode of warfare if the soil does not suffer .-Genius of Temperance.

Perfection.—To arrive at perfection, a man should have very sincere friends, or inveterate enemies; because he would be made sensible of his good or ill conduct, either by the censures of the one, or the admonitions of the other.

For Sale,

The well known FARM in Dover, occupied for the last fourteen years by the subscriber, containing about 200 acres, well located in a square, bounded on the south by Cochecho river, and on the east by Fresh cicek, on which is a tide will, with an apparatus for pounding and grinding plaster. The Buildings consist of a large two story Brick House, of 46 feet by 38, with a wing of 20 by 16, all well mished, adjoined to which is a shed 34 feet by 14, connecting the eider house 27 by 37, two stories, with one plastered room, where all the spinning and weaving is done for the family; two Barns, one of which is 100 feet by 42, with two wings of about 40 feet each, one employed as a stable, the other for a sheepfold, with a good yard well walled in; the other is a Store Barn of 45 feet square, of 16 feet post, and will contain 60 tons of hay; a pig gery of 50 feet by 30, with a cellar of 18 feet square un der it, with boilers set to make soap, hrew, and cook for swine. The fields are divided by permanent stone walls and consist of one of 40 acres in front of the house, on of 17 on the East, one of 10 acres on the North, (principally orchard,) one of 15 Northeast, and one of 30 acre West of the house, with three pastures of 20 to 25 acre each.

The Farm has been gradually improving for the las ten years, and the two last has cut each year one hur dred tons of hay, and 20 to 25 tons of thatch. It is on and a half miles from the village of Dover, which affore a good market. There has been planted some hundrer of Fruit Trees, principally Apple, many of which as gratted-with Pears, Cherry, Plum, Peach and Quinc trees, and many in bearing, with a small nursery,

The terms of sale may be known by applying to Maj Portsmouth, or the subscriber on the premises, WILLIAM FLAGG. June 11.

hope frequently to receive assistance.

Poland, Trumbull County, Ohio, Nov. 10th, 1230. THOMAS G. FESSENDEN ESQ.-

SIR-A few days since I accidentally met with inning of the 9th volume.

The information, contained in your publication, thement, the late spring-frosts frequently desoyed the young fruit, but the trees remained cts. More recently, as the forests have become eared up, no inconvenience is felt from the frosts, t the curculio, rose-bug, and blight have apared, and are far more injurious.

The curculio has destroyed most of the plums the last ten years; and attacked the apples and

u the month of July, I visited the beautiful lement of Mr Rapp, at Economy, on the bark of Ohio, 14 miles below Pittsburg, and was highratified to see his numerous Plum and Prune s loaded with fruit, uninjured by the insect. senior Mr Rapp informed me, that while his body of them, a few inches above the a ind, two pieces of boards, of suitable size, say inches by twelve, out of which, a semi-circuportion had been cut, so that when fitted toer, around the tree. they would completely st the body. These were confined together wo narrow battens, secured with screws, on the er surface. On the upper surface, a circular nel was cut, half an inch deep, and one inch , so as to surround the tree. The joints ben the two boards, where crossed by this chanwere closed with putty, and any vacancies ben the boards and the tree carefully stopped clay mortar. The circular channel is then with tar, and presents an effectual barrier to rogress of the insects. Some attention is red. to see that the tar does not leak out or behardened.

few of the insects, notwithstanding this preon, will find means to pass, and will injure of the fruit which will drop prematurely. is immediately picked up and committed to

From the Wesleyan Methodist Magazine.

OBSERVATIONS ON PROGNOSTICATIONS OF THE WEATHER.

By the Rev. Adam Clarke, L. L. D. F. A. S.

From my earliest childhood I was bred up on a little farm, which I was taught to care for, and cultivate ever since I was able to spring the rattle, use the whip, manage the sickle, or handle the spade; and as I found that much of our success depended on a proper knowledge and management of the weather, I was led to study it ever since I was eight years of age. I believe Meteogology is a natural science, and one of the first that is studied; and that every child in the country makes, untaught, some progress in it: at least so it was with me. I had actually learned, by silent observation, to form good conjectures concerning the coming weather, and, on this head, to teach wisdom among those who were perfect, especially among such as had not been obliged like me to watch earnestly, that what was so necessary to the family support, should not be spoiled by the weather before it was housed .- Many a time, even in tender youth, have I watched the heavens with anxiety, examined the different appearances of the morning and evening sun, the phases of the moon, the scintillation of the stars, the course and color of the clouds, the flight of the crow and the swallow, the gambols of the colt, the futtering of the ducks, and the loud screams of the scamew-not forgetting even the bue and croaking of the frog. From the little knowledge I had derived from close observation, I often ventured to direct our agricultural operations in reference to the coming days, and was seldom much mistaken in my reckoning, When I thought I had a pretty good stock of knowledge and experience in this way, I ventured to give comsel to my neighbors. For my kindness, or perhaps officiousness on this head, I met one day with a mortifying rebuff. I was about ten years of age; it was harvest time," and ' what sort of a day tomorrow would be,' was the subject of conversation. To a very intelligent gentleman who was present, I stated in opposition to his own opinion, 'Mr P. to morrow will be a foul day.'--To which he answered, 'Adam, how can you tell?' I answered, without giving the rule on which my prognostication was founded, 'O Sir, I know it will be so.' 'You know! how should you know?' 'Why, Sir,' I pleasantly replied, 'because I am weatherwise,' 'Yes,' said he, 'or otherwise.' The next day, however, proved that my augury was well drawn,

About twenty years ago, a Table, purporting to be the work of the late Dr Hereshel, was variously published, professing to form prognostics of ular causes, is more uncertain in the latter part the weather, by the times of the change, full and quarters of the moon. I have carefully consulted this Table for several years, and was amazed at its general accuracy :- for though long, as you have seen, engaged in the study of the weather, I never thought that any rules could be devised liable to so few exceptions. I have made a little alteration in the arrangements, illustrated it with

ble object can be completed. Europe, in deliver- may insert it in the Magazine, as it has hitherto

A Table for foretelling the weather through all the Lunations of each year forever.

This table and the accompanying remarks, are the result of many years actual observation; the whole being constructed on a due consideration of the attraction of the sun and moon in their several positions respecting the earth; and will, by simple inspection, show the observer what kind of weather will most probably follow the entrance of the moon into any of its quarters, and that so near the truth as to be seldom or never found to fail.

If the New Moon-the First Quarter-the Full Moon-or the last quarter happens. Between two in Between A 12 o'clock and two P. TIME OF Ċ 4 and 6 6 and œ to 10 and midnight. 4 and 6 10 12 and 2 and 4 the bas midnight 10 Ξ morning. 13 Sujusou 22 HOOR bur rain. wind and rain. changeable. cold with rainy changeable very rainy. 5 if s. or s.w. wind SUMMER frequent ad firsty 1 wind N. or N.E.) wind N. or N.E.) rator smif stor s will ditto. fair and mild. cold rain, if w.; snow hard fros cold & snow or snow and Z WINTER high wind d be s.or stormy untes Ξ; wind if E. ż

OBSERVATIONS

1. The nearer the time of the Moon's Change, First Quarter, Full and Last Quarter, are to Min-NIGHT, the fairer will the weather be during the seven days following.

2. The space for this calculation occupies from ten at night till two next morning.

3. The nearer to Mid-day, or Noon, the phases of the Moon happen, the more foul or wet weather may be expected during the next seven days.

4. The space for this calculation occupies from ten in the ferencen to two in the afternoon. These observations refer principally to Summer, though they affect Spring and Autumn nearly in the same ratio.

The Moon's Change,—First Quarter,—Full, -and Last Quarter, happening during six of the afternoon hours, i. e. from four to ten, may be followed by fair weather; but this is mostly dependent on the WIND, as it is noted in the Table.

6. Though the weather, from a variety of irregof Autumn, the whole of Winter, and the beginning of Spring; yet, in the main, the above observations will apply to those periods also.

7. To prognosticate correctly, especially in ering for this purpose proposed by M. Zemi those cases where the wind is concerned, the observer should be within sight of a good rane, where the four cardinal points of the heavens are correctly placed. With this precaution he will searcely further observations, and have sent it that you ever be deceived in depending on the Table.

It is said that the late Dr Darwin, having made an appointment to take a country jaunt with some friends on the ensuing day, but perceiving that the weather would be unfavorable, sent as an excuse for not keeping his promise, a poetical epistle containing an enumeration of most of the signs of approaching ill weather .- I have enlarged these by adding several new ones, and remodelling others; and subjoin it as very useful, and a thing easy to be remembered,

SIGNS OF APPROACHING FOUL WEATHER.

The hollow winds begin to blow; The clouds look black, the glass is low; The soot falls down, the spaniels sleep; And spiders from their cobwebs peep. Last night the sun went pale to bed; The moon in halos hid her head. The boding shepherd heaves a sigh, For see, a rainbow spans the sky. The walls are damp, the ditches smell, Closed is the pink eyed pimpernell. Hark? how the chairs and tables crack, Old BETTY's joints are on the rack: Her corns with shooting pains torment her, And to her bed untimely sent her. Loud quack the ducks, the sea fowl cry, The distant hills are looking nigh. How restless are the snorting swine! The busy flies disturb the kine. Low o'er the grass the swallow wings. The cricket too, how sharp he sings! Puss on the hearth, with velvet paws, Sits wiping o'er her whiskered jaws. The smoke from chimneys right ascends; Then spreading, back to earth it bends. The wind unsteady veers around, Or settling in the South is found, Through the clear stream the fishes rise, And nimbly catch the incautious flies. The glow worms, numerous, clear and bright, Illumed the dewy hill last night. At dusk the squalid toad was seen. Like quadruped, stalk o'er the green. The whirling wind the dust obeys, And in the rapid eddy plays. The frog has changed his yellow vest, And in a russet coat is dressed, The sky is green, the air is still; The mellow blackbird's voice is shrill. The dag, so altered is his taste, Quits mutton bones, on grass to feast. Behold the rooks, how odd their flight, They imitate the gliding kite, And seem precipitate to fall, As if they felt the piercing ball. The tender colts on back do lie, Nor heed the traveller passing by. In fiery red the sun doth rise, Then wades through clouds to mount the skies 'Twill surely rain, we see't with sorrow,

Hoping that this paper will be of some use to country readers, I am, dear sir, yours truly,

ADAM CLARI

Preservation of iron from rust .- A mastic or sanctioned by the Societe'd' Encouragement, follows: eighty parts of pounded brick, pa through a Silk Sieve, are mixed with 20 par litharge; the whole is then rubbed up by muller with linseed oil so as to form a thick

No working in the fields tomorrow,

which may be diluted with Spirit of turpentine; before it is applied the iron should be well cleaned.

From an experience of two years, upon locks exposed to the air, and watered daily with Salt water, after being covered with two coats of this mastic, the good effects of it have been thoroughly proved .- Bull. d'Encour. Jan. 1830.

We are not going to present to our readers a new and sovereign remedy for the croup; one which never fails until it is tried, and then is found, at the particular juncture, to be utterly inert or prejudicial. We leave discoveries of this nature to almanaes, and books on popular medicine. Our design at this time is to call the attention of mothers to the means of prevention, which they have in their own power. But first, let us ask them -- for however preposterous the question may seem, the conduct of many of them justifies it-When a child is nearly suffocated or actually dead from croup, does the mother derive consolation in her alarm and grief, by reflecting that the dear little one has been always dressed in the latest fashion, with very full and short sleeves, and low breast? She may, in reply, accuse us of sporting with her feelings-well then, we take the liberty of telling her, that she trifles with them herself, and endangers, if she does not actually sacrifice the life of her child, by laying bare its little bosom and shoulders, which are among the most sensitive parts of the skin. And what is the reason of this exposure? None. What the excuse? Because the little dear looks so well in this dress; that is, in fact, because it is made to look like a diminutive woman, a new variety of the species; neither child or adult; neither natural or graceful. Some assign a better motive, viz: in order to accustom the child to resist the vicissitudes and inclemencies of the seasons,-'The intention, though good, is not adapted to the variable climate of this country; and its adoption, the rest of the body being at the same time covered with warm clothing, renders the chest more susceptible of injury. Inflammatory diseases do unquestionably often arise from this exposure, which might be avoided even by a slight covering of muslin. Lentin, a celebrated German physician, as well as many of our own countrymen, are of opinion that croup is not unfrequently thus produced,' These remarks of an English writer, are strictly applicable to our climate and its inhabitants. - Journal of Health.

RUINED BY HARD STUDY.

The history of very many of our students might be briefly told. A lad is sent to college, and after a few months he returns, pale, emaciated, and puny. Immediately a general lamentation is raised among the circle of friends, that the dear youth is ruining himself with hard study. It is high time that both friends and the public should be disabused on this subject. The truth is, in most cases, hard study has had little or nothing to do with the business. He may have studied well or he may not; but this is not the ground of the difficulty. He has indulged his youthful appetite, without regard to even the common rules of discretion. At the same time, he has indulged in indolent habits, neglecting exercise, or taking it so irregularly as to do him more hurt than good. And very possibly, too, he may have learned the very gentlemanly habits of drink-

ining himself by hard study, that he feels almost bed, and perfect relief will be experienced. willing to endure his sufferings; and as he looks in the glass, he thinks he can discern in his pale features, plain indications of future greatness. Whereas, if he would learn to read aright, be would only discern indications of present imbecility, and future worthlessness. Only convince the young gentleman, that it will not be fatal to his scholastic dignity to bestir himself a little, and live and art like other people, and at the same time put a little restraint upon his gluttonous propensities, and the blush of health, and strength of limb, will soon return; and with them will return that energy of mind which will qualify him to study to some purpose. - Christian Mirror.

Cobbett's Corn.-Cobbett's Corn is this year a complete failure, even worse in gardens than it was last year upon farms, none ripened in the fields; but in gardens in favorable situations some was saved which looked perfect, but when sown this spring, has not vegetated, to the full amount of three fourths of seed .- London paper.

March of Intelligence .- This is truly the march of intelligence. The following is an extract from a Liverpool paper:

It is said that a new telegraphic system is about to be established in France, which will be at the service of the public, like the post office. The results will be most important to the commercial world; for it is calculated that a despatch containing several lines, which would traverse a distance of one hundred leagues in a few moments. would cost but 20 francs. M. Ferrier de Drapuignan, the inventor of this new system, proposes shortly to organise a line of telegraphs from Paris to Hayre. Several experiments have been already made, in the presence of persons appointed by the government, and they are said to afford every prospect of the success of the plan.

MISERIES OF A RICH MAN.

Who is dogged in the streets and knocked down at midnight? The rich man. Whose house is broken into by robbers? The rich man's. Who has his pockets cut out, and his coats spoiled in a crowd? The rich man. Who is in doubt whether people are laughing at him, in their sleeves, when they are eating his dinner? The rich man. Who adds to his trouble by every story which he adds to his house? The rich man-for the higher he ascends, the colder is the atmosphere. A bank breaks, and who suffers? The rich stockholder and depositer. War blows his born, and who trembles? Death approaches and who fears to look him in the face? Why, the rich man-and vet all the world envies the rich. Depend upon it the length of your face will always be preportioned to the length of your purse. If you live in a two-story house, be thankful, and not covet the loftier mansion of your neighbor. You but dishonor vourself, and insult your destiny, by fretting and repining. - Morn. Cour.

Itching Feet .- Among the minor evils to which the human frame is subject there are few more tormenting than that of violent itching of the feet, during severe frosty weather, caused by incipient chilblains. The following specific is so simple ing wine, if nothing worse, and smoking, chewing, and cheap, that no person ought to be ignorant of and snuffing tobacco. And no wonder he looks pale. it; it is merely one part muriatic acid, mingled Meanwhile there is something so pleasant to the with seven parts water, with which the feet must -for in other words, at more than 59 miles per hour.]

ears of a young student in the report that he is ru- be well rubbed for a night or two before going to application must of course be made before the skin breaks, and it will be found not only to allay the itching, but to prevent the farther progress of the chilblains,-The feet may be a little tender for a short time, but this slight inconvenience will soon disappear, New Bedford Courier.

> Science in Madrid,-There are in the city of Madrid three distinct establishments for instruction in the Sciences. 'The first is the Museum of Natural Sciences, which is divided into two parts; the Museum, which contains a beautiful cabinet of natural history including one of the richest collections of minerals in the world. The Botanic Garden, containing a rich collection, among which is the Flora of Bogota, Santa Fc, &c, Second the Conservatory of Arts and Trades, including models of the various kinds of machinery, &c.

Mr Bouvier, Philadelphia, has made 16 pieces of furniture, surpassing anything of the kind in the President's House. They were ordered by a lady in the West Indies or S America, in the coffers of whose late husband, immense riches were found,

Militia officers in the Western part of New-York, are holding meetings to petition Congress to modify the Militia system.

The body of a man who fell from the steam boat Ohio, Oct. 6, near Poughkeepsie, was found a few days after and decently interred at Milton, N.Y. is that of Mr. Thos, Harrison, of Yorkshire, Eng. in the employ of Admiral Coffin, and had charge of the celebrated horses, Serab, Barefoot, and Cleveland Bay. He is supposed to have fallen over when asleep.

Letters from France to some of the English editors seem to imply that the elements so suddenly quieted, still heave a little. A good many English travellers have hurried home, thinking it best to scud before a squall .-These fears may be without foundation; they are foundation ed on the restlessness of the republican party, impatient under a government that even bears the name of monrely, and the malicious instigations of the old royalists, aho try to foment faction, in order to answer their own WIDOSES.

It is said the age of salmon is marked by circles in the back-bone, as the age of trees is by the concentric rings in the heart; every year adds a circle.

Extraordinary speed of a Steam Carriage .- In the London Globe and Traveller of the 14th of Oct. is the following article taken from the Taunton Courier.

' Unparallelled Steam Engine Trip .- Mr Stepenson, the proprietor of the Racket Engine, on the Manchester and Liverpool Rail Way, had this week decided in his favor a wager of one thousand guineas upon the speed of his Engine by traversing the distance between the two towns, (thirty two miles) in THIRTY THREE MINUTES

AN EXCURSION ON THE HUDSON.

LETTER II.

MR FESSENDEN-

Dear Sir-The mansion bouse at Hyde Park is elevated about 200 fect above the surface of the river. With its two wings it presents a noble front of 136 feet, and is two stories above the basement. The centre or principal building, has a piazza on both fronts; the west front is open to the Hudson, and the cast looks over a spacious, beautiful lawn towards the turnpike from New York to Albany. The hall, and several apartments above and below, are warmed by heated air from a coal furnace in the basement story, The south wing contains a rich and well selected library, consisting of 4 or 5000 vols, purchased at the expense of \$20,000. Here is to be found a collection of works in every branch of literature. In no private library is there a more complete collection of European and American periodical Journals; searcely a production of merit of this description, but may be found in this collection, and the number is constantly increasing. The Dr has also in his hall and gallery, a valuable collection of paintings, by the first artists both ancient and modern. At a proper distance north from the house, is situated the coach house and stable, built of stone in a chaste style of Greeian simplicity, and is 61 feet in front by 40 deep. At an equal distance south, is to be seen the green house and hot house, a spacious edifice, constructed with great architectural taste and elegance, and well calculated for the preservation of the most tender exotics that require protection in our climate. It is composed of a centre and two wings, extending 110 feet in front and from 17 to 20 feet deep. One appriment is appropriated to a large collection of pines. Among the rich display of rare shrubs and plants, are the magnolia grandiflora, the splendid strelitzia, the fragrant farnesiana, and a beautiful tree of the Figus elastica or Indian rubber, about S feet high, 5 years old. Contiguous to the green house is an ed in fine style, a beautiful variety of trees, shrubs seats, and being dammed at proper places, forms and flowers; among which stands that glory of excellent pickerel and trout ponds. The 500 surface north or south, we have a variegated land- with rye. scape embracing the borders of the noble Hudson,

a sloping declivity on the verge of a precipice, accompanied by 16 Saxon bucks and a pair of again ascending to a commanding plain, opening Surat goats. The buildings, comprising the farm of these romantic walks fanciful pavilions are and sheep pens, eider house, having a cellar to vating display of nature's magnificence in these the three sides of a hollow square of about 175 regions of wonder. From the turnpike road feet. The centre of the yard is dished out for there are two gates of entrance into the premises, the manure, over which is creeted a covering in about half a mile from each other, and a porter's the form of an umbrella, about 40 feet diameter, lodge is connected with each gate. The north to prevent evaporation, and serve as a temporary over the north and south fronts, each supported The excavation is so contrived as to keep the from the sides, which serve as lodging rooms. admired for its architectural beauty. The entrance gate is finished in a very neat and impos-York, is the skilful architect employed in the construction of these buildings. The south lodge, connected with a neat gateway, with the improvements of the surrounding grounds, present a very mansion is over a stone bridge, crossing a rapid stream precipitated from the milldams above, and falls in a cascade below. The winding of the road, the varied surface of the ground, the bridge, and the falling of the water, continually vary the prospect and render it a never tiring scene.

Agriculture .- Hyde Park estate consists of a tract of about 800 acres of excellent land, bordering on the Hudson one mile and half, and extending one mile back from the river; the turnpike from New York to Albany passing through the premises. The farm comprises every variety of soil and aspect, and has not been exhausted by

proach of the Fulton arks, their decks covered are Merino, Saxonand Bakewell. Besides these,

a scene of unrivalled beauty. At the termination yard, consists of barns, stables, low sheds, calf crected, where visitors may contemplate a captic contain 100 barrels, and wagon house forming lodge is 19 by 31 feet, with a portico projecting shelter for cattle and a roost for poultry, &c. by 4 Greeian Doric columns. Two wings project yard dry, and no manure is wasted, the liquid part being conveyed by a covered drain into the This little building has been much and deservedly kitchen garden, and nursery. The sheep yard is located betw en the barn and garden, and a spacious room is provided beneath the barn for ing style of architecture. Mr Thompson of New the ewes and their young when their condition requires a shelter. The hog pens are admirably calculated for the accommodation of about 70 swine, and to keep the different breeds separate. having a cooking apparatus in the rear. The farm picturesque appearance. This is the most com- house stands a small distance from the farm yard manding point from which to view advantageously and is well arranged for the purpose intended. the mansion, green house, stable, and out houses, The cellar is devoted to the purpose of a dairy, which appear at considerable distance from each being floored with stone flagging and the winother in the extensive lawn. This avenue to the dows wired to exclude flies. On entering the dairy I was struck with a view of a novel process of butter churning. This operation is performed by a single dog. The animal is placed on a horizontal wheel, the surface of which is covered with coarse cloth to receive his claws, he is tied by his neck, and by pawing with all his feet, the wheel turns under him and moves a crank and shaft connected with the churndash. The dog does not complain of his labor on the tread wheel. knowing that he is to be well fed as soon as the butter is produced, but he evidently appeared sheepish.

Apiary .- During my visit at Hyde Park, by cultivation. It is well wooded and supplied with request of Dr H. I superintended the construction numerous unceasing springs of pure water. Λ of an apiary upon my improved plan. The house ereck also meanders through the farm, furnishing is 30 feet long and two tiers in height and will extensive ornamental garden, in which is arrang- talls well calculated for manufactories and mill contain nearly 40 bives. The bives are furnished with two sliding boxes or drawers in the upper part, glazed in front, but shielded from light : the forest, the magnolia glauca, hearing large acres under culture yield large crops of hay and they are withdrawn in the rear of the hives, and white flowers, perfuming the atmosphere with a grain, and the soil is adapted to the production this affords the greatest facility for taking the delightful fragrance. The forest trees which sur- of every article of luxury and convenience which honey without destroying the bees. The close round the domicile are identically the natives man can desire. Dr Hosack commences his house secures the hives from the ravages of the which are found in our forest; some of the oaks, labors with characteristic ardor, and evinces a Bec-moth and from the weather, and may be are a century in age, and all are large and so fine taste for agricultural pursuits. In applied to ships or fire engines. Dr 11, has two directions nearly half a mile, exhibiting a diver-front of his house, on the lewer bank of the river, of them in operation, at his green house and sified scenery of hills and dales, now descending he has a park stocked with deer, and at present bathing room. On inspection I find that the

gentleman, and an eminent landscape painter, was narrowed to a ribbon,' who has been for some time engaged in taking | I have now detailed, perhaps too minutely, an could not fail of reminding bim of some of the concernments. noble seats in his own country, and of correcting his unjust prejudice against ours.

I was rejoiced while at Hyde Park to have an nterview with an old friend and associate in the revolutionary army, General M. L. Having suspended our acquaintance for the last 50 years, and unapprised of each other's situation in life, his unexpected meeting was truly gratifying. General L. is one of the very few survivors of his nilitary brethren, who possesses the means of umptuous living and domestic enjoyments. His nagnificent mansion is located on the banks of he Hudson, 4 miles above Hyde Park. The front owards the river is ornamented with a colonnade, spacious and lofty piazza walled on three sides rith Venetian blinds. From this there is a fine iew of the Catskill mountains, in all their variety nd magnificence, and an extensive landscape of ariegated scenery peculiar to these regions. Iere resides, during the summer months, the enerable patriarch, surrounded by objects of teresting reminiscence, of glorious achievments nd tragical events, with which he was familiar a days which tried the souls of men. He preented at his bountiful board a numerous family, ven to the 4th generation, and although his bair gray, and his eyes dim, yet integrity of intellect preserved, his war worn frame is erect, and an xeellent spirit dwells within him.

Catskill mountains, are on the west side of the Iudson, about 110 miles above the city of New ork. Of these celebrated mountains, I could niov only a distant view. They have become so erected on the summit, elevated 2214 fact above ne river. This edifice is 140 feet in length and stories high, and cost the mountain association, bout \$22,000. It occupies a part of table rock, alculated to be 3000 feet above the water. At atskill dock, stages are in readiness to take pares to the mountain house. The distance by the ircuitous road is 13 miles, although in a direct ne it is only S, and is found to be a journey of hours in going and a little over two in returnig. This site, it is said, commands the most exinsive and romantic prospect in America : steam oats and other objects may be traced to the dismee of nearly 70 miles by the naked eye. At rst glance one would be led to believe with eather Stocking, that ereation was all before him, nd he is forced to admit that his wildest anticipaons are more than realized. The view from ible rock has been compared by those who have een both, to that from the summit of Vesuvius ver the bay of Naples and the adjacent coast. n features they are unlike; but in character the ame. From this lofty eminence all inequalities f surface are overlooked.' An accomplished dy in New York who has recently visited the

power is applied by turning a crank, and the water mountain and placed her foot on the housetop, is forced out continuously. The principal part gave me a glowing description. The view from of this hydraulic machine is, I believe, original the summit is most delightful, but from the house with Mr Hale, and I observed to him, 'you top it is still more enchanting. I saw the rising inventive geniuses are getting the world of man-sun in all his glory, and could not wonder that the kind perfect, you leave nothing for posterity to do. Persians worship the sun. I subscribe myself very respectfully,

Your very humble servant,

JAMES THACHER.

Callle Show .- On the 11th ult. about 120 yoke of Working Cattle and Steers, were exhibited near the centre of Feeding Hills. Although there were no premiums offered, and only eleven days notice given, a large number of farmers were assembled, and a very laudable interest in the exhibition was manifested. Committees were appointed to examine the Cattle, and report on the six best pair of different ages. Among other advantages of the exhibition, it afforded a good opportunity for buying, selling, exchanging and mating; and it was resolved to have a similar exhibition annually, in the centre of the town of West-Springfield .-Springfield Rep.

Domestic Manufactures,-Brig Hudson, which sailed from this port lately for Calcutta earried out 99,807 yards of Domestic Cotton valued at \$8,589 98. How long, at this rate, will it be before our Commerce will sink under the opressive weight of our Manufacturers :- Boston Centinel.

Longevily of Jaimals .- A writer in the New York Times gives the following as the greatest number of years to which any of the animals have attained: the Cricket, 10 years. Spider, sometames, but seldom more than I year. Scorpion, 1. River crayfish, 20. Carp, 100 to 150. Crocodile, 100. Tortoise, 100. Hen, 10. Peacock, 24. Lark, 18. Sparrow hawk, 40. Goose, 50. nuch a fashionable resort, that a splendid hotel Swan and Eagle, 100. Parrot, 110. Rabbit, 9. Geat, 10. Sheep, 10. Hog, 20. Dog, 23 to 28. Cat, 18. Squirrel, 7. Wolfand bear, 20, Fox, 15. Lon, 60. Cow, 20. Bull, 30. Ox, 19. Deer, 20. Horse, 25 to 30. Ass, 25 to 30. Camel, 50 to 60. Elephant, 150 to 200.

> Good Farming. - A farmer in the town of Sing Sing, N. Y. has raised during the past season upwards of five thousand bushels of good Wheat! The Chemung Canal passes through his land-and this is a substantial argument in favor of the benefits to be derived from the Canal.-Elmira Republican.

> > HORRIGLE CASE OF HYDROPHOBIA.

A correspondent of the Auburn Free Press, communicates the following account of the termination of one of those distressing eases of disease, upon which it is impossible to reflect without a

Mr Vale of the town of Ovid, Seneca Co. died of this awful and distressing disorder on Sunday, the 31st of October last, leaving a wife and one child to deplore his melancholy fate.

gather them are as follows :- Nine or ten weeks hundred little borrowings.

previous to his death, Mr Vale discovered for the first time, that his dog exhibited symptoms of Hydrophobia, and thinking it unsafe that he should run at large, confined him ; but while in the act of chaining the dog, he was bitten severely on the hand. The animal was immediately killed, and consequently did not live to prove the correctness or incorrectness of Mr Vale's suspicions. But a cow, which had been bitten by the same dog, a short time previous to his confinement, died a few days after, with every symptom of Hydrophobia, which was fearful evidence to the wretched man, that he too had within him all the elements of a quick coming and most appalling death. Medical aid was immediatly secured, and all known specities for hydrophobia put in requisition.

Eight or nine weeks had passed, and he felt that he was out of danger-felt that the applications trad the desired effect; when he learned that the invsterious and maddening agent was at work within him-learned that he must die a mad man! On Thursday evening previous to his death, while he was sitting before the fire, his mother had oceasion to pour some water into a dish before him, which caused him to shudder and eatch his breath, something as a person does on being suddenly immersed in water. This was the first symptom he exhibited. Doct. Pearl, of Genoa, in this county, was called on Friday, who says that he saw nothing unusual in the appearance of Mr V. except in the eyes, which were considerably pretruded out of the head-very glassy in their appearance, and the pupils of which were very much enlarged.

The patient continued in this situation, free from pain and well at heart, until one o'clock on Sunday morning, when he suddenly sprang from his bed and exclaimed to the bystanders, (fifteen or sixteen in number, who from friendship or curiosity, remained with him through the night)-Clear the room! Clear the room! They immediately withdrew, and he was confined in the room alone! Now commenced a struggle which the pen cannot describe-the imagination cannot conceive. He raved and struggled-grated his teeth-frothed at his mouth- and yelled most distressingly. His distorted visage, staring eyes and furious gestures, presented a spectacle, to which by those who have witnessed it, can never be lorgotten. The first attack continued but a short time when he became more calm, and asked his friends to come into the room where he was, 'Now,' said he, 'bind me, keep away from me! Solemn and awful as was the duty, it was done as he requested, and the wretched man was bound hand and foot to his bed, where with agonies, and groans, and shouts too fearful to be told and too dreadful ever to be forgotten, he died, at about 10 o'clock on Sunday morning!

BE PUNCTUAL.

'Oh! he does not want it.'

But he does want it. And even if he did not your own engagement has nothing to do with his private eircumstances.

Such is the self-excuse of many a careless ereditor, and such the proper answer.

It is to be lamented that there is no charge to which many, who may be good men, are more subjected, than the want of punctuality in payment of little debts. And there is no plea by which conscience is more readily satisfied, than that of the declaration that the creditor does not The particulars as far as I have been able to need the amount. The same thing applies to a

A book is lent: it is detained until the lender is unable to recollect the name of the borrowerbut then, 'he does not want it; he has many others; hearts. or he has read it already.' But he does want it. If he has others, it is no reason why he should not lend it to others as well as to yourself.

A small subscription is due: 'The society does not want it; the sum is so small that it can make no difference.' But the Society does want it. If every member did as you do, there would be no funds in the hands of the Treasurer; and your neglect is dissolving the society as far as your own item of influence goes. That influence goes thus far to discourage schemes of benevolence, and to destroy public confidence. You inspired a hope which you crushed again.

An Editor's payment is due: 'He does not want it.' But he does want it. And this very plea of yours gives him more trouble than all others put together.

ROXBURY.

We have read Mr Dearborn's Centennial Address with much pleasure. He has taken expanded views of principles and causes, and detailed in an agreeable manner striking particulars of local history. We quote a short specimen.-Jour. & Trib.

· Roxbury can number among her sons, or inhabitants, many distinguished men. It has been the favorite residence of Governors Thomas and Joseph Dudley, Shirley and Barnard, when under the colonial government,-and since the establishment of Independence, of the PRO-SCRIBED Hancock and Adams—the civil Nestor and Ulysses of the revolution, and of Bowdoin, Sumner and Eustis, forming a constellation of statesmen, whose effulgence illumined the national route to prosperity and grandeur, and will be ever conspicuous in our historical zodiac : and here were born Generals Warren and Heath; Warren! that immortal patriot, that eloquent advocate of the rights of man, that dauntless soldier, that first great martyr of American Liberty. At the mention of his venerated name, we involuntarily turn towards that conseerated battle-ground where he offered up his life in his country's cause, and the whole story of national advent comes fresh and glowing upon the mind, in the mustering reminiscences of that glorious epoch.

When first the May-flower on this rock bound strand Sent forth her 'few and fathful' pilgrim band, No friendly foot stood waiting on the shore To bid them 'welcome hone,' their winderings o'er; To hail with joy the long expected guest From weary wanderings, to delightful rest; Where trembling joy half doubts her happy lot. Blest even in sorrows, thus to be forgot; No blazing hearth, no cheering voice of home, No temple's lofty spire nor vaulted dome, No altar-fire, no cen-or's breath was there. Where rose the pilgrims first deep voice of prayer, But from the roofless rock their praise was poured, Where forests sighed, and answering surges roared. And as their echoing anthem pealed on high, The startled pauther howled his herce reply; And the grim savage yelled in wild dismay And paused to wonder, where he came to slay.'

Years glide along-in silent swiftness plays The Change that steals away our flying days But sadness lingured now where joy had been. And grief hung darkening o'er each sunbright scene. Then shrunk the flowers on Freedom's fairy tree, And drooped thy lotty genius, Laberty Long did'st thou weep unheeded and alone, And mourned like Memnoo as each sun went down ,-! wept-'till grief to indignation turned-And strong and bright within, thy spirit burned.

And then another Change came o'er the land, Where iron power had arged her stern command. Where bristling bayonets gleamed from north to south, And laws were uttered 'rom the cannon's mouth ; Doomed soon to sink beneath a crimson flood, And unlike Draco's, be effaced in blood.

engraved and well colored print of the tashions. Oppo-

site to it is the picture of an aged woman dying in neglected poverty. The two pictures convey an impressive lesson—may the young and fashionable day it to their

Although Mrs Hale has continued this periodical a number of years, we do not perceive that it declines at all in interest.— Ib.

JOURNAL OF HEALTH .- The conductors of this highly useful and valuable publication, have stereotyped the first volume, and embellished it with an elegant lithographic frontispiece. We feel happy to state that this work has already acquired great popularity, and it merits it. We cannot better express our opinion of its worth, than by borrowing the following from the Philadelphian. 'The articles which it contains are eagerly copied into the public prints of every description. News-papers and magazines, whether federal or republican, religious or irreligious, all enrich themselves from this well conducted Journal. Its language is chaste and scientific, without being technical, and its main subject one, about which every one daily inquires, when he meets a friend.'

GOOD ADVICE TO YOUTH.

From a work by Rev. Hosea Hildreth, of Gloucester, recently

It is highly important, my young friends, that you early acquire and establish habits of economy in matters of expense. It is important to your own personal welfare-to your success in the world, as well as to the welfare of your country. Young people are apt to entertain extravagant and of this seed, as a large quantity of old seed is, we absurd notions of life-to estimate their enjoy-understand, hawked about the country, as fresh ments by the money they cost; to choose enjoy- This seed will not vegetate when one year old ments which are expensive, and connected with We shall endeavor to get some from the Sout display. But you may depend upon it, the most that may be relied upon. In the mean time we valuable enjoyments are easily obtained; they cost advise all farmers who have large white mulberr but little money, and are within the reach of all, of trees, in bearing, to save all the seed in futurthe poor as well as of the rich. If a person's de- seasons, as it will no doubt continue to be in grea sign is to secure such privileges and enjoyments demand for several years. only as are connected with virtue, with sobriety, intellectual improvements, and elevation of character, he may carry his designs into operation with very limited finds. It is dissipation, sensual enjoyments, enjoyments which have no good moral tendency-it is such enjoyments as these that east money and very often put young persons upon disagreeable and dishonorable expedients to meet their expenses. The truth is, men's dispensable wants, wants which their own folly have created or which the absurd customs of society have imposed-these wants are all expensive; and they do more than a little to prevent young people rising in the world-to bring on failures, discouragements, habits of intemperance and crimes.

A hank of silk, produced by a single worm, was lately recled in the presence of several gentlemen, in Bolton, which was 365 yards in length, and, on being weighed was found to be the texture of 1,500 hanks in the lb. A single lb. of this silk would reach 716 miles. The worm was only seven days in spinning the hank, consequently produced at the rate of 52 yards per diem.

The Indian Head Woollen Factories, at Dunstable, N H. whose operations have been suspended, have been sold for \$20,009. The new owners are to be called the Jackson Company. President, David Sears; Directors. Samuel Appleton, Amos Lawrence, Ebenezer Francis, &e, till the Spring; should, however, any indi and Daniel Abbott.

The history of the late memorable events in France have been published in Paris on tri-colored paper; one they may come into eating, to the Hall of the So third red, one third blue, and one third white.

The last No. of the Ladies' Magazine contains a well work translated, and we understand it will be published in a few days on tri-colored paper.

FOR THE NEW ENGLAND FARMER

FRUITS.

Mr Fessenden-I have thought the following information might be acceptable.

Harrison's large fall pear of Coxe is synony mous with Rushmore's Autumn Bonchretien, and i was once intimated to me by a Bostonian, that he thought the Mogul Summer of that vicinity, to be identical also .- I send you a description of it,

Catawba grapes have been sold in large quanti ties in the New York markets the present seasor brought from the adjacent vineyards, and readil brought 25 cts, per lb. †

The Blue Pearmain, the fruit of which was ex hibited to me when last at Boston, is identical with the Flushing Spitzenburgh.

Yours respectfully,

WM. ROBERT PRINCE.

* This description we have been obliged to defer thi

† The Catawba Grapes have sold in the Boston Fan euil Hall market readily this autumn, at 37½ ets. per it from Mr Seaver's Garden, at Roxbury—the Isabell (which is now much more abundant here) at 25 cts.; th white Sweetwater at the same price-Editor.

White Mulberry seed .- Owing to the early frost in Connecticut, which prevented the ripening o the fruit, the usual crop of White Mulberry See has been wholly cut off. We advise our friend in the country to be cautious in their purchase

MASSACHUSETTS HORTICULTURAL SOCIETY Saturday, November 27, 1830.

FRUIT .

Pears.—Mr R. F. Phipps, of Charlestown, pre sented a specimen of the Royale d'Hiver, from tree received from Vilmorin and Andrieux, c Paris. This fruit was in eating, under size, bu from its close resemblance to the character of the pear, was thought to be genuine.

Apples .- Mr Stephen Chase, of Fryeburg, Me presented by Mr Charles Tappan, a specimen of fine seedling apple, who suggested that it shoul be called the 'Fessenden Apple,' in complimer to the worthy editor of the New England Farmer in which the committee most willingly concur They are said to have originated in that town, an were of very pleasant flavor and fair appearance represented by Mr Chase as keeping till March who thinks the properties of this variety tend t controvert the theory of Coxe, that apples of goo flavor cannot be raised in Maine. It is to be hope that the result of the exertions of that gentlemaand others, who are engaged in ameliorating th qualities of the fruits of that State, may rende such an opinion general.

The season has now arrived when it is re quisite to suspend the weekly exhibitions of fruits viduals have any of the new, or valuable late va ricties, they are solicited to send specimens, a ciety for examination.

> In behalf of the Committee on Fruits. ELIJAH VOSE,

Prospectus of the Naturalist, A Periodical Publication.

The Subscriber proposes to compile a work of the above description, treating on the three kingdoms of Nature-each number to be accompanied with a Lithographic Print. The work will be divided into three departments,

1. Zoology .- In treating of an animal, will be given its classification and habitation; describing its properties, uses, modes of existence, arms of defence, and the several advantages to which it may be subject.

11. Botany .- In treating of a vegetable, will be given its classification, habitation, geographical situation, and duration; describing its properties, uses, the nature of its substance, and other circumstances relative to vegetable Physiology.

III. Mineralogy .- In treating of a mineral, will be given its classification and the place where it is found; describing its properties, uses, manipulation, and the other important chemical changes to which it may be subject.

It is evident that a work of the above description may be carried to an indefinite extent, that its continuance, of course, depends on the patronage of which it may be deemed worthy. It will be compiled from the best writers on the subject; and it will be the object of the editor to use his utmost exertions to render the work useful and interesting. Those who may subscribe for the proposed work, may rest assured that its design shall be justly DANIEL JAY BROWNE. falfilled.

Boston, Oct. 27, 1830.

CONDITIONS.

The work will be published monthly, in an Svo. form, on paper of a superior quality, making a volume of about 400 pages. The price to subscribers will be Two Dollars a year, to be paid on the receipt of the first number.

§100, Premium Butter. December 4.

In consequence of the appointment of the 2d day of December for a day of Thanksgiving in this Commonwealth, the examination of the butter effered for premium s postponed till Friday, the third day, [TTHS DAY] and in SATURDAY, the feurth, at 11 o'clock, A. M. at QUINCY HALL, will be sold at public anction, several housand pounds of BUTTER, put up in kegs for family ise, and with the expectation of gaining the premium. Though all cannot gain the prize, it is hoped all will find generous market, and that there may be hereafter, as now, a multitude of competitors from Pennsylvania to laine.

Per order of the Committee. BENJ. GUILD.

Early Top or Tree and Potato Onions. Just received at the New England Seed Store, No. 52 Jorth Market Street-

A quantily of Early Top or Tree seed Onions. roduce onions at the bottom and a bunch of small ones a the top of the seed stalk. The small onions are proper plant very early in the spring, or in autumn, which is ne best time, and seldem fail to produce a good crop under roper cultivation. They should be planted in rows ten r twelve feet asunder, and set two or three inches apart, ed one inch deep, taking care to place the bottom downards. They soon spring up, and from their size and igorous growth, are not subject to be destroyed by insects. hould they put forth seed stalks, as many of the larger nes will, they should be broken off soon after they appear,

rally raised with less trouble than the common kind. Also, a few EARLY POTATO ONIONS. This eurious ariety of the enion is very early and mild. They should e planted in common dry situations, in the autumn, covred ever two inches deep in gardens. The small ones would be planted out four inches apart—the large enes relve to fourteen inches. They are generally ripe bout the 10th of July, and yield eight to ten fold.

therwise the enions at the bottom will not be so large. bese onions are mild, grow to a large size, and are, gen-

Seeds for Country Dealers.

Swine.—We neticed the sale of one lot only at 5cbrisk at retail at 5 for Sows, and 6 for Barrows .- Patriot.

MISCELLANIES.

THANKSGIVING HYMN.

BY HENRY WARE, JR.

Father of earth and Heaven! Whose arm upholds Creation! To thee we raise the voice of praise,

And bend in adoration. We praise the power that made us, We praise the love that blesses;

While every day that rolls away, Thy gracious care confesses.

Life is from Thee, blest Father! From thee our breathing spirits; And thou dost give to all that live, The bliss that each inherits. Day, night, and rolling seasons,

And all that life embraces,

With bliss are crowned, with joy abound, And claim our thankful praises.

Though trial and affliction, May east their dark shade o'er us Thy love doth flow a heavenly glow, Of light on all before us. That love has smiled from heaven To cheer our path of sadness, And lead the way through earth's dull day, To realms of endless gladness.

That light of love and glory Has shone through Christ, the Saviour, The holy Guide who lived and died, That we might live forever. And since thy great compassion Thus brings thy children near Thee, May we to praise devote our days,

And love, as well as fear thee.

And when death's final summons, From earth's dear scenes shall move us, From friends, from focs-from joys, from woes, From all that know and love us; Oh, then, let hope attend us! The peace to us be given!

That we may rise above the skies, And sing thy praise in heaven!

American Goods-Nothing can be more gratifying to the lover of his country than the rapid strides we are making in the paths of science, manufactures and the arts. The rank which this republic now holds in the history of nations is eminent, but we have no question that as the hand to support those of the neighboring towns, resources of the soil are developed, and the energies of the people are fully brought into play, we shall command more induence for our political, mercantile and manufactuning character than could ever have been imagined in decay will be visible about every tenement, sloth the mott anguine moments of our forelathers. In nothing have we made more rapid strides of late days, than in the manufacture of American printed calicoes. Merrimack Manufacturing Company deserves in this particular especial mention. The re-pactable agents for this establishment in this city, observe, 'it has been a matter of notoriety that within the last ten or fifteen years, the printed calicoes imported from Great Britain. with the exception of a few of the higher grades, have been generally deteriorating in quality; the width has scarcely more than twenty two or twency three inches; their texture has become light and thinsy, in the same proportion, whilst the colors have frequently been of the most fugitive character-so that in many cases the mantheir cost, when the garment was subjected to the ordeal of the washtub,

This fact has doubtless contributed to disparage and reduce the consumption of American goods of this calibre, shire Spectator.

but undaunted by this circumstance, the company protess their determination to continue the manufacture of substantial and perfect cotton goods of all descriptions and we trust their efforts well be properly appreciated by Corfin, to the Massachusetts Society for the Promot the community.—Philad. Inq.

Losing time. - Dr Johnson having formed one at a whist party at Mrs Thale's house, was asked by the lady at the close of the evening, whether he had lost anything ; . Nothing but my time,' replied the moralist.

Hickory Ledge. -James Neal of Unity, N. II. has discovered on his farm, the present season, a bed of Copper Ore, in an extensive ledge. The ore has been examined by competent judges, and pronounced to be of good quality. The owner has creeted a building over the break he has made in the ledge for the purpose of working the same the ensuing winter,-Portland . ldv.

HELP ONE ANOTHER.

We have too often noticed a propensity among individuals of a compact and flourishing village, to make purchases and to trade generally with strangers, in preference to a fair and mutual interchange, neighbor with neighbor. This is an evil, and we can only account for it by supposing that the judividual who will not encourage business in his own village, is possessed of envious feelings toward his neighbors, and dislikes to see them prosper. When such feelings are cherished between man and man, they soon render the most flourishing village desolate, and paralyse the efforts of those who sincerely wish for the prosperity of the place where they chance to dwell. 'Help one another,' is the mottoto for every Country Village, and when the inhabitants will throw aside all little petty differences, which always exist in every community, and in defiance of personal feeling trade in their own villages, and let what little cash they may have to spare, go to support their own folks, instead of driving off a dozen miles at the expense of a dollar, to save a cent in a trade, that village will be marked by every stranger as thriving and prosperous; the mansion of the Parson and its premises will afford ample token that his parishioners possess the means of paying him a liberal salary, the hammer of the mechanic will be heard at early dawn, buildings will rise as if by magic, and the whole village will present a prospect of industry and contentment. But mark the village whose inhabitants suffer their own mechanics to languish; they are all from the garden of Mr Seaver, who rais while they are spreading their money with a liberal and the reverse of this picture may be seen; the parsonage will be found tenantless and in ruins, will have settled upon the inhabitants, and the rising sun will generally find them snoring away the best of the day in bed ; everything will wear the livery of desolation.

The mechanics of every village must be supported, and if you would have good ones they must be liberally supported. There is opposition in every branch of business, and there are those who have been reduced from about twenty eight to an average of the art of slighting work so as to afford it cheap; you go to a first rate mechanic, his price will perhaps appear to be high, even if he works as reasonable as he can possibly afford to work well, you ufacture of calicoes has proved almost a total waste of la- leave him and employ a cheap workman in some bor and stock, as the deluded purchasers have found to other place, depend upon it your money is wasted, and your mechanics, by such a course, will either be forced to leave you or be ruined .- New HampDurham Short Horns.

FOR THE NEW FYGIAND PARMER.

DISEASE IN CATTLE,

MR PESSENDEN-Since my return from Boston, a disease, or epidemie, has afflicted my blooded calves. On the morning of 28th Nov. on going into my barn, I discovered a fine calf, \$ blood. to be in distress and frothing at the mouth, and my first impression was that she was choked with a potato. I immediately sent for a man who had had some experience with diseases affecting cattle; but I soon discovered the next calf, which was half blooded, affected in the same manner. I found they had severe spasms and were so much listressed as to make them bellow. They had a

reat degree of weakness in the limbs, and a loss of appetite. I soon discovered that another fine half blooded bull calf was affected in some measure, as he refused to eat. I then resorted to the ast volume of the New England Farmer, (the ony one I possess) and there looked for the disease and remedy; but I could not find anything that eemed to apply. I found the disease of Hoven, which was produced by such causes as it did not ppear reasonable could be produced at this seaon of the year; but still I discovered an appaent disposition to vomit the food which they had iten. I therefore made a solution of saleratus, nd by the assistance of a bottle, gave to the two st, a portion which caused violent spasms, and five or ten minutes succeeded by a profuse dislarge from the stomach, which very soon gave lief. The next morning I found the bull in as d or worse state than the heifers; I applied the me solution and produced the same effects, and hich proved an effectual cure. Being in want of formation, I apply to you, Sir, to give me the me of the disease, whether it was an Epidemic, oven, or Poison-and if this is worthy of a ice in the New England Farmer, and will be any public utility, I hope some of your subibers may be enabled to give the desired inmation, which will be conferring a favor on

Yours very respectfully, AARON TYLER Bath, Me., Dec. 4th, 1830,

SHRUBBERY.

MR Fessenden-I have lately noticed a comnication of an enterprising Horticulturist, who n enriches the columns of the New England to introduce to your notice the Euonymus

the opportunity of calling there, to make a more vegetable substances, an LL have yet to dearn that seeds hanging on the sutre of the cells, covered land is in a good state of cultivation, a crop of clowith a searlet pulpy arillus in a very graceful ver, or any other kind of grass, ploughed in, denanner, which the gardener informed me continned so for some time; and also that the plant the purpose as well as rotten leaves. In my own was perfectly hardy and of easy cultivation.

I know not of any shrub at this season more descrying of cultivation in shrubberies and flowergardens .- Its contrast with the pine and other different evergreens, would certainly improve the natural seenery of the season, especially when the earth is covered with snow; while in the panterre it will produce fruit on quite small plants and cheer with its beauty the gloom of winter's dul attire. OBSERVATOR.

WHEAT.

WR FESSENDEN-In the two last numbers of the New England Farmer, your readers have been not altogether unconnected with this subject.

the old-upon that which has been long under of our soil, which renders it indispensable that we neighbors for this necessary article of food. Must stacked down with grass, with the wheat. it not then be attributed to improper management or to neglect in preparing our soil for this particular kind of grain? I am strongly inclined to the opinion, and thus far I should like to see the experiment fully tried, that in every part of the State where wheat can be raised upon new land, it must to rels of their own raising to sell. equal advantage and with the like probability of success, be raised upon land that has been long under mer, respecting the different varieties of Mag-timprovement. That the principal cause of failure as, Altheas, &c, as proper shrubs and trees, in the latter case has arisen from having exhausted decorating parterres and shrubberies. Being a the soil of that particular kind of aliment which is ad to horticulture and natural scenery, allow adapted to the growth and nourishment of wheat,

Burning bush; as a plant which appears to and rendered it rich, lively, mellow and easily pul-

close investigation of this apparently singular the leaves of the forest are more congenial to the point, and found the capsules cloven, with the palate of this plant than other vegetables. If the composed and mixed with the soil, may answer experience, I have not often found it necessary to turn in a crop of grass, especially upon lands that are sown with artificial grasses. In the repeated ploughing of these lands, the soil has become so far saturated with vegetable manure by the decomposition of the roots and blades of the grass, as to afford sufficient nutriment to the crop of wheat.

I have enlivated this species of grain, every year, for the last five and twenty years, and have been as successful in this as in any other branch of husbandry. My crops have averaged between 20 and 30 bushels an acre, and have sometimes risen higher; twice during that period, my crop has been sadly blasted. I have found the red favored with some observations relative to fallen bearded wheat the most sure. This has never leans as a manure. Permit me to throw in a word failed me entirely; when the white wheat from Genessee has proved worthless. My course is The opinion is very prevalent in various parts briefly this. I have five fields which I stack of the Commonwealth, that wheat can be raised down to clover and herds grass. Late in the only on new land-that after it has been improved autumn of every year, I plough up one of them, for a short time, this species of grain cannot be and unless feed has been short and scarce, turn sown with any prospect of success. The conse- in the whole of the aftermath. The next spring, quence has been, that the cultivation of wheat has I manure the land, and plant with corn or potaalmost ceased. If the owner of a tract of wood toes, taking care not to disturb the sod unneceslands find occasion to clear up a portion of it, he sarily during the cultivation of this crop. As will then sow this piece of ground with wheel soon as the corn has arrived to a sufficient degree with as much confidence of success as in any of maturity, it is removed from the ground. The other part of his agricultural pursuits, and he sel- hest is then ploughed a little deeper than before, dom fails of a suitable reward. His wheat grows, in order that the sward may be brought near the it comes to maturity, he gathers a fair crop. Now surface, and subjected to the operation of the what is the reason that we succeed in obtaining harrow, &c, until it is sufficiently pulverised and good crops of wheat upon new land, but fail upon mixed with the soil. I should choose to have the wheat sown as early as is practicable after cultivation? That we succeed in either case, affords the 20th of September, but the season and other satisfactory evidence that there is nothing in our circumstances have frequently prevented its climate, the peculiarity of our seasons, or the nature completion, until early in October. I have gathered a good crop, when it was sown as late as the should depend upon our Southern or Western tenth of the latter month. The land is then

I do not know that my observations or experience will be of any value to others, but I confess that it has often given me pain to see my brother farmers go to the merchant and bny a barrel of flour, when they ought to have 20 bar-

THE SEASON.

MR FESSENDEN-On viewing at this moment a New land is filled with vegetable manure. The brilliant bouquet of flowers, plucked from the purpureus, or Spindle tree-generally called leaves of the forest have perished upon the soil open garden, I have thought it worthy the passing moment, to make some remarks to you in regard worthy of cultivation, as an ornamental plant, verised. Restore the soil of your old fields to to the season. Last spring, after the 10th or 12th his plant may be seen at the garden of John this state and they would again produce similar of March, we had not a frost that would injure NCE, Esq. Jamaica Plains, in full perfection; tesults. It is true that we cannot restore the soil the most delicate greenhouse plant, and the resu't me from 3 to 8 feet high are covered with to the same state, by the application of the same was that the Peach and other trees which are juiful clusters of colored capsules of a dark kind of vegetable manure, yet we can approximate liable to be affected by late spring frosts, yielded which seem to attract the attention of the towards it, we can employ a substitute, we can abundant crops, and excellent peaches were offerers by. In consequence of which I lately took enrich our lands, we can make applications of ed and sold at 50 cts. per bushel. The earlier

part of the summer was attended with plenitful rain fell. The autumn has been a delightful re- ed. presentation of what is termed 'Indian Summer.' The garden flowers are still everywhere bloom- spoonful of ground ginger, ing, and the Dahlia with its thousand hues also presents its accustomed splendor; and from appearances, a speedy visit from the frigid blasts of the North does not seem to be apprehended, although our reflection would teach us to prepare for such return ere long.

Very respectfully, WM. ROBERT PRINCE. Linnæan Botanic Garden,

From the Southern Agriculturist.

Nevember 29, 1830.

On the Culture and mode of Cooking the Salsify, and them in boiling water till they are a little soft. Cottonbia.

The last summer we had the pleasure of spending a short time in the company of Mrs HERBE-MONT, from whom we learned many interesting particulars relative to the culture of Flowers, &c. Her attention, however, is wholly bestowed on her Flower Garden and Shrubbery, but the Kitchen Garden, also, receives some share of it. In the course of conversation the Salsify was mentioned, and from what then passed, we have been induced to request from her, directions as to the best mode of cultivating and dressing it, and we received a few mails since, the annexed directions for that vegetable. It will be seen that Mrs Herbemont recommends that it be sown in February; this period is proper in the lower country for the spring crop, but it may also be sown now, and will be fit for use in the spring .- The Recipe for Dried Peaches (writen also at our request) we can assure our readers is most excellent. We have partaken of Peaches prepared (according to this mode) by Mrs Herbemont, and therefore speak from our own knowledge .- Ed.

We sow Salsify here in February ; but in the low country it might be better a little earlier, Manure a piece of ground well with good rotten stable manure, spread it even on the surface then spade it by putting the spade perpendicularly down the full depth of the spade, and with the foot give the spade another push, to be sure that the earth is turned over at least a foot deep; also leave a trench as it is spaded; fill the trench a the end of the spading with good earth taken any where. It is a slovenly way of working to put in the spade slanting, and not to leave a trench. Lay the beds off as for carrots, and sow the seeds exactly the same. It requires as much room every way. The Salsify will be fit for the table at the same time as the carrots; but it is much better the winter following, particularly as there is no great variety of vegetables at that time. It is be had in abundance, probable the failure complained of it owing to the seed. There are two kinds, one with a dark purple blossom, and the other with a yellow blossom not worth planting. I shall take pleasure in sending you seed of the former kind,

Now for the Cooking .- To begin with the best way first. 1st, Boil the Salsify, scrape them, cut them in halves, lengthwise, and dip them in a rich batter, and fry them in lard.

2d. Boil the Salsify, mash them in a piggin as well, and fry it in little patties.*

rains, and vegetation was consequently very vig- wise, put them in a saucepan with a little butter, a on the great revival of vegetation. It is generally orous and rapid. The latter part of the summer spoonful or two of cream, a little pepper and some admitted, that trees transplanted in autumn, suffer was very dry, and for many weeks little or no salt: strit till it is of a light brown, hardly colour less from the removal. Our countrymen, have cer-

N. B. In making the batter, put in a large ter

As we are on the subject of eating, cooking, &c. a method of keeping flies from fresh means countries, the grove is planted with care, before may as well be recommended. It is simply by shaking fine black pepper over all the cut places, the ends of the bones, and the loin bones. Whereever the pepper is a fly will not approach. It is no detriment to roast meat, and for boiled it can be washed off.

DRIED PEACHES.

Just before quite ripe, peel Peaches, either plum or soft Peaches. Take out the nuts, put Take them out and throw them into a pailful of cold water, when cold, drain them and weigh them. To every pound of Peaches put half a pound of powdered loaf sugar. Lay the Peaches in a lettle, and sprinkle the sugar till it is all in. Le it remain till the syrup runs sufficiently to allow putting it on over a very slow fire. When the sugar is all melted, let them boil slowly, till he Peaches look clear, put them in a large bowl and let them remain all night. The next morning place them singly in dishes, and put them in he sun to dry. Turn them over every day, till they are sufficiently dry to be packed in boxes or stone jars. The soft Peaches are as good, if not be ter than the plum or cling-stone Peach, and the put their branches and leaves, ether green or dry, or is taken out much easier.

The Peaches will, some of them, break in doing. After they have been in the sun two or three days, with a teaspoon and a silver fork draw the broken pieces together in the form and size of their having access. a peach, and they will dry solid.

There will be more syrup than can be dried with them, which may be used, by boiling some Peaches prepared as above in the spare syrup. These will be inferior, but still good.

* A little corn cut from roasting ears that has been previously boiled, mixed with the Salsify, adds much to the flavor.

LIVE FENCES.

Talking about making fences will bring nothing to pass, and fine spun speculative theories on the subject, may entertain the mind of a curious investigator; but hard labor, assiduity and perseverance are absolutely necessary, in order to bring into existence, a fence of any description: I want something done, and now is the time to begin; seeds are now ripe, and ought to be gathered immediately. The Haw, the Crab, Sweet Briar, Pyracantha, Red Cedar, Locust, and many other kinds which night answer a good purpose, are now to

Some may choose one article in preference to another, and some may choose to prove all things. But for the honor of our state, for the ornament of our plantations, and the safety of our crops, let us with energy and zeal commence the good work. -Western Titler.

FOREST TREES.

rapidly away, when all plants and trees may be sent the Preliminaries of a treaty, answered ' potatoes are mashed, then put in batter, mix it safely removed, or transplanted. To transplant did not know, but they had sent the outlines of often in spring, is to check their growth and it is ambassador.' - Mirror.

3rd. Boil the Salsify, and then slice them cross- also appropriating time that is called for elsewhere. tainly too little favor towards a tree-the most glorious of all inanimate objects-and without reference to fruit and ornament, which should never be separated from a mansion house. the house is reared; but here, the axe is laid to the root of the tree, as if it cumbered the ground that it should be preserved to shade. There seems to be a national peculiarity in us, to preserve, at any sacrifice of forest, the prospect; yet it is doubtfu whether the effect of a distant prospect is not increased by seeing it through vistas and glimpses We hope for better practices when the various noble trees that our forests produce, and which are cultivated in Europe as the greatest ornaments o the garden, shall be suffered to wave their brancher in the vicinity of our dwellings .- Palladium.

> Rules for determining the temperature of a coun try. - The fact that a degree of latitude is equal to a degree of Fahrenheit, and that 400 feet of ele vation is equal, also, to a degree of Fahrenbeit, i original and curious, and will go far to assist u in determining the clime of any country .- Amer Quart. vithin their borders .- Ib.

be granted to any person to sell ardent spirits

EARLY EDUCATION. It is as vain as it is difficult, if not impossible, separate early physical from moral education. Vhatever is good in the former, exerts a direct issuence on the latter; the vices of the first are ensibly felt in the second, Improper food, by sturbing the stomach of a child, causes pain, eneral uneasiness, and irritation. The young ing is, on this account, slower in its perceptions the relations between itself and external obets,-it receives with less understanding, and turns with less fondness, the numerons little enaring attentions dictated by maternal love. In is way the bad temper and evil passions of a other, exercise a deleterious influence on the dissition of the child which derives its nourishment un her. Her milk is not of the same nutritive d bland nature, when her nervous system is disbed by corroding cares and contending passions, child, taking this milk suffers from disturbed distion, in the manner already indicated. Similar ionveniences attend neglect of cleanliness, and afed and chapped skin of the child, or constrained I unnatural postures, and ligatures in the shape bandages or tight dress. All these serve as tants to the brain of the young being; they dis-. It is the less enduring, also, of these im- old age.

racy and murder, has lately taken place near New heat and air, or by the prattle and playful amusc-York harbor, on the 23d of last month. The ment of the children around, because it has distransaction was on board the brig Vineyard of this covered, and the discovery, from its early date, port, commanded by Captain Thornby. The crew might almost seem instinctive, that its cries always consisted of nine men, including captain and attract the attention and ensure the caresses of its mother or nurse, together with, perhaps, the administration of some posset, pap, or cordial, which had been used on former occasions of stomachic distress and hodily pain. The habit of indulgence thus early acquired, and impatience at the slightest delay to gratify its whims, continue as the child advances in age; and false affection of the parent coinciding with ignorance of human nature on the part of the instructer, the whims and fits of passion of infancy become ingrained as it were-a were insured for more than \$50,000.-N. E. C. necessary part of the adult and grown up being,

> Neglect on the part of mothers and murses to develop the more docile and affectionate sentiments of children, or still worse, their encouraging the passionate propensities of the latter, by the bad example of intemperate gestures, voice, and language; or by violence, suppressing the more animated feelings of their young charge, and making them either stupid and sullen, or hypocrites, are faults unhappily too common, and yet of a magnitude not at all appreciated.

Vanity of parents, by which they urge their children to an excessive and premature exercise of the mental faculties, that is, of the brain, is either productive of inflammation of this organ, ending in death-or throws it into such a state of lassitude as to give rise to mental imbecility, perhaps bownright idiocy in after life. Grown and aged persons are too apt to forget, that confinement in a close room, and continued application of the mind to one subject, for hours, which they allow themselves, though not with impunity, cannot be practised by children, whose organs, and muscular and nervous, that is of locomotion and sensation, require continued variety, and space, and fresh air. Every part in the young is growing and impressible, and every part must receive its due proportion of stimulus and exercise. Without fresh air, and indulgence of bodily sports, respiration cannot be fully performed; of course the blood cannot undergo the changes which fit it for carrying nutrimental matter adapted to the wants of the several parts of the body, such as earthy matter to the bones, fibrin to the muscles, and so on Not only is the blood not adequately changed, but when the child is immured in close and ill-ventilated rooms, and compelled to preserve the same posture for hours, this fluid is not augmented as it ought, by the chyle or product of digestion, since this process, in common with every other, suffers. The external senses are all in a state of forced inactivity. with, perhaps, the exception of the eye; and this in place of being exercised in looking at the innumerable objects in nature—their size, proporb the usual order of its sensations, and prevent tions, colour, and relative distances from each satisfactory education, as well of its external other, is strained in reading some small print, ses as of its internal ones,-the innate propen- about things which the child cannot understand, es and sentiments. These latter cannot, in perhaps about the qualities of the very objects s disturbed state of things, be correctly studied which could be learned by a walk of five minutes the parent; their manifestations are either sup- out of doors, if not from the very window of the ssed or sadly perverted, both by pain and the school-room. All these practices are not merely ans taken to remove it. The irritability engen- prejudicial to the mind, and impediments to future ed by this sickly condition of the child, makes it usefulness and greatness; but they injure the health ne to be annoyed by various impressions from and destroy, irremediably, the natural cheerfulernal objects, which, in better constituted habits ness of early life, making it, by cruel anticipation, and he either unheeded or productive of plea. a depository of the anxieties, and despondency of

Grapes .- Mr Lemuel Sawyer, of N. C. in a letter to the American Farmer, describes the Roanoke or Scupernong grape, which is indigenous in N. Carolina, and one vine of which is sufficient for one man and his family. for it will spread as long as he will give it bearers, and yield 60 bushels! It grows on sandy land which is fit for nothing else, makes a rich and oily though sweetish wine, some of which Mr S. now has 16 years old. It makes excellent champaign, but so powerful that few bottles can

It is really surprising that more is not done in Massachusetts to cultivate our native grapes, and foreign ones also. It is a fact that vines bending with clusters of beautiful and delicious grapes, are constantly seen in Europe on dry, sandy, and pine land, where a yankce farmer would not think he could raise sorrel! And what is more in the depth of summer, when there is little rain in all the South of Europe, those vineyards are alone green, flourishing, and retreshing. The reason is that grape vines strike their roots deep, and draw up moisture when no other plant can .- Mass. Jour,

Emigration.-A couple passed through Springfield lately on their way westward with seven children, six of them twin boys, and named George Washington, Thoma. Jefferson, John Adams, James Monroe, Lafayette, and Simon Bolivar.

On the 4th of Nov. the Directors of the Old Bank of Tennessee committed to the flames upwards of a million of dollars of the notes of that valuable institution.

The Cotton crop is greater in Louisiana and Mississippi this year than was ever known before.

Salt water has been discovered in the interior of Pennsylvania between the Susquehannah and Alleghany rivers. From a well 17 feet deep, 24 barrels per hour of water containing 4 per cent. salt is taken. A company is formed to manufacture the salt.

Views of Philadelphia .- Col. Childs of Philadelphia, is proceeding with his publication of the beautiful views of Philadelphia and its environs. There are 96 Churches in Philadelphia-one to about 1666 persons-nearly the same proportion in Boston, New York and Baltimore.

Simsbury Copper Mine .- It seems that this dismal cavern, which has been so long a terror to evil doers, and a sinking concern to the state of Connecticut, is now expected to be converted to a valuable purpose. We understand that a company of gentlemen in the city of New York, have purchased the mine of the State, and have procured two skilful miners from England to examine it: who have given it as their opinion that it contains a rich and extensive bed of copper ore, which will yield 60 per

Arms of Massachusetts .- We find the following description of the arms of Massachusetts in the 'Independent Chronicle,' of Nov. 26, 1784.—Journal.

Explanation of the devices for the Arms of the Commonwealth of Massachusetts.

SAPPHIRE, an Indian, dressed in his shirt and moceasins, belted proper; in his right hand, a bow. TOPAZ: in his left an Arrow, its point towards the base of the Second; on the dexter side of the Indian's Head, a star, PEARL, for one of the United States of America; CREST, on a wreath a dexter arm, clothed and ruffled proper, grasping a broad sword, the pummel and the hilt of To-PAZ, with this Motto, Ense petit placidam sub Libertate Quictem.

Mecklenburg Gold Mines .- The Gold Region has now become much enlarged, from Virginia to Alabama, and in almost every county in the western part of North Carolina, which appears to be the centre of the region. Chevalier de Rivalineli, Agent of a London Mining Company, arrived in this place on the 1st inst, and is making arrangements for an extensive engagement in Mines. Chevalier we believe, is to locate in this place, and from all we can learn, will be a valuable acquisition to the village. He has brought on a number of loreigners, Germans, to work in the Mines, and we understand many more are expected .- N. C. Miner's Jour.

Census .- The population of Pittsburgh, Penn. is 12-540. In 1820, it was only 5293. The neighboring towns have increased in a similar proportion aided by its

WORCESTER AGRICULTURAL SOCIETY. [Report continued from page 188.]

The Committee on all manufactured articles other than those of Cotton, Wool, and Flax, respectfully

That the duties they were commissioned to perform related to works of leather and of the ladies-including articles of finished fabric and elegant fashion, testifying by their number and variety the increased interest felt in the society's exhibitions, and by their beauty and excellence, the beneficial influence of that interest on domestic industry and household diligence,

A single specimen only of Sole Leather was exhibited. The Committee award to Col. Jacob W. Watson of Princeton the manufacturer, the premium offered by the Society, of Eight Dollars. regretting there should be so little competition in regard to an article so necessary to place the com-

munity on good footing.

There was great display of Calf Skins. Five parcels, all of extraordinary excellence, were presented by Mr Asa B. Watson of Leicester, Messrs E. H. and G. Bowen of Leicester, Messrs I. and R. E. Warren of Grafton, and Messrs E. and J. Caldwell of Fitchburg. So nearly were their merits balanced, that the committee had great difficulty in arriving at a conclusion. After much deliberation and careful examination, they award to E, and J. Caldwell the premium of Eight Dollars. The specimens exhibited by Messrs Bowens, Warrens and Watson, were of fine quality, and all afforded evidence of the high degree of improvement to which the manufacture has attained in their hands. It was matter of regret that the committee had not power to award premiums to all, where the excellence of the products rendered it so difficult to discriminate superiority of merit.

No Morocco Leather, or Bonnets of indigenous grass, claimed the premiums offered for those manufactures.

Having thus passed on the subjects for which specific premiums had been offered, the committee examined the various articles of utility and elegance, the production of female ingenuity and this addition to matronly apparel was wrought. skill. Having little experience in wearing veils, caps, collars and laces, they were compelled to exercise such discretion in appropriating the sums | ed with much satisfaction. entrusted to their disposal, as those without the aid of gentler judgment in the cunning works of two Crickets, too delicately covered with painted wares from the market by the superior excellen the needle, could be supposed to possess.

The works of lace were unusually numerous and beautiful. A searf, richly wrought with silk, with an extent of figure as ample as female perseverance, and a grace of design as delicate as the taste of the artist, was exhibited by Mrs Eliza S. Holbrook of Northborough, for which the committee recommend a gratuity of Three Dollars to that lady.

black Lace Veil, which, in delicacy of fabric, ble in female attire. rivalled the best productions of foreign skill, and for which the committee recommend that a gratuity of Three Dollars be presented to her. In conclusion, the committee recommend that here be awarded to each person who has furnished rticles to increase the interest of the occasion, as gratuity, the thanks of the society.

WILLIAM LINCOLN, Chairman,

SMALL FARMS MOST BENEFICIAL.

Those who have strictly investigated the subet, consider large farms comparatively less proictive than small ones; while they at the same ne impose upon their owners a degree of labor uch greater in proportion than would seem to be quired by the mere difference of size. A farmer moderate circumstances, with fifty or sixty acres land, for instance, will bring every inch of it to a high state of cultivation-the labor employl in preparing his grounds will be more than doubcompensated in his subsequent exemption from il; while the owner of a wide spread territory three or four hundred acres, which he has but aringly sapplied with nonrishment, must work ore sedulously upon every acre during the proess of vegetation; and, after all, reap but a meae and inalequate harvest. As a single acre of nd highly cultivated, can be made to yield a op equal to three or four scantily prepared, it nst be obvious, that the extra labor in dressing e former, is abundantly more than saved by the ninished labor in attending it. A striking exiplification of this fact may be viewed by any of r farmers, who will take the trouble to visit the ounds attached to the House of Industry at uth Boston-there, they may have the theory d illustration directly before their eyes. Those bunds, it is said, have produced this season, from ee to four tons of hay per acre-which is two three times the quantity of ordinary crops. So therant was the grass that there actually was croom, upon the surface where it grew, suffint for the purpose of making the hay. And this s entirely owing, as we are told, to the previous ns taken to emich the soil by plentiful additions suitable compost.

Were the same policy pursued by the owners

CROPS IN ENGLAND.

We can now state that the harvest is all but at an end in this part of the kingdom; and the last saved grain is the best saved. The Wheat crop, speaking generally, is not a full one, though by no means a failing one.—Barley, Oats, and Beans, on the whole, are likely to be abundant. The necessities of the farmers in this country, especially in the eastern division of it, have induced them to send thus early to market a considerable quantity of new produce. As the Irish crop is somewhat defective, good judges consider that Wheat will keep up as high as 60s, per quarter during winter; but that Oats, Beans, and, perhaps, Barley, may be expected to drop a little in January and February. We understand that, on the European Continent, the grain is defective both in quantity and quality. In the United States of America the harvest has proved abundant; and large supplies may be looked for from the Canadas - Leeds Intelligencer.

From Prince's Pomological Manual, now in press.

Guernsey, Pr. cat. Stevens' Genessee.

This very fine pear is of the melting kind, larger than the White Dovenne, and ripens in September. It should be gathered as soon as the stem will separate by a clean fracture, and ripened in the house, and must be eaten as soon as it become yellow and mellow, as it wil not keep. It is said to be more juicy, and much more delicious than the White Dovenné, and in one case a fruit measured eleven inches in circumference. The tree was raised from seed in the western part of this state, and the grafts were politely transmitted to me by J. K. Guernsey, Esq. of Monroe county, from respect to whom I called it by the title here adopted. PRINCE'S ST GERMAIN. PR. CAT. LOND. HORT.

CAT.

This pear is a seedling of the French St Germain or Incomme-la-Fare, impregnated by the White Dovenné, and was originated from seed by myself about twentysix years since; the original tree, which remained for several years among a cluster of seedlings without much chance for expanlarge farms, there would be little need of emi-sion, did not produce fruit till the ninth year. It tion from the New Eugland to the Western is now in the most vigorous state, and stands near ites; for the very tracts, which now, under a the entrance of one of my nurseries. Young trees eless system of culture, barely afford sustenance to the number of many thousands have been pro- miles and never saw a girl so filthy, but that a a single family, might be made to support three pagated from it, and are now to be found in every gentleman might venture to shake hands with her four and that, too, with much less toil and part of Europe, as well as of our own country, by the intervention of a pair of tongs.

useful in making plans of land, and might be very trouble, in proportion to the quantity cultivated. The growth denotes health and vigor, and the small speeks of white; the buds are large and sharp pointed; the finit is on the average of a larger size than either of its parents, of a russet green color, with a red cheek; its flavor is similar to that of the French St Germain, but it has the advantage of always being a perfectly fair fruit. and a great bearer. The pears should be gathered in October and Inid separately on shelves, or carefully wrapped in paper, when they will gradually ripen during several months, and may be preserved until late in the winter. Next to the Seekel, I consider this as the finest table pear our country has yet produced,

RUSHMORE'S BONCHRETIEN. PR. CAT.

Harrison's large fall near. Coxe. Large Swan's egg.

Richmond.

Autumn Bonchretien, of some gardens. Lott's pear.

This is a native pear of very large size, and one of the greatest hearers. It is flat at the head, and very regularly rounded for nearly two thirds of its length, but diminished towards the stem, which is long and large; the growth of the tree is particularly strong and rapid, and it soon arrives at mature bearing; the fruit when ripe is a pale yellow color, with a red check; it is breaking when ripened on the tree, but becomes buttery when matured in the house, and is considered but a tolerable table fruit, the flesh being coarse; but this taken in connexion with its being a most excellent pear for baking and cooking, and ripe at a season when few other pears are so, and producing very abundantly, it may be considered as one of the most useful pears in a general view; it ripens in succession, from the end of August to the end of September, and may be preserved without rotting a considerable time, and when full ripe, can be used for baking without sugar.

It is very much cultivated on Long Island, and particularly by those who supply the markets with fruit, it being well suited for that purpose,

PARSNIPS.

'In the management, or rather neglect of one of our finest vegetables, than which our gardens produce no richer, we see the tyranny of custom.

'From time immemorial, our fathers have raised the parsnips only as a rarity, to be sought for a few days in the spring. And few farmers think it possible to deviate from this ancient rule, and by digging that vegetable in the fall, provide their tables with a very pleasant and useful winter variety. By taking it up in the fall, we not only gain a long use of the plant, but we have it in greater perfection : for rarely can it be taken up in the spring, before it has sprouted, and become ligueons. Indeed all roots should be dug in the fall, and if packed in a box, with earth from the beds from which they were taken, that the same moisture may be preserved, they can be kept until quite the beginning of summer, possessing all their richness of juice, and nutriious qualities .- New York Gardener.

MEW ENGLAND FARMER.

BOSTON, FRIDAY, DECEMBER 10, 1830.

REPORT OF THE COMMITTEE FOR AWARDING PREMIUMS ON BUTTER.

The Committee report for the gratification of those who contributed to raise the fund to be given for a premium to the best butter, that in collecting a number of competitors and many of them from distant states, one object at least, seems answered. This offer also brings to the market a large quantity of butter, which, in being made for the premium, seems to assure the purchaser that the owners had exerted their highest skill, and had bestowed their best attention in the making and laying down what they considered worthy of so large a premium. The Committee award without hesitation, and with perfect unanimity, the first premium of one hundred dollars to Mr Henry Sprague, of Charlton, Worcester County, (Mass.) for six kegs of butter with flat hoops, and they award with equal unanimity, though with more hesitation, the second premium of fifty dollars to Mr Moses Newell of West Newbury, (Mass.) Several other entries were so near in quality to Mr Newell's that it required more comparison and deliberation before deciding upon this premium, than was requisite in awarding the first. The butter of Mr Newell, though in only four tubs, was still decidedly different in each, particularly in the quantity of salt used. The inequality of several jars or kegs of many of the entries made the task of deciding difficult,-some butter, to which no premium was given, might probably have been selected better than Mr Newell's, but the adjoining keg of the same entry would neutralize its excellence as a lot. Mr Tuttle, of Westminster, Vt., had his butter laid down in a mode new to the committee; it was packed in neat soap stone boxes, which were of clean appearance and apparently calculated to preserve a uniform temperature, though they may not be so entirely secure at the cover, as wooden boxes; whether they be a real improvement can be ascertained only by experience. There were in the whole thirtyfive entries for the premium, from Pennsylvania, New York, New Hampshire, Massachusetts, Vermont and Maine. The butter for the most part was well made and clean in its appearance, and made with different objects, some of it being for present use and some with a more particular view to its perfect preservation for a great length of time. One parcel, which was very sweet, though somewhat salt, was made by the owner 'for the use of the fishermen to take on their voyages next season.' It will probably retain its excellence, and though a premium for butter intended to be used one year from the time it is made, would be highly useful, and give excellent butter to the navy and shipping, the committee considered this premium, as intended for the best market butter for winter consumption, without any reference to the economical ar- by boiling and skimming. Mr CROSBY has repeat rangement of his dairy, the food of the cows, or even the stock. Dr Warren, imported some butter edly taken the premium for the best butter exhibit from Montreal, (L. Canada) purposely for exhibition; it was certainly very excellent, not superior, however, in the opinion of the Committee, to that to which the premiums are awarded.

One entry from Pennsylvania was made, but the state of the winds and weather unfortunately prevented the arrival of the butter, which the Committee the more regret, as that state is so justly celebrated for its success in this department of agriculture. Respectfully submitted.

We have subjoined a few notes taken from the written accounts which generally accompanied the several lots of Butter.

No. 5 .- Mr Newell's butter, which took the second premium of fifty dollars, was made fron the cream of 14 cows, since September 25-there were about 80 lbs, more made of similar quality which was not entered. The cows had commor grass feed only. The butter was packed in ole firkins, (which are considered better than new ones) in layers of about two or three inches deep with a sprinkling of fine salt between each layer The butter is thus more easily taken up as wanter

No 11. Mr WEEKS' butter was made from Aug to October. Mr W. has the morning's milk skim med in 12 hours, the evening's in 24 hours from the time it is taken from the cow; the cream is churned every other day: the butter salted with Liverpool, ground; laid down solid; nothing added, except a little brine: a waxed bag was fixed between the butter and the wood.

No 12. Mr Caoser's mode of making is by skimming the milk while perfectly sweet, churning soon, not waiting for large churnings; when 'the butter has come, he turns off the buttermilk and then churns the butter again, in order to bea out the buttermilk well, without the warmth of the hand: in each of the two successive days, he works it over thoroughly, and then packs it down in tubs previously soaked with brine made clear ted at the Brighton and Concord Cattle Shows,

No 17. Mr PRINCE's butter was made at hi farm on Merino Island in Winipiseogee Lake, N H. It was made between the 10th of August and 19th of November, from cows mostly of the Al derney breed. His pastures are newly cleared land; though his cows have been freely fed with pumpkins. His dairy room is neat and conver ient, and attached alongside of an ice house The butter as soon as packed is put into the ic house. Less than the usual quantity of salt is used no coloring; but a small quantity of saltpetre an loaf sugar is added.

No 24. Mr Eager's butter was made from 1' eows, since the 15th of September. The crear was gathered in seven weeks, from the milk, afte sitting from 4 to 6 meals, which was varied ae cording to the state of the weather, so that th cream might always be perfectly sweet. It wa immediately churned after being skimmed; and from 5 to 6 lbs, pure fine salt put into 100 lbs, o butter, which was the only ingredient made use of

No 28. Mr Baigham's butter was put down be fore the 25th of November, and intended for fish ermen to take out to sea the next season. It was prepared with salt, saltpetre, and sugar, which has for a number of years enabled the butter to endur their trips without injury.

No 29, which was of very fine quality, was entered by Doct. WARREN of this city, for exhibition only, and was procured of H. GATES, Montreal. It was made by a Yankee farmer of the name of HASTINGS from Vermont, who now resides near Montreal, and has a dairy of 50 cows-The 54 lbs, exhibited was the product of a single churning, in November.

No 34. Mr Haines' butter was made from the common breed of cows in Pennsylvania, with about one in ten of the prime full bred Alderney yreed, so that the butter is 10 per cent Alderney, which Mr II, thinks makes a perceptible improvement. Their feed has been from a common pasture, with a large proportion of white clover. The pasture has been frequently top dressed, but not ploughed for more than twenty years,

Mr Strague's butter, which took the first premium, was sold to Messrs Harrison Gray Otis, E. Codman, D. S. Ingraham, T. B. Coolidge, Mr. Hancock, and Mr Barker, keeper of the Marlbo-

Mr Newell's lot which took the second premi-Rollins, and Ignatius Sargeant,

GENERAL AGRICULTURAL AGENCY,

BOSTON. MASS

THE SUBSCRIBER, at the suggestion of many gentlemen in the United States, and the British Provinces, has concluded to add to his present agricultural business, a General Agency for the purchase and sale of the different improved breeds of stock, which he is convinced would be of great convenience to the public, as well as binaself. His intimate acquaintance with all the most eminent breeders of stock, and the favorable situation of Boston, give him important advantages for such an agen-

As General Agent, he will receive orders for, and purum, was sold to Messes George Hallet, Ebenezer chase all kinds of Fruit Trees, Grape Vines, Plants, improved breeds of Cattle, Sheep. Bremen Geese, and other stock; and indeed any thing that may be wanted by far-In the purchase of stock of all kinds, he will be assisted by the selection and judgment of an eminent breeder in this vicinity. Fruit Trees, Grape Vines, Shrubbery, &c., will be obtained at any Establishment named by the person ordering; and if no Establishment be named, the subscriber will obtain them from such as he shall have most confidence in-in the latter case, he will be responsible for the genuineness of the articles; in the former, the risk will remain with the purchaser.

Commissions on sales and purchases of stock, on sums of \$10, or less, 10 per cent. between \$10 and \$20, 9 per cent. \$20 and \$30, 8 per cent \$30 and \$40, 7 per cent. \$40 and \$50, 6 per cent, \$50, and upwards 5 per cent. No commission is charged in purchases of trees, grape vines, and shrubbery.

To Gentlemen baving improved stock for sale, are invited to furnish him with lists, containing descriptions, pedigrees, and prices.

He has constantly on hand, at the Agricultural Warehouse, Boston, the most extensive variety, and the largest quantity of Garden, Field, Tree, Herb, and Flower SEEDS to be found in New England, which are offered for sale, at either wholesale or retail. Traders wishing to keep the very best vegetable Seeds, for retailing in the country, can be accommodated with boxes of any sort from \$10 to \$100, comprising a complete assortment of the common vegetable Seeds, and Flower Seeds, when wanted, on favorable terms.

A large assortment of the best sorts of Gnape Vines, for the climate of New England, both American and European, is kept constantly on hand, well packed in moss. separately, for transportation, and sold at the regular nursery prices—also, Rose Bushes, and various sorts of Shrubbery, packed in a similar manner.
FRUIT TREES of all kinds, can always be supplied at

24 hours' notice-well packed for transportation, to any

Standard AGRICULTURAL BOOKS of all kinds, constantly on hand, at the regular Bookstore prices. Dec. 10 eoptf. J. B. RUSSELL.

Early Top or Tree and Potato Onions. Just received at the New England Seed Store, No. 52 North Market Street-

A quantity of Early Top or Tree seed Onions. Those produce onions at the bottom and a bunch of small ones on the top of the seed stalk. The small onions are proper to plant very early in the spring, or in autumn, which is the best time, and seldom fail to produce a good crop under proper cultivation. They should be planted in rows ten or twelve feet asunder, and set two or three inches apart, and one inch deep, taking care to place the bottom downwards. They soon spring up, and from their size and vigorous growth, are not subject to be destroyed by insects. Should they put forth seed stalks, as many of the larger ones will, they should be broken off soon after they appear. otherwise the onions at the bottom will not be so large. These onions are mild, grow to a large size, and are, generally raised with less trouble than the common kind,

Also, a few Early Potato Onions. This curious variety of the onion is very early and mild. They should be planted in common dry situations, in the autumn, covered over two inches deep in gardens. The small ones should be planted out four inches apart—the large ones twelve to fourteen inches. They are generally ripe about the 10th of July, and yield eight to ten fold.

Dec. 10.

Camellias, Jasmines, &c.

FOR SALE, at a Nursery in the vicinity of Boston, a good collection of Camellias, Bread, Small and Long leaf. Also Jasmines, Heaths, &c. all large plants, and at moderate prices-orders left with J. B. Russell, at his Seed Store, will be promptly attended to.

AARON TVLER, of Bath, Maine, having commence an Establishment for the Promotion of Agriculture an Domestic Economy, and having made arrangements with Mr. J. R. NEWELL, and Mr. J. B. RUSSELL, of the Agricultural Warehouse, Boston, for a supply of the most Improved Tools and Seeds, recommended by them as valuable and useful to be introduced-will be enabled to supply the farmers in Maine at the Bosten prices, with the addition of freight. Persons on the Kennebee, and vicinity, will find it to their interest to call at Mr Tyler's establishment for their supply of farming Tools and Garden Seeds.

A. Tyler also tenders his services to the horticulturists and musery men of Massachusetts and elsewhere, for the sale of all kinds of Trees, Vines, Plants, &c, and will be at all times ready to fill orders for the best of Forest Trees, from Maine, put up and packed properly and shipped according to order.

A. T. flatters himself by close application and assiduous attention to the above objects, that he shall be enabled to give satisfaction to the public, and be a means of introducing into Maine many valuable productions, heretofore unknown, and thereby be a source of improvement to the agriculturist, and or gratification to himself.

A. T. also tenders his services for the sale of Improved Breeds of Cattle and Sheep.
WANTED, a full blooded Bull, 3 or 4 years old, con-

taining the best breeds for Milk and Oxen.

Letters (post paid) will receive prompt attention. Refer to Hon, Joseph Wingate, Bath,

MISCELLANIES.

Among the representatives to the next congress from Massachusetts, we observe the name of General Henry A. S. Dearborn; a gentleman whose exertions for the improvement of agriculture and horticulture in the United States, have acquired for him the respect and esteem that are due to those philanthropists who labor for the public good .-Western Tiller.

Grapes .- It is told us as a fact worth recording, that one hundred thousand pounds of grapes, are annually raised, in the neighborhood of Boston. We know many grape vines in the city that bear abundantly. Mr Perrin May devotes much time to their cultivation, and his garden, this year, has been very prolific in this delicious fruit -Boston Transcript.

Col. Sam. Ward has sent from Worcester, \$5000 worth of goods and implements of Lusbandry, destined to the Mexican province of Texas. The route is down the canal to Providence, thence to New York, then by sea to New Orleans, afterwards up the Mississippi and Missouri to St Louis and onward to the Texas.

Woes of Intemperance .- A child about four years old, in the village of Rochester, on Wednesday evening last, was playing with shavings on the hearth of its own home, when the shavings caught fire and communicated it to the clothes of the child, who was so dreadfully burned, as to survive, in great agony, for but a few hours. The only person near was the mother but she was so intoxicated as to be unable to help her child out of the flames!

Fontainbleau Grapes .- The superiority of the Fontainbleau grapes is attributed to the following peculiarities of practice, to which we would add the spur method of pruning :-

1st. To the judicious choice of cuttings, the vignerous never making use of any but such as have borne the best and finest fruits,

2d. By planting the vines at a distance from the wall, and by frequently laying the shoots until they reach the wall, the vines acquire abundance of roots upon the surface. Also, by the close planting, from which all undue bux riance is restrained; by this means the branches complete their growth within the bounds prescribed, and ripen their wood early.

3d. By limiting each plant to only one cordon, with two arms, right and left, the entire extent of both not exceeding eight feet. The energies of the roots, confined to so small a space, nourish the bearing wood more effectually and more equally. and bring the fruit to greater perfection.

4th. To the projecting coping, which protects the vine and fruit from frosts and heavy rains, and intercepts and retains the heat radiating from the surface of the wall and of the soil,

5th. The sloping disposition of the ground also contributes to their success, as it prevents any accumulation of moisture at the roots of the vines and preserves them sound and healthy. From the French, in Transactions of the Horticultural Society.

A letter from Paris, published in the N. York Sen tinel says,-Thus much is certain, let the fact be attributed to what causes it may, that in no coun. - Franklin Journal. v. 122

try at this hour is there more reading or more thinking than in France. Since the late revolution, it would seem that every body reads, or is read to, or receives a second hand account of the reading of others. In Paris, you stumble upon a reading room at every tenth step; streets and gardens are as thick set with cabinets de lectures as these again are with readers. In the larger commercial and manufacturing cities, you find the same, while every sn all landed proprietor in the departments has his paper from Paris, or reads half a dozen in the cases of his village. On the other hand, the press is as seducous to enlighten the people as the people to be or lightened. Notwithstanding the yet unclinged patronage and undropped police of the government, innumerable are the writers who din their pens in free ink, who write for the people, under the protection of the popular opinion and the countenance of the popular support. No debt is better paid than the debts to Jeurnalists; fraudulency in subscribers is an almost unknown rascality; and here, perhaps, you will find the secret at once of the superior independence and the more elevated and gentlemanly tone of the press of France So far as I can judge, it is now decidedly the first and the freest in the world,

The more popular press of Paris receives much assistance from the young and independent talent found in the popular societies, of which I have already spoken.

Dr Mitchel's Method of working Caoutchouc .-Soak the gum clastic in sulphuric ether until soft and nearly elastic, which in good other will take from ten to twentyfour hours. Then if it is a plate ent it with a wet kinfe, or parallel knives, into such sections or sheets or shapes as may be desired, and suffer them to dry; or if a bag, apply a pipe or stop-cock, and inflate with the mouth, if the bag should expand equally inflate rapidly, but if unequally, proceed more slowly and with occasional pauses. By such means a bag may be made so thin as to become transparent and light enough to ascend when filled with hydrogen. By graduating the extent of inflation, a sheet of eaontchoug of any given thickness is produced. If for blow pipes or other purposes for which it is desirable that the bags should possess contractibility, let them be inflated to the desired size, and after an hour let out the air. Ever after they will suffer as great distention and again contract. If permanent sheets are wanted, the inflated bases are to be hung up till dry after which no sensible contraction will cusue.

Bags softened by other may be stretched readily by the hand, over lasts, hat blocks, or other moulds, so as to assume the shape desired, and may be anplied to a variety of useful purposes. In the form of straps and twisted strings its clasticity offers many useful applications. It is easily formed into tubes to connect apparatus, &c.

Some of the bags have been extended to six feet in diameter; one of them being filled with hydrogen escaped and was found one hundred and thirty miles from the place. A bag originally the size of an English walnut was extended till fifteen inches in diameter.

Dr Mitchel states that oil of sassafras softens caoutchouc so that it can be applied with a brush, and that upon drying by exposure to air it becomes again simple clastic caoutchouc. Many applications of it as a varnish, in this state are suggested Durham Short Horns.

For sale, several of the pure breed, descendants of the relibrated animals, presented by Admiral Sir Isaac Coffin, to the Massachusetts Society for the Promotion of Agriculture. The pedigree of these animals can be given as fir back as Hubbach, who was calved in 1772 and is reputed the foundation of this much admired stock Also, several Hericus bred from the same, of variou grades, from half up to seven eighths blooded animals or particulars, inquire of E. Hersey Dethy, Salem. Salem, October, 1830.

> Catawba Grape Vines. THE GENUINE SORT.

For sale at the New England Seed Store, No. 52 Nor Market-street-

50 Vines of the true Catawha Grape, one year oh price 75 cts. cach. This is one of the best native, table or wine Grapes cultivated; the bunches large, wit shoulders, very thickly set, with large berries of a pal ted or blac color, and in some situations covered with cantiful bloom, giving them a blueish purple appearance They have a slight musky taste, and delicate flavo They have a thin skin, very little pulp, are perfectly has dy, and surpass most of the native grapes that have bee exhibited at the Hall of the Massachusetts Horticultur. Society, the two past seasons. The pulp diminishes an almost disappears when they are left on the vine till the attain to perfect maturity. The vines are great bearers one vine in Mrs Schell's garden, in Clarksburg, Mary land, has produced eight bushels of grapes in one seaso -and eleven younger vines in the garden of Joshua John son, Esq. of the same State, have produced in one seaso therty bushels of fruit. A particular history and descrip-tion of this fine grape will be found in Prince's nev Treatise on the Vine, just published. There can be a mistake with regard to the identity of the above vines, a they are all from the garden of Mr SEAVER, who raise the first Catawba Grapes ever exhibited in Massachusett

VOL. IX.

BOSTON, FRIDAY, DECEMBER 17, 1830.

No. 22.

COMMUNICATIONS.

MR FESSENDEN-I enclose some extracts from the August numbers of the Annales D'Horticulture, and of the Institut De Fromont, containing accounts of several varieties of pears, and a very interesting plant, from the North West Coast,

In one of the above named publications, is an pitome of a Horticultural tour made in England, luring the last year, by M. Filippar, who frankly acnowledges the preeminence of that country in all he branches of rural culture. I shall send it to ou in a few days, as it gives a pleasing account f the wonderful progress which has been made in Freat Britain in useful and ornamental tillage, rance for the advancement of the science and rt of gardening.

Since the general pacification of Europe, each ation appears to have sent out its intelligent and iterprising travellers to explore all others, for the mmendable purpose of collecting horticultura formation, and bringing back the vegetable otic explorations.

With unfeigned respect,

Your most obedient servant.

H. A. S. DEARBORN.

Brinley place, Dec. 8th, 1830.

EXTRACT NO. XXVIII.

From the Anoales D'Horticulture.

New fruits, or such as are but little known.

PEARS.

Beurre-Curter. Fruit oval, rounded; skin en, thin, unctuous at the moment of becoming esed to the sun. Flesh white, melting, full of et juice, quickened by an aromatic tartness, uliar to the Bergamots. Ripens from the last September, to the middle of October.

his new Pear, described by Van Mons, was hecary of Jodoigne, who has dedicated it to

Curtet, a physician of Bruxelles.

EURRE D'AREMBERG. M. Van Mons has deed this pear, which is no longer new, but is one of the best, which we know. We only k of it now, to show how much confusion been produced in the nomenclature, by the nymes. The Beurre D'Aremberg can scarceunber twenty years of existence, and neverss it has already four names. Obtained at neim, by the Abbe Deschamps, in the garden of Hospice Des Orphelins in that city, Dessps at first called it Beurre des Orphelins : M. Mons, soon after named it Beurre Deschamps, nor of its discoverer; others have called it re D'Hardenpont; and finally the name of re D'. Aremberg has been given to it, by mistake, but doubt, but it has prevailed and will probe the only one that is continued.

RRURIER D'AUTOMNE. M. Van Mons says ee is tall and majestic; the leaves small, tated, and apositely folded.

ends; skin of a delicate green, covered with numerous white spots, forming a kind of net work. The flesh is white, tender, melting, full of very abundant sugary juice.

At the epoch of its maturity, which is towards

ger in a good state.

M. Van Mons says, that seed from the pear tree which produced the Scrrurier, and which was sown at the same time, produced a new Sanguine, resembling in every respect, as to the form of the fruit and the color of the flesh, the ancient, but plants, reported by Mr Douglas. In October, rieher and more tender.

DE RAQUINCHEN. The tree is vigorous, branchand of the efforts which are rapidly developing in es erect, bark reddish; buds small and slim; the shoots often thorny; leaves narrow, downy on the under surface, and a little dentated; fruit pleasure of receiving some of the seeds at the round, compressed; stump an inch in length; skin, rough and brown, like that of the Messire Jean; flesh very melting, buttery, and sugary; high flavored; ripens in November and December.

This species of Pear tree merits dissemination, pasures of every clime. I trust the period is from the quality of its fruit, which is as melting t far distant, when we shall participate in the as the Beurre Dore and the Crassane; its branchnefits and honors of such meritorious and pa-jes should be trimmed at full length, for after the fruit buds are formed at the ends of the young shoots, in order to obtain fruit soon, it should be cultivated in the form of an espalier; the fruit grows in bouquets like the Crassane, of which it is believed to be a variety; it succeeds better upm a free stock than upon the quince, although it produces fruit sooner, when engrafted upon the latter. This new acquisition is very interesting, from the quality of its fruit, and the beauty of the tree. It was obtained by M. Noisette.

COLMAR D'ETE. Ripens in August and September; the tree in all respects resembles the Colmar. low, striped, and stained with red, on the side but its bark is always creased; a great bearer; a very good species, but little disseminated. Produced by M. Noisette.

BEURRE DE SAINT QUENTIN. Ripens in September; the tree erect and beautiful; wood reddish; leaves long and narrow; fruit in form of the comined, in 1828, by M. Simeon Bouvier, an mon Doyenne, not quite so long and larger in its circumference; demi-beurre; well calculated for large orchards, being a great bearer. Produced by M. Noisette.

EXTRACT NO. XXIX.

A method of destroying weeds which grow between the paving stones of yards and courts, and in garden walks.

Boil about 20 pounds of quick lime and two pounds of sulphur, in 25 gallons of water; let the liquid cool, drain it off clear, and with a watering pot, sprinkle it over the pavement and walks, so as to moisten the ground thoroughly, and no weeds will appear for several years. It is thus that the Cours des Mornaies in Paris, although but little frequented, is prevented from exhibiting the least vegetation.

EXTRACT NO. XXX.

From the Annales L'Institut Royal Borticole De Fromont.

e fruit is very large, oblong, obtuse at both the services which Mr Douglas has rendered, not myself useful to the Society.

only to botany, properly so called, but to the natural sciences generally, by the introduction of plants from the Northwest coast of America,

Among the plants, there are an astonishing variety, of the Lupinus, Penstemon, Enothera, the end of October, the skin assumes a yellow &c. It seems that nature has placed, in those shade; the fruit can still be kept three weeks lon- localities, the nidus of these genera, from whence some species have been scattered here and there, upon the surface of the earth. During three years, each monthly number of the Botanical Register, and Botanical Magazine, reveals to us the existence of one or more of these charming 1827, Mr J. Lindley, described and figured, in the first of these periodical collections, a magnificent species to which he gave the name of Lupinus polyphyllus. After many attempts, we had the commencement of the year 1829. They came up readily; but only produced radical leaves the first year, which were multifoliolated, and borne on long petioles. Being transplanted into rich earth, but exposed to all the intemperance of the rigorous winter which we experienced, the roots did not suffer in the least. In the month of April the stalks began to be developed, and produced, toward the middle of May, spikes of flowers which were more than two feet in length.

Plant herbaceous, vivacious, perennial; the leaves composed of from 11 to 15 green leaflets. lanceolate, hairy on the under side; the flower disposed in a long terminal cluster. These flowers are of a beautiful azure blue, with a reddish border, and they form a kind of whorls very near each other, or to speak more exactly spirals round a common axis. The general appearance of this plant is something like that of the Baptisia (Podalyria) australis; but it is, without contradiction, more elegant.

When this plant shall become common, it will be generally cultivated, on a large scale, for forage, as it requires no more care than sainfoin, or

any other legume.

It is thus noticed in the Annales D'Horticulture. We believe we can announce to the amateurs of flowers, cultivated in the open ground, that it is a long time since anything has arrived, so magnificent, as this plant. Its culture and multiplication appear to be very easy. It is a fortunate acquisition for our parterres.

MR FESSENDEN-The following letters having been read, at a recent meeting of the Massachusetts Horticultural Society, it was directed, that they should be pubfished in the New England Farmer.

Very respectfully,

Your most obedient servant.

H. A. S. DEARBORN.

Brinley Place, Dec. 1, 1830.

Letter from F. Falderman, Esq. Curator of the Imperial Botanie Garden at St Petersburg,

Sia-I was very happy to be informed, by Doct. HARRIS, that the Massachusetts Horticultural Society had considered me worthy of being elected one of its Honorary Members. For this Remarks on the Lupinus Polyphyllus; by Guillemin. | favor, which you have kindly conferred upon me, We early signalized, in the Annales of Fromont, I promise to do whatever is in my power to render

when they flower, you will be pleased with them, | be readily made through me, or directly to her. and allow them a place in your garden,

With the utmost respect, I am, Sir your most Obedientservant. F. FALDERMAN.

GEN. II. A. S. DEARBORN. Pres. Mass. Hort. Soc.

LETTER FROM S. P. HILDRETH, Esq. Marietta, Ohio, 8th Nov. 1830.

TO GENERAL DEARBORN.

Dear Sir Your favor of the 7th as been received. I feel highly gratified by the flattering notice your Horticultural Society have been pleased to take of my communication of August a place in the bosom of the farmer. last. I shall endeavor this winter to make them some suitable return for their politeness. I pronose in addition to the scions of the Burlingame pear and plum, to send to them, 10 or 12 new Marietta, from the seeds. No part of the west- in a national point of view. ern country, has a greater variety of superior engrafted fruit than Washington County; and in ing the texture of wool. About 6 years ago, I placed the lapse of thirty years many new and excellent a flock of sheep on one of my farms under the care apples must of course spring from the seeds. By a little attention this autumn, I have discovered a number which are fully equal to any of our best engrafted fruits. From these, I shall select a few and send to your Society, and if convenient, perhaps drawings of the fruit-also some of our native crab apples, seeds and scions. Ten or a mon blood. At present they are a full eighth coarsdozen varieties of our best penches, from the er than those on my other farms, that have nd stones, seeds of as many of our indigenous or been so highly fed. They have increased somenamental trees and shrubs as I can collect—also what in size, and I think not less than 25 per creepers and wild flowers-with a few seeds from cent in weight of fleece. The flocks on my other my garden of Dahlias and Crown Imperials. I they are a rarity-perhaps not, but mine never delphia. I shall then write for a few articles in return. The seeds of the Schizanthus pinnatus were lost on the way-the other came safe. The Diploma you are pleased to mention, may come on in the returned box. I shall dip the ends of the scions in melted wax and roll them up in moist paper, and pack in a tight box. Is there any other better method? I also take the liberty of sending you, in company with this letter, two of ty to my experience respecting the shearing of our Marietta papers, containing the agricultural lumbs, as on a former occasion, I advocated what address, and report of the Society in this county, I now believe to be an erroneous opinion on this for the year 1830. The Society is small and funds matter. In a letter, addressed to John Hare Powel, for premiums still smaller, but yet much good is done. If you get from them no new ideas, you will learn something of our views. This state is probably destined to become one of the first in the union-the fertility of the soil, the genial influence of the climate, and the geographical position, bordering on two navigable waters, creating an outlet for her produce both to the east and the west, afford every facility to wealth; while her civil and religious privileges are equally favorable to the growth and improvement of the mind. Nothing but the wickedness or imbecility of her rulers, if favored with the blessing of Providence, can check or retard her progress,

quired, is still living; her residence is about a less they are communicated from other sheep,

I take the liberty of sending to the Society, a mile below the town, on the Ohio river; she is choice collection of double Dahlias which were quite advanced in years, but still smart and active; out to most growers, will no doubt induce man chiefly raised in the Imperial Botanic Garden, the mother of a numerous race of children, and to embark in the business without experience. T from seeds which ripened in this country. I hope grand children. Any communication to her, can such these hints may be useful. Should this b With great respect,

I remain yours truly.

S. P. HILDRETH. * The Lady whose name was given to the pear raised from seed, which she collected in N. Jersey.

FOR THE NEW ENGLAND FARMER.

SHEEP HUSBANDRY.

Sir I have somewhere met with the remark, that all useful discoveries in agriculture should be considered common stock; and the selfish principle which would lead us to keep such discoveries for our own individual use, ought never to find

Acting on this principle, I wish to communicate through your journal, some experiments on the interesting subject of Sheep Husbandry, than which no branch of agriculture is of more importance varieties of the apple, produced in the vicinity of either as it regards the interests of the Farmer, or

I shall in the first place notice some facts respectof a Scotchman, whom I considered one of the best shepherds in this section of country. Besides being extremely careful, he was a very high feeder. At the time, he took charge of these sheep, they were corn about as much below the common ere about an average of my whole flock. A large portion of them were perfectly unmixed with comfarms remain about stationary as to weight of send the Crown Imperial seeds, because I think carease and fleece; but by strict attention to the selection of the best prime bucks, we have been seeded before this year - the spring was a forward enabled to make great impovement in the texture one and very fine, which was probably the cause, of the wool. I find that with all our care in the bury, If the winter is open, I shall endeavor to forward choice of rams, we are barely able to prevent dethe box in February, to Mr LANDRETH, of Phila- terioration in the quality of the wool of the Scotchman's flock. The result of my experiments proves that a flock of full blood merinos, under high keeping, and breeding indiscriminately from the produce, may be reduced to three quarters grade in six or eight years. I am not sure, however, that considering the increased quantity of wool

and mutton they would be less profitable. I have an aditional inducement to give publici-Esa, which was published among the proceedings of the Pennsylvania Agricultural Society, and also if I mistake not, in your paper, I condemned the practice of shearing lambs. Additional experience has entirely changed my opinion. About four Rufus Howe, of Dorchester, years ago, I had my lambs shorn on one farm. 1 found they stood the winter better, came on to grass in fine order and with less loss than those on my other farms. Since that time I have continned the practice, and with uniform success. I believe the great advantage is derived from the destruction of the tick. If a lamb is closely and smoothly shorn, about the last of June or first of July, very few of these troublesome and destruc- Seaver, of Roxbury, Mrs Burlingame, * after whom you so kindly in- tive vermin will be found on it the next spring un-

The present flattering prospects which are held the case, I shall be amply compensated for my trou

It is high time our country should cease to

be dependent on Europe either for wool or cloths It is not less absurd for the United States to in port wool, except the very coarsest kind, at thi day than it would be to import cotton.

> Yours very truly, ALEXANDER REED.

Washington, (Pa.) Dec. 3, 1830.

THE SEASON.

P. S .- The past summer was unusually dr very little rain fell from the first of June ti the middle of October, and even until this date w lave had moderate showers. We hear of heav and continued rains, both east and west, but her the Autumn has been the most pleasant with the recollection of the oldest inhabitants. W lave apples and strawberries of the second croptie Lima Bean and Passion Flower are as green in August, and the buds of the apricot and east are considerably swollen. Our fall crops prese ; beautiful appearance, and in many instances ha been pastured.

The crops of the last season were, on t' whole, abundant. Wheat, oats, and barley, ful one third more than an average crop. Indi-Rye, a good crop. Potatoes and apples abo half a crop. Peaches not plenty but fine. Pea scarce, the trees having died, or being on the d A. R.

HORTICULTURAL.

At a meeting of the committee of the Maschusetts Horticultural Society, on Fruits, on S urday, the 4th December, 1830, the following p miums were awarded.

For the best Apples, to John Prince, of Re

For the best summer Pears, (Andrews) to Ru F. Phipps, of Charlestown,

For the best autumn Pears, (Bartlett) to Enc Bartlett, of Roxbury,

For the best native Pears, (Heathcot) to Rod ick Tooliey, gardener to Mrs Gore, of Waltha

For the best Peaches, (Grosse Mignonne) Elijah Vose, of Dorchester,

For the best native Peaches, to E. M. Richar of Dedham,

For the best Apricots, (Moor Park) to Phinney, of Lexington,

For the best Nectarines, (Red Roman) to I

ward Sharp, of Dorchester, For the best Pioms, (Bolmar's Washington)

Samuel R. Johnson, of Charlestown, For the best Cherries, (Black Tartarian)

For the best native Charries, (Downer's M:

zard) to Samuel Downer, of Dorchester,

For the best foreign Grapes, (White Muscadi) of out door culture, to David Fosdick, of Charl

For the best native Grapes, (Catawba) to 1 thaniel Seaver, of Roxbury, For the best Gooseberries, (Jolly Angler) to

For the best Strawberries, (Keens' Seedling)

D. Haggerston, of the Charlestown Vineyard,

of Charlestown, for the best Grapes, (Black Humburg) grown under glass, presented to the Society at their Anniversary Festival, in September last, the committee recommend a gratuity of

To Elisha Edwards, of Springfield, for several beautiful varieties of rare and valuable Fruits, presented to the Society at various meetings, a gratuity of

By order of the Committee,

E. PHINNEY, Chairman.

The Standing Committee on Ornamental Trees, the year 1830.

For the most successful cultivation of the Roderick Tooliey, of Waltham.

For the best specimen of Chinese Chrysanhemums, a premium of \$3, to Mr David Haggerton, of Charlestown.

For the six finest Tulips, a premium of \$2, to Mr Augustus Aspinwall, of Brookline.

For the six finest Hyacinths, a premium of \$2, o Mr Augustus Aspinwall, of Brookline.

For the finest Ranunculus, a premium of \$2, to Ir George W. Pratt, of Watertown,

For the finest cultivated native Flowers, a prenium of \$2, to Messrs Winships, of Brighton.

For the finest Roses, a premium of \$4, to Mr lugustus Aspinwall, of Brookline,

For the finest Dahlias, a premium of \$2, to Mr lavid Haggerston, of Charlestown.

eorge Thompson, of Medford.

For the best Carnations, a premium of \$2, to essrs Winships, of Brighton.

The many specimens of native Flowers prented by Messrs John Russell, Daniel Chandler, d E. M. Richards, have rendered the weekly hibitions of the Society peculiarly interesting. By order of the Committee,

R. L. EMMONS, Chairman.

N. B. Those members to whom premiums ve been awarded, can obtain an order on the easurer for the amount, on application to the airman of the Committee.

FOR THE NEW ENGLAND FARMER.

PROLIFIC SHEEP.

MR FESSENDEN-Having lately visited Col. John le of Chelsen, and noticed young lambs among flock, he informed me, that the last year he 1 44 cwes of mixed breed, which began to prose lambs, Nov. 24, and continued till some time January-That 2 sheep brought 3 lambs each of which died young .- That from June 14th July 2d, he sold 41 lambs at \$2,50-That 5 re sold after that time at the same price, among ich were the 3 from one sheep-that since v 20th, he has 18 lambs of the second crop. Vov. 22, 1830. A. B.

MPROVEMENTS IN AGRICULTURE. The greatest and almost exclusive obstacle to provements in agriculture, is the prejudice exig in favor of old systems, or rather want of em. The practices learned from their forciers are taken for granted to be the best, and attempt at improvement upon them is treated

true, but much more so than a casual observer would be willing to believe. Go where you will, a thoughtless and eareless adherence to old customs will be met with on all sides, with but an occasional exception. Here and there, a beautiful mansion, well arranged barn-yard, well tilled, luxuriant and properly fenced fields, healthy and thrifty orchards, and improved stock, will be seen like a bright star in the wilderness of ephemeral been done, may we not fairly conclude that the and misty meteors of the system. The most process of improvement may be continued? for, unaccountable circumstance in this state of things as it is not allowed to human nature to attain a is the fact, that the great success that universally Flowers, &c, award the following premiums for attends these instances of improved practice does not disperse the doubts and prejudices of the neighboring farmers; but so it is. They view the Rhododendron Maximum, a premium of \$5, to Mr | fine crops, fine eattle, and all the other fine things, results of a wise practice, as the result of accident, 'O! he is a lucky farmer,' say they, and give themselves no further trouble about the cause of his prosperity. Indeed his great success is itself, by the weakness of human nature, no small obstacle to his example being followed by his neighbors. It too often excites envy instead of emulation, and from this cauldron the vials of all the malevolent passions are filled, and their contents directed towards him. How happy would be the condition of farmers in this country if the reverse of this state of things existed! There is no country on earth in which the condition of the agricultural community is susceptible of being made so comfortable and happy, as in the United States. While in the most favored country on For the finest Pinks, a premium of \$2, to Mr the globe, except this, the labor of farmers is taxed to almost a moiety of its earnings, it is here comparatively unvisited by the tax-gatherer. We know well that much and loud complaint is made by our farmers against the oppression of taxes; but let them look at the amount of taxes paid by the agriculturists of any other, we care not what country, and their complaints will cease. That their condition is at present not prosperous, is readily admitted, but we contend that the fault is with themselves; and nothing but the unexampled fertility of our natural soil, and the propitionsness of our climate saves them from utter ruin. How long would the farmers of England keep themselves from starvation, if they pursued the system generally practised in this country?

It is not for want of sources of information that so little improvement is made in our agriculture; but from the neglect of them. This arises from, besides a prejudice for old customs-they are unworthy of the title of systems,-a prejudice against 'book farming,' as it is termed. This has done much injury, and is utterly groundless. It is 'book farming' that has brought our agriculture even to its present state. The fact is that agriculture has derived as much benefit from the invention of printing as any other department of human industry. Through the medium of the press, farmers have been informed of the objects of agricultural attention in distant parts, and thus been enabled to introduce such of them as were adapted to their soil and climate. But that every subject of agricultural attention is susceptible of improvement is easily proved; and if so, that it is the interest of farmers to make the improvements will not be denied. Let us glance at a few instances of improvement that are now considered in a state of perfection by farmers generally. Wheat derision and contempt. There are many in its natural state was scarcely anything more thy exceptions to this, it is true; but if we than cheat. Potatoes were small contemptible roots, 👣 a view of our agricultural community as a such as we at this time, would scarcely think of Ohio and Baltimore Company are for it.

To Thomas Willet, gardener to Mr E. Breed, whole, we shall find the remark not only generally taking from the ground. Cabbages in a state of nature, are little better than wild mustard; and cotton, now one of the principal staples, and a source of wealth to our country, in its original state, could scarcely be appropriated to the use of man. These are but few instances; the whole catalogue of agricultural products were in the same state, till human wisdom and industry im proved them by cultivation. If, then, such has state of perfection, so we may fairly conclude that the works of man are imperfect and are capable. of improvement ad infinitum,-Imerican Farmer.

> Among the articles say d from the wreck of ship Superb, bound from Philadelphia to New Orleans, was a bundle about a foot square which being opened in New Orleans, contained counterfeit bank notes on the Salem and Philadelphia Manufacturing Co. to the amount of \$10,000. It is said they were to have been forwarded to Illinois for circulation.

> In Bedford Co. Pa. the children average 8 to a

Mr Law, of Liberty Co. Ga. has raised a 'brimstone' potato 18 inches long, 224 round, 104 lbs. On one acre he raised more than 600 bushels.

Last September and October, 700 teams crossed the Mississippi, for the upper part of Hlinois.

The Russian government has offered 25,000 roubles (about £1,000,) for the best treatise on cholera morbus,-The French physicians are not enumerated in the address of the offer, and the treatises are to be written in Russian, Latin, German, English or Italian; French not being included. They are to be sent to St Petersburg, addressed to the Council of Medicine, before Sept. 1, IS31: the name of the author to be in a separate and scaled cover.

McRapp, of Economy, Pa, hearing of a pumpkin in N. Carolina weighing 86 lbs. was induced to weigh one which had grown on his farm. It weighed 124 lbs, was nearly 4 feet round one way, and 85 the other.

In Alexandria, D. C., 2d inst, there was hoar frost and ice; yet strawberries were for sale in the market,

20,000 hogs were lately met in in the Western country, on their way to Alexandria.

It not being legal to sentence a Spanish nobleman to punishment for life, the Supreme Court at Malaga have lately sentenced a young nobleman, for murder, to the galleys, for 100 years and a day!

Elegant ribbons are manufactured at Wayne. Kennebec Co. Me.

Mr Richard Imlay, of Baltimore, has made and shipped for New Orleans a beautiful rail road carriage, intended for the Lake Pontchartrain Rail Road.

Two of the shillings coined in Massachusetts in 1652, were lately found in a scull bone, while removing earth next the burying ground in Concord, Ms.

Mr Harding the distinguished artist of Boston, is engaged in making a full length portrait of Daniel Webster, at the request of Boston Mechanics, who have raised \$600 by subscription for that purpose.

Railroad from Baltimore to Washington.—This project seems to gain consistency. The public and the

PROFITABLE COWS.

which had a call which was well fatted, and killed journey to any distance and time. at 5 weeks old. ' It will be interesting to our Farbusiness. Cannot some of our Farmers give an the following:account of their receipts from the same source? the quantity of butter made, &c, from the Doctor's statement, viz:

In May, 110 lbs. 2 oz.; June, 109 11; July, 93; August, 80 S, Sept. 101 S; Oct. 25th, 81 12; total 576 lbs 9 ozs.

On the 1st of Sept. another cow was added which including what was made the last week in April, to wit, 21 lbs. would make 597 lbs. 9 ozs. in 6 months Besides all this, milk and cream have been sold, to the amount of \$3, and a family of 16 persons furnished with milk and cream, worth at least \$1 a week, at 4 cents a quart, and pork fed to the amount of at least \$1. Not a pound of Butter

as sold for less than 1s. per pound.

IN RELATION TO WATERING AND FEEDING HORSES.

To prevent all inflammatory disorders arising from the too prevalent practice on the part of the inexperienced, in the use and application of the necessary and proper quantity of both food and from a tree which grew near Helzinborg, and water, to the comfort and preservation of their health and consequent usefulness-I subjoin the following unerring rules and directions, to secure and insure the health, vigor, and consequent utility of this most valuable and indispensable animal, to

When the horse is heated from any cause, great care should be taken while in that state, to allow him to take but a very small quantity of cold water at a time-say not more than two quarts, which may be repeated at intervals, during his meals, which should also be limited. New hay and corn should always be rejected, when pure hay and oats can be obtained; the natural and certain tendency of the introduction of either new or green hay, and Indian corn (in too great quantities) into the stomach of the horse, is to produce diseases in that organ, and consequently the derangement of his whole system; the animal is rendered therefore worse than uscless; for delays, and frequently further remedies are vainly sought for, because it too often happens, that from the ignorance of the operator, he adds tremes of moisture and dryness. To favor the forto the malady, instead of removing it.

At the Hartford County Agricultural Exhibition one quart of oats or dried corn, with a sprinkle of and Cattle Show, this fall, Doct. Samuel B. Wood salt, after his first draught of water, of two quarts. ward, of Wethersheld, had two Cows exhibited, These portions of each, water and food, may be one of which took the first premium, \$5. Dr repeated at discretion, during the reasonable, but days ago, that a Swiss, of his acquaintance, settled Woodward, in his letter to the Committee, says, necessary time for the rest of the animal, and you that on the 1st of May, he had three cows, one of may then with certainty and safety, pursue your

Recipe .- When the above directions are omitted, mers to know what Doctors can do in their line of and the bad effects are apparent, give the animal

Tincture of Benzoin, one onnce; Spirits of Am-We therefore publish the following statement of monia, one do; Aromatic Confection, half an ounce; Ginger one ounce. To be mixed in one quart of water. When a horse is over heated, this application will relieve him - and it may also be given with success, in cases where a horse is affected with cholic or gripes, flatulency in the stomach or intestines, mixed with a pint of warm oilto be repeated at every three hours until relieved. WM COOKE, Veterinary Surgeon.

> The Philadelphia papers mention a Grape vine growing near the banks of the Schuylkill in the township of Upper Merion, on the farm of Isaac Jones, which measures at several places between the root and the height of ten feet, from 30 to 35 inches in circumference. It is a curiosity worthy the attention of those persons who have doubts respecting the soil and climate of this country being favorable to the growth of the vine,

Names on Trees .- In the last number of Dr Brewster's Journal there is a curious paper on Inscriptions in Living Trees,' translated from the Swedish. Words or figures are often idly cut on trees; and the general opinion is, that they are soon obliterated by the growth of the wood, It appears however, from a number of examples cited that they are faithfully retained in the tree as long 15 75 as it endures; and that, if it is not seriously injured, 144 00 the number of concentric rings of wood found above the inscription will accurately denote the \$159 75 time when it was cut. Professor Laurell of the University of Lund, made two incriptions in two beech trees, in 1748. The one was opened in 1756, and had the inscription remaining, with eight rings of wood over it, the other in 1764, and had sixteen rings over it. Bishop Faxe sent lately to the museum of Lund two pieces of wood which, during the sawing and cleaning, separated in such a way, that the inscription stands right on the one piece but reversed on the other. It is 'F. M. d. 21, I. 1817.' but the letters and figures are placed below one another, in four lines. It was ent in 1828, and the incription was found to be covered with nine concentric layers of wood, the tenth being imperfect. Several other examples are given, but they are less precise.

> To prevent the rot or Mildew of Grapes .- Mr George J. F. Clark, in the Southern Agriculturist, supposes this disease of the fruit of the vine to arise | ty of this Province .- St John (N. B.) Guzette. from the root being too near the ground. A lew days of hot drying weather absorbs so great a portion of the moisture from the roots that, on return of a plentiful shower, they drink in the rain so copiously as to produce a repletion that results in the rot. Mr. C. says the vine, under favorable circumstances, has a strong propensity to form a tap root, which protects the vine from the exmation of this tap root, deep planting is requisite. wine, but merely as a fresh fruit in the market

Give your horse, (after, and while he is heated) Moderate watering of the plants in dry weather prevents exhaustion in a drought, and repletion on the return of rain. Mr. C. states the following:

A very inteligent friend informed me, a few in Missouri, plants his vines thus: he digs a ditch the length of a row, and three or four feet deep, and at the bottom of this ditch he plants long enttings, (eighteen or twenty inches,) a common depth below it. On the bottom of this ditch he scatters a little manure, and from time to time as his vines ascend, (which they do most vigorously,) he fills in the surface of the ground with the poorest earth he can get, (to discourage the growth of side roots, we may reasonably suppose, but a matter of no importance to our text,) and that their success is surprising; and no rot or mildew is known among them. The ends of his cuttings must lay four or five feet deep.'

. Irabian Horses. - Mr Rhind late Agent of ou government, has transported to this city from Co., stantinople, four Arabian stud horses. They are five or six years of age, and considerably smaller than our common horses. Two are sorrel, one gray, and the other bay. The last had been taker from the desert but a short time, and was pronounce ed the swiftest horse in the Turkish Capital,

Large Cucumbers .- A eucumber (the Bloor' White spine) was cut on the 8th of June in the garden of W. Hardman, Esq. of Chamber Hall near Bury, of the following dimensions :- Lengtl 26 in., girth 11 in., weight 5 lbs, 83 oz. It di. not appear overgrown, but in proper state for the

The Washington, N. C. Times, after an eigh months' publication, has been discontinued, be cause many people subscribed, not to pay but t encourage.

This is about equal to those who subscribe to er courage a printer to establish a paper, and the discontinue at the end of six months, leaving hir in the lurch with a large debt on his shoulders.

Geography of Boston. - Messrs Carter & Hende have published a little volume under this title, b the author of the History of Boston. It embraces description of the topography of the city, and of i principal buildings and other objects deserving notice, illustrated by cuts representing the prine pal buildings, and by maps of the city and of the adjoining country. It will be found a useful an agreeable work.

IMPROVEMENT OF STOCK .- We are informe that George Hazen, Esquire, of Sussex Vale, he now on his farm, a Bull Calf, of six months of which weighs 600 lbs,-and another of five month and seventeen days, which weighs 465 lbs. Th stock is of the short horned Durham breed, in ported a few years back by the Agricultural Soci

Grapes .- The Boston Transcript says that u wards of one hundred thousand pounds of grapare annually raised in that vicinity. We believe much larger quantity is raised near Philadelphi and have no doubt that if ten times as many we cultivated they would be found among the mo profitable production of a garden or farm. W do not refer to their use in the manufacture

mand a good price and meet a rapid sale .- U. S.

Cape Braccoli in Baltimore.—This most excellent vegetable has been quite common in our market, and is raised in great perfection. A day or two since a couple were presented to us by Mr Sanntel Feast, raised at his garden on the Frederick road, which surpassed any we had before seen, for size, firmness, and richness. We were so anxious to test their excellence by the palate, that we quite forgot the more scientific but more fallible tests of the rule and scale; but we do not overrate them in saying that they measured ten or twelve inches in diameter, exclusive of the leaves. They were of the improved purple kind.

Owing to the peculiarly favorable season, Brocoli and Cauliflowers, are cheap as well as plentiful in our markets, and thus many who have heretofore looked upon them as delicacies beyond their reach, have been enabled to try them; and hence a knowledge of their good qualities has been diffused, and the gardeners will be encouraged to extend the cultivation of them by an increased demand. We have seen fine large Cauliflowers and Broccoli sold at 64 cents, such as could seldom have been btained in any previous season for less than 125 ets, and such as we have often seen sold at 25 ents. -. Am. Furmer.

South Carolina Silk and its Manufacture.-We ave in our possession a pair of silk stockings, ne material of which was raised by Miss Harriet Vinn, of Winnsborough, in Fairfield District, and nit by that young lady's own hands; which every ne to whom we have shown them, pronounce urticularly beautiful. They are certainly beyond iv ideas that we had formed of the perfection hich this interesting culture had reached in outh Carolina. It is almost impossible to disignish them from the finest specimens of woven siery, and they entitle our fair friend to very cat praise for patriotism and ingenuity. Such a ecimen, in our opinion, settles the practicability silk cultivation in our state. - Camden Journal.

A correspondent says the domestic exports of ount to an equal sum, and furnish cargoes for many ships. Here the exports come from toil, I there from soil .- Palladium.

Cure for Bloating in Cattle.—The Volatile Spiof Ammonia is said to be used in France with at success in the cure of Bloating, a disease sing from excessive eating of green grass, 'Its ion is chemical, 'says the American Citizen, composing the gas generated in the stomach by nentation.' We suppose the gas generated is carbonic, and that the Ammonia does not dea water would not have the same effect.

Officers of the Horticultural Society of Rensselaer enty .- We perceive by the Troy Sentinel that society has gone into successful operation. e constitution and by-laws are substantially same as those of the New York and Albany

where, in their proper season they always com- President, Herman Knickerbacker, of Schagticoke; as a Professor in the New York Institution for the 3d Vice President, Richard P. Hart, of Troy; Instruction of the Deaf and Damb, in the vicinity 4th Vice President, John Carpenter, of Hoosie; of that city.-Baltimore Patriot. Corresponding Secretary, O. L. Holley, of Troy; Recording Secretary, . Abert P. Hearlt, of Troy; Treasurer, John Mc Coun, of Troy .-- V. Y. Farm.

> The Southern Review is discontinued for want of patronage. It has been in existence three years. Flint's Western Review, though ably conducted, has met a similar fate. Four newspapers have been discontinued in Maine within the last three weeks, viz. the Maine Gazette, Bath; the Thomaston Register, the Wiscassel Citizen and the Saco Palladium.

> A person called and left at our office vesterday, a Mammoth Pear, weighing, when taken from the tree, THIRTYFIVE OUNCES. It was raised by one of our subscribers, in Oley township, Berks county. The person who left the giant of fruit, did not inform us of the name of the person whose trees are thus gifted .- Conn. paper.

> Prince Edwards Island Cattle Show.—The P. E. Island Register of the 2d ult,, contains an account of the Annual Cattle Show held at Charlotte town, in the last week of October, at which the crowd of competitors far exceeded in number any former exhibition-while the specimens of stock and Agricultural produce displayed, proved the spirit of rivalry which is now animating the farming classes of the Island,

A Composition for the Shoes of Gardeners .- Take one pint of boiled linseed oil; two ounces yellow wax; one ounce Burgundy pitch; two ounces pirit of turpentine. Melt the ingredients well together, over a slow fire, and apply the composition to the shoes with an ordinary brush, repeating the operation as often as the ointment will dry in the sun.-This composition not only renders the shoes more impervious to wet, but preserves and gives a tone to the leather, and enables it afterwards to take an exceedingly fine polish from blacking. I would therefore, recommend its use, not only for strong shoes to gardeners, farmers, sportsmen, &c, who are obliged to be much exposed to the wet, but for shoes and boots in generuth Carolina to foreign countries amounted last al. The composition may be kept in an earthen hr to \$8,000,000; and he hopes to see the time cun or gallipot for a length of time, and laid by ien the domestic exports of Massachusetts will for use as occasion requires. - Gardener's Magazine.

Horticultural Society of Charleston, - A Society under the above title has recently been established at this place, the objects of which are, to effect an improvement in the culture of such vegetables and fruits as are now grown among us; to introduce new species and varieties, and to encourage a taste for Floriculture and ornamental gardening. The Society has determined on establishing an annual exhibition of vegetables, fruits and flowers, at which premiums will be awarded, for the best specimens. Also, for such others as cannot be apose but unites with it. We know not why exhibited at those seasons .- Southern Agriculturist.

In company with the Rev. Dr Milnor who has just returned to New York from Europe, is Mr Leon Vaysse, a Professor from the Royal Institution for Deaf mutes in Paris. Professor Vaysse comes with high recommendations from the Abbe Borce, Director of that Institution, and he brings nelius Lansing, of Lansingburgh; 2d Vice the Abbe Sicard. Mr Vaysse has been engaged it has by some been considered the best pear of its

Connecticut River Navigation .- A meeting was lately held at Hartford, consisting of citizens of that town, to consider the subject of the proposed steambout line up the Connecticut to Wells' river. A good spirit was manifested and half the stock allotted to that city was immediately taken up. The Haverhill N. H. Post says that when the steamboats are established the transportation for that part of the country will be done to and from N. Vork for \$15 a ton, whereas it now costs them \$40 to and from Boston, a saving of \$25 dollars per ton, or a premi-um of that amount to all who go to N. York instead of Boston as they do at present!

Rail Roads .-- The Rail Roads making in New Jersey, Pennsylvania and Maryland, and that projected from Baltimore to Washington, it is said will make a complete line from the Federal City to New-York --- 300 nules.

Cider .- As the time for laying in cider has come, I would observe that mustard seed put into new cider will keep it much better than any other thing I have tried. I put a half pint common mustard seed into a barrel of new cider last fall, and let it remain on the lees, without drawing off, until it was all used, and it kept perfectly sweet to the last-not the new sickly sweet, but more hke mellow old wine. The cider tasted a little of the mustard, but some gentlemen who drank it thought it was improved by it .- Vewburyport Herald.

We have heard several judicious persons who had tried the mustard seed, recommend it very highly .-

It is said that there were but 40 hours of clear weather in the whole month of November.

A Rarity.-A salmon was lately exhibited in doston market, suppossed to weigh nearly sixteen pounds, and estimated at \$25 value.

An old Standard .- There is a tavern house in Sudbury 114 years old. The first man who kept it as a public house, was Mr David Howe. He occupied it till his son, Mr Ezekiel Howe, took it in 1746. In 1776, the present secepant. Mr Adam Howe, succeeded his father in the same employment. In the same family there is a coat of arms, which has been handed down from generation to generation since 1606-also a silver spoon since 1619-besides a large table and other articles of household turniture since the erection of the house in

From Prince's Pomological Manual, now in press.

LONG ROSE-WATER. AUTH.

I adopt the above title for a pear received about eight years ago, from Paris under the name of Caillot resat, and I think it may possibly prove to be the German variety so called, and mentioned in the Pomological Magazine as a long fruit. The tree is remarkably vigorous in its growth, and its form is very regular and handsome. It last year produced fruit of a delicious quality; the pear was nearly as long as the Epargue, not so large at the base, and diminishing towards the stem; its color was green when gathered in October, but acquired a yellow hue when at maturity, which was in November or December. The flesh was very rich, juice, and high flavored; and although I had but one fruit, and did not therefore test its value as a keeping pear, I was highly gratified with it, and I deem it one of the very best of its season. I have as yet seen no description whereby to fully identify it; but the appearance of the tree is so characteristic, that it cannot readily be mistaken for any other, and it must without doubt be known to some of the numerous writers on the subject.

SUMMER MELTING. PR. CAT.

Fondante d'ete.

This is a tree of the most vigorous growth and ticultural Societies. The officers are, President, with him a knowledge of all the improvements in flourishing appearance, shooting erect into a stately D. Dickinson, of Troy; Ist Vice-President, the art of instructing mutes, since the death of form; the fruit is of fair size, ripens in August, and annually in fertility and the quantity of its produce may confer a favor upon more of your patrons but it attains considerable size before it produces than

I received the original tree of this variety in 1802, from a person then resident in Baltimore, who was very curious in fruits, and who had a number of French varieties of pears. It was on a quince stock and soon bore fruit, which was larger, handsomer, and more melting than any I have since had on pear stocks.

RED CHEEK, Pa. CAT. English red cheek. Pr. Cat. 25 ed.

This pear is cultivated at Rhode Island under the name given above as a synonyme, whence it was brought to Long Island. It is a bell shaped fruit, of a beautiful yellow color, with a red cheek; it is not quite as large as the St Michael or Virgalien,-is considered a very good fruit when not over ripe, and the tree bears well; it ripens at the latter part of August.

A tree imported from France, but whose name is unknown, has produced fruit precisely like the foregoing, and it is therefore most probable that the variety is of French origin.

MEW ENGLAND PARMER.

BOSTON, FRIDAY, DECEMBER 17, 1830.

LARGE HOGS.

Mr Alanson Sessions, of Cumberland, R. 1. on Tuesday last, sold to Messrs C. II, and II. BRACKETT, of the Boston Merchants' Hall Market, two hogs, one of which weighed 675 lbs, the other 645. The largest had not been able to get up alone for two months before he was killed.

Large Cabbages, -- Messrs Fenno and Payson, of Chelsea, Mass, have raised two Drumhead Cabbages this season, which weighed 25 lbs. each, after being divested of their stumps and outside leaves.

Quarterly Review .- Lilly & Wait, Court Street, Boston, have just re-published the 86th No. of this valuable Journal, which contains elaborate articles on the Decline of Science in England : on Credit Currency; on the Life of Bishop Heber; on the Principles of Geology; Southey's new edition of Bunyan's Pilgrim's Progress; on the Affairs of Greece; on an edition of the New Testament into the Negro-English language, by the Missionaries of the United Brethren; on the late affairs of France. Published quarterly, at \$5,00 per annum.

FOR THE NEW ENGLAND FARMER.

GLANDERS IN HORSES.

Mr. Fessenden-If consistent with the object of your useful paper, will you have the goodness ter. to answer the following questions:

- I. What are certain signs that a horse has the disorder called the glanders?
- 2. Is there any certain cure for this disorder? 3. If there be, by what means can it be effect-

I am acquainted with some things said to be put in operation by dogs, trained for the purpose. useful, and have employed them, but with very little success. I know of no cure; if there be

season. After it comes into bearing, it increases, fected. In answering the foregoing inquiries, you

Worcester County, Dec. 7, 1830.

Remarks by the Editor .- An obliging friend in this vicinity, who has the care of many horses, has furnished us with the following reply to the

Glanders, commonly called the Horse Distemper, is always accompanied with a discharge of matter from the nostrils, and a swelling of the glands under the throat. When the bones become rotten in that part, it is generally incurable-and this may be known by the bad smell which it produces in such cases; for the most part it is sure death; not one in a hundred recovers.

The treatment recommended in Gibson's Farriery for this disease, while in its first and second stages, is, to make use of purges, diaphoretics, and roweling in the hinder parts. We imagine that roweling in the breast will answer the same purpose. To clear the nostrils, Gibson recommends passing the fumes of burnt brimstone or burnt leather into the nose of the horse, and after the matter has been discharged, to syringe his nostrils with brandy or red wine. Afterwards, he says, a small quantity of Unguentum Egyptianum, dissolved in oil of turpentine, may be injected through a large pipe, for the purpose of cleansing the ulcerated parts. A particular account of this disease will be found in N. E. Farmer, v. S, p. 412.

STATE OF NEW YORK .- We gather from Mr Butler's Anniversary Discourse before the Albany Institute, the following interesting facts respecting the State of New York.

In 1790, the population was 340,000. It is now about 2 millions! Being an increase in 40 years of one million, six hundred and sixty thousand! There are in the state S nullion acres of improved land. The number of counties, separately organized is 55. There are 757 towns, 93 incorporated villages and 5 incorporated cities, one of which contains more than two hundred thousand inhabitants. The canal navigation constructed and owned by the state, is 484 miles, and 81 by an incorporated company. From salt springs in the state, nearly a million and a half-bushels of salt are made yearly. There are 1406 post offices-70 steam Loats-211 newspapers, 14 of them daily-214 incorporated manufacturing companies, and several hundred not incorporated-44 banks, and 53 insurance companies now in opperation-350 turopike and bridge companies-5 savings banks and a militis of nearly 200,000 .- N. E. C. Herald.

A composition for painting Wood, &c. - A respectable correspondent sent us the following recipe for the hay stacks and salt works in that county. a paint, which he says is durable and appears well

Rare Sport.—One young fool was shot in the breast, by another tool, near Camden, New Jersey, on the 26th one, I very much wish to know how it can be of October. They were firing at each other according to

A most remarkable case has occurred lately in Pennsylvania. A negro woman died sudd-nly; after she was put in the coffin, the sexton observed the sheet to move immediately above her hand. He thought much of it, and finally hit upon the idea that some slupifying poison might have been given her, and that she would come to after some hours or days. He knew that her husband was enamored of the sister of the deceased .-He inquired of the apothecaries and found that the husband had bought arsenic. The wife was disinterred, and arsenic found in her. The husband is sentenced to death.

Count de Survilliers, (Joseph Bonaparte) has sent to the editor of the New York Courrier des Etats Unis, the sum of one hundred dollars for the Spanish emigrants in that city and the same sum for tue funds of the French henevolent Society.

[The Count is engaged in a lawsuit to resist the running of a rail road through his fine garden and grounds. When a canal in China is required to go through the Emperor's gardens, he goes out at the head of the diggers, and lifting the first shovel full of his ground he says: This I do that all may learn to prefer public good to private pleasure.]

Turns in Trade .- A line of steamboats is about to be established from Wells river, Vermont, to Hartford, Con. and even to N. York city. If the project succeeds, the effect will be to divert the whole trade of Grafton and Coos counties to the New York and Hartford markets. Look to it, Bostonians! - Gaz.

The Board of Internal Improvement of North Carolina have reported in favor of an immediate appropriation of \$500,000 to public works.

It is stated that there are now seven millions of specie in the banks of New York. This is owing to the domestic trade-to manufactures and internal improve-

Germantown, Penn. Dec. 1-The Season.-A gentleman left at this office, on Saturday morning last, a ful grown Catharine Pear, of the second growth, which wa taken from a tree of Mr Peter Betchel, Sr. of Moun

On the 17th ult. there was for the first time this sea son, a heavy fall of snow at Quebec. The mountain between St Joachim and St Paul's Bay, were covered with snow on the 1st ult, and at the same time there we a fall of snow on the Catskill mountains and the border of Lake Champlain. A few flakes fell at Boston abou the same time.

The Portland and Louisville Canal, was to receive it water on Monday the 30th ult. and to be immediate! open for boats.

Domestic Goods .- The ship Emerald from Salem for Calcutta carried out 213 bates.

British navy employs no fewer than 52 Admirals; 6 Vice Admirals; 66 Rear Admirals; 32 Superannuate Rear Admirals; 20 Retired Captains; 809 Post Captain 544 Commanders; 98 Superannuated Commanders; Poor Knights of Windsor; no less than 3691 Lieutenant 540 masters; 353 Surgeons, and 668 Pursers, besides it numerable midshipmen.

There is a large fish supposed to be 20 feet long in Fla Pond, North Dennis, Barnstable county.

The late remarkably high tides did much damage t

Mr Rush has written a very excellent letter illustra ing and defending the American System. It was in re ply to a letter of the owners of the Philadelphia an Providence packets, who informed him that their freigh had increased in the last sixteen years 1200 per cent.

Steambouts .- It is stated in Silliman's Journal the 1500 persons have been killed in the U.S. by Stean boat explosions.

Commitments in Suffolk Jail for debt in 1830 .- The have been about 1000, mostly for debts under 20 dol

Thief eaught by Whiskey .- A negro broke into: store in Macon, Ga. and after filling a trunk or two wit goods, could not muster resolution enough to leave th store without taking a sample of the whiskey. The sample proved too powerful and the thicf was caught.

A Directory is about to be published in Lowell.

To Correspondents .- 'THE WANDERER,' No. 3, will appear next week. With regard to the subject on which 'A DELVER' writes, we always aim to be just and impartial; but his communication shows so much personal feeling and animosity that we cannot insert it. We have the best method of destroying and preventing the depreno relish for the bitter controversy to which its publication would inevitably lead.

Prime Orchard Grass Seed, &c.

For Sale at the New England Seed Store, No. 52 North Muket Street, Boston,

A few bushels of Prime Orchard Grass Seed, raised by the Hon. NATHAN NOVES, of Newburyport, expressly for this establishment. This is remarkably pure and fine, being wholly free from chaff, white weed, Canada thistle, or any weeds, as the grass was not mowed, but the heads cut off separately, received into a bag, and then spread on sheets to dry, before being threshed. Farmers who wish to seeme some of this seed, of the very first quality, are requested to apply soon.

Also, seeds of the Martynea Proboscidea, one of the finest articles for pickles. This is raised to much better

advantage by planting in the fall.

AARON TYLER, of Bath, Maine, having commenced an Establishment for the Promotion of Agriculture and Domestic Economy, and having made arrangements with Mr. J. R. Newell, and Mr. J. B. Russell, of the Agricultural Warehouse, Boston, for a supply of the most Improved Tools and Seeds, recommended by them as valuable and useful to be introduced-will be enabled to supply the farmers in Maine at the Boston prices, with the addition of freight. Persons on the Kennebec, and vicinity, will find it to their interest to call at Mr Tyler's establishment for their supply of farming Tools and Garden Seeds.

A. Tyler also tenders his services to the horticulturists and nursery men of Massachusetts and elsewhere, for the sale of all kinds of Trees, Vines, Plants, &c, and will be at all times ready to fill orders for the best of Forest Trees, from Maine, put up and packed properly

and shipped according to order.

A. T. flatters himself by close application and assiduous attention to the above objects, that he shall be enabled to give satisfaction to the public, and be a means of introduing into Maine many valuable productions, heretofore inknown, and thereby be a source of improvement to the griculturist, and of gratification to himself.

A. T. also tenders his services for the sale of Improved

Breeds of Cattle and Sheep.
WANTED, a full blooded Bull, 3 or 4 years old, con-

aining the best breeds for Milk and Oxen.

Letters (post paid) will receive prompt attention. Refer to Hon. JOSEPH WINGATE, Bath,

" 11. A. S. Dearborn, Roxbury, Dec. 10. epotf.

Farmers and Mechanics

BRIGHTON MARKET .- Monday, Dec. 13. [Reported for the Chronicle and Patriot.]

At market, this day, 1128 Cattle, 4102 Sheep, and 945 Swine.

PRICES. - A small gradual rise has been effected today and last Monday, which fixes the price about the same that it was four weeks since, probably a little better on good Cattle.

Beef Cattle-From \$3,37\frac{1}{2} to 4,62\frac{1}{2}; a few extra voke were taken at 4,75.

Barrelling Cuttle-Mess, \$3,42 a 3,50; No. 1, 3; No. 2. Sheep .- A large proportion of which were pelt sheep,

and the prices low; we noticed one lot taken at \$1,121, one at 1.17, and one at 1.25; lots at 1,42, 1,50 and 1.75; we also noticed one lot of 170 whethers taken at \$3,25.

Swine .- Sales not so brisk, and prices about the same ; we noticed the sale of one lot of 50 barrows at 5 c.; also one lot of about 60 sows and barrows at 44 c.; retail price 5c. for sows, and 6c. for barrows.

MISCELLANIES.

CURIOUS FACT IN NATURAL HISTORY.

WILD GOOSE (. Inas Canadensis.) The Canada Wild Goose (says Wilson) is now domesticated in numerous quarters of the country, and it is remarkable for being extremely watchful, and more sensible of approaching changes in the atmost phere than the common gray goose, with which they readily pair, the female always seeking out the most solitary place for her nest not far from the these birds discover symptoms of great uneasiness, frequently looking up into the air, and attempting to go off. Some whose wings have been could find fit for the purpose.-Roscoe's Leo X. cut, have travelled on foot in a northern direction several miles from home. They hail every flock that passes overhead, and the salute is sure to be returned by the voyagers, who are only prevented from alighting by the presence and habitations of man. The strong disposition of wounded wild geese to migrate to the north in spring. When Prussia, painted, or fancied he painted; but his works their wounds have healed, induces them sometimes to mount into the higher regions of the air and join the passing parties to the north, and extraordinary as it may appear to return again the succeeding spring.

In corroboration of the above the following circumstance was related to me, by an old gentleman, belonging to the family of Shakers at Alfred. He observed, that a neighbor of his, a few years since, having upon his farm a female wild goose, which he had kept some time, seeing in the spring a flock taking their accustomed flight to the north, and, actuated by that strong instinct of migratory birds, immediately joined his old associates and dissappeared. The fall following, as the goese were returning to their winter quarters, he was surprised to find one morning, that the identical goose which left him in the spring had returned with three others which he presumed were her young.—Salem Observer.

The Marquis Marbois in the introduction to his history of Louisiana speaks thus of the supreme tribunal of our country.

· There is at Washington a power which has neither guards, nor palaces, nor treasures; it is neither surrounded by clerks nor overloaded with records. It has for its arms only truth and wisdom. Its magnificence consists in its justice and in the publicity of its acts. This power is called the Supreme Court of the United States,'

Specie-The New York Journal of Commerce says-It is estimated, by those who understand such matters, that the Banks in that city have now on hand seven millions of dollars in specie and it continges to flow in from all quarters. The vaults are already overflowing, and some of the Banks will soon be compelled to rent larger accommodations, in which to store their redundant barrels of dollars. The legal interest ou this mass of idle capital, would be almost half a million annually.

Bestow thy youth so that thou mayest have comfort to remember it, when it hath forsaken thee and not sigh and grieve at the account thereof. While thou art young thou will think it will never have an end; but behold, the longest day hath its evening, and that thou shalt enjoy it but once, that it never turns again; use it therefore as the spring time, which soon departeth, and wherein thon

Law. - Horne Tooke used to say, that law, in his opinion, ought not to be a luxury for the rich but a remedy to the poor. When told that the course of justice was open to all, he replied so is the London Tavern, to such as can pay their entertainment,

Imperia, the Lais of Modern Rome, like her Grecian prototype, found Princes anxious for favors. The splendor with which she received her visitor has never been surpassed. Such was the elegance of her apartments, that the Ambassador water. On the approach of every spring however of the Spanish monarch, on a visit he paid her, spat in the face of one of the servants, excusing himself by observing, that it was the only place he

> The following sign may be seen in Salisbury Eng.—'Table bear sold hear,' A wag asked if the bear was the man's own brain.

REWARD OF FLATTERY

Frederick William, father of Frederic the Great of were mere daubs. Such, however, was not the language of his courtiers, when descanting on the merits of the royal Apelles. On one occasion his Majesty favored them with the sight of a new specimen. "Suppose," said the King, 'that some great painter, Rubens or Raphael, for instance, had painted this picture; do you think it would fetch a considerable price? 'Sire,' replied the Baron de Polnitz, who passesd for the most practised and the most obsequious of his Majesty's courtiers, '1 assure your Majesty that a connoisseur could not offer less for such a picture than 25,000 florins.' 'Well, then. baron,' cried the gratified monarch, ' you shall receive a proof of my munificence. Take the picture for 5,000 florins, which you shall pay me in ready money; and as I wish to render you a service, you have my permission ' Ah, sire,' cried the Baron, who was to sell it again." fairly caught in his own snare, 'I can never consent to take advantage of your majesty's generosity.' 'No reply,' said the King; 'I know that I make you a handsome present, by which you will gain 15,000 florus or But your zeal for my interest has been proved, and I owe you some recompense. Your love for the arts as well as your attachment to my person, entitle you to this mark of my esteem."

INSTINCT OF THE DOG.

At a Convent in France, where twenty paupers were served with dinner every day at a certain hour, a dog, belonging to the Convent, did not fail to be present at the repast, to receive the orts and ends, which were now and then thrown to him. The guests however, were poor, and hungry, and of course not disposed to be wasteful; so that the dog did little more than scent the feast, of which he would have fain partaken. The portions were served by a person at the ringing of a bell, and delivered out, by means of what is there called a Tour; which is a machine like the section of a cask, and, by turning round upon a pivot, exhibits whatever is placed on the hollow side, without discovering the person who

One day, this do2, who had received only a few seraps, waited till the paupers were all gone, then took the rope in his mouth, and rung the bell. The stratagem succeeded. He repeated it the next day, with the same good fortune. At length, the cook finding that twentyone portions were given out, instead of twenty, determined to discover the trick; in doing which he had no great difficulty; for placing himself where he could see, without being seen, and perceiving all the paupers, as they came in great regularity for their different portions. and that there was no intruder except the dog, he began to suspect the real truth, which he was presently confirmed in. The dog waited till the visiters were all gone, and then deliberately walked up, and pulled the bell .-The matter was related to the community, and to reward him for his ingenuity, he was permitted to ring the bell every day for his dinner, when a mess of broken victuals was regularly served out to him .- Youth's Keepsake.

Two youths lately fought a duel at New Orleans, first with swords; but neither falling, they took pistols and oughtest to plant and sow all provisions for a long and happy life.—[Sir Walter Raleigh to his Son.] exchanged shots without effect; then resumed their Augustu, Me. Wm. Mann. swords and both fell, one to expire in a few seconds, and Indiffact, N. S.—P. J. Holland, Esq. Recorder Office. the other as it is supposed in a few days.

Durham Short Horns.

For sale, several of the pure breed, descendants of the celebrated animals presented by ADMIRAL SIR ISAAC COFFIN, to the Massachusetts Society for the Promotion of Agriculture. The pedigree of these animals can be given as far back as Hubback, who was calved in 1777, and is reputed the foundation of this much admired stock. Also, several Heifers bred from the same, of various grades, from half up to seven eighths blooded animals, for particulars, inquire of E. Hersey Dorby, Salem. Salem, October, 1830.

Bolivar Calves, Saxony Bucks, and Bremen Geese. For sale, 4 Bull Calves, sired by the celebrated imported improved Durham short horned bull Bolivar, which stock have produced 36 quarts of milk a day. No. 1, dam Grey Brown, half Colebs and half Galloway. No. 2, dam Juno, three fourths Fill Pail. No. 3, dam Ceres, her sire Codebs, her dam Mr Gray's imported Cow. No. 4, dam Beauty, half Colebs and balf Galloway. The Calves are beautiful, and their dams all great milkers.

Two imported Saxony Bucks, 2 Yearlings, and 2 Lambs. 3 pairs of Bremen Geese. Inquire of Benjamin Shurtlett, Jr, Chelsea, or at 52 Hanover Street, Boston. July 9.

Culture of Silk.

For sale at the Seed Store connected with the New England Farmer, 52 North Market-street-

Essays on American Silk, and the best means of rendering it a source of individual and national wealth; with Directions to Farmers for raising Silk Worms -By John D'Homergue, Silk Manufacturer, and Peter S. Du Ponccau -Price 621 cents.

Also, Directions for the Rearing of Silk Worms, and the Culture of the White Mulberry Tree. Published by the Pennsylvania Society associated for the Promotion of those objects, (on excellent, plain, practical work.)-Price 25 cents.

Catawba Grape Vines.

THE GENUINE SORT. For sale at the New England Seed Store, No. 52 North Market-street-

50 Vines of the true Catawba Grape, one year old, price 75 ets. each. This is one of the best native, table or wine Grapes cultivated; the bunches large, with shoulders, very thickly set, with large berries of a pale red or lifae color, and in some situations covered with a beautiful bloom, giving them a blueish purple appearance They have a slight musky taste, and delicate flavor, They have a thin skin, very little pulp, are perfectly hardy, and surpass most of the native grapes that have beer exhibited at the Hall of the Massachusetts Horticultural Society, the two past seasons. The pulp diminishes and almost disappears when they are left on the vine till they attain to perfect maturity. The vines are great bearers. one vine in Mrs Schell's garden, in Clarksburg, Maryland, has produced eight bushels of grapes in one season -and eleven younger vines in the garden of Joshua Johnson, Esq. of the same State, have produced in one season son, Esq. of the same state, nave produced in one scassification withing bushels of fruit. A particular history and description of this fine grape will be found in Prince's new Treatise on the Vine, just published. There can be no mistake with regard to the identity of the above vines, as they are all from the garden of Mr Seaver, who raised the first Catawba Grapes ever exhibited in Massachusetts

Silk Cocoons wanted.

Cash and a fair price will be given at the New England Seed Store, No. 52 North Market Street, for about 20 lbs of prime Silk Cocoons, to be delivered soon. 21 Nov. 26.

NEW ENGLAND FARMER.

PUBLISHED BY J. B. RUSSELL, AT NO. 52 NORTH MARKET STREET, 🌉 THE AGRICULTURAL WAREHOUSE.)—T. G. FESSENDEN, EDITOR.

VOL. IX.

BOSTON, FRIDAY, DECEMBER 24, 1830.

No. 23.

LEUUTOULUU.

FOR THE NEW ENGLAND FARMER.

MR EDITOR-I sometimes make extracts and notes when I read. I send you a sheet of these, which you are at liberty to dispose of at the time, and in the manner, you deem proper.

Respectfully yours,

Albany. Dec. 9, 1830.

J. BUEL.

PLANTING .- HEALING WOUNDS IN TREES.

'I have adopted a system of planting,' says Mr Braikie, an eminent landscape gardener, by which I can remove trees at all scasons. As soon as they are taken up, I dip their roots in a puddle of wowdung and loam, which preserves their fibres rom the influence of the air. When this practice s adopted in the winter season, the plants may be ent to any distance, or kept out of the ground or weeks (in the climate of France) without the lightest injury; and I have frequently transplant-I trees in the heat of summer by this precaution, ad with perfect success,' The cowdung is othwise beneficial than by preventing the roots from e influence of the air. It is not only nutritive the plant, but the most healing salve for the ounds of vegetables that I know of. It excels prsyth's celebrated composition, with the adntage that it costs nothing, and is always at hand. hen applied to fresh wounds, and secured by a ght bandage, it almost invariably effects a cure,

SALT, AS A MANURE.

The testimony of eminent men in favor of aping salt as a manure is so strong as to shake opinion of the most sceptical. Lord Bacca ommends it for the bect, and the garden genery; G. Sinclair for the earrot; the Rev. Mr twright for potatoes; Sir T. Auckland for manwurtzel; several for flax and asparagus; Hogg, florist, for bulbs, particularly the hyacinta: wch latter he declares will never grow well at stance from the sea without it. The Dutch sts, who flower the hyacinth in great perfec-, and who supply half the world with its bubs, at a mode of culture which strengthens Mr I g's opinion of the efficacy of salt. They raise a where the water (which I presume is salire) des within two feet of the surface, the upper this of the beds being entirely of sand. This at does not bloom well in the interior, and I a naking an experiment to ascertain how far it be improved by salt.

uths are found in vegetables; but whether

ful experiments would probably show a like result the ground frequently about one part, and leaving in regard to the other earths.

WHEAT.

I some years ago ventured an opinion, in the New England Farmer, as to the cause of wheat not producing well on the premature soils of New England, viz. because these soils did not contain anything which had been animal matter, or any material which would afford nitrogen, an essential element of the gluten of wheat; and I suggested that this deficiency might be supplied by animal matters, as bones, horns, hair, soap boilers' waste, manure from a slaughter house, urine, &c. If any gentleman has made a satisfactory experiment, by which to test the correctness of this opinion, or can give any information in relation to its soundness, from his observation or experience, he will confer a particular favor by communicating the result through your paper.

STIRRING LAND IN WARM WEATHER.

Withers says, in his Memoirs on Planting, and he says truly, that 'stirring land in dry weather, is the only effectual method of keeping it in a moist state.' Thus many err in not stirring the ground among their crops, because the weather is too dry; others delay the operation of hoeing, to the prejudice of their crop, lest by destroying the weeds they expose the soil to the more severe influence of the sun and drought. The reverse happens. Weeds exhaust the moisture of the soil. The evaporation caused by them is in the ratio of the entire superficial surface of their leaves and stems. The best precaution against drought is to keep lands rich, elear and light.

Although I concur with Mr Withers, as to the effect of stirring land in dry weather, I do not wholly agree with him as to the governing cause of that effect. He imputes it wholly to the loose mould detached by the hoe operating as a shade to the soil beneath-I ascribe it to the combined influence of heat, light, air and moisture, to which stirring renders the soil more permiable. Heat rarefies the moisture in the subsoil, and induces it to ascend to the upper stratum. In the dark no oxygen is given off by plants, nor carbonic acid gas absorbed, processes indispensable to healthy vegetation; and roots are the main organs of absorption. The atmosphere contains prepared food for vegetables, as well as moisture, at all times; it penetrates a loose soil freely, and the roots seize and appropriate that which is congenial to their wants. Dows falling upon a hard surface, remain. constitute a part of their proper food, is yet and are evaporated by the morning sun. They tter of dispute. Sanssure's experiments go fall upon a stirred soil as upon a spenge; are imr to prove the negative. He analyzed the mediately disseminated through the surrounding of two pinus abies, (spruce) one growing or mass, and impart vigor to the plant ere they are nite, and the other on a calcareous soil. It dissipated by the morning. Books afford numeharts of the first, he found 13 of silex, 15 o' rous instances of working the ground among una, and 46 of carbonate of lime. In 100 crops in dry weather. Curwen grew cabbages to of the latter, no silex, 16 of alumina, and the weight of 50 and 60 pounds each, and he asat carbonate of lime. Hence it would seem, cribed their uncommon size to the beneficial ef-

ty of the soil in which it was found growing. Care- half a dozen cabbages or hills of corn, by stirring the other unloosed, in dry weather.

TREES.

It is a custom in Turkey, says Dr Walsh, to plant a platarnus orientalis (buttonwood tree) on the birth of a son, and a cypress on the death of one. Were this custom adopted in the United States, it would give us, at the end of forty years, about twenty millions of trees more than we shall then probably have; a consideration of no mean importance to posterity. And were the trees to be planted by the road side, most of our public highways would at the end of the period be converted into delightful avenues. Let it be remembered that the road from Strasburgh to Munich, a distance of 250 miles, is already an avenue of fruit trees.

It is an axiom of Mr Knight, that all vegetables which require to be left in a state of inactivity during winter, vegetate sooner in spring, if that state of inactivity is brought on sooner in autumn. Salisbury cites a case which strongly verifies this rule, in regard to the grape. A vine of the Munier, in Yorkshire, bore 1000 to 2000 bunches of fruit annually, not twenty of which were ripened in a season, under ordinary management. The vine was pruned and stripped of its leaves, on the 20th of Sept., seven years in succession; after which it ripened half a crop in ordinary, and a whole crop in warm weather.

EFFECTS OF POISON ON VEGETABLE LIFE.

Marcet of Geneva, instituted a set of experiments to ascertain the effect of poisons upon vegetables. By eausing plants to grow in poisonous mixtures, or by introducing poisons into their systeni, it was found that the effect upon vegetation was nearly the same as upon the functions of ani-

The excrescences upon the plum and Morello cherry are no doubt caused by the poison of insects. The blight of the pear, and I may add of the apple and quince, will ultimately be traced to a like cause. How far acids and alkalies, by a topical application, might serve as a preventive or antidote, remaius to be tried.

DISEASE IN FRUIT TREES.

My observations upon the pear, the past season, have been many and close; and yet I can adopt neither the conclusions of Dr Fiske or Professor Peck, although their opinions are entitled to great weight. The seat of the disease seems to be in the elaborated sap, or inner bark; and to progress towards the root; and although I have found insects in my examinations, and traces of them in the diseased bark, yet I never could fix upon any species as the authors of the mischief. nor decide whether they were the cause or consequence of disease.

În grass grounds my apple trees have almost wilex was not necessary to the growth of this feets of keeping a boy and plough almost constant. wholly escaped injury; while in an orchard that is; and that its presence in the first experiment ly at work among them. Experience is the hest has been several years under the plough, almost enerely adventitious, resulting from the quali- teacher. Let the farmer test the axiom upon every apple and pear tree has been more or less

affected, and some of the pears entirely destroyed. In cutting in the affected branches or tops, which I did thrice during the summer, I always found the cambium colored below the point where the outer bark seemed to be sound and healthy. I endeavored always to cut below the disease, though I often failed, as seemed from its subsequently reappearing below. Until this year, the attack has been confined to the limbs; but now it has appeared on the trunks, particularly of the pear. In looking over my orchard in Sept., I discovered half a dozen trees, (the limbs and leaves of which appeared to be luxuriant and healthy,) with circles of bark on the trunk perfectly dead, at greater or less heights, but generally extending to the ground. The pears in the nursery, not eighty rods from these trees, remain wholly unaffected.

APHIS LANIGERA.

This insect is becoming very troublesome on our apple trees, and every hint therefore, which promises to be beneficial, is entited to attention. John Adams writes, in the Gardener's Magazine, that spirits of turpentine, applied with a brush, will destroy them. A. W. in the same Magazine, found strong old urine equally efficacious. Another correspondent professes to have found an anti-dote to the evil in soft soap. Oil has been recommended. I have tried it. It drives the aphis from the trunk and branches, and probably kills many; but they are found to exist in numbers on the roots, when it is difficult to reach them with any topical application.

TRANSPLANTING.

Withers planted five acres with forest trees by pitting, i.e. I suppose, by merely raising earth enough to cover the roots. In five years all died but a few Scotch pines. He trenched half an acre, and planted it with trees also. In seven years, the last were superior to trees planted eight years before them in the common way. Although we do not plant forests, these facts afford a lesson in planting our orchards and gardens. A tree, like a melon or putato, will repay for good soil, and wants rich mellow earth under and at the extremity of its roots, as well as upon them, to enable it to thrive well, and into which it can push its tender roots, and obtain food. The hole or pit for a tree, therefore, should not be less than three feet in diameter, and two feet deep, and filled, upon the very surface, with good surface mould. The extra cost will be from two to four cents each, and the benefit twice as many shillings.

AL A NEED TO

Their management and application are so essential to good farming, that I could almost venture to decide a man's character as an agriculturist by his practice in managing them. They are as essential to good crops as hay and grain are to good cattle. Every vegetable substance may be converted into manure, or food for other vegetables. Animal substances contain this food in a concentrated form. I have thought horns and hones particularly valuable as fertilizers of the soil. A load of comb maker's shavings will feed as many plants as twenty loads of barn yard dung. I have this year applied thirty loads of feelings, soil, which, when the misrory is placed near to the dwelling, may be attended to with advantage, while dinner is heating or cooling, as the case might be more successive the process is daily and constantly instructive. Skill and industry might be more successfully introduce many kindred objects be reared. This can be done by cuttings. But be reared. This can be done by cuttings. But so easy and certain is the process, that I learned of a cultivator in or near Mansfield, that he found a benefit in raising and selling the growth of a gar. But there are many other trees, shrubs, &c, which, when the nursery is placed near to the dwelling, may be attended to with advantage, while dinner is heating or cooling, as the case might be mere exceeding the annule.

Three prominent errors prevail in regard to the management of cattle dung. Nearly a moisty is lost in the urine which is wasted. Half of the fertilizing properties of the remainder escapes in the form of gas, from the fermenting dungheap is account of the manner in which he, in a short time, in the form of gas, from the fermenting dungheap is account of the manner in which he, in a short time, in the form of gas, from the fermenting dungheap is account of the manner in which he, in a short time, in the form of gas, from the fermenting dungheap is account of the manner in which he, in a short time, in the form of gas, from the fermenting dungheap is account of the manner in which he, in a short time, in the form of gas, from the fermenting dungheap is account of the manner in which he, in a short time, in the form of a most valuable orchard. This, I was by since it is applied in the field; and a third error consists in applying it as top dressings, or to small him furtied to visit, with that look that success in grains, instead of lood erops. Yet I have witnessed its good effects upon stiff clays, when spread and harrowed in with the seed. Here its growth and in a fine bearing state. It was but effects were partly mechanical, in protecting the surface from the effects of sudden alternations of heat and cold, which are extremely prejudicial in his cow-yard, and upon carting it out in the to the wheat crop upon such soils.

THE WANDERER-NO. III.

The silent process of industry and accumulation is too often thought wonderful; it is difficult sufficiently to realize it; and when thrift, the invariable consequence, occurs, something out of the common course of events is looked for, and any but the true reason given for an enviable prosperity. We often see calculations showing that what is spent in one and another useless object would, if prudently reserved and applied, give a degree of independence. To favor the habit of industry, to give facility to improvement and skill in agriculture, I know no object more important than the GAR-DEN. There is herein comprised so many of the comforts and conveniences of life, that little need be said to show it. The capacity of production in a rood or quarter of an acre of land is, on poetic authority, supposed equal to the sustenance of one person,

'A time there was, ere England's griefs began, When every rood of ground sustained its man.'

Without contending for the capacity of production here stated, it is yet difficult sufficiently to estimate all the advantages, that may be derived from the high culture of a small spot of land. A constant recurrence may be had for every luxury from the early green to the latest vegetables. The careful housewife supersedes a call on the apothecary by many a salutary herb there raised. and I was told by a prudent farmer, that the females of his family brought the doctor of the parish considerably into debt by the Rhubarb and Opium they sold him. The former is easily cultivated, and the latter is had in a simple process by an incision on the calyx or under part of the poppy flowers and a collection of what exudes, That these and many other benefits may be derived from the garden, by those disposed to apply to this useful occupation, there can be no doubt. From the flower-bed onward, much is due to female industry and taste. The art of husbandry is here taught in miniature and the process is daily and constantly instructive. Skill and industry might successfully introduce many kindred objects -to wit, a nursery for trees. The mulberry may be reared. This can be done by cuttings. But by the seed there is so excessive a production, and so easy and certain is the process, that I learned of a cultivator in or near Mansfield, that he found a benefit in raising and selling the growth of a year at the rate of \$5 a thousand, or half a cent each. The seed is of little value after one year's age. But there are many other trees, shrubs, &c. which, when the nursery is placed near to the dwelling, may be attended to with advantage. might be, mere especially the apple,

I have been led to this course of observation, him invited to visit, with that look that success in skill and industry may well allow. The trees were thrifty, the bark smooth, and all of nearly a growth, and in a fine bearing state. It was but natural to be pleased and to lend an car to the in his cow-yard, and upon carting it out in the spring of the year, after spreading it, he observed the seeds to vegetate on the surface of the green sward. These he took up and set out in rows in his garden, a considerable number of them. The thrift of the trees induced him to prepare a piece of land of about 3 acres, overrun with bushes and unproductive, for their reception. The land was kept up for a time, and when laid down, the trees were carefully hoed round, and the surface lightened by the fork. I think there can be few instances of enterprize and application better displayed or rewarded-and as the orchard is on the road, the traveller must be frequently gratified with so luxuriant a view. Upon inquiry what the fruit was, he answered with great satisfaction 'every one a Baldwin.'

I was much pleased to learn that the Massachusetts Agricultural Society had awarded to this skilful farmer a premium which was well merited There was more compost or summer manure pu around the trees than is usual-seven shovels ful had been applied in the fall, and this makes it the more necessary to stir the surface to preven weeds &c. True it is, as some of your respecte correspondents observe, deep and injudicious dig ing may do an injury. But a young orchard rare ly flourishes in a grass sward. It requires care ful attention, as herein exhibited, and the resu will be alike certain to all. There are instance of great production from an orchard of well se lected fruit. A husbandman, nearly 20 mile from Boston, during the last season, pointed to small spot, of less than an acre probably, and of served, that for the fruit gathered from the fe young trees I saw there, he had received 58 dc lars. They were on a light soil, set out on sma round stones, as has been often stated in your usful Journal. Let those who have not this advatave, be persuaded to set about it; let them answe this question, llow far will a fine orchard of graft; fruit, and near their buildings add to the value their Farms?

CULTURE OF SILK IN THE U. STATES There can no longer remain a doubt of th practicability of making silk a principal stap production of this country. The experiment h been tried to an extent sufficient to settle the que tion as to practicability; and as to profitablenes it searcely requires the test of experiment-its pr fits will be almost a clear gain to the country; f it will neither divert capital nor labor from the present employment; there being very little of the former required, and the latter being chiefly to ! taken from those classes that are now idle and II productive. It will, besides, bring into use the lands which by nature or mistaken management a now totally unproductive; there are millions acresof this 'oldfield,' waste land, in the U. State and much of it in the most thickly settled state which may be occupied with mulberry orchards, and thus rendered profitable. There can be no doubt, therefore, of the policy of introducing the culture of silk.

Much has been said and published relative to the policy of the government encouraging the silk culture. Indeed, we fear that individual enterprise has been weakened in this way; for there is nothing in political economy cleaver than the policy of leaving to individual enterprize, that which it is capable of accomplishing; and extending the strong arm of the government to the aid of that only which requires the assistance of Hercules. Any prospect of aid from government before individuals have tried their strength, is sure to encourage a dependence upon government and thence a relaxation of individual energy. In the matter before us we have no doubt of the competency of individual enterprise to the introduction of the silk culture to the fullest desirable extent in the course of time; and with a trifling aid from government, in a few years. But on the mode by which this aid is to be given depends all its efficiency. We have reflected long and deeply upon this subject; we have investigated it in all its bearings; added experiment to theory, and brought to bear on these the lights of history. If we have read of governments engaged in establishing silk factories, we have found them so in times and under circumstances far different from ours-when art was mystery; when the light of science was mere moonshine on a blasted heath; when the people served governments; and when nothing less than the purse of a government could purchase the ment of its advantages in this respect. secrets of an art. We could not cite precedents like these of our own times and especially our own country. Here the arts are at the command of all, and all are capable of applying them to the great purposes of their existence. Here governments are instituted for the service of the governed, and the people are the recipients of every public good. The art of silk-making is not now a secret which one king must purchase of another; but a simple process susceptible of acquirement by every human being of common intelligence. Hence the power of government is not now necessary to the introduction of the silk culture, whatever it may have been in the times and under the circumstances alluded to. And yet, a judicious extension of governmental aid would facilitate and hasten the object. But, we repeat, on the mode of this aid must depend its efficiency, and probably the question whether it will not prove positively detrimental, by causing a relaxation of individual

We think the proposition at the last session of Congress, to give to an individual forty thousand reeling silk, the most injudicious mode that could produce. be adopted for the attainment of the object. It would paralyse all other individual efforts-first by discouraging them, and secondly by creating a monopoly against which no other establishment could contend. It would fail of its object, because no young men in the different states, would be them. found able, or if able, willing, to incur the expense of travelling to and fro, board, &c, to attend two annual courses of tuition of five months each in a distant city, for an object so easily attainable at home. It would be impolitic and unjust, because it excludes competition in the pursuit of its advanif in no other respect objectionable, it is untimely, also exhibited, the Improved Silk Reel, by means wools went off very briskly .- London paper.

and will utterly fail of its object; on this account of which, silk was extracted from the cocoons it would be like a farmer preparing to make cider with great case and despatch, and which was of before he had planted his orchard. There is an abundance of knowledge of the silk business in the United States to work all the raw material that can be produced by our present supply of mulberry trees, and by the time the orchards now planting shall come into use, our knowledge of the art will become sufficiently extended for their

The only mode of government patronage which we think at all admissible, in addition to that now offered by the duties on the imported article, is that of bounty. Let government appropriate the forty thousand dollars as a bounty fund, to be paid for the cultivation of mulberry trees and the production of silk, and it will call into action more silk reels than five hundred such appropriations where individual competition is excluded. The details of such a mode of encouragement are simple. To every individual who should prove to the satisfaction of the government, that he had planted out an orchard of one thousand mulberry trees with a view to the cultivation of silk, let a bounty of fifty dollars be given, and to him who shall freezes at 32 deg. salt water at 28 Fahren. prove in like manner that he had made one or more pounds of merchantable silk, let five dollars for every pound be paid, or a sum in proporture and would facilitate its introduction. Besides all who have contributed to the support of the government, would have a chance for the enjoy-

There is another plan of encouraging the silk culture which we have long intended to recommend, and which we think better of, even than the last suggested-it is in its detail the same as the above, but a measure of the individual states. Some state legislatures have had the subject before them, but none have acted upon it with sufficient energy to lead to any efficient result, Maryland and Delaware, above all, should act upon it without delay. But let them and all other states beware of any other mode than that of bounty, above suggested; for they may be assured alone all enterprises of this kind must in the nature of things depend .- Am, Farmer.

CULTURE OF SILK.

We have had the pleasure of attending an interesting course of Lectures in this town, during the past week, by J. H. Cobb, Esq. of Dedham, dollars to instruct sixty young men in the art of Mass, on subjects connected with this valuable The heat of the wire will preserve the fluidity of

> The course consisted of four lectures, which were given in four successive evenings, as follows:

- 1. On the history of silk and the importance
- of its culture in the United States. 2. On Silk Worms, and the art of rearing
 - 3. On the culture of the Mulberry Tree.
- 4. On the art of Reeling and Manufacturing

hibition of Silk, in its various stages of prepar-

excellent quality, the thread being even and uniform. The premium of the Massachusetts Agricultural Society, was awarded to the Proprietor of this reel.

Mr C, demonstrated with great clearness and accuracy, the profits which had been and might be derived from this business, and made it very apparent, that if the White Mulberry should be cultivated on the sides of the streets and lanes in this town, the leaves of the trees with little care and attention on the part of the inhabitants, might in a few years, yield more profits than would be sufficient to pay the whole town expenses.

We understand that a number of our enterprising citizens are about engaging in the above business,-Warren R. I. Star.

Freezing of Water .- The expansion of water in freezing has often split rocks and trees. According to some calculations, a spherule of water I inch in diameter, expands in freezing with a force equal to the resistance of 135 tons weight. Fresh water

An animal might be frozen to death in the heat of summer, when exposed to the rays of the sun, or in the shade by repeatedly sprinkling ether upon tion to the value of the kind of silk produced. it. Its evaporation would soon carry off the vital This would be real encouragement to the silk cul- heat and produce death. Water thrown on hot iron, acts in the same way; it becomes instantaneously converted into vapor, and this deprives the iron of a great portion of the caloric it contains. We cannot increase the heat of boiling water, for when it reaches that point, the vapor or steam absorbs the heat, and carries it off as fast as it is generated. Substances usually become more dense by the loss of caloric, but the freezing of the water is a striking exception to this law of nature, showing the provident care of the Almighty, when he established the laws of matter.

Ice Boxes, made with strong double casing at the sides and bottom, leaving an opening of three quarters of an inch in width, all the way round, to be filled with powdered charcoal rammed in tight, that any money given for this object in any other the bottom sloping so as to let the water run off way than that of bounty will be absolutely thrown through a small aperture, and the top made very away, and probably act detrimentally, by causing tight, to shut down close, with an intermediate or a relaxation of individual exertion, on which middle shelf, is a great preserver of ice and provis-

> Economical Lamp .- In the absence of lamp oil, you will find that hogslard, which is always at hand, will serve as a make shift, if you insert a piece of knitting needle along side of the wick, that shall extend from the bottom of the lamp to the flame. the lard.

> Diseased Sheep .- The quantity of sheep affected with the rot in the west of England is unparalleled. In Scotland, too, the disease has become very prevalent. Formerly the mutton from the Highlands was probably the best in the world; all that is fed in the cultivated lands now is diseased.

Wool .- There was a great deal of animation These Lectures were accompanied by an ex-levinced yesterday evening at the sales of Spanish, Australian, and other wool. The attendance of ation, raised in this country: the eggs of the Silk manfacturers and others from Yorkshire and the tages, confining them to a single individual. But Worms were distributed gratuitously. There was West of England was very numerous, and the

COMMUNICA TIONS.

FOR THE NEW ENGLAND FARMER.

Mr Fessenden-Our practical labors having been suspended by the rude visitation of winter, we must fall back upon our intellectual resources, and continue the pursuits of horticulture, by an investigation of the theories, which its illustrious professors have established, the scientific principles on which they are founded, and the accumulated facts by which they have been illustrated and verified.

If we have found pleasure amidst the luxuriance of vegetation, and cheering exercise in the cultivation of our fruits and flowers, we should endeavor to increase these delightful sources of recreation and health, -of moral and physical enjoyment, by extending the bounds of intelligence, and multiplying the objects of future experiment and attention, during the hibernation of the garden. Instructed by the experience of others, we shall welcome the return of spring with joy, and hasten to realize the anticipated results of various projected improvements in the management of our grounds.

The literature of horticulture offers ample resources for whiling away the tedium of winter, In the history, science, art, statistics, and poetry of gardening, there are numerous interesting and splendid works, which will afford not only highly useful information on all the branches of culture, and of general application in the various duties of life, but tend to elevate the mind, and expand the generous sympathies of the heart. Reason and imagination, fact and fiction, utility and ornament, have each their zealous and distinguished votaries, and numerous are the rich offerings which they have dedicated to the several departments of rural

There was a time, when the sciences and arts were so unnaturally estranged, that it was rare to find them practically united; but we now behold them, harmoniously blending their powers, to facilitate the operations and improve the products of mechanical industry. Books are, at last, considered as indispensable to the artizan, as his implements of trade, Will the cultivators of the soil consent to fall in the rear of the age, and make no effort to increase their fund of knowledge? Where their prosperity and happiness periments, no cause of rivalry, no stimulus to improvement; but the moment civilization commences, every faculty of the mind is excited into vigorous action, and individuals and nations become rich, independent, and happy, in proportion to their progress in intellectual attainments.

tiquity, and has been fully illustrated in modern ages. At no period has there been e . nibited such a general and mighty effort to develope the moral and physical resources of man, and of empires, as the present. No branch of science, of art, or of industry has been neglected. Able and ardent disciples of each are collecting and diffusing in-

rious public depositories, others are traversing every region of the globe, in search of rare additions to those treasuries of knowledge, whatever new, interesting and valuable products, or facts, are discovered, in any nation, they are speedily known in the great marts of intelligence, mutual benefit. Horticulture has her full share of dens of our capital, learned and industrious colaborators, in this grand republic of letters, science, and art, and she daily hails the return of some enlightened traveller, enriched with the spoils of distant climes.

Neill, through Flanders, Holland and France; of vate fortune; now these are the two grand prin-Douglass along the banks of Columbia river; of Perrotet, among the islands in the Eastern Archi- perity of horticulture in England. On the one pelago; of Nuttall, through the United States, and side, the air, constantly charged with humidity, of Filippar, over England, are glorious illustrations of the prevailing spirit of enterprize and improvement. It is not the interests of their own activity to vegetation, and a tone to the verdure. countries merely, which these distinguished gentlemen have subserved, but those of general civilization, and they merit universal gratitude and commendation.

As was promised in a former communication, I enclose a very interesting synopsis of the work published by the last named tourist.

With sincere respect,

Your most obedient servant, H. A. S. DEARBORN.

Brinley Place, } Dec. 1830.

EXTRACT NO. XXXI.

From the Annales D'Horticulture. Abstract of M. Filippar's Agronomical Journey, by M. SOULANGE BOOIN.

I obey the orders of the Council, in offering an that they can be promptly realized in money. abstract of the work, presented by M. Filippar, and which is entitled: An Agronomical Journey in of Europe traversed unknown regions, at all risks, England, made in 1829; or, An Essay upon the to fill their port-feuilles with dried and sterile Cultures of that country, compared to those of plants. To these botanists have succeeded, since France,—with twenty plates.

Mr Filipar commences by giving a sketch of the physical geography of England, and of the soil and collectors of seeds: they travel, not only on their agriculture of that kingdom. Soon restricting his own account, but on that of rich commercial observations to horticulture, properly so called, he houses, and when, in the midst of mexplored forare so essentially dependent upon the skill and indulges in reflections upon gardens in general, ests, they can despoil some unknown beautiful intelligence with which their labors are directed, and observations which more particularly relate tree of its ripe seed, it is not mere grains, which it is impossible that the obvious mode of perfect- to the practice. Descending immediately into ing both should not be adopted. Mere routine is those details, which the subject requires, he speaks the characteristic of barbarians; their wants being of the gardens of villas-of public gardens-parks limited, there is no inducement for attempting ex- and gardens-flower gardens, for plants cultivated in the open ground-botanic gardensflower, or ornamental gardens, for green house plants, culinary gardens, or those of domestic economy-fruit gardens-early, or forcing gardens, and of nurseries. All of which is comprised in thirteen chapters, at the end of which, he gives This is sufficiently shown in the history of an- an analysis of the soils, and a nomenclature of the new plants, which he discovered in the establishments that he visited.

Mr Filipar does not vainly boast of his impartiality; he evinces it throughout his whole work; sition, developed over extensive spaces, affords when it is necessary to collect from afar, a barvest of useful observations, and render them profitable soil of the gardens is generally excellent; it is not to our own country, it is in this manner, that we only ameliorated by the manure which it receives formation by all the means, which wealth and should write. He, therefore, recognises with but by the attention paid to the details, and the genius can command. No object is so small as to frankness, the superiority of English cultivation, in constant neatness which is observed in its cultive-

elude their attention, and none too large, or too every instance, where it was apparent; but he distant, for their comprchensive and far-reaching then proceeds to excite the emulation and indusgrasp. While portions of them are analyzing, ar- try of our own cultivators; and as this superiority ranging, and giving publicity, to all that is worthy has been well explained by him, to depend on of consideration in the libraries, cabinets, and va- causes, over which the acknowledged activity and ability of the French gardeners have no influence, his remarks will naturally tend to produce among them, that lively emulation, necessary to sustain their courage, in the daily efforts, which they make to obtain like results, with resources infinitely less; efforts which we daily see crowned and become objects of reciprocal exchange and with brilliant success, but chiefly among the gar-

Indeed, the mere horticulturist has no power over the general order of the seasons and the customary state of the temperature; and he has much less power over the public wealth, the The recent botanical and horticultural tours of abundance of capital and the employment of prieipal causes of the physical and industrious prosby exhalation from the ocean, and suitably warmed by the temperate heat of the sun, gives an which is not generally seen elsewhere: on the other side, the number and situation of the large estates allow the capitalists to become interested in great speculations, and the pleasures of rural life; and while French cultivators may surpass those of England, they find their intellectual means always paralyzed by the exiguity of the pecuniary resources, which are directly or indirectly at their disposal.

I would, if permitted, add to these very just observations of Mr Filippar, that England, more than any other country, is essentially industrious, - where every commodity capable of entering into the general circulation, immediately assumes a commercial character, and where the discoveries of science, are so much more highly appreciated,

There was a time when the learned botanists the last century, a class of men, no doubt intelligent, but active and interested; they are called they have collected, but guineas which their just hopes realize, and which will soon amply remunerate them for their labors,

If vegetation, under the climate of England, receives great assistance from the air, the sky, the water, its cultures find a no less salutary shelter in the multitude of high hedges, extensive lines of compact evergreen trees, and the small masses of woods, which characterize the numerous forks of Great Britain, and which give to the whole country, the smiling aspect of a continued garden .--The hedges, especially, which are generally substituted for walls, break the violence of the winds. and preserve a favorable humidity. This dispogreat advantages to small cultures; besides, the

tion. Not any expense is spared to keep it in a good state, and the earth repays with usury what has been expended upon it. The country housest and the fields are surrounded with fruit trees, such us apples, pears, and cherries; their trunks are dean and smooth, and if moss or lichens begin to rppear, they are immediately destroyed by white wash. Mr Filippar has remarked, that plums, apricots, and almonds were rare, and he thinks hat the climate is not favorable to these kinds of rees, which are, in fact, of southern origin. However, it is not long since fruit trees have been ably nd methodically managed in England; and alhough the inhabitants highly value good and eautiful fruit, immense quantities of common aples are thrown upon their shore by our Norman arks, with which the people appear to be satisfied, ad eat them with avidity.

All the proprietaries are amateurs-the taste for ardens extends from the highest to the lowest; id no one spares any expense which his condition ill allow, and is necessary to obtain an enjoyment universally appreciated. This inclination for dulging the natural taste, always renders men ppy; but as he who enjoys ought also to know w to appreciate and manage the immediate inument of his gratifications, it results, that in igland, a good gardener is always treated with pect—that his talents are everywhere duly esrated, and in requisition-that a proper support torably gained and liberally bestowed, gives nquillity to the head of a laboring family, in reon to all which concerns him-that his mind, re free, is in equilibrium with his grateful heart, that the gardener is pleased to increase and petuate the enjoyments which the master can knows how to cherish. And it is not astonishto see good gardeners enjoy this consideration lngland, when it is known that these men are erally well instructed; that they do not comce their career until they have received a priv education, which is the foundation of success, all kinds of industrious occupation; enfranchised that mere routine which elsewhere seems the and sterile heritage of their profession, they the labor of the body to that of the mindangthen their judgment by reflection and reason, become able in their practical duties, in proon as they have been rendered good observers. I Filippar expresses the pleasure which he exenced in meeting, among the English cultivaa multitude of men, who are not strangers to nature of sciences-who perceiving that phychemistry, and botany, are necessary to enahem to account for the phenomena, which they observe, in the course of their operations; ne regrets that in France, the importance, or r the necessity of these studies is so little rived; and that the pupil, who has devoted olf to them, is generally left confounded among rowd of common laborers, and that the intelt cultivator finds it difficult to ascertain the which he merits in the social scale.

ie natural beauty of the country, and the neatness which is everywhere conspicuous, rs it necessary for the English to bestow care upon their gardens, to render them suto the enclosures which are merely embelby nature. But whether they manage their ins as English gardens properly so called,-

simply adorned and kept in neat order, they al- thower gardens, are not numerous in France, but by different tints, and in which are enclased, grouped, or detached, all the factitious scenes, which the kinds of gardening allow, and which their artists of talents know perfectly well how to connect with the whole design. We have in France without doubt, beautiful gardens, which merit being named; but it cannot be done with the same conviction of its propriety as when speaking of those of England: it is in England that we find, and where we can alone study, the difference which exists, between English Gardens, and Landscape Gardens; and if we ought not to attempt to find in England, gardens like those of the Thuileries, and the Luxembourg,-parks like those of Versailles, and Trianon, or promenades like our Champs Elysees, and our Boulevarts, the English, instead of a majestic regularity, and a pompous grandeur, have shown us gardens, very simple in appearance, that is, having the merit of exquisite perfection; a merit much more seducing, because it never appears accompanied by

Mr Filippar knew how to examine the gardens of England; as an artist and a cultivator; he has noticed in each kind of plantation the order and connexion of every species of culture, which forms a harmonious whole from divers parts, and the most opposite to each other; which renders it easy to distribute all the labors with regularity, to direct them with economy and success, and to enjoy the whole with equal pleasure; he has described the solidity of the walks, the neat appearance of the turf, the management of extensive lawns, the formation of clumps of trees, the taste which excludes the severe pruning of beautiful isolated trees, the richness of the masses of rosebuds, of heaths, and of magnolias, the happy employment of resinous and evergreen trees; then abandoning those grand picturesque scenes and quitting the country, he has endeavored to give us an idea of those little town gardens, which decorate the front of almost all the houses, and which are seen in nearly all the streets, to which their verdure and their flowers, protected by elegant barriers, gives a similar aspect; the beautiful groups of trees and flowers, which surround the slender iron balustrades, break up the monotony of the public squares; he describes the principal parks of London, and expatiates on the exotic riches, contained in the royal garden at Kew, remarkable for its beautiful collection of North American plants; he assigns, as the reason why such immense quantities of foreign trees and shrubs, are found in these places, that the English began to plant sooner than we did, in greater quantities and over more extended surfaces. But within a few years, beautiful exotic plantations have been commenced in France; our gardens are annually enriched by a great number of species, hitherto but little known; this tuste increases with the discoveries, our knowledge, and our labors have taken a more happy direction, and our gardens soon scattered over the country, will excel in the vegetable riches which are daily accumulating.

ways endeaver to render their plantations a pic- that several could be named which are sufficiently ture, which appears to have been composed by an characterised to be immediately distinguished, in able painter, varying and contrasting the masses the other kinds of culture; but he does not dissemble that the English are much richer, in that kind which offers so many more attractions,which is capable of being so variously developed, and which can be accommodated to the fortunes, or means of all classes. The flower garden, essentially consists in a piece of ground, more or less extended, destined for raising annual or vivacious flowers, which are taken up for ornamenting the grounds, or are left in beds to luxuriate in masses. This department among English cultures, has assumed, for several years, an aspect entirely different from that which it still presents in our gardens; this difference is chiefly in consequence of the tardiness, with which new plants are introduced into this country. These novel vegetables, have already been modified by the care of the English cultivators, and produce numerous interesting varieties, when we scarcely possess the type. I will cite a single example: they have actually abandoned tall Dahlias, - which they throw pellmell into masses, for the shorter varieties, which present a sensible difference in their appearance and elevation, and which are cultivated like other herbaceous plants, in beds, or collections. They are only from 18 to 30 inches high. This diminution of the size of the plants has these advantages,-they produce as many flowers as the large, can be placed everywhere, do not require so much trouble to be supported, to protect them against the violence of the winds, and are, therefore, more economically cultivated. On this subject I will add, that, having paid particular attention, to the multiplication of this new race, of Dahlias, at Fromont, I have obtained a great number, which are so short, branch out so low, and whose stalks and branches tend so strongly from the herbaceous to the suffruticious, or partially shrubby state, that they do not require any kind of support. Among these are some, whose branches are straight and stiff, and the flowers fixed, horizontally, at their summits, and not hanging, or concealed under the leaves, as in other species. There are others whose stalks and branches are much slenderer, having a less number of leaves and which are covered with a number of much larger flowers; they produce, in the parterre, a much richer effect, for their numerous branches being gently compressed round a little stake, by a string, the bunches of flowers appear, at a distance like bougnets, which are not less interesting from their duration, than for their splendor.

Among the new flowers, which for sometime have given such a distinct aspect to the flower gardens of England, there is to be seen, before the Dablias, which develop their form and colors under the heats of summer, the equally beautiful and numerous genus of the Preonies, which, displaying, in the spring, the most splendid shades of white, carnation, rose, purple and variegated colors, furnish single groups, which, at that period become, alone, the ornament of the parterre. In the course of that delightful season, the beautiful brocteated Poppy, the Clarkia pulchella, the Lupinus polyphyllus, and the Elsholtzia of California, develop, under forms peculiar to each genus, Such are the general views which Mr Filippar, their elegant, red, rose, blue and yellow flowers, h, according to their ideas, allows nature to be has given of English Horticulture. Proceeding while the musk-scented Mimulus, in a modest attiornamented and luxuriantly maintained, or immediately with his remarks on ornamental gar- tude, exhales, at their feet, an aroma which perus country or rural gardens, which is nature dens, he does not deny, that what are called fumes the air; and when retiring autumn threat-

ens destruction to the more delicate plants, the numerous family of the Chinese Chrysanthemums, begin to display their splendid dises, and to prolong, under other forms and colors, upon their mingles with the first frosts of winter, and even more. The slaughter house alone supports four, persists in the midst of the snow.

Mr Filippar names some establishments more especially consecrated to this kind of culture; but according to our information, there is not at this time, any one so rich and beautiful as that of Young & Brothers at Epsom, near London: it is sufficient, to give an idea of it, to state, that the Catalogue of vivacious plants, which they cultivate, on a large scale, contained, the last year more than four thousand species and varieties,

According to Mr Filippar, the English do not appear to have paid so much attention to Botanic Gardens, and scarcely any other can be named than the Garden of the Apothecaries, at Chelsea; but he prefers the garden of the School of Pharmacy in Paris, because the plants, although not so numerous, are at least arranged in such an order as facilitates study. He gives the description and figure of a basin existing in the Garden of the London Society, for aquatic plants; and another construction of rock-work, for plants peculiar to rocks, and he does not omit to notice a beautiful compartment in the garden at Kew, devoted to a collection of Grasses; but he has seen nothing which can be compared to our celebrated Jardin du Roi, where such a large number of plants are so admirably disposed for illustration, and where so many able professors consecrate their nights to study them, and their days to make them known to their pupils.

The remainder in the next number of the Annales.

From the Concord Gazette.

AGRICULTURAL REPORTS.

The committee on Fruit and Forest Trees, Shrubs and Farms, consisting of Josiah Adams, Benjamin F. Varnum, Reuben Brown, Jr. and Moses Whitney, Esy's respectfully Report:

That Premiums have been claimed only for Apple Orchards and Farms.—The competitors for premiums on Farms are, Capt. Francis Richardson, of Billerica; Dea, Thomas Hubbard, of Concord; and Abner Wheeler and Wm. Buckminster Esq's of Framingham.

CAPT. RICHARDSON'S FARM

Consists of 44 acres; seven of which are woodremainder consists of moving, tillage and orchard- row and roller complete the process. ing,-Beside the young orchard offered for premium, there are many old trees in most of the lots, some of which have been engrafted and bear considerable fruit. The soil is generally loamy and is well supplied with stones. Much of the farm about ten years ago, was in a very rough and unprofitable state. It has been subdued, the siones dug and made into walls, and it is now in a good state of cultivation. Capt R.'s personal attention is principally given to his slaughter house and his soap and candle Manufactory, which, with about 1000 bushels of ashes, bought annually for making soap, and the feet and heads of animals which he purchases in considerable quantities from Lowell, have enriched the farm, and given him great facilities for abundant harvests,

The labor has been done by the assistance of a man and a boy, and an additional man in having house, a room for farming tools, a dairy room id

The stock has usually been two horses, one pair strong and elevated stalks, a decoration, which exen from four to six cows, six hogs and sometimes

> The hay this year amounted to about 25 tons of which 16 were sold. Cider and winter apples are sold annually more or less according to the season and also about half of the leached ashes, No cheese is made on the farm and the butter is farm, except a pint of New Rum, when the best usually consumed in the family, as is also the corn and English grain.

The farm is about 30 rods wide only, extending from the main road to Coucoid river. It is well divided, by well built stone walls, into convenient lots on each side of a lane, through which the cattle can pass from the road to the pasture at the river, and into any or all of the lots as may be desired. Ardent spirits are not used on this farm except sometimes for laborers hired by the day,

DEA. HUBBARD'S FARM

Consists of about 60 acres of mowing and pasture trees, not yet fit for sale | Mr Buckminster bou land, mostly of a high sandy loam and free from about three years ago. The house lot had I stones. It is all arable, excepting 16 acres of river cleared of large wood a few years previous, meadow, and about four acres of reclaimed meadow thad been considerably reduced by taking off c which last, by draining, has been made to produce of grain and grass without much manure. Be good English grass.

hay, and about six tons from the meadow with three years, and the lot is in good heart and y about 20 bushels of eranberries; 56 bushels of tye plentiful crops. two and a bulf acres; four acres, produced 162 bushels of oats; four acres of good corn; two and acre of it is now covered with young loc a half acres of potatoes which look well; 43,000 raised from the seed. One acre is planted teasles from half an acre, which sold for 86 dollars, corn, which was manured with two loads

in winter; one horse, five cows, six hogs and nine and, being the best part of the lot, promis shoats; six cows in the best of the season, which good crop. Two acres are sowed with rye average fourteen quarts of milk per day, and in are meadow land and the remainder has been i September about ten quarts.

ploys a man and boy in the summer season, and a boy only in the winter.

Your Committee reviewed this farm on the 21st Septemb r. Preparation was then making to sow the counfield with rve. The method is this:--The by draining, pairing and burning, it is made corn is basked in the field, and the basks taken off produce the best of English hav and grain. in bundles toward the last of September-The hills B. has taken off this season nearly a ton a are split with a furrow turned each way, and the half to the acre. ground is then harrowed. The field is next laid into squares by farrows, six paces apart and one eighth of a load of manure is spread on each square. The rye and grass seed are then sown together, land, and about eight only are pasture; but about mixed with a little ashes, and water is added just three acres of pasture beside are prized. The sufficient to produce a proper cohesion, and the har-

> There is a large commodious building of two stories, used also by the two sons, who occupy farms adjoining. Below, is a eidermill, and a threshing machine (Warren's) worked by horse power, which answers well for oats, but not so well for rye. Above, is a large and well constructed granary.

The barn is very well constructed. It has a piggery at one end, sufficiently elevated to allow the urine to pass through the floor into a place below, where loam and other substances are carted in, and into which the manure from an adjoining linter and from the piggery is also thrown. At the other end of the barn is another linter, with a cellar under it to receive the sale, he was enabled to put the manure t the manure, and into which loam, &c, are thrown the tavern upon his farm from 1810 to 1818 in through windows from without.-The cattle are sive. The farm had run to waste; kept but put into the linters at night through the year.

There are other conveniences, such as a wolapparatus for boiling potatoes, which your Comittee omit to describe. By transporting stones film a distance, the farm is well enclosed with walls, id the lots are judiciously arranged and divided by

Your Committee were pleased with the apperance of method and neatness throughout. They | only add that no spirit of any kind is used on is man comes to kill the hogs.

MR BUCKMINSTER'S FARM

Contains 30 acres, viz :- the house lot of the acres of good loamy land -a lot of 12 acres a principally for pasturing, of a light strong lo distant about half a mile-a wood lot of e acres at some distance, which your Committee not view-and six acres of reclaimed peat n

On about one acre of the house lot, is a th young nursery of apple, pear, cherry and pe his own he has purchased 40 loads of manure The produce, this year, is about 20 tons English about 200 bushels of leached ashes within

The 12 acre lot had been much reduced, Stock,-One pair oxen in summer, and three pr. manure, mixed and fermented with meadow to bear good feed by the ploughing in of g Dea. Hubbard labors himself habitually; em- crops. Beside the above, there is another ac corn planted this season which appears The peat meadow has always been considered little value. Mr Buckminster and two or thr his neighbors took it in hand three years ago,

Mr B, beside his own occasional labor, and of his two sons aged 16 and 10, hires a about four months in the summer season.

Stock-four cows, two horses and two hogs Very little spirits is used; usually for men li by the day.

CAPT. WHEELER'S FARM

Contains about S0 acres; five of wood, of le and beautiful appearance, and eight of young w of six years' growth-twentyfive of pasture, thirty eight of mowing and tillage. Beside a trees which are growing in most of the lets, which are well managed and productive, there young orchard of twentyfour trees only, wi are very thrifty, beautiful and well trimmed. soil is of strong loam and rocky,

Capt W. bought his farm in 1809. He sold tavern soon afterward, and, by a reservation cows, pair of oxen and a horse. It was over he most was made of the manure from the tayrn, so that in 1819 the farm was in a good state f cultivation, and produced abundantly. Since nat time all the manure has been made on the arm, and the soil has been considerably improved. The bushes are entirely gone, and the Committee ould not discover a sod of waste land except a

w acres which have been flowed by a mill-dam. The whole has been laid out into convenient its, and divided by well made stone walls. By eans of a lane, which is connected with a pasare lot at the barn and also with the river, the attle are admitted to or excluded from any of the ts at pleasure, except the pasture at the barn.

The barn is large and new, with a cellar undereath to receive the manure, and communicating ith the vard for swine.

Stock-one pair oxen, one horse, ten cows in mmer, and in the winter six or eight more, swine om six to ten.

Produce—usually about 2400 lbs, pork, 1500 itter, 300 four meal cheese, and 600 of skim ilk, from 40 to 50 barrels eider, from 30 to 50 of nter apples, 200 bushels corn, and 200 of other ains, 300 husbels potatoes, 35 tons English and

tons of bank hay; no hay has been sold for ir or five years last past,

Labor-besides his own occasionally, and that his son, whose health till lately has been feeble, pt W, has kept a hired man and boy through year, and two men in having time.

The farm is carried on with very little ardent rit of any kind. None but temperate men are ployed unless occasionally by the day.

Your Committee recommend that Premiums awarded as follows:

Abner Wheeler, Esq. of Framingham, the st Premium on Farms, \$25,00 Dea. Thomas Hubbard, of Concord, the 2d

remium of \$15,00 Capt. Francis Richardson, of Billerica, the

ld Premium of

\$10,00 JOSIAN ADAMS. For the Committee.

The Committee's Report on Orchards, is necesly deferred till next week,]

O READERS AND CORRESPONDENTS .- We feel er great obligations for the increasing number respectability of our correspondents, whose tributions are so essential to the usefulness and ularity of our journal. We have now on hand ly communications which we have been obliged efer this week. Among them a valuable artion Wheat, and on the importance of farmers' ng fewer acres of land and paying more attento a Rotation of Crops, &c, by 'A New York mer'-and one on the Glanders and other dises in Horses, by an intelligent gentlemen in tsmouth, N. II., will appear in our next paper. have received from Theodore Sedgewick,

. President of the Berkshire Agricultural Soy, a copy of the Address delivered by him at r last Cattle Show, with which we hope soon nake our readers acquainted. Mr Ablum's ays on Domestic Wines, will soon appear.

We commend to the particular attention of our lers, the rich contributions of Judge Buel, and Come the return of 'The Wanderer' to our fine animal. Price 500 dollars—can be seen by applying

rith bushes and the fences were of little value. Barlram Bolanic Garden and Nursery, Kingsessing, near Philadelphia.

This old and celebrated establishment is 4 miles from the centre square, three miles from Market-street bridge, and a half mile below Gray's ferry, on the west bank of the Schuylkill. It is the oldest botanical garden in the United States, having been begun in 1720 by the elder John Bartram, who was the American botanist to the king, until the Revolution, and it has since been cultivated by his children and grand children.

The garden originally contained about eight acres, chiefly planted with native trees, shrubs, &c, and became the seminary from whence American vegetables were distributed to Europe, and other regions of the civilized world.

The present proprietor has added an extensive collection of green house plants, a thriving young vineyard and several acres of nursery, well stocked with a general assortment of the finest fruit trees, grape vines, ornamental trees and shrubs, &c, which are sold at reasonable prices, and are sent to all parts of the United States

American indigenous trees, shrubs, and plants, or their seeds, suitable for sending to Europe, are supplied in assortments from \$5 to \$500, or more

Orders for trees, plants, or seeds, from this garden, lef with Messrs G. Thorburn & Son, seedsmen, New York George M. Coates, No. 49 Market-street, Philadelphia J. B. Russell, No. 52 North Market-street, Boston; o addressed, per mail, (post paid) to the proprietor, at the garden, will meet with prompt attention, and the article. will be carefully packed, so as to bear the transportation in safety.

Strangers are invited to view the gardens at any time Sundays excepted) where any information will be cheer fully imparted.

Printed catalogues of the collection delivered gratis. Dec. 24. ROBERT CARR, Proprietor.

Notice.

The Trustees of the Society of Middlesex Husbandmen and Manufacturers, will hold their Annual Meeting a Shepherd's Coffee House, in this town, on Wednesday the 29th inst. at 10 o'clock, A. M. All persons having claims for premiums, on agricultural experiments, will present the same at this meeting, accompanied with the requisite vouchers.

JOHN STACY, Sccretary.

Wanted,

Concord, Dec. 11, 1830.

Volumes 2, 3, and 6, of the New England Farmer, to complete a set, for which a liberal price will be paid at the Farmer office, Boston. Dec. 94.

Farmers and Mechanics

In the country, who are in want of good boys from the city of various ages, as apprentices, are respectfully informed that a register is kept at the New England Seed Store, No 52 North Market Street, of the names, ages and residences of such boys, of good character, (generally orphans or of poor parents) which is furnished by the Rev. Dr Tuckerman, general Minister to the poor in this city. Any information will be given gratis at the Seed Store with regard to the boys, or letters can be addressed (post paid) to Rev. Dr Tuckerman, Boston 3t Nov. 26.

Camellias, Jasmines, &c.

FOR SALE, at a Nursery in the vicinity of Boston, a good collection of Camellias, also Broad, Small and Long good confection of Camerinas, are money, and at moderate prices—orders left with J. B. Russell, at his See Store, will be promptly attended to. Dec. 10.

Seeds for Country Dealers,

Traders in the country who may wish to keep an assortment of Garden Seeds for sale, are informed they can be furnished, at J. B. Russell's Seed Store, connected with the New England Farmer, 52 North Market Street, Boston, with boxes of various sizes and prices, from 10 to \$50, containing a COMPLETE ASSURTMENT of the seeds mostly used in a kitchen garden, on as favorable terms as they can be procured in this country, of equal quality, neatly done up in small packages, ready for retailing, with short directions on each package for its culture and management—warranted to be of the growth of 1830, and of the purest quality. Nov. 5.

A fine Maltese Jack,

to Mr Russell at the Farmer office.

MISCELLANY.

EFFECTS OF THE TARIFF.

the Tariff on some articles of prime consumption and necessity.

Flannels have been reduced in price from 23 cents to 17 cents per yard.

A man can buy a shirt for half what it used to

Chemical Preparations have fallen fifty per

Window Glass in 1816 worth \$15 for 100 square feet, now sells for \$7.50. As many tumblers can be bought now for 50 cents, as used to cost us \$1.

cost.

price is 3 cents per lb.

even 10 or 12 cts. per lb.

cts, per gallon.

conscience of a duty of 334 per cent.

Castor Oil in 1824 was \$3 per gallon: in consequence of a duty of 40 per cent it fell to \$1,-50 per gallon. An important item this in the domestic concerns of a 'marriage and giving in marriage' people.

\$70 per 1000. Now they are made as good by ourselves for \$30 per 1000, in consequence of a during severe frosty weather, caused by incipient protecting tariff.

Notwithstanding the Tariff, the Tonnage foreign and coasting, of the United States, has been steadily and rapidly increasing for the last fifteen years,

The revenue from Imposts has steadily increased too-not so much from the increase of duties have to sell, the more we can buy.

THE MAGIC ONION.

Sometimes called the Canada, sometimes the tree, or top onion. This is a singular plant, and deserves cultivation, not only for its domestic use, but as a curiosity. All other plants raised in the garden are oviparous, or in other words, re-produce their species from seeds or eggs; but this alone is viviparous, and brings forth its young alive; in clusters of four or five, around the parent stalk. These continue to cularge, until their weight brings them to the earth, where, if not prevented, they take root, and the maternal stalk now becomes useless, dries off, and the next season, these in their turn become parents, and reproduce a numerous progeny.

the other. If you would have them in perfection, make your ground ready as for the other kind; then stretch a line ten inches from the alley, and in their catechism. The first question in the with a small hoe make a furrow two inches deep; Heide!burg catechism is this ;- What is the only in the bottom of this place the top bulbs, or infant consolation in life or death?' A young girl to onions, five or six inches apart, with their points whom the pastor put the question, laughed, and or heads uppermost; then fill up the drill with would not answer. The priest insisted. 'Well light earth, which should be pressed down with then,' said she, at length if I must tell you, it is the hand or broad hoe. This done, remove the the young shocmaker who lives in the Rue line back a foot, and in the same manner, plant Aqueax.

as many as you please. In setting out these bulbs, you should not place the large and small ones promiscuously together, but separate the large The following facts cannot be gainsayed, and from the small, and plant them in different rows; they show to farmers the effect of the increase of for the largest will generally become breeders this season, while the small ones will enlarge, and swell into beautiful onions, fit for any use in the kitchen.

The magic onions intended for seed, or breeders, should be two years old, and the largest and Cotton Manufactures have fallen fifty per cent. the best of their kind. They must on no account stand near the other species of seed onions, or they will degenerate, and a mongrel race ensue,

Preserving the Wood of Wheel-work, &c., from decay .-- A Member of the Royal Academy of Sciences of Stockholm, in Sweden, in a Memoir, read to that Academy, states that wood, for the use of building may be rendered incombustible by letting Lead and all its manufactures are reduced in it remain some time in water in which alum. copperas, or any other salt has been dissolved The duty on pig lead is 3 cents per lb. and its which contains no inflammable matter. He likewise states as his opinion that wood, rubbed over Gun Powder has fallen from 45 cts. to 22, and with very warm alum or copperas water will, by this process, he secured from decay, dry rot, or Spirits of Turpentine 50 cts. in 1823, now 30 injury from moisture, moss, mushrooms, &c. Also that boiling for some hours the spokes of wheels Cyphering States are 33\frac{1}{2} per cent cheaper in in vitriol water, will secure them from rotting in the places where they enter the stocks or hubs. After they have been thus boiled they are to be dried as perfectly as possible, and then may be painted any color,

Itching Fect.-Among the minor evils to which Before we made Fire Brick, we paid England the human frame is subject there are few more tormenting than that of violent itching of the feet, childrains. The following specific is so simple This list might be extended to fifty other arti- and cheap, that no person ought to be ignorant of it; it is merely one part of muriatic acid mingled leff, Ir, Chelsea, or at 52 Hanover Street, Boston. with seven parts of water, with which the feet must be well rubbed for a night or two, before going to bed, and perfect relief will be experienced. The application must of course be made before the skin breaks, and it will be found not only to -as from the obvious reasons; that the more we allay the itching, but prevent the farther progress of the chilblains. The feet may be a little tender for a short time, but this slight inconvenience will soon disappear.

> Mix Olive Oil with a good quantity of water; agitate and whip it up well: suffer it to subside, then skim off the oil and bottle it. Themucilage which disposes the oil to rancidity is detained in the water, and the oil when deprived of it will be better, more fluid, and may be kept sweet for years. I have experienced the benefit of this for table purposes, and Clock and Watch-makers would doubtless find it useful in their business. Castor Oil, which is usually obtained by expression, I should suppose would be preserved from rancidity if treated in the same way; and if no consequence to the doctors I assure them it is a very serious

COMMANATE TOURS

FOR THE NEW FAGLAND PARMER.

GLANDERS IN HORSES, &c.

MR FESSENDEN-I observe in your last numper, an inquiry concerning the disease in horses, which is called the 'glanders,' I should like to nake a few remarks upon this dreadful but very

The glanders is not so common a disease in hose parts of New England, in which I have esided, as in Europe : neither is its near relation, he Farcy. Strange as it may appear, though I ave seen the farcy here, I have had no case ome under my regular inspection. I have known, owever, great ravages committed by the glanders. ad have had opportunities of inspecting glander-I horses daily. It is well established at the resent day, that no cure is known for glanders; it it is said, that of the thousands of them which ave been made the subjects of experiment in the ust military and other studs of England, France. id Germany, one horse was fairly cured by art. is also well established, or (if I may be allowed use the expression as I wish to hold no controrsy upon the subject,) it is almost well establish-, that, when the horses have been turned out d left to nature for successive seasons, this disse has occasionally run itself out. I was juested to examine a horse, suspected to be glarred, from a large stable, within the last yea. s left nostril, as is generally the case, was alone ected : and I advised the animal to be destroyed, ich was not done.

The much important and encouraging change t has taken place in the opinion of the best rmed persons on this subject, is as to the dise being often propagated by contagion. It is v generally thought, that except the poison or the system through some sore or wound, a se may even cat the same mash which a gland-I horse has left, without danger. It may, rever, be always given by inoculation to other ses, and to jackasses, and, I suppose, mules. will also produce, it is said, distressing effects n the human system. The matter of glandis, in fact, a most inveterate and malignant on. Still, it is said, and I have no doubt 1 justice, that the disease generally arises other causes than contagion. The horse I tioned had always stood in a large coachle, but no other case has yet appeared in it. proper however, to seclude a horse suspected a glandered, and to direct those attending him uching the diseased nostril, to wash their hands pap and water, before going near other horses. he glanders and the distemper, though coned to proceed from somewhat similar causes, wholly different diseases. In the last the disge is always from both nostrils: and generally ks young horses, particularly when first put hot or town stables. This is fully as common ease here as in Europe, but it is not nearly third disease, generally affecting young could not succeed on old lands.

horses or colts, is the European strangles: which and lasting but a very few days. One of the colts has since had the common strangles; and a fallows, must be repaired by rotation of crops, finer mare had had them before. I consequently considered it allied to the distemper.

I observe an account of a peculiar affection attacking the cattle of a gentleman in Maine, For the sake of accuracy, so important a thing in agricultural writings, and the importance of which has been so amply, of late descanted on in your useful paper, I beg leave to inform this gentleman that we do not admit of the term 'blooded,' or more properly 'blood,' stock being applied to any particular breed of horned cattle. He alludes, I presume, to Short Horns. I am myself an admirer of those cattle: but it is worth remark, that in their own country a distinct breed still holds way with them, and is often preferred : viz. the Herefordshire. The characteristics of the improved Durham Short Horns, being the precise opposite of those of broad-horns, it seems a peculiarly ineligible term.

It may not be a new occurrence to some others, but it is so to me, that there is a remarkably beautiful and thriving wild pear tree, bearing excellent fuit, within a short distance of my farm, growing on one of the beaches of the Atlantic, and frequently covered by the tide.

J. L. ELWYN.

Partsmouth, N. H. Dec. 22, 1830.

FOR THE NEW ENGLAND FARMER.

ON WHEAT.

MR FESSENDEN -- I entirely concur, with your correspondent S. L. in the New England Farmer of the 10th, as respects the practicability of raising ample crops of wheat from the old lands of New England, although it may be doubtful whether it would be profitable at this time to make this crop a leading object of the cultivator's attention. It appears to be sufficiently proved that old lands will grow wheat, by the fact, that fields now yield this grain which must have done so in the days of Julius Cæsør, nor is the wheat culture limited to particular latitudes-it is the grain of the world.

The first essays in cultivation, like the infant stages of every branch of human knowledge, are necessarily rude ;-the felling of trees and scratching the rooty surface with the harrow constitute the whole 'art and mystery' of wheat culture with the hardy frontier settler-nature does the remainder, and she seldom disappoints him,

Indian corn is sometimes planted with an are and is suffered to mature, without the plough or hoe on the new cleared lands. This mode of proceeding, however, if continued on the same lands tal. No horse should ever be fed or worked after the strong vegetable properties of the soil suffering from it: and numbers of our best have become exhausted, would be productive of in the Gardener's Magazine, that the trunks, and parg horses are greatly injured by its being done. results that might make some believe, Indian corn ticularly the collar, being that part which joins

A new era is approaching and better systems of cannot be well mistaken, and generally leaves cultivation will be forced upon the farmer of the them better than it found them. I had, however, old states:-all cannot fire to the west, and there once seven or eight affected with a swelling of repeat the exhausting practices which have run down the glands, with an excessive and enormous dis- the soil of countries once proverbially productive; more charge both from them, and from their nostrils, labor must be bestowed on a smaller surface than is now practised .- The poverty caused by naked tilth, and judicious applications of manures .- By these means, it may be reasonably anticipated that before the lapse of half a century, it will be no novelty to produce fifty bushels of wheat to the acre, where now it would be decored an act of temerity to attempt its growth.

The necessity for the aids of agricultural science will be first experienced in the oldest of our settlements.-This necessity will, no doubt, lead to improvements and exertions, that must place the agriculture of the Atlantic States on a higher scale than in regions where nature has been more bountiful, but where those bounties have been taxed unduly. Let not the New England man despond, therefore, nor too lightly estimate the soil on which he has been born and nurtured .- He may be assured, that, if there be a state of independence allowed to mortals, his chance of enjoying it is equal to that of any of his species.

Saratoga County, Dec. 14, 1830.

FOR THE NEW ENGLAND PARMER.

SALT USEFUL FOR MILCH COWS

Collyns, in his 'Ten Minutes' Advice on the use and Abuse of Salt, as a Manure,' says that a lump of salt, hung up for milch cows to lick occasionally, entirely removes the peculiar turnip taste from milk and butter. My cows have eaten turnips, spring and fall, for ten years; yet in two or three instances only do I remember that this food imparted any bad flavor to the milk and butter. I never conjectured the reason, until the remark of Collyns met my view. My practice for years has been, to have salt troughs under my cattle sheds, daily accessible to my cows; and probably in the instances noticed, the salt troughs were from negligence empty. Salt is beneficial to cattle, as a condiment, as well as to men. Why then is it not as important that the former should have it with their daily food as well as the latter? I have never known animals do themselves injury by using it to excess. The consumption of salt is but very little increased by the practice I adopt, while the waste is diminished. The books tell us that the free use of salt among cattle, is a great preventive of disease, and powerful promoter of thrift. Reason and experience seem to justify the remark.

Albany, Dec. 23.

J. BUEL.

FOR THE NEW ENGLAND FARMER.

LATE FROSTS

To prevent the effect of late frosts upon the blossoms of fruit trees, William Stowe recommends. the trunk to the root, be covered with a bay or

straw band, before the blossoms open. An apple tree thus protected, resisted, in bloom, a frost of 15 degrees, or a temperature of 17° Fahren. while the blossoms on surrounding trees, not protected, were destroyed. The protected trees bore an uncommon burthen of fruit. Mem. Remember to make the experiment next spring, on apple and other fruit trees.

I am induced to believe, that it is not so much the intensity of cold, as the sudden change of temperature, that proves destructive to the blossom, or rather the germen. The two last seasons, the blossoms of my apricots, and in some instances of the peaches, appeared only in the higher branches and tops-not because, as 1 conceive, it was less cold there than below, but because it was not so warm, when the sun shone. At the north, the peach produces best in the most exposed positions and coldest aspects, where the greatest equilibrium of temperature prevails. Rhododendrons, and other tender evergreens, about Paris, died last winter, where planted in a southern exposure, while those exposed to the north were unburt. The Verbenum, Madeira nut and Altheas have been killed down, in protected situations, exposed to the full rays of the morning sun, while they have stood well in exposed situations. It is evident that sudden alternations of heat and cold are extremly prejudicial to the vital organs of vegetables as well as of animals. The collar, Mr Knight considers the most sensitive part of the plant; and Mr Stowe's experiment seems to show, that the hay band tends to preserve an equilibrium, by defending this sensitive part against the two extremes, or rendering the transition more gradual. The apple, potato and other vegetables may be frozen and thawed without destroying the vitality, if the thawing process is carried on gradually, and beyond the reach of atmospheric air. Our potato fields afford ample demonstration of this.

The hay band serves another important purpose, when placed around the peach. If closely wound round the trunk and the earth a little raised at the surface, it protects the tree from the injurious effects of the peach borer or worm; as the fly must deposit its eggs at too great a distance from the ground, for the larvæ to reach its winter quarters, under ground, before the frosts destroy it.

On looking farther into my text book, I find that London confirms the utility of the practice of Mr Stowe; he says that Magnolias, delicate standard Roses, and other half hardy shrubs, are thus protected about Paris and London, merely taking care to cover well the collar.

Albany Nursery, Dec. 14, 1830. J. BUEL.

FOR THE NEW ENGLAND FARMER.

ASPARAGUS.

I think an error prevails in the method ordinarily adopted in cultivating this delicious vegetable. The object seems to be to grow a long blanched stock; which to be sure is inviting to the superficial buyers,-but at the table is found stringy, tough and bitter. The roots must lie deep and the growth be comparatively slow; my roots have but a superficial covering of earth. Their growth is early and rapid; and as I cut at the surface, the grass is tender, succulent, well flavored, cows. and the whole of it eatable. I cover my beds in winter with manure, but rake it off and fork the They ought to support 16. ground in the spring.

Albany Nursery, Dec. 1830. J. BUEL. OPERATIONS OF STEAM.

A steam fire extinguishing engine has recently been invented in England, which will deliver from 40 to 50 tons of water per hour to an elevation of hay. We must infer that this had been accumula from 60 to 90 feet, according to the adjutage of ting for years, because his other 9 tons would no the wind. On a calm day the distance of 140 feet support his stock of 11 cows. And he is the has been acomplished. This is the machine (says only one who has sold hav. But we see that be Loudon's Gardener's Magazine, for Oct.) that properly applied, will at some future time, plough and the use of the refuse of his slaughter house, and sow 1000 acres in a week, and reap the crop in a

FOR THE NEW ENGLAND FARMER.

EXAMINATIONS OF FARMS.

MR FESSENDEN-I read with much interest, in your last number, the report of the Committee on Farms, in the county of Middlesex, and think the practice of examining farms, and the different modes in which they are cultivated, with close scrutiny, by judicious committees, will have a good effect on husbandmen throughout the Commonwealth.

The task of such Committees is sometimes difficult, always arduous, and oftentimes exposes them to the charge of partiality or carelesness in making their awards-each ambitious candidate for a premium valuing more highly his own improvements than those of his neighbors.

To obviate all charges of partiality or semblance of favoritism, I would have committees govern themselves, by some fixed principle by which the community generally might see at once the true foundation of the preference given in the awards. The grand object should be to show clearly the advantages of correct and economical cultivation over that of a different character. For this purpose, committees should be careful to compare the number of improved acres in a farm with the value of its produce-taking always into view the expense of cultivation, and the condition of the farm before the improvements commenced; then, whether the farm be large or small, if the productions are similar in kind on each, it would seem more easy to come to a correct conclusion.

The Report of the Committee states that four farms were examined, and that premiums were recommended for three of them. I am but partially acquainted with the Committee, but presume they intended to make a candid award, not knowing any reason why they should not. But taking for facts the statement in the report, I cannot avoid coming to a different conclusion from the committee.

The smallest farm-Mr Buckminster's-appears, by the report, to maintain more stock-at less expense-and with a soil poorer, three years ago, than either of the three which obtained premiums. The whole produce, indeed, on that seems more valuable in proportion to its acres, labor, and purchased manure, than on the larger farms. That too on land which three years ago produced comparatively nothing.

To compare them I will suppose the produce necessary to keep one horse will keep 2 cows or oxen. The smallest farm then, exclusive of 'a thrifty nursery' and 'one acre of locust trees,' supports 8 cows. That is 20 acres support 8

Capt. Richardson's 40 acres support 11 cows.

Deacon Hebbard's 60 acres support equal to 12 cows. This should support 24.

Capt. Wheeler's 63 acres support equal to 174 cows through the year. They should support 25

It is true Capt. R. sold (this year) 16 tons o sides purchasing 500 bushels of ashes yearly, and candle-factory, he purchases quantities of feet an heads of animals from Lowell.

Now with these actual expenses and the bet efit of a 'slaughter house, which alone support 4 hogs,' it does not appear that his annual pro duce is, in proportion, equal to Mr B.'s

Deacon H. buys no manure and sells no hay He keeps 12 cows instead of 24.

Capt. W. has purchased for 9 years, the whole manure of the largest stable in the county. H sells no hay-he keeps 173 cows instead of 2a Mr B.'s proportion. As Mr B. has purchase only 40 loads in tirree years, and 200 bushels of leached ashes, and as his 'thrifty nurser 'planted on' exhausted ground,' must have r quired at least the 40 loads in three years, (which nursery is not counted as any part of the produc of his farm) as the whole of his pasture at mowing grounds, as by report, were 3 years bac 'much reduced'-the six acres of peat meado eonsidered of little value,' it strikes me for bly that the smallest farm, which obtained 1 premium, must have been managed with mo skill, and of course was better entitled to tl Society's premium than either of the others.

The truth is, small farms are more productive in proportion than large ones.

They are managed at less expense-less lab

They lie nearer the barn and the house. I the produce therefore is more easily stored-t manure more easily carted, and the cattle me readily driven to pasture.

I hope, sir, our Committees will not desp small farms.

A SMALL FARMER.

FOR THE NEW ENGLAND FARMER.

IMPROVEMENT IN GRAFTING.

T. G. FESSENDEN, ESQ -

DEAR SIA-For the three last years I have be

in the habit of side-grafti into the roots of small app and pear stocks. I dig do to where the perpendicu root or bole is of sufficient si an inch under ground, more less, and make an oblique into it at an angle of about degrees with the stem, and sert my scion. The first t years I applied some clay a manure around where the sci

was inserted, but the last spring, I only replac the earth, and closely pressed it down.

The last year I used scions of one, two, 8 three years' growth, and they all took, and ha grown very well. I send you samples of the mo of inserting them.

Yours respectfully,

BENJAMIN SHURTLEFF. Boston, December 27, 1830.

MR COOK'S ADDRESS,

DELIVERED BEFORE THE MASSACHUSETTS HOR-TICULTURAL SOCIETY, AT THEIR SECOND AN-NIVERSARY, SEPTEMBER 10, M.D.CCC.XXX.

Mr President, and Gentlemen of the Massachusetts Horticultural Society-

The propitious circumstances under which we have assembled to celebrate our second annual festival, must be gratifying to all who cherish an interest in the prosperity of our institution, and more particularly to those who have labored to acquire for it its present prosperous and elevated condition. The experiment has been fairly tested, and thus far its results are too apparent to permit even the most sceptical to doubt of either its utility rits final success. Its interests are too closely dentified with the general good, as well as with ndividual comfort and happiness to allow us to waver in our hopes, or to falter in our exertions to effect the original design of its creation.

We have not come up hither to recount the exploits of military prowess, or to mingle in the exploits of political statistic, or participate in the conquests of political statistics. We come not to swell the preams of he conqueror or to mourn over our prostrate liberies. We come not to indulge in the feelings which are incited by the contemplation of such bjects, for we war not with the sword, nor seek or gather laurels in the field of hostile or fierce ontentions.

But we have come together at the ingathering f the harvest, to exhibit an acceptable offering faportion of its bounties. We have come in the acific and general spirit of the pursuits we love, participate in the enjoyments the occasion imarts, and we have come to reciprocate the conratulations of the season, in the success with hich our labors and our experiments have been rowned.

The primitive employment of man was that of a ller of the ground, and the garden of Eden, anted and ornamented by the hand of its Crear, was assigned to the care of our great proenitor, 'to dress and to keep it.' From the earest period of the world to the present day, the iltivation of the ground has been viewed with ecial favor by all civilized nations. roes, philosophers, and statesmen have sought rural employments a temporary relaxation from e cares and perplexities incident to their public bors. It is not necessary to explore the annals ancient history for the names of individuals who we been thus distinguished. The records of ir own times, and especially of our own country. d our own personal observations, afford instans of illustrious men who have been thus preemient, and there are those now living among us. he, by their precept and example, by their ientific and practical knowledge and skill, and votion to its interests, have imparted an impulse the pursuit, that will be felt and acknowledged ng after they have ceased to cheer us by their esence, or to influence us by their personal illus-

The pursuits of horticulture are peaceful. The hivation of firits and flowers is an unfailing urce of pleasant and instructive occupation d amusement. Labor is lightened, and care is compensed, and industry is cheered in the complation of the expanding beauties of spring, in e delightful fragrance and glowing and gratefulticipations of summer, and in the consumman of our hopes in autumn.

The pursuits of horticulture are salutary to the physical and moral nature of man. They impart vigor to the body, and expansion and elevation to the mind. The plants that are everywhere scattered in his pathway, and around, above and beneath him, delighting the senses with their sweetness, their simplicity, their grandeur, and perfect adaptation to his joys and to his necessities, are silent but impressive emblems of the benignity of our heavenly Father, admonishing the recipient of his indebtedness, and claiming from him the return of a sincere and lively gratitude.

Industry, intelligence, and skill are indispensable

agents in the business of horticulture. A thorough acquaintance with the views of eminent scientific and experimental writers, as well as with the more legible and definite compositions of nature, are essential to the formation of an accomplished, and distinguished cultivator. The information we derive from study, as from the practical observations of the workings of inanimate nature' will administer to our success, and prevent in a measure the recurrence of errors which flow from inattention, or from the want of some established system of operation. A judicious selection of soil and aspect is necessary to the health of the plant, and will repay our care in the vigor of its growth, and in the improvement of the quality and quantity of its fruit.

The opinions of foreign writers, however applicable they may be in practice to the mode of cultivation pursued in those regions of which they treat are not always suited to the climate and soil of that which adopts them. That which is ascertained to be of practical utility in one country, under one climate, may be unfavorable to the production or maturity of the same variety of fruit or vegetables, or ornamental trees in another, In some climates, indigenous and exotic plants and fruit, that require the aid of artificial culture and great care in their preservation, are matured in others with comparatively little labor. Unassisted nature performs nearly all that is needful in their production, relieving man from the toil and anxiety of cultivation, and affording him, at the appropriate season, a portion of her abundance. The present flourishing condition of horticulture in our country may, I think, be ascribed to the refined taste and liberality of its citizens, and in a measure to the improved condition of those whose ingenuity and industry is exerted in affording the means of gratifying that taste, and exciting that liberality. A laudable spirit of competition has been awakened among the practical and amateur cultivators in this vicinity, which I hope will be productive of great and useful results to the community. We have witnessed with no ordinary gratification the increasing variety of flowers, the introduction of new and valuable kinds of fruit. and the amelioration of those which have been long familiar to us. And among those fruits which we may, without the imputation of a violent presumption, consider as original native productions, the Baldwin Apple, the Seckle, Cushing, Wilkinson, Gore's Heathcote, Lewis, Andrews, and Dix Pears, the Lewis or Boston Nectarine, and the Downer Cherry, may be classed among the most desirable of their kinds.

It is true that the introduction of these several varieties of fruits was the result of accident; this consideration does not diminish their value, nor should detract from the merit of those under

whose auspices they were derived, or introduced to public notice.

An opinion seems to be entertained by some of our most experienced cultivators that few if any of the choice varieties of pears, considered by others as native fruits, are indigenous to our soil. That this opinion is not well founded, I think has been abundantly demonstrated by the production of some in the instances to which I have before referred. Those fruits were discovered in isolated situations, in pastures or in the woods, or generally remote from habitations, and where no traces of man's device' could be discernible in their vicinity or the ameliorating effects upon the tree itself, by engrafting or ineculation. In some cases we have positive evidence, derived from the personal observation of the proprietor, that the tree originated in the place it now occupies, and has never been subjected to the operation of artificial change. The process of raising ameliorated fruits of this description is very slow, if we wait the development of the product in the maturity of the original tree. The first generation of fruit may afford the desired degree of amelioration, although the balance of probabilities may be against the fulfilment of that expectation. A more summary mode of preducing the desired result is to transfer a sheet or a bud from a young plant to a * thrifty mature tree. and to plant the seed of the fruit that it may produce, and thus proceed in the multiplication of chances by alternate planting and engrafting from the fruit and plant produced, until the required quality is obtained. This, according to the theory of an ingenious modern writer, may be effected in the fifth or sixth generation. The experiment, though it may require much time and labor, and demand no inconsiderable share of patience, is worthy the attention of those, whose views are not confined to the narrow precincts of a selfish and exclusive policy, but are disposed to imitate their predecessors in the liberal provision they made for their successors. But I make not this appeal to any who are actuated by similar feelings to those which were indulged by the enlightened legislator, who, in the discussion of a subject bearing some analogy to this, inquired, what has posterity done for us! that we should be required to do this for our posterity!

The reflection that we may not realize the advantages of those experiments, should not deter us from making them. We should be influenced by more patriotic and liberal sentiments. Every generation of men is a link in the great chain that has been forming from the creation of the world, connecting the present with the past, and is to be lengthened out brough succeeding ages. Be it our province then, as it is our duty, to preserve the brightness of this chain, that our appropriate division of it may loose nothing upon a comparison with all its parts, but that the period of which it is typical, may be regarded as one that was charracterized by a suitable respect for ourselves, and as a stimulus to the coming generation to evince a like regard to the claims of these who are to follow.

[To be continued.]

consideration does not diminish their value, nor The first tri-colored flag hoisted during the 3 gloshould detract from the merit of those under rious days was made of the garments of a dead soldier

[•] It has been suggested to me by a distinguished Horticulturist, that this experiment would probably succeed better, if the shoot or bud were placed upon an old tree, or one of slow growth, as it would thus earlier develope the fruit.

ERVERVOLFROM.

FOR THE NEW ENGLAND FARMER.

Mr Fessenden-Although commendable efforts have been made in several parts of the country, to introduce and multiply most of the choice varieties of fruits, and our cities are now tolerably well supplied, from the gardens and orchards in their immediate vicinities, still there is a lamentable negligence, of this important culture, throughout the union. Without going beyond the bounds of our own Commonwealth, how rare is it to find any fruit, other than the most indifferent wilding apples, save in a few gardens, or estates in some of the most flourishing villages. Strawberries, raspherries, cherries, apricots, pluns, peaches, pears, and grafted apples are so little cultivated, that a large portion of the inhabitants never even taste them, during the successive seasons of their maturity; and every owner of an acre of land could annually enjoy them all, with but triffing other protection than the morals of the people, labor and expense. A few rods of ground, appropriated to a nursery, would afford stocks for all the kinds of fruit trees, which flourish in this climate. Scions or buds, of the best varieties, are easily obtained, and in a few years, each house, however humble, may be embowered in the shade of many of the most excellent kinds of fruit trees, affording not only an abundant supply to the family during summer and autumn, but during winter, and until strawberries and cherries announce the commencement of a new pomonal year.

A few hours, in the morning and evening, could be devoted to a fruit garden, which, without interfering with the other duties of the farmer, or mechanic, would insure the comforts and pleasures of its products to the whole family.

There is a too general impression, that much skill and great labor are indispensable, to manage fruit trees successfully; but the same intelligence and attention, which insure a harvest of corn and grain, are the only requisite. Those who have made the experiment will vouch for the truth of this assertion; and there are but few farmers, who are willing to acknowledge, that their neighbors are more able than themselves, or can use the implements of their profession with better judgment, adroitness, and success: still they must perceive, that there are individuals, in their vicinity, with equal talent and resources, are not such mer- men! let the odium be upon him; our hands are itorious experiments imitated?

There is one objection, which is very generally urged for not establishing a fruit garden,-the depredations which are committed upon them. To prevent this, it is only necessary to make them universal, and thus leaving none to intrude, -for they afford, or enabled to purchase them at a moderate price, the temptation to plunder is removed. Who, but the most abandoned, robs a corn exposed. Having alighted from our carriage, to or potato field? Equally secure would be the fruit spare the spring, in a rough road that wound trees, if they were rendered as common.

in some degree, accountable for its existence? Is I might take an apple : he replied coolly, "they are it treated with sufficient seriousness? Is not the not mine." But you sometimes help yourself, I pilfering of fruit thought much too lightly of in dare say. He raised his head, and looking at me, the community? and are not children induced to with an expression of humorous sarcasm, he replied, view it, as a very slight, and even an excusable "You mean that I steal; do you not, madam? No. offence, something to be laughed at, rather than madam, it is better to ask for one, than to turn to be denounced; and all this from the indifference thief for an apple."

with which parents are apt to regard such transgressions. In point of criminality, where is the each county, for no other purpose than to collecdifference, between stealing fruit, or the fence seeds, buds, scions and plants, for distribution which encloses it .- an apple or a plough .- cherries or silver spoons, -melons, or any other article belonging to the proprietor? If the law has not made it theft, it is an offence punishable by a heavy fine. Morality is as much outraged, by taking a peach, as the spade at the door; and to treat such acts, in children, as unworthy of re- sides the benefits which would be derived from proof, is a dereliction of duty, which neither vir- an abundance of excellent fruit, vegetable gar tue or religion can tolerate; for the doing wrong in the slightest manner, is most often the commencement of a career of depravity, which brings disgrace and ruin upon the deluded or heedless offender.

A man's ground should be considered as sacred as his house; and every article on his estate, as secure against robbery, as if it were protected by locks and bars. The very fact that most of the property of the farmer is exposed, and without any makes it still more imperious, that such an exalted sense of honor and honesty should be inculcated, as to give not only security to the products of rural industry, but a confidence beyond the sanctity of the laws. Of what value are morals. which are limited by the statute book, and consist in doing whatever does not subject the individual to the penalties of the criminal code? But placing this subject in the most favorable light, for those who have been in the habit, of either deeming it of such little moment as not to merit grave consideration, or as a foible incident to youth, and not very objectionable at any age, still they are bound to change their conduct ;- this, politeness and common decency of manners require. If they believe there is no great harm in taking. there is much of rudeness in not having the civility to first ask permission. If what is desired, is of small value, it will most commonly be cheerfully granted, and the donor is happy to have it in his power, to do an act of kindness, and the receiver. if not grateful, he at least has the satisfaction of reflecting that he has acted like an honest man, and a christian, and that he has observed the courtesies of life. Should, however, the owner refuse the boon, there is still consolation; either it was of greater value than had been presumed, and thus an injury has been prevented; or he was not of neither greater capacity or means, who exhibit of a generous disposition; and then comes the vigorous trees and beautiful fruit. Why, then, ejaculation,-thank God there are but few such

On the continent of Europe there are but few fences in the country; the grounds are unprotected even on the highways, and although burdened by grape vines and trees loaded with delicious fruit, no one thinks of taking the smallest quantity, with-Il being either in possession of the luxuries which out the approbation of the proprietor. Lady Morgan observes, in her travels, 'that property of this description is held sacred, in proportion, as it lies through a wilderness of fruit trees, I asked a boy But as to this too common vice, are we not all, who was lying reading under one of these, whether

If horticultural societies were established in much could be effected in a few years toward covering our naked fields with fruit trees, I very small fund would be sufficient for this purpose, and when the members had obtained the best varieties, how rapidly would they be dissem inated among the inhabitants of every town. Be dens would naturally claim more attention, and : taste for flowers and ornamental trees and shrub: would seen be induced, and at last universall

With the picturesque topographical feature which Massachusetts presents, nothing is want ing to render its scenery as interesting, and in villages as beautiful, as those of any other coun try. In England scarcely a cottage exists, that i not surrounded by fruit trees, shrubs, and flowers while the neat esculent compartment,-often containing less than a rood of land, supplies mucl of the food for the industrious inmates of the modest dwelling. In Holland and Germany it i the general attention which all ranks in society bestow upon the grounds about their habitations which gives such a pleasing aspect to those coun-

Why then should not such examples be emu lated in the United States, where the industrions are so independent in their rights, and domestic circumstances; where there are infinitely greate means, within the command of the cultivators o the soil; where each is the lord of the domain on which he resides, and garners up its undivided harvest, free and exempt from all exactions

Besides the pleasure, comfort and economica advantages, which are derivable from well man aged fruit and vegetable gardens, their sanative influence is of inestimable value, -not only a respects the fortunate families which directly participate in the various products they afford but the whole community. That fruit is no merely healthy, but is even an antidote and curfor many diseases, there is not the least doubt We have the opinion of the ablest physicians, ir support of this position; but as very erroneous impressions are still prevalent on this subject, it is believed, that the following extract will be reacwith interest; at least by all lovers of good

Accept assurances of my great respect, II. A. S. DEARBORN. Brinley Place, Dec. 20, 1830.

> EXTRACT NO. XXXII. From the Annales D'Horticulture.

The Utility of Fruit for the Preservation of Health

One of the best aliments, and the best appropriated to the different ages of life, is that which our fruits afford. They present to man a light nourishment, of easy digestion, and produce a chyle admirably adapted to the functions of the human body. But in the use of fruits, care should be taken, that they are fully ripe and of a good quality. Those which a delicate palate does not relish, are not, in general, healthy; those which are green, or have not obtained perfect maturity, are very injurious, and often occasion diseases, especially when the stomach is feeble or when they are eaten for a long time. It has been remarked, that children and females have a particular taste for green fruit, and this taste has bestrength. The author of this article, has made by Tissot. he experiment. He passed a whole year, withiminished in the least, not withstanding the great xereise which he constantly took.

Vol. 1X.—No. 24.

There are fruits, which when perfectly ripe, can e eaten to excess, without inconvenience. Such s grapes, cherries, and currants; the other kinds ever occasion ill consequences, if they are eaten nly to satisfy the demands of nature. They are jurious, when large quantities are taken into the tomach, already filled with yiands, and other food, here are certain stonnachs with which fruits do ot equally well agree : but still they are not inprious in such cases if taken with moderation. hat kind of laxness which certain fruits prouce,-such as melens, peaches, apricots, &c, is revented, by taking a glass of wine after having iten them.

It is much to be regretted, that our country is so enerally devoid of fruit, when it can be so easily ised and at such a triffing expense. The small imber of fruit trees, which are to be seen around ir villages, are generally of very inferior kinds; id it seems that the people—are disposed, in orr to render them more unhealthy, to cut the uits before they are ripe. It is in conformity to order of things, so adverse to the public good, at on the one side the privation of fruit renders e regimen of the inhabitants unfavorable to alth, and on the other, the custom of eating d and imperfectly ripe fruit, occasions sickness. This state of things, so pernicious to the happiss of the country, must continue, as long as the norance of the people, in relation to the first ants of life, reigns throughout the departments. is the doty of the independent proprietors, to lighten the laborious cultivators of the soil, and encourage them to plant orchards of fruit trees, iere should not exist a cottage to which there is nexed any land, without having some good it trees about it. This kind of crop, which is easily obtained, would be a great nutritive rearee for the inhabitants, not only during sumer, but the whole of the year; for plums, apples d pears can be readily dried. This variety, beintroduced into the dietetic regimen, would stribute, not a little, to the health of the people. The numerous advantages, which the laboring sses may derive from the cultivation of good kinds fruits, are better understood in Germany, than in ance, although the natural advantages which r soil affords ere much superior. In traversing territories of Germany, there is to be seen ar each habitation, a vineyard or a garden of it trees. The villages are surrounded with em, and there are but few families, who do not ke use of fruits, during the summer, and preve a certain quantity for winter. The surplus sold in the cities. There are to be seen, upon Rhine and other rivers of Germany, boats en with dried apples, pears and plams. These its are objects of considerable commercial imtance. It is desirable that the departmental cticultural societies should offer premiums, to sourage the proprietors of small estates to plant it trees of the best kinds.

As this belief is sufficiently general, that fruits some too common among all classes, either from produce diseases, and especially the dysentery, we poverty or ignorance. Thoroughly ripe fruit, think it our duty to introduce the following pas-Paten with bread, is perhaps the most innocent of sage, in relation to this subject, which is to be Il aliments, and will even insure health, and found in the advice to the people upon their health,

· There is a pernicious prejudice, with which all but taking any other food, than fruit, bread and are too generally imbued,-it is, that fruits are water, without his power, or vigor, having been injurious in the dysentery, and that they produce and increase it. There is not, perhaps, a more false preindice.

Bad fruits, and those which have imperfectly ripened, in unfavorable seasons, may occasion cholics and sometimes diarrhoas,-oftener constipations and diseases of the nerves and skin, but never epidemic dysentery. Ripe fruits, of all kinds, and especially those of summer, are the true preser, atives against this malady. The greatest injury they can do, is in dissolving the humors, and particularly the bile, of which they are the true dissolvents, and occasion a diarrhora; but even this diarrhoea is a protection against the dysentery. It has not been observed, that this disease is more common during those seasons when fruits are very abundant. It is also believed that it is more rare and less severe than heretofore, and this can surely be attributed, if it is true, but to the more numerous plantations of fruit trees, which has rendered fruit very com-

· Whenever the dysentery has prevailed, I have caten less animal food and more fruit, and I have never had the slightest attack. Several physicians have adopted the name regimen,

'I have seen eleven patients in the same house ; nine were obedient to the directions given and ate fruit; they recovered. The grandmother and a child which she was most partial to, died. She prescribed to the child burnt wine, oil, powerful aromatics, and forbade the use of fruit; it died. She followed the same course and met the like

'This disease was destroying a Swiss regiment, which was stationed in a garrison in the southern part of France. The captain purchased the grapes of several acres of vines. The sick soldiers were either earried to the vineyard, or were supplied with grapes from it, if they were too feeble to be removed. They are nothing else; not another died, -or were any more attacked with the complaint, after they commenced eating

'A minister was attacked with the dysentery, and the medicines which were administered gave no relief; he saw by accident, some red currants, and had a great desire to eat them; he ate three pounds, between seven o'clock in the morning and nine o'clock in the evening; he was better during the day, and entirely cured the next.'

I could accumulate a great number of like facts, but the above are sufficient to convince the most incredulous. Far from prohibiting the use larger size and later at maturity. of fruits, when the dysentery prevails, too many of them cannot be eaten. The discretions of the police instead of interdicting them should cause the markets to be abundantly supplied with them. This is a truth, which intelligent persons no longer doubt. Experience has demonstrated it, and it is founded in reason, since fruits remove all the causes of dysentery.

Slavery.-The Georgia Senate, by a vote of 38 to 30, have refused to repeal a law prohibiting the importation of slaves into that State.

From Prince's Pounological Manual, now in press.

Pound. Pr. car. Coxe. Fes. New AM. GARD. Cordelier, or large Cordelier, of English authors.

Next to the White Doyenné pear, the present variety is the most common in this vicinity, it being of so great a size and subserving such useful purposes, that all desire to possess it. It is the largest of all the older class of pears, and there are but three or four of those more recently introduced that can compare with it in this respect. It often weighs from twentyfive to thirty onnees, and one exhibited in New Jersey about four years since, weighing forty and a half ounces. It is of uniform shape, full and round at the head, and diminishing gradually to the stalk, which is large and long; the skin is of a greenish bue, with a brownish russet cheek next the sun; the flesh is solid, and when cooked, acquires a red color. This fruit is not suitable for the table, but is esteemed for baking and preserving. It will keep till late in the spring and may be used from time to time as required for the above purposes. It is preferable to allow the the pears to hang on the trees until late, when after gathering they should be packed away in chaff, or wrapped in paper, which by excluding the atmosphere, keeps them from drying and preserves their freshness, consequently rendering them more juicy and tender, and when so treated they become towards spring of a yellow color, and the russet cheek acquires a fine tinge of red.

The tree grows exceedingly strong even from its first advance, and its progress is very rapid, perhaps none more so, forming one of the largest of its class, and being also exceedingly hardy, and subject to no maladies or defects. Large quantities of the fruit are put up in this vicinity in barrels for the markets of New York and for exportation.

> SWAN'S EGG. PR. CAT. FOR. COXE. Poire d'Auch, of some gardens.

This fruit is of medium size, and the form eliptical; the skin is green, slightly tinged with brown or russet; the flesh quite melting, and abounding with juice of an agreeable musky flavor. Its period of maturity is November, and it may with atten tion be preserved for some time.

Miller does not descibe this pear, and Forsyth after quoting the Poire d'auf, or Egg pear of Duhamel, copies about half of the description of that variety, and adds thereto some further remarks of little import, and varies the time of ripening. In truth, however, these fruits would appear to be very distinct and Duhamel states the time of ripening of the Egg pear to be the end of August or beginning of September.

ANGLETERRE DE NOISETTE, PR. CAT. A Grosse Ingleterre de Noisette. Bon Jard.

BEAUTY OF BRUSSELS, PR. CAT. Belle de Bruxelles. Dah. Calvel. Dic. d'Agric. Belle d'aout. Bon Jard. ?

This fruit has the form of a Beurre; the skin which is previously green, becomes yellowish at the period of maturity, which is doring the month of October; the flesh is white, delicate, and of agreeable flavor, and the tree is of thrifty growth. The Dict. d'Agriculture gives a very similar description, but the Bon Jardinier describes it as a superb fruit of good quality, and ripening in August.

NEW ENGLAND PARMER.

BOSTON, FRIDAY, DECEMBER 31, 1830.

VALUABLE COMMUNICATIONS.—We should be very insensible or ungrateful not to acknowledge with gratitude the numerous favors, for which we are indebted, and by which the public is benefited, emanating from the pen of our enlightened and patriotic correspondent, Gen. H. A. S. Dearborn. We are happy to perceive that his efforts to irradiate the path of the American cultivator with the lights of European science, as well as those which can be elicited from eisatlantic sources, are well appreciated; as his articles are widely diffused by the courtesy and discernment of our editorial brethren. Our warmest thanks are also due for the constantly increasing number of intelligent correspondents.

AGRICULTURAL MEETING.

At a meeting of a number of Farmers of Rutland, and the neighboring towns, at Capt. Wm. Butman's, on the 27th ult. for the purpose of consulting on the adoption of measures to promote the agricultural interest in this vicinity,

The Hon, Mosks Strong was appointed Chairman, and WM, FAY, Secretary,

After some discussion in which it was argued and urged, with much earnestness and zeal, that something ought to be done to promote the Agricultural Interest in this vicinity,-It was unani-

Resolved, that the Farmers of Rutland and the neighboring towns, form themselves into a society denominated an Agricultural Society.

On motion, Messrs Heman Spafford, Robert Pierpont and Wm. Green, were appointed a committee to draw up a constitution for said Society, and report at the next meeting.

Voted, that the meeting adjourn to meet at the Court House in Rutland, on the first Tuesday in January next, at one o'clock, P. M.

Voted, That the Secretary cause the proceedings of this meeting to be published, and therein to solicit the attendance of the Farmers of Rutland and the neighboring towns,

WM. FAY, Sec'y.

From the Concord Gazette.

AGRICULTURAL REPORTS.

The Committee on Fruit and Forest Trees, Shrubs and Farms, consisting of Josian Adams, Ben-JAMIN F. VARNUM, REUBEN BROWN, JR., and Moses Whitney, Esq's respectfully Report.

That Premiums have been claimed only for Apple Orchards and Farms-The Competitors for the premiums on Orchards are: - Capt. Francis Richardson, of Billerica; Mr Horace Tuttle, and Robert Chaffin, of Acton; Mr George M. Barrett, of Concord; and Mr Nathaniel S. Bennet, of Framingham.

CAPT, RICHARDSON'S ORCHARD

Has 132 trees which were set in the spring of 1825. They were then very small and not thrifty; being placed however in a good soil which has been cultivated, and manured, most of them have is left of four rods, and, in some instances, this recovered and some of them are of good size and space is left also cross wise making the trees stand thrifty. They do not however appear to have in squares of four trees each. There is some variebeen trimmed at all; the trunks of many of them ty in the manner, but the effect and object, in each into the middle of the tree, and present an ap- productive for other purposes. In order to suffer by Mr Cody. - Brooklyn Adv.

pearance which to the horticulturist, need not be described; and all for the want of a little trimming in season.

MR TUTTLE'S ORCHARD

Was set partly in 1824 and partly in 1825, on strong loamy land. There are about 80 trees, The land has been cultivated till the last year and kept in good heart. The trees look healthy and some of them quite large for their age. Some attention has been paid to trimming, but more of it would have added greatly to the beauty and value of the orchard.

MR CHAFFIN'S ORCHARD

Is partly in Acton and partly in Littleton, consists of 114 trees set in 1826, on land of rather more than ordinary quality. It had been cultivated and laid down in 1825, and has been mowed ever since. Had it been ploughed and cultivated two or three years, the trees would have been much benefited, as the roots would have extended themselves to a greater distance. They have however a healthy appearance, though they are not large. They were well set in holes of three or four feet diameter, which were fitted with a rich soil, and the roots within those limits have been cultivated with great care. If Mr Chaffin will plough his land the next season, and manure and cultivate it two years in every four, and will also take off many more of the limbs, which should have been removed when small, he will in a few years see a very beautiful orchard. The limbs should not be suffered to cross each other, nor to tend either toward the ground or into the middle of the tree, and the sooner such branches are cut the better. To Mr NATH'L S. BENNETT, of Framingham, the A small twig, growing in a right direction, should be left to the exclusion of any other however thrifty. Mr C. seemed willing to be instructed and did not pretend to any of that sapience which the inexperienced are so ant to assume. The Committee are confident he will not feel injured by these suggestions, which are made for the benefit of Committee have been governed rather by the spi others who may be exposed to the same errors,

MR BARRETT'S ORCHARD

Is large, containing above 200 trees, exclusive of the 50 at the west part of it, which received the Society's third premium in 1826. The orchard is situated on the southern declivity of a hill of good soil and in a healthy state of cultivation. There is a considerable variety of well selected fruit, the trees being many of them in a bearing state. They were mostly raised by himself in the nursery. They were set out in the spring of 1822, and appear to have been well attended to, many of them being quite large and thrify. Many of them have been well trimmed but some of them have suffered in this particular.

MR BENNETT'S ORCHARO

Is very large and occupies six different lots, which are separated only by stone walls and the road. The trees are about 540 in number, and were set out some in every year from 1825, to 1830. The trees are set a little less than two rods apart excepting that, between every two rows, a space

eattle to graze without injury to the trees, they ar engrafted about six feet from the ground, and the limbs generally take a direction upwards more tha usual. As the trees however are not yet out c reach, they are preserved by putting bows on the neck of the animals and also on one of the for legs and connecting the bows with a small iron roc Mr Bennett has a nursery of his own, from which he took the stocks-assisted personally in setting them in the orchard, and engrafted them himsel in the year 1829, excepting those set out in tha year and the present being about one hundred which had been engrafted in the nursery. Mr Bennett' object was to preserve any new varieties of fruit as he might choose, and engraft the rest; but bein, disappointed in all the specimens of the first fruits he gave up the object and engrafted the whole The tops of the trees are of course small, but the are generally thrifty and in a year or two will be come proportioned to the bodies. It will be neces sary however to cultivate the soil at least for a fev feet around the trees, and to add a little manure in order to make the trees continue thrifty,

Trimming has been purposely omitted this year as the stocks were large and long, and required al the top that could be obtained. It will be in sea son next year, when Mr B, proposes to attend b it. The soil is good-consisting of a hill of strong loam, some parts mixed with gravel, inclining to the southeast; and also a piece of low land o strong loam. The whole is at present laid down to grass except one piece which is planted with

Your Committee recommend that Premiums b awarded as follows:

1st Premium on Orchards, \$15,01 To Mr George M. BARRETT, of Concord, the 2d Premium of \$12.00 To Mr Horace Tuttle, of Acton, the 3d Pre

mium of

In awarding the premiums on Orchards, you rit than the letter of the offers made by the Trus tees. They have considered the expression, best thrifly state,' to mean the best state-taking thriftiness into view among all the other circum JOSIAH ADAMS,

For the Committee.

LARGE HOGS.

But a few weeks since we published an account of large Hogs. By way of appendix we now ade that a dead hog 20 months old was carried through Warren last week which weighed no less than 712 pounds, and was bought by Mr Benjamin Hall of Bristol. The animal was bred in Swanzey, by Mr Richard Leisure, and may fairly excite the emulation of all growers of pork, in the flourishing county of which Swanzey is a part.

Large Heifer .- Moses Smith, of Flatbush Hill, is now fatting a three years' old Heifer, which is supposed to be the largest ever fatted in this county. She weighs 1829 pounds.—Brooklyn Adv.

Horticulture .- Thomas Cody, gardener of Commodore Chauncey, at the Navy Yard, in this village, has left at this office a Savoy Cabbage weighing nine pounds and a half, without the stalk and under leaves. It is considered large for that pecuare much too short; the branches are crowded case is to let in the sun's rays so as to make the land liar kind, which was produced from foreign seed,

COARSE GRAIN.

MESSRS EDITORS-It has been a question with armers what they should do with their coarse grain, when the Temperance Reformation shall keep more stock and feed them with it. I have nade the trial and find it more profitable than to ell my coarse grain to distillers. Make the trial with a dozen or twenty pigs. Value them at their narket price when young; then keep an account f the coarse grain you give them, at the market rice. You will find on selling the pork a handome profit for your trouble .- Gen, of Temp.

Ship Timber - Several lots of ship timber have een sent down the Canal, from this place the resent season, which, we learn has turned to good count. There is no doubt that all such sticks will answer, are worth much more for that than r any other purpose to which they can be put reabouts. And it should be borne in mind that great portion of the timber which is most valable for that purpose, is of little worth for any her, even for fuel, as it costs as much to work it as it is worth after it is done. Those who are out to cut timber should take this into considerion, and save all such sticks as will answer the rpose, in doing which they will doubtless find eir account in the course of the next season. We derstand that some of that which has been sent wn the present season, was carted from twelve fifteen miles, and paid well for the transportan .- Mass. Spy.

The durability of posts used in making fences matter of great importance to our farmers, and cing is continued. We are informed that the tkers at Union Village, have been in the habit making oak posts as durable as locust, by a y simple and easy process .- This is merely to e a hole in that part of the post which will be tat the surface of the earth, with such a slope as I carry it just below the surface, and fill it h salt. This, it is said, will preserve the timfrom decaying for a long time; and from the invledge we have of the influence of salt in serving ship timber when treated in a someat similar manner, we have no doubt of its ng an excellent method.

nprisonment for Debt .- A meeting was held in ladelphia, on Wednesday last, to take measures ameliorating the laws on this subject.

SIGNS OF PROSPERITY.

FROM THE CHINESE.

were spades grow bright, and idle swords grow dull; ere jails are empty, and where barns are full; ere church paths are with frequent feet out-worn; · court-yards weedy, silent, and forlorn ; re doctors foot it, and where farmers ride : ere age abounds, and youth is multiplied; ere these signs are, they clearly indicate

ippy people, and well-governed state.

CORRESPONDENTS .- We have deterred this week ral communications; among which are an interesting ssion between Mrs Griffith of New Jersey, Dr CHER of Plymouth, and Dr Smith of this city, on heory of the existence of the Queen Bee; in which drawings will be introduced illustrative of an imed Apiary, and some improvements in Hives- Sugweek-with several other communications.

Mason's Pocket Farrier,

Comprising a general description of that noble and use tul animal the Horse; fifth edition, with additions. T which is added a Prize Essay on Mules. By S. W. Pume 10y, Esq. of Brighton, Mass And an appendix, contain have stopped the distilleries.-Let me tell them ing observations and recipes for the cure of most of the common distempers incident to Horses, Oxen, Cows Calves, Sheep, Lambs, Swine, Dogs, &c, selected from different authors. And an Addenda, containing the annal of the Turf, American Stud Book, mode of training, rule of Racing, &c.

Just published and for sale by R. P. & C. Williams, 1 and 20 Cornhill.

Also, on liberal terms, a large assortment of Agricultu ral, Historical, Theological, Law, and other Books Persons selecting Libraries, will find it for their advan tage to eall.

Notice.

Messrs WINSHIPS have a bundle of Shrubs, lef sometime since at Doolittle's City Tavern, by a Provi dence Wagon; as they were in a perishable state, it was considered expedient to remove them to Brighton, in or der to save them. The owner may have them by application to the New England Farmer Office. 3t Dec. 31.

Black Currant Wine.

For sale at the Agricultural Warehouse, 52 North Market Street-

A few dozen bottles of superior old Black Curran Wine, made by a gentleman in this vicinity; an account of its astringent and detergent properties in various complaints, and particularly the Sore Throat, will be found in the New England Farmer, vol. v. page 567, written by Samuel W. Pomeroy, Esq. and the late Dr John G. Coffin Price 75 cts. per bottle—also, a few bottles of old White Dutch Currant Wine, price 50 cts. per bottle. Dec. 31,

Bartram Botanic Garden and Nursery, Kingsessing near Philadelphia.

This old and celebrated establishment is 4 miles from the centre square, three miles from Market-street bridge and a half mile below Gray's ferry, on the west bank of the Schuylkill. It is the oldest botanical garden in the United States, having been begun in 1720 by the elder t matter of great importance to our farmers, and John Bartran, who was the American botanist to the continue so as long as the present system of king, until the Revolution, and it has since been cultivated by his children and grand children.

The garden originally contained about eight acres, chiefly planted with native trees, shrubs, &c, and became the seminary from whence American vegetables were distributed to Europe, and other regions of the civilized world.

The present proprietor has added an extensive collection of green house plants, a thriving young vineyard, and several acres of nursery, well stocked with a genera assortment of the finest fruit trees, grape vines, ornamental trees and shrubs, &c, which are sold at reasonable prices, and are sent to all parts of the United States.

American indigenous trees, shrubs, and plants, or their seeds, suitable for sending to Europe, are supplied in assortnents from \$5 to \$500, or more.

Orders for trees, plants, or seeds, from this garden, left with Messrs G. Thorburn & Son, seedsmen, New York; George M. Coates, No. 49 Market-street, Philadelphia; J. B. Russell, No. 52 North Market-street, Boston; or addressed, per mail, (post paid) to the proprietor, at the garden, will meet with prompt attention, and the articles will be carefully packed, so as to bear the transportation in safety.

Strangers are invited to view the gardens at any time, (Sundays excepted) where any information will be cheerfully imparted.

Printed catalogues of the collection delivered gratis. Dec. 24. ROBERT CARR, Proprietor.

Camellias, Jasmines, &c.

FOR SALE, at a Nursery in the vicinity of Boston, a good collection of Camellias, also Broad, Small and Long leaf Jasmines, Heaths, &c. all large plants, and at moderate prices-orders left with J. B. Russell, at his Seed Store, will be promptly attended to.

A fine Mallese Jack,

Recently imported from Malta-he is a young, vigorous, fine animal. Price 500 dollars-can be seen by applying to Mr Russell at the Farmer office.

Wanted,

Volumes 2, 3, and 6, of the New England Farmer, to ons on the Culture of Silk, by W.' will also appear complete a set, for which a liberal price will be paid at the Farmer office, Boston. Dec. 24.

BRIGHTON MARKET-Monday, Dec. 27. [Reported for the Chronicle and Patriot.]

At Market this day, 537 Cattle, 2007 Sheep, and 424 Swine.

Prices .- We report the same as last week, although prices were hardly supported, probably in consequence of the bad weather.

Beef Cattle-from 3,25 to 4,50. We noticed a dozen beautiful Cattle, (fed by Mr Sweetser, of Athol) some of which would quite equal in weight and quality, the Premium Oxen-sale not effected.

Barrelling Cattle-Mess. 3,50, No. 1, 3,00.

Sheep-we noticed sales at 1,50, 1,75, 1,83, and 2,25. Swine-sales dull; we noticed one lot taken at 4/2c and one at 41c; a few only were retailed at 5c for Sows and 6 for Barrows.

Prices in New York, December 25.

MISCELLANY.

FROM FRIENDSHIP'S OFFERING—FOR 1831. THE ACCEPTED.

BY THOMAS HAYNES BAYLY.

I THANK you for that downeast look,

And for that blushing cheek:

I would not have you raise your eyes,

I would not have you speak: Though mute. I deem you eloquent,

l ask no other sign,

While thus your little hand remains Confidingly in mine.

I know you fain would hide from me The tell-tale tears that steal Unbidden forth, and half betray

The anxious fears you feel; From friends long-tried and dearly loved The plighted bride must part :

Then freely weep-I could not love A cold, unfeeling heart.

I know you love your cottage home, Where in the summer time,

Your hand has taught the clematis, Around the porch to elimb:

You casement with the wild rose screen, Yon little garden too,

How many foud remembrances Endear them all to you

You sigh to leave your mother's roof, Though on my suit she smiled,

And, spurning ev'ry selfish thought, Gave up her darling child:

Sigh not for her, she now may claim Kind deeds from more than one; She'll gaze upon her daughter's smiles

Supported by her son!

I thank you for that look-it speaks Reliance on my truth;

And never shall unkindness wound

Your unsuspecting youth : If fate should frown, and anxious thoughts

Oppress your husband's mind, Oh! never fear to cling to me,-I could not be unkind.

Come, look upon this golden ring-You have no cause to shrink, Though oft 't is galling as the slave's

Indissoluble link! And look upon yon church, the place Of blessing and of prayer;

Before the altar hear my vows-Who could dissemble there!

Come to my home; your bird shall have As tranquil a retreat:

Your dog shall find a resting place, And slumber at your feet:

And while you turn your spinning wheel, Oh! let me hear you sing,

Or I shall think you cease to love Your little golden ring.

From Lady Morgan's late Work on France.

DOMESTIC INDUSTRY IN FRANCE.

To the perseverance and enterprise of Monsieur Ternaux the French are indebted for the immense improvement they have made in the manufacture of shawle, to which his attention was drawn by the

growing rage of the Parisians for the products of to improve the breed of sheep, and obtain the finthe Indian leom. At the period when the Egyptian expedition had brought this article into vogue, the species of animal which produces the raw material was absolutely unknown in France; and the first this product, and the animal from which it is obtain effort of Monsieur Ternaux was directed to smuggling from a town, some hundred werstes beyond Moscow, a specimen of the wool. This was executed by one of his riders, who brought the precious bale, to the amount only of sixty pounds, concealed in a courier's cushion. The first attempts at imitation were made with this scanty supply; and it was not till after the peace of Tilsit, that he was enabled to obtain a second quantity.

A perfect fac-simile of the shawl itself was then soon effected; but the borders afforded a permanent obstacle, in the high price of French labor; this article being entirely manufactured by needle-work .-Monsieur Ternaux's next attempt was, therefore, to work the border by the process used in Lyons for the figured silks. The excessive price was, however, still an obstacle to their sale; and an inferior article, made partly of silk, by another house, obtained possession of the market. Unsubdued by this impediment, Monsieur Ternaux still persevered; and ultimately succeeded in producing shawls, which, both for the tissue itself, and the beauty of the borders, were not inferior to those of India.

The next object with the manufacturer was to obtain a sufficient supply of the wool; and Monsieur of Monsieur Ternaux, dispersed through differe Ternaux having remarked that the Russians, from parts of France, commerce is indebted for a vast v whom he had purchased it, knew the article by the name of Persian wool, he directed his researches in that quarter; and learned that Thomas Koulikan, in his Asiatic expeditions, had brought three hundred of the goats which produce it from Thibet; and that these animals have multiplied greatly in Bukharia, and as far as the province of Kerman. thus determined that these animals throve in fortytwo degrees of latitude, and in a climate, from its elevation, much colder than France, and that they also resisted the heat of Kerman, which is in the thirtieth degree of latitude, he resolved to attempt their naturalization in his own country.

To ascertain the identity of the animals, and that their products in Thibet were precisely the same as those in Persia, personal inspection was necessar For this purpose, Captain Baudin, who sailed for Calcutta in 1811, was charged to obtain the true Thibet wool. An examination of this product cleared up all doubt; but the greater work remained of obtaining the animals themselves. To this enterprise many difficulties presented themselves, in the distance, the dangers of the journey, and the jealousies of foreign governments. To succeed, required the services of a man of great courage and ingenuity, acquainted with the Oriental languages, and accustomed to perilous and long journeys. It required also the direct intervention of the French ministry, to dispose the Russian government in its Fortunately, the Duc de Richelieu, whose relations with that country gave him immense facilities, took up the matter with warmth; and a Mons. Amadee Jaubert (who was sent express,) after having been compelled to abandon two hundred goats in the steppes of the Oural, and having encountered the greatest difficulties, from the sickness of the animals, from wolves, from the barbarous hordes inhabiting the country through which he passed, and from hunger and thirst, succeeded in embarking from the Crimea five hundred and sixtyeight animals, two hundred and forty of the pure breed, and three hundred of a mixed race; six Bukharian sheep, eight kids, seven young mothers, and seven males.

By the success of this well-combined and fortunate enterprise, a single manufacturer has bestowed on his country a new and profitable object of agricultural industry, and has enriched its manufactures which a product, which will be a source of labor and profit as long as wealth and taste shall remain in Europe.

But perhaps a greater benefit still was conferred on France, by the efforts made by Mons. Ternaux,

Montreal, L. C.—A. Bowman, Bookseller. with a product, which will be a source of labor and

qualities of wool, from indigenous sources. Havin made his first attempts at imitating the Indian shaw with merino wool, his attention was early fixed of ed. The improvement of the breed of sheep he been a favorite object with the minister Colbert; at when a certain Mons. Cudot, a cloth manufacture was nearly sinking under the expenses of his a tempts to make fine cloths in opposition to the Le den looms, he succeeded in saving his protege, by trick, which perfectly answered his intention. his persuasion, Louis the Fourteenth was induced wear a coat of this manufacture; and, when on parti de chasse, to praise very much its texture at colors: the result was, that his courtiers (and the courtiers in turn) all made a point of procuring similar dress. The cloth sold rapidly, and at a high price; the manufactory at Sedan was saved, and b came the parent of that of Rheims, which, for long time, remained famous for this stuff, which w afterwards known by the name of silerie.

To the improvement of the French breed sheep, Monsieur Ternaux has contributed, by t importation of various approved races, from Spai from England, and from Egypt; and he has publis ed several pamphlets to diffuse a knowledge of t points to be attended to in the conduct of this it portant branch of agriculture. To the manufactur riety of new products; more especially for th beautiful, light texture, now so perfectly imitated England, which is known by the name of merin-He also, I believe, it was, that invented the proce for stamping patterns in relief, on cloth ;-for t covers of tables, and other ornamental purposes.

As the popular representative of Paris in t Chamber of Deputies, this gentleman's name is w known to English politicians. He is said to posse unmense wealth; and, if industry, ingenuity, an e lightened and comprehensive mind, and a patri ism that sees the prosperity of his country in t comfort and happiness of its people, and purst that object with incorruptible honesty and unweari perseverance, be just titles to eminence-

'Well has he won it-may he wear it long.'

The night before Pius the seventh died, he sent Col. M --, who had been extremely kind to him wh he was a prisoner at Valence, and presented him w a superb silver-gilt cup, rescued from the papal tre ury, which he begged him to accept as a mark of gratitude and esteem. Col. M --- , felt some co scientious scruples about taking so magnificen present. 'Perhaps your Holiness is not aware,' s he, that you are making this valuable, and alm consecrated present to a heretic. I am of the chur of Geneva.' What has that to do with it? said t Pope, with a flash of animation. Then, closing 1 heavy eyes, he added, in an exhausted tone, but w great solemnity, 'Are we not all children of t same Father?'—Lady Morgan's France.

NATURAL HISTORY

THE HONEY BEE.

THOMAS G. FESSENDEN, Esq.-

leficient in our knowledge, in many points of heir true character and peculiar system of econmy, nor can our inquiries be fully satisfied, till we and and matter, or intelligence and unerring ininct. Having devoted a portion of my latter coretical and practical knowledge.

Presuming that the following correspondence ill prove interesting, or at least amusing to many your readers, I present it for insertion in your ry valuable vehicle of intelligence, and subscribe vself very respectfully,

Your obedient servant.

JAMES THACHER.

y of a letter from Jerome V. C. Smith, M. D. to Doct. hacher, dated,

Quarantine Ground, Port of Boston, Aur. 3d, 1830. DEAR SIR-By the promptitude of our friend, BERT TREAT PAINE, Esq. who is destined to be American Astronomer, your note of the 28th

y, came to hand y esterday. I am wondering v he could abstract himself long enough from society of the stars, to interest you with a his-

By the nature of your inquiries, I am fearful suppose me much better acquainted with the aral history of the bee, than I really am, and e philosophical in my investigations, than in the

iel, I may deserve credit for. laced, as I am, on a small island, Quarantine, uded by the nature of hospital duties, from all reciable society, I have actually been obliged to rational enjoyment and happiness, in the emplation of the structure and habits of every et and creeping thing that happens to make ppearance; the moment my interest was excitfound that it would never do to depend on precarious supplies. Believing there was h more to be known of the bee than has been overed, and, withal, hoping for a supply of cts, I purchased a hive, in Dorchester, in the g of 1827, at the price of eight dollars. The was a pine box, about nine inches deep and een or fifteen inches square. Through the top is box, was an aperture, perhaps two inchdiameter, over which a second box, precisely he first, only smaller by several inches, was d. The servant who went for them said the lower box, with its contents, weighed forty ds,-and, therefore, was pronounced by the , an excellent hive. In truth I suspect it was

vils of an exhausted treasury.

no one has, from remote antiquity, arrested the at-could not procure food enough, that a piece of old on several little blocks, half an inch-high, so that contion of naturalists and philosophical investigation was filled with honey, on both sides, and the bees can pass and repass freely, under the ors with deeper interest than the honey bee. It laid in the lower box, between their empty combs edge of the glass, in various directions, towards vill, nevertheless, be conceded that we are yet and the floor. The attention of the island keeper, the walls of the wooden, tight, iron-bound case, an learn to distinguish the precise line between of comb, to an inclined plane, by building a colding within a little building, in one corner of the ears to this recondite but pleasing subject, I have the way, was old and adhesive, in all the cells on is denominated the temple of industry, I have made und a gratifying resource in a correspondence the underside. A larger piece of old comb, charge such observations, from time to time, as are now ith intelligent apiarians, distinguished for both ed, with reference to their mechanical skill in rais- presented you. ing a great weight, to such a comparative height, were now beginning to appear in the garden, where towards nightfall, on a tuft of grass, nearly on the spot were the barrel stood. We roused them, repeatedly, vainly hoping they would go to the hive, but the effort was unavailing, as they would join the nucleus in a very few minutes. On viewing the hive, there appeared to be a respectable number within or without, that was extraordinary.

Several times, a heavy piece of comb, charged with honey, was laid over the hole, which communicated with the upper box, and as readily moved place.l entirely within their habitation.

On the 15th of June, I placed over the aper-Ill kirgdom, thinly inhabited, suffering from and thick. Indeed, it resembles a balloon, more of them, wandering over the cells, are suddenly Irhaps you may grow weary of this detailed his like the mouth of a phial, in which a cork is some | very sudden activity. I am induced to suppose of one bive; but in giving you the whole mat- times kept. Suspended from the centre, is an ash they want urging, and perhaps punishment, at

feited by a future repetition of the same story. within six inches of the hole, through which the Well, after being placed on the head of a barrel, bees pass from the old box. On this, are three in the course of two days, they commenced opera- cross bars, reaching laterally, within two inches tions by searching all the miserable little flowers of the glass walls. The globe is not set flat on DEAR SIR-Among the whole tribe of insects that had appeared. It was so apparent that they the top of the old hive: on the contrary, it stands who was in the habit of frequently looking at which encloses the glass. In the sides of the them, by raising the box, was soon excited by oh. latter, are doors, through which, at leisure, I can serving that the bees had raised the horizontal bit inspect the bees, at all their working points. Standumn of wax under one end of it, so that they were door-yard, which, from the circumstance of havenabled with ease, to get at the honey, which, by ing a dome, an arched door-way and a few pillars,

1. Of the Industry of the Bee. 'Many hands,' was now placed inside, and elevated on a col-says the proverb, 'make light work;' this is true in mmn, as in the first instance, before we were aware relation to a hive of bees. When my hive, in of their readiness to commence the undertaking, 1827, had about three thousand, -very little pro-Whether they took portions of their own empty gress was made; some old comb was repaired, but a comb, or pared the foreign bit, to construct the very little constructed. They were constantly enprop, we were not critical to determine. Flowers deavoring to rear the young-feeding them with all the honey they could procure. Having been the hive was conveyed one evening, to a tempora- presented with some Havana honey, of bad qualiry house, about thirty rods from their first locality, ty, they were fed with it plentifully. Such a seaon the island. By accident it was discovered, that, sonable supply enabled them to rear a supply of instead of returning to the hive, after the labors laborers. In the spring of 1828, although almost of the ensuing day, they were clustering together, destitute of honey, they commenced a small mound of comb, at the side of the hole, on the upper side, within the glass bell. The question at once arose, in my mind, whether there were a class of bees, that were architects exclusively, as it was certain, the season before, no building was done; but since the addition of new members to there ;-the guard were on their posts, at the en- the sovereignty, new comb was being constructed, trance ;-and on the whole, the usual order and though there was no necessity for it, as there were, discipline appeared uninterrupted. Where was the to all appearance, empty cells enough to store all queen at this crisis? Was she at the hive or on the honey that might be collected during the the grass: -or had a royal princess escaped from season. I marked those bees, on the head, with a confinement, and were a part of the subjects fol- brush, dipped in whitewash, as they were sticklowing her destiny? Fearing a total loss of those ing the little pellets of wax together, on the horon the grass, and soon too, as a heavy mist was ders of the new comb. By long and sometimes, falling, the island keeper took a large earthen ves- tiresome observation, I found those masons kept sel from the hospital, and waiting till they were on the foundation, day after day, and that they comparatively quiet, took them up by handfuls into | labored only a very small part of the time. It the pot, and poured them into their domicile. He would seem that they were sometimes waiting was stung in only one place, by pressing one be- for mortar; and at others, when it was deposited twixt his arm and sleeve. No extraordinary com- by carriers, close to where it was required, they motion resulted from carrying back the fugitives, were in no hurry to use it. Apparently examinnor was there any subsequent excitement or turmoil, ing the work, two bees would accidentally meet, and were they not interrupted by any order from a superior, would dress each other's limbs, wings, feelers, &c, precisely as cattle in a field will lick each other's head and ears. This is very comraised, that it might be searched, as when mon: I have seen them dress each other in this way, a whole hour; and I have also, seen them quit, instantly, as though commanded, and resume ture, a glass hive, shaped much like an inflated their work. The honey gatherers seem at times bladder, capable of holding nearly three pecks of to skulk about the hive, as though they were ungrain. It was blown of pure flint glass, very clear willing to go abroad ; sometimes, a numerous body than anything else. Near the top, is a ventilator, driven out, and the front of the hive presents a noce, there will be no danger of being sur- rod, three quarters of an inch square, reaching times, to complete their task .- How is it, that we

hive, dead occasionally? Are they put to death for refractory conduct?

2. Government .- Notwithstanding an extraordinary attention to the construction of the glass, which magnifies the bees considerably where it is most convex, I never have discovered the least clue to the mode of government. A peculiar noise like the singing of a cricket, is sometimes heard, towards the honey, as though they were about tasting it, they are oftener driven away, by an invisible something, before succeeding, than otherwise. There are watchmen everywhere, and this mirable, that it must interest the students of nature, were kept most perfectly clean; we judged the I infer from marking them :—finding them a long time near one spot, unengaged, and occasionally sipping the honey fearlessly, as they go their rounds. In the warm season, there has always been a sentry, but more commonly four, at the entrance of the laive. Their heads are inward, while their wings, in the most rapid motion, seem to imply that those inside know they are securely guarded, as long as the humming continues. When they have been forced though anxious to ascertain the difficulty. As the cold weather approaches, the guard disappears, as might be seen and their function understood. insects and other enemies, attracted by the odor of the honey, are no longer feared. I think the government generally, and certainly all special commands, are first made and propagated by the appropriate officers, by striking the horny tip of destroy, and on which they undoubtedly feed. the tail on the hive or comb-so that a tremor, differently modified, gives a general as well as instantaneous information, which every bee not only perfectly understands, but quietly obeys.

3. Contrivance .- A very large spider got within the glassbell, just as the mound had been commenced. The bees left their work to pursue the common enemy, but did not overtake him, as he sought for with avidity. From the dandelion plate, where the bees had been feeding. It w succeeded in climbing up the glass much better than they collect, at this place, the principal part of chased one side repeatedly, but not taking the hi they. Having made, en masse, a thousand attempts, but falling back before reaching the intruder, they turned their attention to raising a pillar by which they might reach him. In two days the column of small diameter, was six inches high, so that they could step to the bar before mentioned suspended from the centre. Mounting this in astonishing numbers, he was forced to take to the glass again. Being within two inches, though losing their foot-hold and falling to the bottom, charine matter, besides imparting a delightful hottles full may be so taken, their number see constantly, their progress was such as to alarm flavor to that with which it is mixed, the spider exceedingly. I watched the approaching conflict with intense interest; when lo! the spider eased himself down on a cord, of his own manufacturing, just as the bees were on the point of seizing him. Thus, securely suspended midway, betwixt the central pillar and the side of the glass on a single thread, perhaps a foot in length, I was obliged to leave him. On the following day, the spider still kept at the end of the rope, were she among her subjects. Were it not absoloaned me by my friend Mr Porter, Editor though the bees were trying by a variety of schemes lutely rude towards those learned entomologists the American Traveller.

as there was room enough to use their wings, unfolding the political condition of a bee hive, I To my regret, in the course of that day, the spider should say the queen was an imaginary despot.

Turning an arch of wax like an oven over an theory, lest it should be incorrect. enemy, and removing the offender, whenever dead, is resorted to occasionally,

I believe, that the bee swallows the honey, and begins to increase in size, excepting it be by the in deep in the centre of the hive, but there are no that it is disgorged into the pot, by some kind of creased temperature of the air, I will not pretent indications of particular attention, on the part of effort. Probably by being mixed with the pecu- to say. That the temperature varies, is well the bee. Is this made by the Queen? On the liar secretion of the organ, the quality, if not the known: in some of the coldest days in March and whole, I have concluded that it must be by a young quantity of the honey is changed. In fact, this April last, the mercury would rise to summe one, freeing itself from the cell and trying its wings, must be the case, as direct experiment shows, heat. It is soon known, when the maggot require That there is a peculiar discipline, is beyond all by feeding a hive on West India honey. A single material attention. About the last of June, such manner of doubt. Certain it is, that those that bee, might carry from the mouth to the interior broad sheets of comb, having a maggot, just dis gather honey, after they have deposited, are not two or three teaspoonfuls in a day. Three large cernible, at the bottom, were so conspicuous, the allowed to taste it .- On a rainy day, when all were coffee saucers have been repeatedly conveyed into 1 used to importune gentlemen to witness the proat home, I often observed them travelling over the the hive in six hours. This very day, (August 3) cess of feeding them. The bee extended its prepots, looking at one, feeling the depth of another, by way of ascertaining a point, a tumbler of honey boscis quite deep, till, as nearly as could be &c, but the moment they thrust their proboscis spread on a plate by only a small part of the whole ascertained, the brush, charged, probably with it swarm was taken in two hours.

see an apparently healthy bee dragged out of the to get at him. I wondered they did not fly at him, who have gained such distinction in the world, by was missing, and probably despatched in torture. I am unwilling at present to communicate my

- 7. The Young .- From a series of examinations, 1 am led to suppose that an egg is deposited in every 4. Disgorging Honey .- It is generally admitted cell of honey, throughout the hive; how or why is appropriate nourishment, touched its mouth, The contrivance by which the process of dis-slight motion, observable in the worm, was take
 - S. Drones .- I scarcely know what answer give to your question relative to the drenes. ernel executions, where two or three are fore plain the following account?-Just as the your ones had arrived to a size, that completely fill the cell, they were killed by hundreds. Perlu a gill, large, white and plump, with folded win were drawn out on the lighting board, in o night, last week. This morning, I discover about thirty more, and perhaps a pint may ha been dropped in the vicinity. Just as they h is attained a growth which required the unceasi care of their nurses, they have been slain with cied they were,
- 9. The Moth.-About two hours before vo terest me, killed the moth with a stone. Were I a farmer, I should certainly cultivate a empty long neck bottle, with a little honey at field of eatnip solely for the bees, fully believing it bottom, placed close to the hive, at night, wh undiminished. I am inclined to suspect the or 6. The Queen.-I am in doubt what to say of of the honey collects them, and that they can

Finally, you ask me whether I derive a profit from the culture of bees? The fact is, the idea of profit never occurred to me; my first and present object, is to study them, -My hive is now very large, and perfectly full,-having never swarmed-whenever they exhibit indications of it, I propose to insert another box, to give them other occasions, and the reminiscences of by-gone room. In this way, I hope to have a formidable hive. It has been thought that it now contains upwards of two hundred pounds, and so packed with beautiful flakes of pure, white comb, intersected by roads and paths, that every one, unacquainted with the peculiar, instinctive habits of the bee, views it as a great euriosity. The additional convenience now contemplated, is a glass floor, to enable me to look upward, with a light at the top; I hope for some insight into their out-of-sight economy.

Without reference to theories, or, indeed the facts of writers, I have given you the results of my personal observations, If I have been deceived, you will be able to make the corrections. It would give me great pleasure to add something to the stock of general knowledge, relative to the cultivation of bees, as a source of profit, but at present, my locality forbids an experiment,

Very respectfully and obediently, yours, JEROME V. C. SMITH.

JAMES THACHER, M. D.

[Dr Thacher's Letter and Mrs Griffith's remarks in continuation, will appear next week.]

MR COOK'S ADDRESS. (Continued from page 187.)

The agricultual interests of New England have been greatly promoted by the skilful, judicious; ind generous exertions of the society long since instituted in Massachusetts for that purpose. To he ardor and zeal that has been unceasingly manfested by the distinguished men who have directed ts efforts, this section of our country is particuarly indebted for the advances that have been made n this department of national industry, and which nay not be inaptly termed a branch of the 'Amerian System,' They have given an impulse to the mergies and the hopes of our yeomanry. They have instilled into their minds a portion of their entiments, and have excited in them a spirit of mulation, and the advantages that have accrued, and still continue to follow their labors, are legible n every field, and are daily conspicuous in our narket-places.

The industry, and perseverance, and forecast of he people of New England, is the basis upon which heir prosperity and security must be sustained.

Possessed of fewer natural advantages of soil nd climate than are enjoyed in other sections of our ountry, we are happily exempted from many of the he evils to which they are necessarily subjected, y circumstances they cannot control. If we are enied the privilege of a milder atmosphere, and more temperate climate, if we must submit to the igors of our northern winter, and find no escape rom the chilling colds of a protracted spring, we an do so without murmuring or repining.

If Providence has been pleased to withhold rom us, what in its wisdom it has seen fit to coner on others, it has given us much, and withheld rom us much for which we should be grateful.

a subject which should interest our attention, as knowledge of it will tend to prevent much of
